Hornbeam Rods A SPECIALTY.

W. HUNTINGTON,
WILTON, CONN.

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly-fishing Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance For circular send to WALLACE HUNTINGTON as above.

THREAD-WOUND, LONG-RANGE
SHOT CARTRIDGE CASES

For muzzle and breech-loading, cylindrical and choke-bore shot-guns. Made to open just short of 50, 70 and 90 yards, giving close pattern and great penetration. 10 and 12 gauge. Send for circular.

20 Sent, Post-paid, for $1.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 1lb canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 1lb and 5lb canisters and 6¼ and 12½lb kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern, will be found well adapted for glass ball and pigeon shooting. Made of two sizes, only No. 7 and No. 8, No. 7 being the coarsest. Packed in 6¼lb kegs and 1lb canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 1lb canisters and 6¼ lb kegs.

Dupont's Rifle Fg. "Sea Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½lb, 1lb and 5lb canisters, 6¼, 12½ and 25lb kegs. Fg coarse, FFFg. fine.

Dupont's Sporting, Mining, SHIPPING and Blasting Powders of all Sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by **F. L. KNEELAND, 87 Beaver St, N. Y.**

N. B.—Use none but DUPONT'S Fg. or FFg. for long-range rifle shooting.

ANSWERS TO CORRESPONDENTS :— 337

TO CORRESPONDENTS.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen.

Communications upon the subjects to which its pages are devoted are invited from every part of the country.

Anonymous communications will not be regarded. No correspondent's name will be published except with his consent.

The Editors cannot be held responsible for the views of correspondents.

All communications of whatever nature should be addressed to the Forest and Stream Publishing Company, Nos. 39 and 40 Park Row, New York.

FOREST AND STREAM.

Thursday, May 26.

SAN FRANCISCO sportsmen are about organizing a game protective association. There is a most emphatic call for a live, working, earnest society in that vicinity. If it is started in the right spirit, and confined strictly to securing a better enforcement of the law, the good it may do is very great. From the character of those who are engaged in the effort to form such a society, we are sanguine of its success. We notice that the San Francisco *Call* is devoting some attention to the subject of game and fish protection, and is exerting a very commendable influence in that direction.

THE ENGRAVING OF MAJOR, Mr. Dorsey's beagle, in our last issue, was cut from a drawing on the block by our valued contributor Mr. Rowland E. Robinson, who has thus proved his pencil to be as facile as his pen. The drawing, which we need not say was an admirable piece of work, was a veritable labor of love; and possibly Mr. Robinson's success was partly due to this enthusiasm for his subject. We count Major's owner and ourselves fortunate in having secured so true and artistic a portrait of the dog; and we only regret that our acknowledgment to the artist should not have been made last week.

PREPARATIONS for the State shoot are nearly complete, and the programme for the week is now in the printer's hands. The prize list is an extraordinary one. The delegates, it is now proposed, will meet at the Hotel Brighton, Monday noon, June 20, the first business being the discussion of an immense clam chowder. The afternoon will be devoted to locating the club tents, providing hotel accommodations, and other preliminaries. The evening sessions will be held at the Hotel Brighton, and some rare musical attractions will add to the entertainment provided. Mr. Crooke, to use a homely phrase, is working like a beaver, and the smooth working of details will be largely due to his energy.

A CONNECTICUT PLAN.

THE Middletown, Conn., Association has made a successful attempt to secure better game presentations by enlisting in the work the co-operation of farmers and land owners. The system works well because it recognizes and provides for the mutual interest of farmer and sportsman.

For a certain merely nominal payment, the owners of the land agree to confine the privilege of shooting over it and fishing in its streams to the members of the Association, of which they are themselves by the terms of the agreement honorary members, having the same shooting and fishing rights as the rest. Each individual belonging to the Association is furnished with a ticket, which serves as a permit to enter the lands under its control; if others trespass, they are intercepted and driven off. The advantage accruing from its expenditure of funds are thus secured to the Association. The game and fish replenished by them are protected from the pot-hunter and net fisherman.

The Middletown plan appears well in theory, and we are assured by its officers that it works well in practice. It preserves the game; and involves no clashing of interest between sportsman and farmer. We print on another page the form of government of the club; and commend it as a model to be adopted elsewhere. The society is incorporated and can bring suit through its attorney, without involving any individual member in the thankless task of prosecuting offenders.

The success of the Association has been largely due to the exertions of Dr. Joseph W. Alsop, its president.

THE MASSACHUSETTS MUDDLE.

AS to the general legal sapiency of the legislators who have been convened under the big gilded dome of the State House at Boston, we have no knowledge. Of their specific lack of wisdom, when they are called upon to confront the vexed problem of game protection, they have just given striking evidence.

The Massachusetts Fish and Game Protective Association is a society of anglers and gunners, who have had a great deal of experience in the actual work of preserving the game and fish of the State. They presented, at Boston, the bill of a proposed new game law. It embodied what after mature consideration they believed to be the best practicable regulation of the taking of game and fish. The bill ought to have passed. It was lost by a large majority. This result was not wholly unexpected. In Massachusetts, as elsewhere, game legislation is too much in the hands of know-nothings, and the know-nothings are in the hands of a class of men who are concerned not to preserve the game, but to squeeze the almighty dollar out of it as it goes. It was not, therefore, strange that the existing law was not made any better; nor even that it was made worse.

But the stupidity exhibited by the adoption of Sect. 4 is an occasion of genuine surprise. This section prohibits the trapping and snaring of game birds and hares, "*provided*, the provisions of this act shall not apply to the trapping or snaring of ruffed grouse, commonly called partridge, or hare or rabbit, by owners of land upon their land, or by any person or persons authorized by them, between the first day of September and the first day of January of any year."

This is in so many words a concession that wild game is the private property of the landowner. By no other doctrine can an individual, a private citizen, be authorized to kill the game at a time or in a manner forbidden to the people; and by no other doctrine can the individual delegate to another the privilege of so killing game. On no other principle than this can the section be construed as other than an arrant absurdity; the principle once adopted makes of the rest of the law equal nonsense. If game is private property the Legislators under the big dome have no business with it, and should let it alone; if it is the propety of the State, the man upon whose land it happens to be has no more right or control over it than any other citizen has. The two doctrines are inconsistent; a law must be based upon one of them only. The attempt to embody each in different sections of the same law only makes a muddle of the whole statute. The Massachusetts law is such a muddle.

ICHTHYOPHAGOUS DINNER tickets at Blackford's. Steamer Matteawan will leave Fulton st., E. R., 5 P. M.

SOME POINTS OF LAW.

THE MAGNER CASE AND THE CAIN CASE.

THE opinion of the Court in the case of Magner *vs.* The People of the State of Illinois, recently decided by the Supreme Court of that State, is a well considered and comprehensive review of the law respecting the legal status of animals and birds, *ferœ naturœ*, especially those that are generally denominated "game." It may be well to review this case in connection with certain other cases arising in the courts of this country as well as in England, involving in one way and another the leading questions determined by the Illinois Court. This case, sustained as it is by the eminent authorities to which we shall refer upon elementary principles of law, will commend itself to the legal fraternity both at the bar and upon the bench.

The lawyer who, for fee or reward, or the judge who, through the vista of an occasional quail-on-toast, or preconceived notions and prejudices against restrictive laws, shall seek by subtle distinctions or judicial fine sighting to evade its consequences or overturn its force, that lawyer or that judge should receive the just condemnation of all fair-minded men.

The doctrine of the law that all animals, birds and fishes that are by nature wild, belong to the sovereign or government, has been so long and so well settled as to admit of no question among lawyers or judges, and hence they are entirely subject to the legislative will of the State. At least, until the Federal Government shall have passed some act, or otherwise assert Federal control over the question, the matter must remain of State sovereignty and subject to State legislation. It is a matter of grave doubt, after this right has been for so long a period of time exercised by the State governments, whether Congress would have the power to legislate upon the subject at all, except, perhaps, within the jurisdiction of the unorganized territory belonging to the Federal Government.

It follows, then, that the Legislature of the State may prescribe the time and manner in which any or all wild animals, birds and fishes may be taken or killed, or it may prohibit the killing or molestation of them entirely. This being so, the State has the power, under what is known as the police power, or authority to prohibit the sale or traffic in dead animals, birds and fishes within the State that have been killed outside of the State and brought within the State for sale, as well as those that may have been lawfully killed within the State during the licensed period for killing, and kept until their sale is forbidden by the local law. This question was before the Court in Phelps *vs.* Racey, 60 N. Y., 10. The defense in this case was that the bird, a quail, had been killed in the proper season, and kept by a process of preserving game until after the season expired, and then offered for sale. But the Court held that "the penalty is denounced against the selling or the possession after that time, irrespective of the time or place of killing." It seems that this question has recently been decided in the English Common Pleas Division, Law Reports, Whitehead *vs.* Smithers, but we have not examined that case.

But, notwithstanding the clearness with which the cases referred to have settled these questions, it seems to remain for the Police Court of Cincinnati, by some method of judicial legerdemain, to evade the effect of those decisions, as applied to the game laws of Ohio. See State *vs.* Cain, published in the FOREST AND STREAM, April 14, 1881. The question before the Court in that case appears to have been whether quails killed in Illinois and exposed for sale in Ohio in the month of February were so exposed for sale in violation of the Statute of Ohio, which prohibits the exposure for sale of "quails killed during the time when the killing thereof is made penal." The first section of the Ohio Statute provides "It shall be unlawful to kill quails between January 1 and November 1." The act is limited only as to the time of killing, namely, "within the time when the killing thereof is made penal," without regard to place where killed. The only distinction between this case and the case of Magner *vs.* The People, is this: The Illinois Statute prohibits the exposure for sale of quails after the expiration of five days next succeeding the first day of the prohibited season for killing them, without regard as to when or where such quails may have been killed. Consequently quails lawfully killed in Ohio during the "open season" cannot be sold in Illinois

after five days succeeding the first day of the "close season" in the latter State. The Ohio law prohibits the exposure for sale of quails killed during the "close season," *ex. gr.*, quails killed between the first day of January and the first day of November, and by parity of reason quails killed in Illinois between those dates cannot be lawfully exposed for sale in Ohio. The section of the Ohio Statute which makes the possession of quails during the prohibited season *prima facie* evidence that such quails were killed in violation of law does not seem to relieve the case from its embarrassment. The only purpose or effect of that statute is to shift the burden of proof upon the defendant to show that the quails were not killed within the time when the killing thereof is made penal, and which proof would have been a complete defence under the Ohio Statute. It is to be regretted if this case shall not be taken to the Supreme Court for final adjudication of that question. And in the meantime let the friends of the game laws of that State see to it that their laws are so amended as to avoid any pretext for technical discrimination by judges who may have a greater regard for votes in succeeding elections than for an impartial adjudication of the law. BOB WHITE.

NO LUCK.

BIRDS chirruped welcomes to the morning sun which shone from a cloudless sky. Big, well-fed bees in their black velvet jackets and yellow trimmings hummed monotonously and bumped their noses against the wild flowers as they stole their sweets. Breezes from over the hills streaked the lake with ripples. It was one of those cheery mornings you find lying around loose up in these parts, one of the unencumbered mornings, on which no person holds a mortgage, and you can step in and take possession by preempting what you want of it. It means not only good health, but more of it. No one could be brazen enough to return your salutation of "Good-morning" by saying he had seen better. It was a perfect fishing morning, every sign beckoning to the full fruition of enjoyment and the word is "Up, Guards, and at them!"

Fair it was and fraught with promises. Every angler is aware of the uncertainties attending these promising mornings, and is prepared in a measure to meet ill-fortune if she happens his way. All signs at times fail him. We have filled our creel fishing carelessly, when the wind was blowing from the east; and we have failed to obtain a rise when we have plied our gentlest art and fulfilled to the letter all the instructions those modern disciples of the rod Francis, Norris and Scott require. We did not, however, borrow trouble nor quarrel with ill-luck, but continued our ineffectual casts with a delightful feeling of indifference to the result that would perplex a less stoical person.

This bright, auspicious morning we cast our lines in the deep, shady pools, in the whirling eddies, in the rapid riffs, and threw them carefully beneath the overhanging bushes and branches. But things were not what they seemed. The trout were coy and shy, and hard to catch than a lass of eighteen summers. Their peculiar idiosyncracies could not be satisfied. Though every spot on their beautiful sides were an eye, it could hardly have improved their vision or rendered an approach toward them more difficult.

A trout is sometimes notional like a woman, or, to be still more truthful, like a man. All argument is wasted, and every inducement goes for nothing, when—say *she*—has made up her mind to pursue a certain course. It may be mere fancy, but she is immovable, and will not listen to reason.

Our lines were cast far off and fine, but the old rascals had been there before, and too much experience restrains for this day at least their natural daring, and makes them too suspicious of our manœuvre. They pluck from the nettle danger the flower safety, by not biting.

Excepting with our worm-fishing companion, Tyro—and a genial old fellow he was—we were all possessed with the true inspiration of good old Izaak, inasmuch as patience, called contentment and singleness of purpose, filled our souls to the utter exclusion of every worldly thought and desire.

"Well," says Tyro, "it's a fine thing that some souls are so easily satisfied with that kind of filling, but it doesn't spread the butter on one's bread. Contentment and a well-filled creel are compatible, else my mental and physical organization is peculiar."

"It is peculiar, for you are growling and fault finding because the fish don't bite. Have a little reason and common sense. What splendid sport you had yesterday 'yanking' them out with your disgusting angle worms and spreeing grass-hoppers. You never miss a meal, I know, but give the trout credit for knowing when they want your bait. They have got memory and reasoning powers, and it's not for any of us to force the argument."

"All right. Salt pork for supper."

"Plenty of yesterday's catch in the ice-house."

So passed the day. The sun came up and blistered our noses; the forenoon passed, and the dinner-bell rang for many a dinner, and the sun went down and the birds to roost, but so far as this vicinity was concerned, there was hardly a trout in the stream but what could have proven an unimpeachable *alibi*.

Not so the musquitoes. They were present, and improved to the fullest extent their unusually fine opportunity of displaying their infernal wickedness; and if ever any of us resembled saints it must have been when those musquitoes came around our heads like halos around saints' heads, as the picture-books represent them.

Wet, weary, but not despondent, we reeled up, and with almost empty baskets retraced our steps. It was only an episode in our cheerful holidays, a day to be remembered as having been spent pleasantly and profitably, no matter how it may have resulted piscatorially. Without harboring any vindictive feelings we plotted full revenge on the victualling department at headquarters. MILLARD.

LIVE QUAIL.—The demand for live quail for stocking purposes last season was unprecedented. We are still in frequent receipt of inquiries for birds. The parties who secured a supply of live quail for sale and advertised them in the FOREST AND STREAM, soon found that the responses were more numerous and for greater numbers than they could furnish. (Advertisers of other things in this paper have had the same experience.) Next season, there is every reason to believe, the demand for birds will be very large, and we already hear of parties who will make propositions to supply the birds. The quail brought, in some cases, $3, $4 and $5 per dozen last year, and whether that price will hold another season will depend altogether upon the quantity trapped. Those who are favorably situated for securing birds to supply to clubs and individuals desiring to obtain them would do well to trap the birds as late in the season as may be practicable, so that their season of captivity may have as short a duration as possible. It will be long enough in any event, for we do not believe in turning down quail in this latitude before the middle or last of May, and if they are Southern birds the first of June would be still better.

DEER FLOATERS, if any such there be within sound of the FOREST AND STREAM's voice, are commended to a perusal of our game columns, where they may find a new form of "sport" indicated for their express delectation. After all, what is the necessity of going away off to the Adirondacks to stab a deer in the water, or to Michigan or Maine to shoot the victim in a lake, when within a few minutes of Boston and New York and Chicago are abattoirs and oxen and swine in scores, ready for the slaughter?

The "barn-yard" plan recommended by our correspondent is not very different, indeed, from a Continental form of deer shooting. It is quite the correct thing in some parts of Europe to drive the game of a locality into a limited area, thus confining several hundred head in the space of a thousand acres. A fence of cloth is then erected about the poor brutes, shooting stands are built near the circumference, and the beaters are sent in to drive the animals up. Four or five hundred deer and bears in the course of a day is a fair "bag" for a "hunting" party. We notice in the London *Illustrated Sporting and Dramatic News* an illustration of such sporting. The shooter in the foreground, about whom lie the deer already slaughtered, and who is just bringing down another victim at six paces, is no less a personage than His Royal Majesty, William III, Emperor of Germany.

OUR esteemed English contemporary, the London *Illustrated Sporting and Dramatic News*, gave to its readers the other day one of MARK TWAIN's cleverest speeches. But the editor neglected at the time to *explain the joke* for John Bull's edification, and, as a consequence, of course got himself into trouble. The following week appeared an editorial, stating that a shoal of letters had been received, and two or three quite angry ones, showing that "the humor of the article was not apparent to all." Then follows an elaborate explanation of Mark Twain's witicisms. The *News* will doubtless in the future confine itself to "sporting" topics. American jokes are away up beyond its readers. If our neighbor, *Puck*, were published in England it would have to publish a weekly supplement, explaining its fun, so that John Bull could know when to laugh.

As a choice example of British wit, by the way, we note in the same journal a comment on the weights of foxes (recently recorded by "Antler" in the FOREST AND STREAM) to the effect that "America, being a bigger country than England, ought to have bigger foxes." If any of our readers do not understand that, we hold ourselves in readiness to explain it in person at this office at any time.

A LAWN TENNIS CONVENTION, at which thirty-five clubs were represented, met at the Fifth Avenue Hotel, in this city, last Saturday, and organized the United States Lawn Tennis Association, with the following officers: President, General R. S. Oliver, Albany Lawn Tennis Club; Vice-President, Samuel Campbell, Orange Lawn Tennis Club; Secretary and Treasurer, Clarence M. Clark, Young America Cricket Club, Philadelphia. Executive Committee—Dr. James Dwight, Beacon Park Club, Boston; G. S. Scofield, Staten Island Cricket Club, and Berkley Mostyn, St. George's Cricket Club. The All England Lawn Tennis rules of 1881 were adopted. The Executive Committee will report in two weeks on the style and brand of the ball to be used in all matches and tournaments.

WE UNDERSTAND that a gentleman of this city has secured for the Kitty Hawk Bay Sportsman's Club, by lease and purchase, a number of valuable shooting properties, in addition to those already acquired. These properties are stated to comprise between seventy-five and eighty-five thousand acres of land, most of it points, marshes and islands. Numbers of shoals adjacent to these lands are said to contain valuable oyster beds and to be favorite resorts for fish. On the Gallop property the deer-shooting is good. We have been shown copies of statements made by residents of the section in which these properties are located, which are unanimous in agreeing that these lands are excellent shooting ground for fowl of all descriptions. The railroad to Elizabeth is now, we understand, completed, and that city is only twenty-three hours from New York.

"THE FISHING LINE," as the Grand Rapids and Indiana Railroad is termed, leads into that part of Michigan which is far-famed for its grayling and trout streams. The wide-awake general passenger agent, Mr. A. B. Leet, Grand Rapids, Michigan, has prepared a handsome edition of his annual guide-book. It has descriptions of the best localities for sportsmen tourists and their families, and we advise those who are planning for a summer vacation trip to send for this pamphlet and study its pages. If they cannot find something to their taste in Michigan they are hard to please. The book, moreover, contains that famous account of the capture of a grayling, written by Mr. Charles Hallock, and published in these columns some years ago.

NEW YORK CITY spends $1,000,000 a year for rose-buds, and 2,000,000 a year for other cut-flowers. In the June *Scribner* Mr. Peter Henderson, the great seedsman of this city, says that "at some seasons the prices paid for forced rose-buds are perfectly astounding. One grower, of Madison, New Jersey, took into New York three hundred buds of the crimson rose known as 'General Jacqueminot,' for which he received at wholesale three hundred dollars, and which, no doubt, were retailed at a dollar and fifty cents to two dollars each. A flower dealer in Fourteenth street, a few days before Christmas, received the only four of this same variety of rose that were offered in the city, and found a customer for them at sixty dollars, or fifteen dollars apiece, or eight times the value of their weight in gold."

A GAME PICTURE.—Mr. M. A. Stearns, President of the Rochester Gun Club, has presented to the association, as a prize for the greatest consecutive number of birds killed at the next meeting, an oil painting—"A Pair of Canvas Backs"—by J. B. Stearns, Esq., N. A. Mr. Stearns is an artist of extended reputation as a historical painter, and was for many years Secretary of the N. A. Academy of Design.

ON THE LARRIWEEP.—We conclude this week the publication of the charming picture of camp life on the Larriweep; a series which, the reader will agree, has proved one of rare interest. We take pleasure in announcing that other papers from the same pen will appear from time to time in our columns.

SUMMER SIGNS—circus posters on country fences. There may be some fun in fishing without lying about the fish caught, but half the charm of a circus is in the brazen lies flaunted on the bill board and in the columns of the home paper.

THE ADDRESSES ARE WANTED of "C.," who wrote "Our Last Match;" "Kliph," who wrote "The Franklin Club at Reelfoot."

The Sportsman Tourist.

ON THE LARRIWEEP.

IN THERE PARIS—PART III.

AFTER supper, as we sat smoking our pipes by the fire, we fell to talking of early times in this country, and I asked Ignotus if he was not with Baker, when the latter made his unfortunate expedition to the park which now bears his name.

"No," he answered, "I came in two years after, and went out again in a hurry."

"Tell me about it."

"Well, it's a thing I don't like to think about much, and I don't talk about it any more than I can help. Still, if you'd like to hear about it, all right. I was living in Denver (it was in the fall of '60), running a little assay office, when one day a ragged old chap came in and asked me if I could assay some ore for him. I told him yes, and he pulled out a little chunk of greenish rock, and said he'd like to have that tested, but he hadn't any money to pay for it. Business was pretty slack just then, and besides, I kind of felt for the poor old chap, for I'd been there myself and knew what it was to make a strike that I thought that there might be millions in, and not have money to pay for getting it assayed, so I told him I'd do it for him, and he could pay whenever he got the money. I didn't think, from the looks of it, that it would pan out ten cents to the acre, but I knew it was no use to tell him so until I'd assayed it. I went to work on it that afternoon, and by thunder, it turned out to be worth about twelve thousand dollars a ton. I thought I must have made some big mistake, so I tried it again and got the same result. Well, when the old man came in again I told him what I'd found, and he didn't seem much surprised—said he thought it was pretty rich. 'Got much of it, old man?' says I. 'Well, about a nine foot streak,' says he. 'Nine devils!' says I. 'Why, that's better than the Comstock.' 'Yes,' says he, 'but it's there—crops out for over a hundred yards, and not less than seven feet anywhere, and from that all the way up to thirteen.'

"I thought the old chap was lying, but next day he comes

into the office again, with a chunk of the same rock as big as my head. Well, when I looked at it I saw it had been broken off a ledge—wasn't no flint rock nor boulder, but rock in place, sure.

"I tried to pump something out of him, about where it was, and so forth, but he was as close as a clam, and I couldn't get anything out of him. Well, he stayed around Denver all winter, and pretty soon he got in the habit of making the office his loafing place, so we got pretty thick, and the more I got to know of him the more I began to mistrust he wasn't lying about his big strike so much as he might be. One day in the spring he comes into the office, and says he, 'What you going to do this summer?' 'Don't know,' says I, 'go prospecting up in Red Dog, I guess.' 'Red Dog be hanged,' says he, 'come with me, and I'll show you more gold in an hour than Red Dog can turn out in a year.'

"Well, as I say, I'd got to believing the old fellow by this time, so I told him I'd go. 'Can you scare up four or five other fellows,' says he, 'that have got plenty of sand in their craws, and ain't afraid of Indians or hard work. We don't want too big a party—about six or seven 'll be right. There's rock enough there for a hundred men, but a little party can skip the Indians, where a big one can't. That was Baker's mistake—he had too many men with him.'

"I told him I could find the men if he could prove to 'em that it was worth their while. So he pulled a paper out of his pocket and showed me a chart of the country that he'd made, and just where the lead was. I knew the country down as far as the Needles, and so far, I could see, he had everything down on the chart, to a dot. Everything was as plain as could be, and I knew, with that chart, we could find the lead easy. So next day I spoke to four or five of the boys, and that night they and the old man came around to the office. I showed 'em the rock and the assay, and the old man he showed 'em the chart and told 'em about the lead. 'Now,' says he, 'here's what I propose. Each of us'll furnish his own outfit and we'll start. I'll pilot you to the lead, and we'll locate it. I'm getting too old to do much work, so I'll cook and tend to the stock, while you fellows get out the ore. When we've got as much as we can pack we'll come back, sell it, and divide the proceeds, my share to be one-third of the ore and one-half interest in the mine. What do you say?' Well, it just set us wild, and we all agreed we'd go. Each fellow was to take three animals—one to ride and two to pack. I tried to get the old fellow to tell me how he came to find the lead, but it was no go. I always thought he must have been one of Baker's men, and knew a good deal more about that fracas than he let on to. You know there was five or six of 'em had a quarrel with the rest and left 'em, and Baker always swore that there were white men in that party of Utes that attacked them on the Animas and killed all but him and Johnny Moss. However, that's neither here nor there. We struck south from Denver, crossed the Sangre del Christo, up the San Luis, through Antelope Park, crossed the range about the head of Stony, got down in the Animas and camped about where Howardsville is now. We hadn't seen a sign of Indians, so we concluded we'd stay here a few days, and rest up. The old man and I concluded we'd try for some meat, so we started out the second morning and told the boys if we weren't back by the next night to pull out down the creek, and we'd catch 'em at the foot of the park. Game seemed mighty scarce and night come, and we hadn't seen a sign, so we cooked a couple of rabbits we'd knocked over, curled up under a spruce and went to sleep. As near as we could calculate we were about four miles from camp. About daylight I felt the old man shaking me. 'Wake up!' says he, 'for God's sake wake up!' 'What is it?' says I, but he didn't need to answer, I heard it myself—three or four shots, and the awfullest yell you ever heard. We looked at each other, but couldn't say a word. We knew what it was. That was the scalp yell, and we knew the Utes had wiped out the boys. If they found us, we were gone, too. We'd crossed an old trail about two miles below, and we knew if they went down the canon that was the trail they'd take, so we climbed up the hill to a place where we could watch the trail, and lay there hid till about the middle of the forenoon, when we saw them come along, driving our stock. One big buck was riding my horse, and I tell you my fingers itched to pull trigger on him, but I knew it wouldn't do. After they'd passed we made our way back to camp, and found the boys lying around, killed and scalped. They were all stripped and shot full of arrows. Everything in the shape of grub and blankets was gone, and there we were, five hundred miles from Denver, afoot, no blankets, nothing to eat, and only our guns and the clothes we had on. The old man said we were only about fifty miles from the lead, and wanted to go on to it, but I knew, even if we found it, we couldn't do anything, and I thought the best thing we could do was to get back home as quick as we could. So we took some of the picks and shovels that were lying around, buried the poor fellows the best we could, and struck out. That day and the next we shot some rabbits and grouse, but the next day we couldn't find anything, and went to bed without supper. The next day it was the same, and the next and the next. The last two days we chewed spruce bark for want of something better, but it was mighty bitter and tough. We stumbled along the best we could, but I noticed the old man was getting weak. It was on Tuesday the Utes had wiped out the outfit, and this was Tuesday again, and we hadn't had anything to eat since Wednesday, and had been tramping steady every day. Tuesday night I was restless and couldn't sleep. Every time I'd doze off I'd dream that I was just going to sit down to a table chock-full of grub, and that somebody—sometimes the old man, sometimes a Ute, sometimes one of the boys—was trying to hold me back, and then I'd get so mad I'd wake up; and then I'd see the old man sitting with his back against a tree, and his arms folded, looking straight ahead of him as if he saw something out there in the woods, and never answering when I'd speak to him. Along toward morning, though, when I'd dozed off a little, I was woke up by an awful screech, and I jumped up, thinking the Utes were on us; but I was so weak and dazed that it was a minute or two before I got my senses, and then when I looked around there were no Utes there, and no old man, either. It was just about daylight, and as I didn't have any baggage to pack up or any breakfast to get, I started off after him. I hunted all around till nearly noon, firing my gun and yelling as loud as I could, for I had such a horror of being left there alone that I'd rather run the risk of drawing the Utes than lose any chance of finding him. Besides, I had a warm side for the old fellow, and I couldn't bear to think of his wandering around there all by himself, and crazy, as I knew he was. But it was no use; and so, about noon, I concluded that if I wanted to save myself I'd better pull out. I was so weak in the legs by this time that I could hardly stagger, and I had such a dancing in my eyes, and such a buzzing in my ears, and such wild fancies in my head, that I began to fear I was going crazy too. I got to Wagon-wheel Gap that night, and didn't know whether to try to cross the range and strike the Santa Croce trail, and so get to South's cabin, or to go down the river till I struck some of the Mexican ranches near Del Norte. The last was about three times the furthest, but the first was five times the hardest going. I remember that I was cool enough to debate the matter pretty sensibly before I went to sleep, but I must have lost my wits in the night, for I don't remember anything after that, except stumbling along somewhere or other, falling down, and getting up, sometimes burning, and sometimes freezing, cutting myself against the rocks, choking with alkali dust, and then for awhile I can't remember anything. When I came to, I found I was in old Alcantara's casa, clear down by Old Loma, and he and those two pretty muchachas of his were nursing me as if I had been old St. Jago himself. They told me that Felipe, Pedro's boy, who was lynched afterwards for knifing Dick Stuart in Conejos, had found me up in San Luis Park, where he was hunting for some stray burros, and had brought me down to the casa. They were such heathens at old Pedro's, that they didn't keep any track of the days of the month, so I don't know how long I'd wandered about before they found me, but I must have been pretty near gone up, for, as near as I could make out, I'd been there about six weeks, and it was all of six more before I could travel. When I could, I put back to Denver, and didn't come back this way till the Strong outfit came in, '68."

"Did you ever hear anything more of the old man?"

"No, not a word; he must have starved to death, or tumbled into some canon, or got picked up by the Utes."

"But I thought the Indians wouldn't harm a crazy person; that they thought such were under the direct care of the Great Spirit?"

"Well, perhaps Cooper's and Catlin's Indians wouldn't; but the white men have educated them out of that, and they'd scalp a crazy man now as quick as they would you or me."

"When you got down here again, did you try to find the lead?"

"Yes, but I couldn't find it. I'd made a copy of the chart the old man had, but whether I tore it up or lost it, when I was crazy, or whether old Pedro suspected what it was, and froze to it, I don't know, but it disappeared some way. From what I could remember of it, and from what the old man told me of the landmarks, I've always thought it must have been somewhere up here in Conquistador. So in '72, I spent the whole summer up here looking for it, but I couldn't find it. I found some float, though, just like the rock the old man had, up in Bear Creek, and up at the head of the gulch, there was a big rock-slide, that looked as if it wasn't more than a year or two old, and I believe the lead's under that. If I could find it once, I wouldn't ask odds from Vanderbilt or Mackay."

Next morning Ignotus took a couple of the horses and went after the buck, while I remained at the cabin "on household cares intent." These satisfactorily attended to, I strolled up the valley, to perfect my acquaintance with the Larriweep.

These mountain brooks are like high-born dames.

Much courteous humility, and deferential wooing is necessary, before they will admit you, on the footing of a friend, into the privacy of their boudoirs. I know some persons who never succeed in passing the antechamber. As some men are connoisseurs in wine, and can discriminate, by the bouquet, between Chateau Margaux of '49, or Lafitte of the "comet vintage," so the lover of brooks finds in them differences too subtle to be appreciated by the "mobile vulgus," but which, to him, are open secrets. The waters of every neighborhood have their own particular color, which is easily recognizable by the brook haunter. The pale beryline tint of the Holston or the Clinch, the aquamarina shimmer of the upper Au Sable, the topaz glow of the hemlock brooks of Maine, the pale diaphanous azure of La Chandiere, the cool inky blackness of the Neversink, or the opaline gleam of the French Broad—who that has once seen these can ever again forget or mistake them? Different from all these is the Larriweep, whose characteristic is its intense transparency; as clear and free from soil or stain as the thoughts of the Blessed Damosel. If one could only let it flow through him for an hour or so, how it would wash away the dregs! Born of the mountain snow, and dandled in the rough embrace of Plutonic rocks, it is as clear and cold as the one, as strong and pure as the others. There is none of the mischief of coquetry about it; no gentle dallying with bending hemlock boughs—no sweet coaxing of some gnarled and stubborn root—no coy avoidance of some intrusive boulder—but a steady onward flow, straight, strong and direct. Not with the dancing step of blushing Hebe, but with the firm step of Pallas Athene, does the Larriweep sweep to the sea.

Sitting in an angle, where two trees make a convenient arm chair, I hear what is rare in these woods—the soug of a bird. The jays—Canada, crested and Steller's—screech and gabble; the ousel occasionally whistles; the sparrows cheep, and the tom-tits chatter, but the pine grosbeak is almost the only bird I have found here, that can really be said to sing. His note is clear and melodious, in timbre something like that of the meadow lark, but reminding one more of the purple finch, which, by the way, he resembles in more than in voice. Both have the same reddish ground-work of plumage, overlaid with ashy gray, as though some tyro had painted them first a bright lake or carmine, and then, dissatisfied with his work, had added a coat of gray, which, weathering off in spots, was showing the original hue beneath. In habits, however, they are very distinct. The finch, whether resting or journeying, delights to huddle together in flocks. The grosbeak, on the other hand, though companionable (so that, seeing one, you are almost sure to find plenty of others close by), has not that penchant for massing together in crowds, that characterizes his lesser prototype. The one is distinctly gregarious; the other, sociable. In the one case, the group is the unit; in the other, the individual. The musical *repertoire* of the finch, moreover, is more limited than that of the grosbeak; the former possessing only three notes, while the latter can compass an octave, though generally content with the major fifth.

In the pauses of the grosbeak's song I hear another note which sets me to wondering if there is any place in the Western continent where the robin is not found. We are so accustomed to associate him with man, and to think of meadows and orchards as his necessary corollaries that it gives one a start of surprise to find him as much at home in these grim forests as in a New England homestead. He is the one familiar thing that redeems these Western woods from utter strangeness. The hemlock woods of Maine, the cypress swamps of Louisiana, the sage brush of Arizona, and the pine forests of Pembina, all know his song. While watching the birds there stole down to the margin of the stream that "thief of the world," a Canada lynx. Some nocturnal revelry or bloody midnight foray had kept him up later than common, and he was now coming down to take his last mountain cocktail before retiring. There was a bloodshot cast to his eye, and a look of shame-faced guilt on his hang-dog countenance that told of an unquiet conscience, and of a mind ill at ease. He lapped the water softly, in a sneaking way, glancing furtively around as though he feared to be confronted by the ghost of some one of his many innocent victims.

As he sprawled on the bank opposite me, uncouth, bestial and murderous, he seemed a libel on the tribe of Felidæ. There is a supple grace about most of his congeners that attracts the eye, and one cannot look upon some of them without feeling the vividness of Blake's lines—

> "Tiger, tiger burning bright
> In the jungles of the night,
> What immortal hand and eye
> Framed thy awful symmetry!"

But my present visitor excited only feelings of repugnance. Happening to look up and to catch sight of his human spectator, he was struck with a catalepsy of abject fear, and I think, had I been near enough, I could have taken him by the scruff of the neck, and cuffed his ill-conditioned soul out of his body, without any other remonstrance than a frightened whine. In a moment, however, his sullen ferocity returned to him, and he began to slowly back away, sneaking'y withdrawing each huge splay-foot, and keeping his furtive bloodshot eyes fixed upon me. Uglier optics I think I never saw in the head of any animal. The alligat r's fixed, unwinking stare, is not pleasant, nor the cold, dull glare of the rattlesnake's eye, but they both lack that malignant gleam of torpid hate that flared upon me from the opposite bank. Having gained some additional ten yards of distance he slowly turned around never taking his eyes off me and began climbing the hill. I shou'ed at him to increase his speed, but the only effect was to produce a snarl which showed his white fangs, and the slaver dripping from the red cavern of his mouth. I was not sorry to see him finally disappear among the bushes at the foot of a ledge of rocks, where he had his lair. This retreat, Ignotus and I harried, that afternoon, and with the assistance of Swipes, our plucky bull-terrier, avenged the *manes* of his many victims. In death he looked less hateful than in life, and there was something even grand about his massive fore-arm and chest, and his close, well-knit flanks and loins.

I had slipped a volume of Shakespeare into my pocket when starting out, but I returned with it unopened. Somehow blue sky and fresh air seem to act as preventives to reading. Books, for their proper appreciation, require four walls and a ceiling. Out of doors it is more natural to be Shakespeare than to read him; to "find tongues in trees, books in the running brooks, and sermons in stones," than to dally with the printed page. The thought of humanity becomes feeble when opposed to the thought of nature. One may read Homer by the seashore where the sonorous Greek vocables chime well with the diapason of the "poluphloisboio thalasse," but other than that open air reading tastes flat in the mouth. One would like to run a tape-line round the mind of that man whom I saw once, on the top of Mount Washington, reading a *New York Ledger*, while the sun was coming up out of the Atlantic, and the shadow of the mountain was sweeping over the valley below. Or of that young woman who, upon the same occasion, gravely proceeded to note down in her diary the impressions produced on her mind by the scene before her.

In the evening, I climbed the hill-side, above the cabin, and, sitting upon a rock, watched the sun set. Probably on account of the lack of moisture in the air, the scarlet and gold of other sunsets are rarely seen here; but the close of the day in these high altitudes has a beauty and a peculiarity of its own, which I never tire of witnessing. As the sun dropped down behind the peak of El Conquistador, the shadow slid down the mountain side, swept across the valley and began to climb the opposite heights. It was a huge triangle of shade, springing from a constant base; the apex continually advancing, and the sides lengthening in proportion. The edge was so well defined, that, where it cut an aspen tree, one-half of the head would be of a dark waxy green, while the other, still in the sunlight, showed its own dusty emerald hue. There was not that gradual fading out of the light, accompanied by an imperceptible transition to darkness, that marks the close of the day in the eastern half of the United States, but rather a sudden, vivid change, so that, whereas you were one moment in the broad glare of day, the next it was dusk all around you. As the shadow swept across the valley, it had about the speed of a sturdy walker, and, like him, slackened pace when it struck the hill-side opposite, and climbed laboriously to the top. In the East, the blue of the sky changed first to a lighter blue, then to an olive, deepened its tint slowly, and finally settled into a pale ashy gray; in the West, the blue changed to a darker olive, then to a delicate salmon, then to its final ashes-of-rose tint, permeated by a sombre glow. Hardly had the shadow gained the opposing crest, before the stars were out—Jupiter, Srvius and Venus—shining with a brilliancy such as the dweller in the lowlands never sees. Twilight there was none, or at least, so little, that before one could say "Lo! here!" or "Lo! there!" it was gone.

The breeze, which had blown, as is its custom here, steadily down the gulch all day, now turned, and blew as steadily up the valley. From its changed direction it brought to me savory odors of broiling venison and the fragrant aroma of coffee, and obeying its gentle call, I strolled slowly homeward, through the silence of the everlasting hills.

H. P. U.

MAINE CAMPING GROUNDS.

WE want to camp out this summer and fall in Maine, somewhere at or in the neighborhood of Moosehead Lake. We have looked over a goodly pile of FOREST AND STREAMS, and although there are very many articles about Maine, and very interesting they are, too, none are definite enough to afford us the aid we want to carry us up and give us a start when we get there. We want advice as to the quickest and least expensive way of getting to the best game country. Again, we would like to know what facilities of transportation we would be likely to find from Moosehead into the interior, whether we can obtain guides, horses, etc., at the Lake, and what it will be necessary for us to take, such as blankets, cooking utensils, tools, tent, and so on. And besides all this, can you put us in communication with some

person who has done the country? We are not tenderfeet—you understand—and have had our fun in Florida, Texas, New Mexico and Colorado. So, though entirely ignorant of the lay of the land in Maine, we will not be deterred by any prospect of being in a wild and lonely country.—T. AND J.

See last issue for notes in Moosehead Lake and Tim Pond. You might go directly to the N. Y. Kineo House and thence to a selected camp, or go to Tim Pond and strike out from there. For a camping ground in the Rangeley country write to Samuel Farmer, Phillips, Me. The same course is recommended to a Boston inquirer. Pentagon writes: "Will some of your readers who have camped out there tell me what the lowest total estimate would be for a party of four who wish to camp at Rangeley for twelve days in the last part of July, exclusive of railroad fares and outfit, and including tent and boat hire? Would it be necessary to hire a guide, and what would be the expense?" By writing to Mr. Samuel Farmer, proprietor of the Bardin House, Phillips, Me., Pentagon may get the particulars he requires. Moxie Pond, six miles from the Forks of the Kennebec River, has been recommended by some of our friends who have been there. The Forks are forty-five miles by stage line from Skohegan, the terminus of the Maine Central Railroad. Doubtless there are other equally desirable localities in other parts of Maine, of which some of our readers may be willing to tell us.

John Burroughs has camped at Moxie Lake, and records in the current *Atlantic* his delightful experiences there.

The traveler and camper-out in Maine, unless he penetrates its more northern portions, has less reason to remember it as a pine-tree State than a birch-tree State. The white pine forests have melted away like snow in the spring and gone down stream, leaving only patches here and there in the more remote and inaccessible parts. The portion of the State I saw, the valley of the Kennebec and the woods about Moxie Lake, had been shorn of its pine timber more than forty years before, and is now covered with a thick growth of spruce and cedar and various deciduous trees. But the birch abounds. Indeed, when the pine goes out the birch comes in; the race of men succeeds the race of giants. This tree has great stay-at-home virtues. Let the sombre, aspiring, mysterious pine go; the birch has humble every-day uses. In Maine, the paper or canoe birch is turned to more account than any other tree. Uncle Nathan, our guide, said it was made especially for the camper-out; yes, and for the woodman and frontiersmen generally. It is a magazine, a furnishing store set up in the wilderness, whose goods are free to every comer. The whole equipment of the camp lies folded in it, and comes forth at the beck of the woodman's axe; tent, water-proof roof, boat, camp, utensils, buckets, cups, plates, spoons, napkins, table-cloths, paper for letters or your journal, torches, candles, kindling-wood and fuel. The canoe birch yields you its vestments with the utmost liberality. Ask for its coat, and it gives you its waistcoat also. Its bark comes wrapped about it layer upon layer, and comes off with great ease. We saw many rude structures and cabins shingled and sided with it, and haystacks capped with it. Near a maple sugar camp there was a large pile of birch-bark sap-buckets, each bucket made of a piece of bark about a yard square, folded up as the tinman folds up a sheet of tin to make a square vessel, the corners bent around against the sides and held by a wooden pin. When, one day, we were overtaken by a shower in traveling through the woods, our guide quickly stripped large sheets of the bark from a near tree, and we had each a perfect umbrella as by magic. When the rain was over, and we moved on, I wrapped mine about me like a large leather apron, and it shielded my clothes from the wet bushes. When we came to a spring, Uncle Nathan would have a birch-bark cup ready before any of us could get a tin one out of his knapsack, and I think water never tastes so sweet as from one of these bark cups. It is exactly the thing—it just fits the mouth, and it seems to give new virtues to the water. It makes me thirsty now when I think of it. In our camp at Moxie we made a large birch-bark box to keep the butter in; and the butter in this box, covered with some leafy boughs, I think improved in flavor day by day. Maine butter needs something to mollify and sweeten it a little, and I think birch-bark will do it. In camp Uncle Nathan often drank his tea and coffee from a bark cup; the china closet in the birch tree was always handy, and our vulgar tinware was generally a good deal mixed, and the kitchen maid not at all particular about dish-washing. We all tried the oatmeal with the maple syrup in one of these dishes, and the stewed mountain cranberries, using a birch-bark spoon, and never found service better. Uncle Nathan declared he could boil potatoes in a bark kettle, and I did not doubt him. Instead of sending our soiled napkins and table-spreads to the wash, we rolled them up into candles and torches, and drew daily upon our stores in the forest for new ones.

POMPEII.—An illustrated review of popular and industrial archaeology and of art appears on our table for the first time. Its purpose is a happy one, and discovers all success in pursuing it. Its salutary announces the desire that archaeology, that science which to-day is the monopoly of a small number of scientific men, should for an hour or two each month don its severely precise cloak and, attractively clothed in the modern style, tell us the story of its deeds more simply than it has yet done.

The science is one which is itself most attractive, and which appeals to the highest tastes of the human mind. Pompeii, if it accomplishes what it has set out to do, will have rendered no small service to civilization. The review is finely illustrated. Augusto Melo, Rue de Chiaja, No. 209, Naples.

C. P. N., New York.—The early volumes of FOREST AND STREAM contained articles on the Muskoka region as follows: Vol. III. Nos. 8, 21 and 26; Vol. IV., No. 2; Vol. V. No. 1. In our issue of March 17, 1881, you will find a list of places where we get excellent "bass-skidded trout fishing, the south branch of the Muskoka is. Al. The head waters of the Nipissing River are hard to beat for the speckled beauties, and the Nanibuttygong or South River will hold its own with any of them. Trains for maskinonge, the Muskoka and Moon rivers are first-class, and I can safely say that French River cannot be beaten for maskinonge, pike and pickerel; and lakes Rosseau, Joseph, Spider, Turtle and Manitowabing and the hundreds of other smaller lakes cannot be excelled for the fine lunge and fair chance for black bass fishing. In the autumn deer are plentiful, partridge are found everywhere. Moose are killed in the vicinity of Lake Nipissing in good numbers, also wild geese and ducks. The routes to reach these sections are as follows: For Toronto per Northern Railway to Gravenhurst, thence by steamer to Bracebridge, and then by stage fourteen miles to Baysville, on Trailing Lake, for trout fishing on the South Muskoka and North rivers. For maskinonge fishing on the Muskoka and Moon rivers, take the steamer from Gravenhurst to Hoda. For bass fishing on lakes Rosseau, Joseph and Turtle, take steamer from Gravenhurst to "Pratt's." For trout fishing on the Maganetawan and the Nanibuttygong, or South river, take stage from Pratt's to Maganetawan Village thirty-seven miles, and for South River, stage twenty-four miles further north to Commonda. For bass fishing on Spider and Manitowabah lakes, take stage from Pratt's to Parry Sound twenty-four miles; and for French River, take steamer from Parry Sound to French River. Guides and canoes can be had at all the different places mentioned." Go to Phillips, boat from Baysville, and engage Allen or Alven Phillips as guide. See number referred to.

Natural History.

THE SEALS OF NORTH AMERICA.*

MR. ALLEN'S latest work renews and adds to the obligations which the scientific world already owed him. It is a fact which might easily escape the observation of one whose attention was not specially called to it that up to the publication of this work astonishingly little has been known of this highly-important sub-order of carnivora. It is true that many observations had been made on the group, but these were not at all in shape to be accessible to the general reader, but were scattered through a number of works—in books of hunting, of science, of commerce, of manufactures, and in the records of the proceedings of legislative bodies is to be found some fragmentary material bearing on the history of the seal family, but these fragments possess, when standing alone, but a slight value. To serve any useful purpose it was necessary that they should be collated, examined with care, sifted and woven into one harmonious whole. To satisfactorily perform a labor of such magnitude, in which scientific acquirements of the first order had to be added to a capacity for an enormous amount of labor, and to the most scrupulous exactness, there was required a master hand, and happily the work was undertaken by one who was, perhaps, above all others, best fitted to perform it. Those who are familiar with Mr. Allen's works, notable among which are his monographs on the buffalo, and on certain families of North American rodentia, will turn eagerly toward his latest volume, and, whatever their tastes, will find in it much to interest them.

The present work, which is published by the Interior Department, forms No. 12 of the Miscellaneous Publications of the United States Geological and Geographical Survey of the Territories, F. P. Hayden, geologist-in-charge. Of its 800 pages, 163 are devoted to the walrus family (*Odobænidæ*), 224 to the eared seals (*Otariidæ*), and 344 to the earless seals (*Phocidæ*). The last named family is the only one represented on our Atlantic coast, the common *Phoca vitulina* being abundant in winter along the New England shore.

The following extract from a review of this volume recently contributed by the writer to a daily contemporary, will serve to give our readers some idea of this work and its importance:

The pinnipeds, although so different in appearance from the typical flesh-eaters, represented by the dogs, cats, bears, etc., are really neither more nor less than amphibious carnivora. They are little adapted for progression upon the land, where their movements are much confined, but are truly at home in the water, for a life in which the modifications which they have undergone most admirably fit them. In form they are more or less fish-like, resembling in this respect the more truly marine mammals, such as the porpoises, whales and manatees. Their limbs have become true swimming organs, and, as their name implies, they are finfooted.

Of the three groups here treated, the walruses and the eared seals are far above the earless seals in the zoological scale, the latter representing much the most generalized type. The *Odobænidæ* and *Otariidæ* stand about on the same plane, and are united into one group or sub-order, *Gressigrada*, while the *Phocidæ* represent a second group of the same value, *Reptigrada*. The walruses, from their stout, awkward bodies and enormously developed canines, are widely different in appearance from the active eared seals, but the differences are superficial rather than structural.

The walruses are found only in the arctic seas. Various authors have alleged the existence of three or more species, but a careful examination of a large amount of material leads Prof. Allen to conclude that there are but two, one inhabiting the Atlantic and the other the Pacific Ocean. For the genus the time-honored appellations *Trichechus* and *Rosmarus* are discarded, and in their place, according to the laws of priority which govern scientific nomenclature, the generic name *Odobænus*, for some time in use among German zoologists, is adopted. Besides the two living species, fossil remains of walruses have been found, indicating the existence of two additional genera, *Alachtherium* and *Trichechodon*. As an indication of the exhaustive method which Prof. Allen has employed in the treatment of his subject we may quote some of the subjects into which he divides his article on "*Odobænus Rosmarus*," the Atlantic walrus. He gives as synonymy and bibliographical references, external characters, sexual differences, individual variations and variations depending upon age, measurements of skulls, dentition, fossil remains, geographical distribution, past and present, nomenclature, etymology, literature, habits and the chase, products, food, functions of the tusks, enemies and domestication.

To the general reader the past and present distribution of the walrus and its habits will no doubt prove the most interesting subjects in this list. The chase cannot be spoken of apart from its habits, for these habits have been scarcely at all observed except by those who have penetrated to its arctic home for the purpose of killing it. It is hardly necessary to state that, like all other large mammals, and especially like all those that furnish some useful commercial product, the walrus has found its worst enemy in man. During the sixteenth century the walrus was hunted for its tusks and oil, and Richard Fischer, speaking of the Island of Ramea (probably Sable Island), says: "On which Isle are so great abundance of the huge and mightie Sea Oxen with great teeth in moothes of April, May, and June, that there have bene fifteene hundreth killed there by one small barke, in the year 1591." "Thomas James of Bristoll," quoted by Hakluyt, says of the same island: "The fish cometh on banke (to do their kinde) in April, May, and June by numbers of thousands, which fish is very big; and hath two great teeth; and the skinne of them is like Buffes leather; and they will not away from their young ones. The young ones are as good meat as veale. And with the bellies of five of the saide fishes they make a hogshead of Traine, which Traine is very sweete, which if it will make sope, the King of Spaine may burne some of his Olive trees."

Early in the seventeenth century the morse, as it was generally called in the old works, was slaughtered on the coast of Northern Europe in enormous numbers. The account of the Jan Mayen walrus "fisheries," as compiled from the writings of that day, tells a pitiful story of wholesale slaughter, and fully explain, if any explanation is needed, the rapid disappearance of the walrus from localities where it once abounded. Even as recently as 1852 these animals were found in such numbers on some of the Ten Thousand Islands as to furnish the material for the following account by Mr. Lamont in his "Seasons with the Sea-horses." He says: "It seems that this island (one of the south-westernmost of the group) had long been a very celebrated place for walruses going ashore, and great numbers had been killed upon it at different times in by gone years. In August, 1852, two small sloops, sailing in company, approached the island, and soon discovered a herd of walruses, numbering, as they calculated, from 3,000 to 4,000, reposing upon it. Four boats' crews, or 16 men, proceeded to the attack with spears. One great mass of walruses lay in a small sandy bay, with rocks inclosing it on each side, and on a little mossy flat above the bay, but to which the bay formed the only convenient access for such unwieldy animals. A great many hundreds lay on other parts of the island at a little distance. The boats landed a little way off, so as not to frighten them, and the 16 men, creeping along shore, got between the sea and the bay full of walruses before mentioned, and immediately commenced stabbing the animals next them. The walrus, although so active and fierce in the water, is very unwieldy and helpless on shore, and those in front soon succumbed to the lances of their assailants; the passage to the shore soon got so blocked up with the dead and dying that the unfortunate wretches behind could not pass over, and were in a manner barricaded by a wall of carcases. Considering that every thrust of a lance was worth $20, the scene must have been one of terrific excitement to men who had very few or no dollars at all; and my informant's eyes sparkled as he related it. He said the walruses were then at their mercy, and they slew and stabbed and slaughtered and butchered and murdered until most of their lances were rendered useless and themselves were drenched with blood and exhausted with fatigue. They went on board their vessels, ground their lances, and had their dinners, and then returned to their sanguinary work; nor did they cry 'Hold, enough!' until they had killed *nine hundred* walruses, and yet so fearless or so lethargic were the animals that many hundreds more remained sluggishly lying on other parts of the island at no great distance. * * * When I visited the island six years afterward, there still remained abundant testimony to corroborate the entire truth of the story. The smell of the island was perceptible at several miles' distance, and on landing we found the carcasses lying as I have described them, and in one place two and three feet deep. The skin and flesh of many remained tolerably entire, notwithstanding the ravages of bears, foxes, and gulls. So many walruses have been killed on this island at different times that a ship might easily load with bones there. * * *"

Of the Pacific walrus less is known, but enough to show that it is by no means so active and fierce as its Atlantic congener. The accounts given by Mr. Elliott and by Capt. Scammon in his "Marine Mammalia" are the most extended and trustworthy, but even these are lacking in many important points. Affection for its young is a touching characteristic of both species of this genus, and it is the practice among walrus-hunters, as among whalers, to harpoon, when this is possible, a calf. The cries of the little animal not only bring its mother to the rescue, but the whole herd, even if in headlong flight, will turn about on hearing the screams of a "junger" and attack their pursuers with determined fury.

The two enemies, after man, from which the walrus has most to fear are the great white bear and the orca, or killer. The latter animal, a carnivorous cetacean, destroys the young also of both the fur seal and the sea lion.

Passing now to the family of the *Otariidæ*, or eared seals, we find accounts of seven species of unquestioned validity, and of two others the authenticity of which is as yet doubtful. This family, containing as it does, the fur seals, is, from an economic point of view, by far the most important division of the group under consideration. The walrus yields valuable oil and a little (from three to four pounds to the individual) ivory, while the hair seal produces nothing of special commercial value except its oil, the skins being but little used except by the natives of the countries which the animals inhabit. This is true also of such of the eared seals as are without fur, but the value of the pelts of *Callorhinus ursinus* and other species of fur seals probably at present equals or exceeds that of all the other products of the seal tribe.

The history of the fur seals from the date of the discovery of the value of their products up to within a short time is only a repetition of the old tale of slaughter which has been narrated again and again in connection with each species of the marine mammals. Captain Fanning, in his "Voyages to the South Seas," states that in a few years there were taken, toward the close of the last century, a million sealskins on the island of Masafuera. This little island is on the coast of Chili, and is about 25 miles in circumference. Capt. Scammon states that in 1801 the sealing fleet which was cruising off the coast of Chili, consisted of no less than thirty vessels, almost all of which bore the American flag. In the year 1800 there were taken at the Georgian Island 112,000 fur seals. During the year 1820 and 1821 over 300,000 were taken at the South Shetland Islands, with the result that, at the close of the second year, the species was almost exterminated. From the Antipodes Islands, off the coast of New South Wales, 400,000 skins were obtained in 1814 and 1815. Fur seals were killed at about the same time in the Aleutian Islands at the rate of 200,000 per year; and but for the fact that the market was so glutted with skins that they did not sell for enough to pay the cost of transportation, the animals no doubt would have been exterminated on these islands, as they have been elsewhere.

Steller's sea lion is the largest of the eared seals, a full-grown male measuring from 13 to 14 feet in length, and weighing considerably over 1,000 pounds, though the females are much smaller, being only 8 to 9 feet long, and weighing one-third less. Its range extends along the north-west coast of America from the Farallone Islands to latitude 61 deg. north, or about to the southern limit of floating ice, and it occurs on the Arctic shore of the Pacific as far south as the Kurile Islands. The sea lion of California is a different species, somewhat smaller than Steller's. To the inhabitants of the Pribilov Islands the sea lion is scarcely less important than the fur seal. The skins are used for covering the canoes employed for hunting the sea otter; the linings of the throat, after being tanned, serve for making the legs of boots; the intestines are sewed together to make waterproof suits; the stomachs are cleansed to contain oil, the sinews are stripped into threads, and the flesh is dried and preserved for use through the Winter.

The accounts of the habits of Steller's and California sea lions, as observed on the western coast of America and the islands of the Pacific, which are quoted from Mr. Elliott and Capt. Scammon, are extremely interesting, as is also an account of the breeding of the sea lion in captivity, the only

---

* History of North American Pinnipeds. A monograph of the walruses, sea lions, sea bears and seals of North America. By Joel Asaph Allen, Washington, Government Printing Office, 1880.

instance of the kind on record. This record of the habits of these little-known animals is due to the careful observation of Mr. Frank J. Thompson, of Cincinnati, who has charge of the Zoological Garden, and who contributed this observation to the columns of FOREST AND STREAM.

The fur seal is less in size than the sea lions, but the difference between the males and females is still greater than in that genus, the males weighing from 500 to 700 pounds, and the females from 80 to 100 pounds. Opportunities for observing the habits of the fur seals have, of course, been exceptionally good at the Pribilov Islands and the material for a biography of this species is very full. But little, however, is known of their habits except during the time that they remain on the islands, that is from April to November. Where they pass the Winter is as yet a matter only of conjecture, and further observations on this point are needed.

Of the habits of the *Phocidæ*, or family of earless seals, though these are much more numerous in species than the groups before mentioned, perhaps even less is known than about the *Otaries*. From their mode of life they offer less opportunity for observation and study than the latter. Prof. Allen mentions nine genera of earless seals, represented by seventeen species, of which seven, or possibly eight, are found on the coast of North America. The business of sealhunting has been, and is still, followed with such energy that several species are threatened with extermination, and in more than one case, notably that of the sea elephant (*Macrorhinus angustirostris*), the pursuit of the species has been abandoned, as the animals are no longer to be found in any numbers. As some indication of the yearly destruction of seals, the following figures are given: The annual catch of the West Greenland "fishery" is estimated by Dr. Rink as about 89,000 seals. Here they are captured by the natives with harpoons or shot with rifles. In 1873 the "catch," so-called, of the Newfoundland fishery is said to have been 526,000. In the Jan-Mayen, or Greenland seas, the annual catch is about 200,000, and so wasteful and improvident is the slaughter of breeding females that the European nations interested have all passed more or less stringent laws for the protection of these animals during certain seasons. With regard to the "fisheries" of the Kara Sea and Nova Zembla, the White Sea, the Caspian Sea, and the North Pacific, we have no figures, but from all the accounts which we have it is certain that a shortsighted policy of indiscriminate slaughter is pursued in all these localities.

It is, perhaps, not generally known that the Caspian Sea an inland brackish lake having no natural communication with the ocean, is the seat of a most important sealing industry—one, in fact, second only to that of the Jan-Mayen seas. The figures given by Schultz for six years ending with 1872 will give some idea of the magnitude and importance of the "fisheries" of these waters. The number of skins taken in 1867 was 131,723; in 1868, 150,947; in 1869, 128,701; in 1870, 137,030; in 1871, 90,468; and in 1872, 156,759, or an average of about 130,000 for each year. The species taken here is the *Phoca caspica*, by some authors regarded as identical with our common *Phoca vitulina*, but considered by Prof. Allen as a perfectly good species. It is a small animal, weighing from 75 to 150 pounds, or about as much as the common seal found in winter in Long Island Sound and sometimes in the Bay."

It will be seen from what has been said above that the history of the seal is simply one long tale of butchery, and that the extermination, certainly, of the more important groups, has many times been threatened. The fact that their resorts are distant from the haunts of man has alone protected them up to this time. The governments of Europe most immediately interested have of late been legislating for these animals, and it is high time that the United States and Canada took some effective steps in the same direction.

A DUCK NEW TO NORTH AMERICA.

FROM advance sheets of the Proceedings of the United States National Museum for 1881 we learn that another new bird has been added to the North American fauna. The story of the identification of the specimen, which has been in the National Museum for nine years, is worth telling. Mr. Ridgway says:

"About nine years since (February 2, 1872), Mr. George A. Boardman, of Calais, Maine, sent to the Smithsonian Institution a mounted specimen of a duck obtained in Fulton Market, New York city, and supposed to have been shot on Long Island Sound, which he was unable to determine satisfactorily, but which he supposed to be a hybrid between the redhead (*Aythya americana*) and some other species. The specimen was in immature plumage, with the feathers of the first livery much worn, while those of the new moult, which were generally interspersed, indicated a very different garb when the moult should have been completed. At the time the specimen was received at the Smithsonian I (also supposing it to be a hybrid) made comparisons with nearly, if not quite, all the American species of ducks, but was unable to get the slightest clue to its parentage. It was then put back in the case and not again thought of until a few days ago, when in removing the specimens with a view to their re-arrangement I happened to take the one in question in one hand and an adult female of the European rufous-crested duck (*Fuligula rufina*) in the other; and having the two thus in a very favorable position for comparison, I at once perceived a striking similarity in general appearance and in the form of the bill, which induced me to extend the examination to an adult male, the result being that no question remained of the bird in question being an immature male of *F. rufina*, a species hitherto not detected in North America. I have written to Mr. Boardman, requesting full particulars as to circumstances and date of capture, but have been unable to elicit any further particulars than those given above.

"As the species has never been described in any work on North American birds, I give below a description of the three stages represented in the collection of the United States National Museum, as well as of the downy young, the latter quoted from Dresser's 'Birds of Europe;' also the principal synonyms and references, compiled from the leading European authorities."

For the benefit of our duck shooting readers we quote below Mr. Ridgway's very full description of adult male and female and immature male:

HAB.—Southern and eastern Europe, northern Africa and India; occasional in northern and central Europe, and casual in the British Islands; accidental in eastern U. S. (New York market; Boardman; spec. in U. S. Nat. Mus.).

Adult Male (57207, U. S. Nat. Mus.; Hungary, W. Schluter). Head and upper half of the neck delicate pinkish cinnamon, or vinaceous-rufous, the full, soft crest (occupying the entire pileum) paler and less reddish, the feathers light buff at tips; lower half of the neck (including a narrow stripe which extends up the nape to the occiput), neck and jugulum, breast, abdomen, anal region, crissum, upper tail coverts, and rump brownish black, deepest on the jugulum, and with a decided dark-green gloss on the upper tail-coverts. Back and scapulars uniform light umber-drab or Isabella-color; wing-coverts and tertials brownish gray; speculum white basally, changing gradually into pale grayish, then succeeded by a rather broad subterminal bar of dusky, the tip narrowly and abruptly white; four outer primaries with outer ends dusky; inner quills pale ashy, with broad dusky ends; tail dull dark grayish. A broad bar or transverse patch across anterior scapular region, anterior border of the wing, lining of the wing, axillars, and a very large patch covering the flanks and posterior half of the sides, pure white. "Bill bright vermilion-red, the tip white; irides reddish brown; legs orange-red. Total length 21 inches." (DRESSER, B. Eur. pt. xxii.) Wing, 10.30; culmen, 2.00; tarsus, 1.50; middle toe 2.25.

Adult Female (57209, U. S. Nat. Mus.; Hungary, W. Schluter).—Crest much less developed than in the male, light hair-brown, this color descending to the level of the lower border of the eye, and posteriorly continuing in a narrow stripe down the nape; rest of the head and neck very pale ashy, as are also the lower parts in general; jugulum, sides, and flanks light raw-umber brown, the tips of the feathers lighter; anal region and crissum uniform light drab, the latter whitish terminally. Upper parts in general umber-drab (the wing being more brownish than in the male), darker on the rump; white patch at base of scapular region wholly obsolete, and white border to the wing indistinct; speculum pale ashy, becoming gradually dull white basally, and brownish dusky subterminally, and with a narrow white terminal margin as in the male. "Eyes hazel; beak blackish, with a pink tip, a portion of the lower mandible being yello pink; legs and feet pinkish, webs blackish." (DRESSER, *l. c.*) Wing, 9.90; culmen, 1.90; tarsus, 1.50; middle toe, 2.20.

Immature Male (61957, U. S. Nat. Mus.; vicinity of New York city, Feb, 1872, G. A. Boardman).—Similar in general appearance to the adult female as described above, but crest much less developed (the tips of the feathers much worn) and decidedly more reddish in color; sides and under parts of head thickly interspersed with cinnamon-colored feathers (new moult); the jugulum, breast, and under posterior parts also mixed with black feathers, indicating the approaching adult livery; white patch at base of scapular region plainly indicated, and broad white border to anterior portion of the wing very distinct; speculum much as in the female, lacking the distinct subterminal dusky bar of the adult male. Wing, 9.80; culmen, 1.80; tarsus, 1.50; middle toe, 2.15.

A MORNING'S WALK.—Taunton, Mass., May 7, 1881.—5 A. M., wind south, thermometer 50 deg., foggy. No school to-day. Frederic, a boy 11 years old, wants to go to the trout pond to see and feed the trout. We started at 5.30. The birds were singing merrily, and he proposed to take the names of all that we saw, and send them to the FOREST AND STREAM, a paper he thinks much of. Last autumn there were flocks of perhaps hundreds of English sparrows about our streets, but there are not one-tenth as many now as there were then. But our native or summer birds are as plentiful as usual. In walking three-and-a-half miles on the Taunton and New Bedford R. R., we saw 1 fish hawk, 4 hen hawks, 3 sparrow hawks, 8 crows, 6 blue jays, 4 red thrashers, 6 peewees, 14 barn swallows, 25 bank swallows, 12 or 15 robins, about the same of bluebirds, and flocks of blackbirds, 2 bobolinks, 1 humming-bird, 6 marsh-quails, 4 yellow-birds, 5 woodpeckers and a great number of smaller birds. We heard quite a number of quails whistle. They are quite plenty here, but partridges are not. We let the dog work along by the side of the R. R. where he started 1 partridge and 4 woodcocks, three of them in air at one time, and a pretty sight it was. We arrived at the springs about 7.30. There were two hounds following rabbits as we went up the brook. One rabbit, about one-quarter grown, or perhaps six weeks old, attempted to cross the trench that runs to the pond, and fell in, and was quite dead when I got him out. We also saw 3 red squirrels and 1 gray one. The dog worked on some good snipe ground, but did not start any. I have not seen one this spring.—C. B.

NOTES FROM CANADA.—Niagara, May 16, 1881.—I send you, to-day, per sample, a little bird that was picked up dead in my yard this A.M. What kind of a bird is it? I noticed, the other day, some people fishing for black bass on the other side (N. Y.) of the river, just off Fort Niagara. I thought the close season was not up until June 1? Below I give you the arrival of several of the birds here: bluebird, March 14; robins, about the same time; swallows, April 19; cat-bird and oriole, May 5; crows were here off and on all winter. Have heard of no snipe this spring; they are protected here by the game laws. The "Cowreens" have left us. Although we are in Canada, a country supposed to abound in ice and snow and wolves, the black Hamburg grape is grown here out doors, and we have as fine peaches, in their season, as can be grown.—W. S.

The specimen sent is a rose-breasted grosbeak, one of the most beautiful and sweet-voiced of our birds. The bass season in New York does not open before June 1.

SNAKES CLIMBING TREES.—Webster City, Iowa, May 10, 1881.—While passing over the battlefield of Belmont, in the summer of 1863, I heard a slight noise just over my head. Looking up I saw, in close proximity to my face, and resting upon the leaves and twigs of a pawpaw tree, one of the small, pale-green snakes so common in that region, and sometimes met with here. As I was on horseback, the snake was seven or eight feet above the ground. The tree was six or eight inches in diameter. How the snake got up there I did not know, but he seemed perfectly at home on his airy perch.—CHARLES ALDRICH.

GUIDE BOOKS OF THE SEASON.—"Homes and Sports Along the Erie. A directory to hotels, boarding-houses, lakes and streams in the romantic regions near New York reached by the Erie Railway." This is a useful epitome of information for city residents who are looking for summer boarding places or who want to take a flying trip into the country. Sent free by John N. Abbott, General Passenger Agent N. Y. L. E. & W. R. R., New York city.

"The Hills and Homes of Berkshire." A pamphlet setting forth the summer attractions of the Berkshire hill country. By Clark W. Bryan, Great Barrington, Mass.

Game Bag and Gun.

THE HAUNTS OF THE RUFFED GROUSE.

WING SHOOTING VS. TREEING.

HAVING noticed the reports from New Jersey of the mortality of 40, 60, and 100 per cent. of quail and ruffed grouse "from the effect of cold and snow," I cannot but think, with all due respect for your reporters' veracity, that in relation to ruffed grouse these reports come mostly from hearsay or a superficial knowledge of the habits of this bird, and should be corrected as being liable to mislead the amateurs in forming a just estimate of their valuable qualities for cold climates. Some of them seem to make no distinction between the quail, whose food supply is liable to be cut off by snow at any time, and the ruffed grouse whose ample larder hangs in tempting display far above the possible reach of this enemy. Admitting that a winter like the past may be more trying to the constitution of game raised in a warmer climate than this, I still think that a bird that can make a bountiful meal off a handful of birds and a warm sumptuous couch from a snow bank (thawing the snow considerably where they sit over night) will "stand a pile of weather."

I suppose that there is no game bird on this North American continent whose habitat covers so wide a range, of whose habits and peculiarities the average sportsman is so poorly informed as this same namesake and especial friend and protege of mine. There is a larger class that fairly detest the name of this king of birds; for is not this the chap that has so many times outwitted their half-broken dogs and caused them to display anything but desirable field qualities, and are not they the gentlemen that have been the butt of so many jokes and caused so much fun by their constant misses and striking display of "grouse fever?" They affect to dispise the lordly grouse and in the same breath rave about the beauties of woodcock shooting, a bird which (in my opinion) bears about the same comparison to the noble grouse that a bull butterfly does to a December quail. In fact the warbling, fluttering rise, short flight and abrupt, ungraceful descent of a summer woodcock strongly re-embles the action of those overgrown butterflies, which boys chase and capture with sticks.

There are also many aspiring youths that go tearing and smashing through the brush and screaming at their dogs and come home and report "no birds this year," and all this when they have unknowingly flushed more grouse that day than they ever killed in their lives. The secret of their seeing no birds being that "Umbrellas tetrao" not fancying so much racket makes a little run through the first thicket and, with a spring and a few strokes of his powerful pinions, quietly sails to some distant thicket without "showing his hand at all." And the game reports of our non-sporting, noisy farmers and lumbermen are usually still more inaccurate.

Meeting a neighboring farmer, in March, I asked him if he had seen many grouse, while lumbering this winter. His reply came quickly, "Not a durned one, and what's more I knew last fall, when I seen near a dozen blooded pinters and setters at your kennels and heerd the crackin of your infernal old Parker gun every day, that there wouldn't be scarcely a bird left within ten mile o'here; and what few there was left has all froze to death long ago." My reply was that if he would give me half an hour's time for two or three nights I would show him more grouse than he ever saw. He quickly consented thinking to enjoy my discomfiture.

Half an hour before sunset I quietly took him to a hill one half mile back which commanded a view for half a mile of a secluded valley and mountain side, covered with a vigorous growth of young timber, largely yellow birch. This was backed by a heavy spruce forest, interspersed with frequent small swamps and dense thickets of hemlock and the whole well back from civilization. Seating himself the granger grimly bade me "fetch on yer partridges." We sat in silence less than ten minutes when *whiz* came a brown streak from a dense thicket on his mountain lot, and a fine cock grouse struck a tall birch opposite, his glossy ruff glistening in the sun, as he nipped a few buds, and finding them rather tough descended to the smaller growth, where he made a hearty meal unconscious of our proximity. Before he had finished, his kinsmen began to arrive from various directions until there were fifteen in sight up and down the valley, all brisk and strong as game cocks. When the first bird arrived a look of blank astonishment surmounted the granger's phiz; and as they continued to come in, his eyes and mouth continued to extend and when the show was over and we turned homeward he merely gasped "I'd no idee, don't tell the boys on't," and actually kept silence until home was reached. However, I hauled him out two nights more for half an hour to favorable localities far enough apart to insure a new lot of birds each time, and showed him no less than fifty fine vigorous grouse in these three trips. The last night I labored him up fearfully and he ejaculated "I'm beat! but for massy sake don't tell the boys on't, for I have told everybody that every last bird was dead."

His mistake consisted in supposing them all dead because he saw none in their summer haunts, and if he happened to go through their winter haunts he made so much noise that he could get no sight of them

And, by the way, speaking of grouse reminds me of a little incident that occurred a few days since. Happening in at the hotel in a neighboring town, I found fifteen or twenty young men who had lately formed a shooting club, purchased new breech-loaders, etc., and were "going in for some fun," as one of their number stated. After discussing various matters pertaining to sport, the subject of shooting grouse from trees came up, whereupon one of the leading members of the club took the floor and stated that he had been "reading up" on sporting matters generally for several months past, and that he had been particularly impressed by several letters to the FOREST AND STREAM from men who, he was confident, would scorn the imputation of shooting a quail while sitting, describing the best dog, best methods, etc., for obtaining a large bag of grouse by shooting from trees. He further stated that this kind of slaughter had always rather disturbed his sense of manhood and fair play, but that, inasmuch as many of these letters came from men that scorned the quail pot-hunter, and had also received the sanction of silence (if nothing more) from so eminent an authority as the FOREST AND STREAM, he had come to the conclusion that his sense of honor had perhaps been rather over-sensitive on this point, and that he must have been misinformed as to the general public sentiment among sportsmen in relation to this matter, and that in view of the foregoing and also the fact that every other kind of game bird that we have is speedily approaching annihilation, and further, that man

much as the leading sportsmen are endeavoring by hook or by crook to obtain the largest bags of grouse possible, and last, but not least, that if we fail to grab for this public pie with the rest we shall not get a piece big enough to swear by; therefore I make the motion that we establish a fund "at once to be appropriated to the purchase of a pack of the best 'treeing dogs' that can be found, no matter of what breed, pedigree or style so that they procure the 'heavy bag.'" I regret to record that the closing sentence of this harangue was received with shouts of acclamation, and the motion was carried without a dissenting vote.

Perceiving the urgent need of a little missionary work, in which these youthful knights of the trigger stood, I took the liberty of introducing myself, and labored long and earnestly to convert them from the error of their ways. It was little use to present the argument that their standing with neighboring sportsmen and clubs would be affected by this course, for, said they, "Are they not all in the same boat with us, only, perhaps, a little more sly about it?" But their main stronghold that they fell back on and refused to give up when routed elsewhere, was the fact that there had been published in the FOREST AND STREAM for the space of nearly a year frequent letters, giving full directions for the most deadly method of accomplishing the destruction of this beautiful game bird by the most ignoble pot hunting, and from among all the numerous throng of the FOREST AND STREAM readers not a single voice had been raised to plead for fair play for the king of game birds. Here they had me "on the hip," and I pleaded guilty, but urged extenuating circumstances in the form of sickness in my family and unusual pressure of business, and also the constant expectation that some noble knight, equal to the occasion, would arise to defend the right. I reminded them that the editor of the FOREST AND STREAM was not responsible for the views of correspondents, and that to my certain knowledge he was the avowed enemy of pot hunting in every form. And as for the authors of the above letters, I would guarantee that they would not advise any one to take measures to exterminate the only resident game bird in the vicinity. I pictured to them the contrast in the feelings of the owner of a pot-hunting ill-bred cur, and those of the possessor of a finely bred dog well broken for legitimate manly sport, and a constant honor and delight to his master at home or afield, the exquisite pleasure of seeing such a one at work heightened at each shot by the excitement attendant upon all games requiring skill and "nerve," and the proud satisfaction of having honestly earned their spoils in a fair, manly way. Observing signs of a truce, I dropped the question of right and honor, and brought to bear what proved (Oh, FOREST AND STREAM, how can I confess it!) to be one of the heaviest guns in my armament, by urging that they never, no, never, could become good wing shots, especially on ruffed grouse, if they indulged in even occasional sitting shots. And by further appealing to human nature, I reminded them of the fact that if they persisted in their course they might as well hang their new breech-loaders "on a willow tree" for a few years, as such murdering pot-hunting would leave them no use for them. I called their attention to the growing popularity of this bird, as evidenced by our sporting papers of late and predicted that at no very distant date the party that took sitting shots at King Umbellus would be shunned by true sportsmen as fully as the pot-hunting quail shooter now is. And finally, by having a good friendly "talk" with them, and promising all the assistance in my power to help them on in this new way, they came to the conclusion that true sport lay only in this direction, and recorded a unanimous vote to "*take no sitting shots*" for one season at least. And, between you and me, if they stick to it for one season, I am not a whit concerned about their taking the back track. RUFFED GROUSE.

Ashfield, Mass.

PENNSYLVANIA WOODCOCK HUNTING.

See old Duke in stately statue
Rendered rigid by the scent,
And his comrade, younger Bruno,
On a graceful "back" intent.

WHILE deprecating the fact that the laws of our State allow the hunting of the woodcock prior to September 15, at which time both ruffed grouse and woodcock should become lawful game, yet each 4th of July for the last half decade (excepting when the latter date has fallen upon the Sabbath, and in that case the 5th) has found me in the company of a choice companion at break of day, donned in my corduroys with gun in hand and dog at heel, ready to breast the rank growth of nettles, willows, alders and other varieties of spontaneous vegetation with which the islands of the Allegheny River at this season are matted, in quest of *Philohela minor*.

Of the nettles let me say that they frequently attain the height of six and even seven feet and grow as densely as standing wheat. Not seldom have my hands and feet received from a dozen to twenty of their aggravating points simultaneously, while the dog, if unused to the ground, will refuse to be initiated. The birds are seldom if ever found here, but lying in the path the nettles must often be passed through.

The foliage is so heavy that the scorching rays of the sun are excluded, and the ground remains damp and cool, and the soil being of a rich, sandy nature, swept over and enriched yearly by the vernal freshets, requires no manure where cleared for cultivation and is *par excellence* the feeding ground of the cock, being easy for them to bore, and furnishing an abundance of food. There is the towering button ball and leaning shady butternut with branches drooping to the ground, beneath which or close at hand it were almost an exception not to flush one or more birds.

These islands are usually bordered with a matted growth of dwarfish willows which serve to retard the attrition of the freshets, as where the willows whose roots intertwine are lacking these islands yearly decrease in area, and during my recollection of some fifteen years a number of them within a length of fifty miles on this river have wholly disappeared from the above causes.

In these willow borders, which are about fifteen yards in width, and through which it is necessary to force a passage at any season, and in which a clear space of a gun's length were hard to find, many a noble bird may be flushed before the quivering form of your dog—yes, and not unpardonably missed, too, but as he darts over the tops of the willows your companion on the outskirts may cleverly "wipe your eye" as the shot then usually is an easy one.

Perhaps 25 per cent. of the area of the islands is overgrown by a particular species of weed of a matured height of three feet whose name I have never heard. Towering above this are numerous button balls and alders in occasional spots, and among these weeds at certain times the heroes of my tale affect in fair numbers, affording the easiest of shooting as they clear the tops of weeds and present themselves to unobstructed view, affording no excuse for a miss.

As a medium the shooting as it is found, say September 15, in the cornfields affords the keenest, most enjoyable sport. The birds have about recovered from the effects of their moulting and the young and old birds are hardly distinguishable from each other.

By the way, speaking of the moulting of woodcock, the writer has never noticed a diminution of their numbers at that season from their accustomed ground during a period of five years, during which time he has made a number of trips in their quest each year; but he has noticed, however, an abnormal disposition on their part to skulk and hide under piles of dead brush and weeds from which they stubbornly refuse to flush for some time.

The corn-stalks are then well matured and tower rankly above the head. Your dog has reached the acme of his steadiness, being tempered by the previous month's sun and work. The sun is yet powerful and even more penetrating than in July or August, yet is toned down by the first whisperings of the fall breezes. Your dog systematically weaves back and forth through the waving grain, which is interspersed with barely enough weeds to cover the bird.

Suddenly your dog checks his speed into the most careful of gaits, and in a moment after, as you mechanically throw your gun into position, becomes rigid. Carefully passing ahead, or of necessity stepping directly over him, most likely a few yards to the right or left of where you expected, the bird flushes with a twittering whistle and a rustling as his wings strike the leaves, affording but a momentary glance as he barely raises the tops of the corn—nothing but the waving leaves to mark his flight. Quickly, yet not too quickly, but thoughtfully deliberate, bring your gun into line with the course he has marked out. If a straightaway shot, fire—yes, a score of times with barren returns if the man behind the gun be a novice—but to the graduate such shots will be successful in perhaps three-quarters of the chances offered. There is an unexplainable knack in it, either natural or acquired, and when the latter you fail to see the difference in your shooting, excepting that now you kill when before you missed. Should the bird cross on either hand, the most scientific points of your shooting education are called into play. Throw your line of sight to the rear of the bird, guided as before by the nodding leaves, and pass it forward until your "eye of faith" sees the point of his bill, and as you press the trigger and the charge showers the tassels of the corn, your companion on the opposite side of the field asks, "Did you get him?" and you answer that you don't know, feeling pretty sure that you did all the same, and adding a moment later, as your dog, knowing fully as well as yourself, rises in obedience to instructions and goes carefully forward lest another bird lie before him, and returns holding up to your hand the rufus beauty. "Yes, I did get him," at the same time smoothing out the ruffled plumage of the bird and caressing the equal partner of your sport or dividing your lunch evenly with him.

Of a goodly number of woodcock which fell to the writer last season perhaps fifty per cent. were killed fully a second after completely disappearing amid the foliage, although the writer makes no pretensions to being a crack shot or a really good one.

While disliking to hunt alone, yet it is much preferable to hunt in company with the dog only to consorting with one of those uncongenial spirits (they are not mythical beings, either) who invariably claims to have killed the bird when both fire together, or who ever betrays an obnoxious ambition to lead the score and is never barren of explanations as to the reason if he fails in so doing. Fully one-half of the sport consists in a genial companionship.

A team (two) of hunters are best adapted for this work if well matched in gentlemanly qualifications, especially between themselves, in which case there is hardly a sport comparable to it, and many such a day have I enjoyed, and I hope many are yet in store for me. It hardens the muscles, gives zest to the appetite, clears the brain after months of poring over monotonous journals and ledgers, and, well stuck to throughout a hot summer's day, converts straw, or even corn-husks with an occasional cob (within my experience), into downy feathers, and, if your sleep has been uncertain, returns at least a night of solid slumber for every day thus invested.

Reader, go thou in the proper season and do likewise.

BELL-MUZZLE.

HOUNDING VS. STILL HUNTING.

WE continue the publication this week of the numerous replies received in response to our request for experience and observation on the subject of deer-hunting. There is no necessity of calling attention to the value of the data we are collecting and setting forth here. The views are those of experienced, well-informed observers. The particular points of the inquiry are as follows:

1st. What is the character of the country referred to?
2d. What is the prevailing method of hunting deer?
3d. Describe hounding deer, as practiced in the section referred to, and its effects. Does it drive deer out of the country?
4th. Describe in like manner still hunting and its effects.
5th. What class of men kill the most deer?—market hunters or parties of sportsmen?—residents or non-residents?
6th. Would resident sportsmen approve of a law prohibiting hounding deer? Would the residents assist in enforcing it?
7th. Would they approve of a law permitting hounding, but prohibiting the killing or capturing of the deer after it has been run into the water? Would such a law be practicable?
8th. What is the open season for deer?
9th. What are the winter habits of deer, so far as you have personally observed them.

DEER IN FLORIDA.

The communication from Mr. Hughes in your issue of February 24 is well put. I do not advocate deer driving as the sport par excellence, but why it should be condemned as illegitimate, I am unable to understand. Certainly the sport attendant is of the very finest. If there is anything more exciting, more thrilling than standing on a runway and listening to the far-away music of the hounds as they scent the game, then, with devious course or direct run, bring the bounding deer nearer and still nearer you, the music momentarily growing louder and more distinct, until the noble game bursts upon you, to be skillfully dropped or to turn and tantalizingly wave his flag in your face as he goes hence, if there is anything more enjoyable than this, some one else must hunt it up. And yet I never shot a deer from a runway, nor do I own dogs. I came very near getting a shot, or being shot, off my mule once when driving. I was aboard Sampson, a sixteen-hand game-and-gun-shy monstrosity of a mule, whose lively ears would show more game in field or forest than my eyes; and a companion afoot was in a strip of hammock bordering the river where the dogs had winded deer. I stopped Sampson, cocked my gun, and awaited developments. The mule's ears worked nervously and I gathered the reins. Presently a dog yelped, then a rifle cracked and Aleck sung out "Look out," and I heard the shrubs rattle and caught a glimpse of a buck as he rose and fell among the tall palmettoes, coming directly toward me, but that glimpse was all I got. Sampson whirled, and I pulled, not on the trigger, as I wished, but on the reins. I pulled, and he whirled, until the circus that ensued must have been a funny sight, and I lost all direction of the buck until I got the beast partially stopped, when the deer was a hundred yards away, going like the scared deer he was. I sent a load of buckshot after him, but they failed to find him, and Sampson indulged in some more lofty tumbling.

But, although I never killed a deer on a "stand," and but seldom indulge in the pleasure of a "drive," I can fully appreciate the sport that accompanies it. All the deer I have ever killed have been either shot still or fire hunting, both of which I very much enjoy; but if I were in a locality where still hunting were practicable, that method would be my favorite. When a sportsman takes the field, he goes first of all to get game, that is the primary object. He may and ought to combine other pleasures with it—sights and sounds of nature, tints of sky and foliage, beauty of bud and blossom, of shimmering stream and shady wood; but he goes to get game, else would he leave his Scott or old "pot-metal" at home, and enjoy these other things without impediments.

Now, what success, think you, he would have still-hunting in a Florida hammock, where saw and cabbage palmetto, inextricable confusion of vines, bushes and all the rank growth and tangle natural to such places exist, and where deer love to resort after their night rambles? A deer would hear a hunter long enough before he got anywhere near him to take a nap and think about it before he got up and off, and when he did the hunter would be none the wiser. Still-hunting would be folly in such places. In the neighborhood of such spots, from September to March, deer seek the open pine and black jack lands at night to feed on acorns and such herbs as they can find, so that they must either be driven with dogs or fire hunted if shot at all. The day finds them securely hidden in the hammock. A method of hunting which will answer in one locality will not work in another.

As to dogs running deer out of the country, I do not believe it. Deer become accustomed to dogs easily, and well understand how to double and outwind them. Two years since while still-hunting in the more open country south and west of here, I heard, one evening when returning to camp, the notes of a hound some distance away, and in a few moments three deer appeared on my left, running on a course at right angles to mine, and about a hundred yards in front. I stopped and watched the game in progress. The deer were in no hurry at all, but loping easily along, stopping now and then to feed a moment, and listening to the dog (which was a slow one) about a quarter of a mile in the rear. When he got where they thought he was close enough, they loped on easily, and after a while stopped again. They were having their own amusement with that dog, but they were nearing me, and when they were directly in front I dropped one with a single shot rifle, and the other two left there at once. The dog came up soon and shortly turned back, as it was nearly dark. A swift dog would have stirred the deer up in a more lively manner, but I doubt not they would have got away easily without greater alarm. Deer will not so readily leave their haunts.

If deer cannot be got except by hounding, and that is prohibited, what good are deer to men? As Mr. Hughes says, sportsmen will resort to such arts and implements, as experience and observation show, are most efficacious in securing game. So long as methods are lawful and seasonably used all are alike legitimate. If one method is unadvisable in certain localities it does not follow that it is in all, and should not be sweepingly condemned. S.

Twin Lakes, Fla.

THE ADIRONDACKS—"FLOATING."

I wish to indorse the views of "Adrian Ondack" as embodied in the article which appeared over his signature in your issue of March 10. The article is evidently the offspring of practical experience and honest convictions. Many incidents tending to prove the correctness of his views occur to me, but I will relate only two.

I was stalking deer in Oceana County, Mich., during the month of November, 1878. One morning I was cautiously "working up" the trail of two deer when a hound came in hearing, and a few minutes later a deer went crashing by about twenty rods from the place where I stood, followed in due course of time by the hound in full cry.

After listening until the voice of the dog was lost in the distance I threw off all caution, and pushed forward thinking that had the deer I was working on been anywhere near the clamor of the chase would certainly have stampeded them. However I had scarcely taken half a dozen steps when, with a snort and crash, they sprang from their beds not over eight rods from the trail on which the hound had gone past them. This circumstance would seem to show that deer care very little for the presence of hounds when they are not the objects of their pursuit.

During a fall hunt on the Cedar River, Hamilton County, N. Y., a party of which I was a member drove no less than seventy-five races from one mountain (Old Roundtop). There could not have been over a dozen deer on the mountain when we commenced operations and I think there were about that number on the mountain when we stopped exercising them. I also think that the deer we left were the same we first experimented with. Certain it is we failed to kill any before the hounds, and just as surely as we drove a deer from the mountain just as surely could we find a fresh track leading up the side of the mountain on the following morning. This circumstance would seem to show that when deer are driven from their chosen haunts by hounds they soon return to them again. It would also seem to show that "hounding" is not a very destructive method of hunting deer.

In point of destructiveness I think there is not much difference between these two methods, when both are practiced by experts in a locality alike favorable to both. Personally I can kill two deer stalking while I would be trying to kill one before the hounds, and as to sport, it affords me more pleasure to stalk one than to stand on a runway and shoot a dozen. The mere act of pulling the trigger and sending the charge into an animal as big as a jackass is of secondary importance to me. It is the sharp struggle between human muscle, skill and cunning and the keen senses and instincts of the animal that afford me my greatest pleasure.

I agree with "Adrian Ondack" in thinking our present deer

law pretty good. However, I would urge slight changes as to time of open season, and would utterly taboo "floating," were it not for that class of sportsmen who delight in it as furnishing the only chance for them to kill a deer. Perhaps if I suggest a substitute for that sort of sport I will be forgiven, if I do urge the suppression of floating.

My advice, then, to the sportsman who desires the prominence which is achieved by killing a deer ahead of the "jack" is: Take the money with which you would pay your guides, hotel bills and other expenses, and with it buy a cow, tie her to a tree, then stand at the distance of twenty feet and shoot her. You will be entitled to fully as much credit for skill, be subjected to less discomfort, and secure more meat than you would should you kill a deer before the "jack." Should you desire to do something particularly brilliant, give the cow the run of the barn-yard when you open your battery upon her. Killed at the first fire, under these conditions, the exploit will win more fame for you than you can ever hope to secure by "floating" for deer.

I think if the open season were to commence Sept. 1 and close December 15 the change would be beneficial. When a deer weighing 200 pounds is killed four or five miles from any road or habitation of man, as is frequently the case, and is exposed to an August temperature somewhere up among the nineties, the chances are that by the time it is put upon ice it will be more suitable food for buzzards than human beings. Deer are in much better condition after than before September 1. The fawns are larger and better able to take care of themselves. No reasonable objection can be urged to changing the close of the open season from December 1 to December 15.

The deer are usually in good condition up to January 1. Snow is not usually deep enough to make crusting possible before January 1. Then, it would more nearly equalize the opportunity for stalking and coursing.

What I have written is written because I believe it to be true, and because I would insure to all an equal chance to enjoy sport in the way that pleases them best, consistent with efficient game protection. I like the idea of basing game laws upon the practical experience of sportsmen, rather than upon the selfish demands of a class. I am glad that we hear no more about renting shooting privileges and taxing guns.

However well such measures may work in other countries, I think they would work only mischief here. The average American is too intelligent, his love of equality and hatred of anything that smacks of class distinction too strong for such measures ever to become popular in this country.

Replying briefly to the questions you propound, I would say:

1st. I have hunted deer in several States, and find their habits practically unaffected by the "character of the country" they inhabit.

2d and 5th. Since it has been the fashion to "do the Adirondacks," viz.: for the last three or four years more deer have undoubtedly been killed or destroyed during the months of May, June and July, in that section, by the method commonly called "Floating" than by all other methods combined. It is practiced principally by "sportsmen" (?) from the city.

3d and 4th. "Hounding" and "still hunting" deer does not drive them permanently from their chosen haunts.

6th. In some sections they would. In the great majority of sections they would not.

7th. Such a law would be impracticable.

8th. Practically from about the 1st of May to the 1st of December in this State.

9th. "The winter habits of deer," like their habits at other seasons of the year, are governed by their instincts of self-preservation. To answer the questions fully and in detail would be to "write a book." The answers given above are based upon personal observation and reliable statements of guides and residents. JOS. W. SHURTER.

We have, awaiting publication, a farther communication on the subject from "Adrian Ondack."

DEER IN MASSACHUSETTS.

PLYMOUTH Woods in Eastern Massachusetts is some 70 miles in length by from 8 to 16 miles in width, extending from Plympton to Falmouth and beyond, and a rather barren hilly district of scrub oak and stunted pitch pine, with once in a while a cedar swamp or piece of lowland white pine, with many ponds and brooks.

All over the land is the blue huckleberry and the roxberry, which the deer are very fond of. There are yet quite a number of deer there, and a day's ride from Plymouth to Sandwich will reveal quite a number of tracks crossing the roads. Forty years ago deer were very abundant, and it was not an uncommon thing to see droves of from fifteen to twenty. I well recollect when my father used to fix up things in his corn and rye fields to frighten away the deer that would come and trample down and destroy his grain. Still-hunting was the only way generally allowed, and if hunters owned and used a hound in killing deer, the dog would soon be killed someway. Finally some of the wealthier or more prominent men in Kingston clubbed together and bought two or three deer-hounds, and there were two or three owned in Plymouth, and that winter there were not as many deer killed as when still-hunting was practiced; the deer were more often wounded, and the dogs would sometimes return bloody, having come up with and killed the deer, which could not afterward be found. The next year deer were scarcer, and when routed would seem to bound away for Sandwich, and the dogs could not find their way back, being often lost or stolen. Deer soon became so scarce in the northern end of the woods that the Kingston party, uniting with the Plymouth hunters, would not start a deer in an all day's hunt. Finally deer hunting was given up for a few winters at the north end, and the hunters, by hounding them at the more southern part of the woods, drove them north again, and they were quite plenty, but on hunting them again with hounds we drove them all off south, and for ten years past but one or two deer have been seen in all the woods north of Plymouth, with one exception. A large buck's track was seen at the old guide board crossing, and I was one of the party that went for him. We started him in Watson's Valley, and he struck out straight for Falmouth, and the dog was soon out of hearing, and we have never seen him since. The deer now seem to abound most in the more quiet wilderness in the neighborhood of Great Herring Pond, some fifteen miles below Plymouth, although their better feeding-ground is at the northern end of Plymouth Woods. From my experience in both still-hunting and hunting with dogs, more deer are wounded and lost and driven away from their feeding-grounds by hunting with dogs. More deer when shot and wounded are secured by still-hunting, and they do not seem to be so disturbed nor frightened away.—G. F. W.

MIDDLESEX COUNTY ASSOCIATION.

CONSTITUTION.

Article I—Name.

This Association shall be known as "The Middlesex County Association for the Protection of Fish and game."

Article II—Object.

The object of this Association is to insure a rigorous enforcement of the game laws of this State throughout Middlesex County, and to promote the increase of game of all kinds, including fish, wild birds and animals.

Article III—Officers.

The Officers of this Association shall consist of a President, and four Vice-Presidents, a Secretary, a Treasurer, a Counsel and an Executive Committee, consisting of the above-named officers and five active members of the Association, whose duties shall be such as the by-laws prescribe, all of whom shall be elected annually by ballot at the yearly meeting in January.

Article IV—Members.

Any resident of this County over eighteen years of age, and of good character, shall be eligible to membership in this Association.

Article V—Quorum.

At any meeting of this Association seven members shall constitute a quorum, and a majority vote shall be necessary to the election of any officer, or the transaction of any business.

Article VI—Amendment to Constitution and By-Laws.

The By-Laws shall be of equal binding force with the Constitution, and no alterations or amendments shall be made in either, unless proposed in writing at a preceding meeting and adopted by the concurrent votes of two-thirds of those present.

BY-LAWS.

No. 1—Executive Committee.

The general management of the business of the Association shall be intrusted to the Executive Committee.

No. 2—Annual Meeting.

The annual meeting of the Association shall be held the third Wednesday in January of each year, at such hour and place as the Executive Committee may direct. If by any cause such meeting shall fail to be held on such date, it shall be held the corresponding day of the following week.

No. 3.—Duties of Officers.

Section 1.—It shall be the duty of the President to preside at all meetings; to see the rules and regulations strictly enforced; to give the casting vote whenever there is a tie, and perform such other duties as usually appertain to the President of an Association.

Sec. 2—The Vice President shall assist the President when necessary, and in his absence perform all the duties and be invested with all the powers of President.

Sec. 3.—In the absence of the President or Vice Presidents from any meeting of the Association; any member present may be elected to preside, but shall have no power for any other purpose.

Sec. 4.—The Secretary shall keep an accurate record of the proceedings of the Association, issue all notices required, and keep the records and papers of the Association.

Sec. 5.—The Treasurer shall receive all the moneys of the Association, and see that all fees, charges and subscriptions are regularly collected; keep an account of all moneys received and expended, subject to the investigation of the Executive Committee. He shall at each meeting of the Association present a list of all delinquent members, and at each annual meeting shall furnish an account of all the moneys received and dispersed during the year.

Sec. 6—It shall be the duty of the Counsel to attend to all legal affairs of the Association; to bring suit immediately on information of any infraction of the game law; to report all suits, instituted or pending, at each regular meeting of the Association; and to deliver to the Treasurer, as fast as received, all penalties collected for such non-observance of the game law, after deducting his expenses.

No. 4—Executive Committee.

Section 1.—The Executive Committee shall make all purchases authorized by the Association, have a general supervision and jurisdiction over the internal concerns and regulations of the Association, and assist the Counsel, when required by him, to prosecute any infraction of the game laws. They shall audit the accounts of the Treasurer; they shall serve as a Court of Appeal, by whom all questions shall be decided as to the true meaning of any part of the Constitution and By-Laws, and their decision shall be final; and they shall have power to suspend any officer, whose conduct shall have been prejudicial to the welfare of the Association, until the next regular meeting.

Sec. 2.—The Executive Committee shall have full power to fill any vacancy which may occur from death, resignation or otherwise, among its officers, and any appointment so made by them, shall be valid until the next annual election. It shall also prescribe such rules regulating the affairs and conduct of the Association as, in their judgment, may from time to time be necessary; provided, they do not conflict with the Constitution and By-Laws.

No. 5.—Dues.

The annual dues of active members shall be two dollars ($2.00), payable at the annual meeting in advance.

No. 6.—Proposals and Election of Members.

Section 1.—Propositions for membership may be made at any meeting of the Executive Committee, if, on a two-third vote of the members present, it be accepted, the candidate may become a member; but no person shall be considered a member until he has subscribed to the Constitution and By-Laws and paid the dues of the current year.

Sec. 2.—Every gentleman, by becoming a member of this Association, shall be considered as having pledged his honor to promote and carry out the objects of the Association; and whenever a member shall have knowledge of any violation of the game laws by killing game or fish, or having the same in possession during prohibited seasons, it shall be the duty of such member to communicate the facts immediately to the Counsel of the Association, whose duty it shall be to enforce the penalties of the law, in such case made and provided.

No. 7.—Forfeiture of Membership.

In case a member shall neglect to pay his dues for a period of six months after notice given, he shall, *ipso facto*, cease to be a member of the Association, and shall forfeit all right or claim to the property of the Association. The names of such delinquents shall be striken from the list of members, on motion, at a regular meeting, and the Secretary shall notify him or them of the fact; but such member may be reinstated, within twelve months from the period of forfeiture, by the unanimous vote of the Executive Committee, provided that all his arrears are paid,

No. 8.—Expulsion of Members.

Any member guilty of violation of the game laws of this State, or having knowledge of any violation of the same by any person, and failing to report to the proper authority, may be expelled by a two-thirds vote of the Executive Committee; but any member so expelled shall have the right of appeal to the Association, which appeal shall be decided by a majority vote of the members present, at a meeting called for said purpose.

No. 9.—Matters Not Provided For.

All matters not particularly provided for in the Constitution and By-Laws shall be controlled by the Executive Committee, until specially passed upon by the Association at a regular meeting.

No. 10.—Special Meetings.

Special Meetings may be called by the President and Secretary on three days' notice, and it shall be their duty to call a meeting on the written request of three members.

CHARTER.

STATE OF CONNECTICUT, ss.: *Office of Secretary of State.*

General Assembly, January Session, A. D. 1878. (Senate Joint Resolution No. 31). 128. Incorporating a Game Club in Middlesex County.

Resolved by the Assembly:

Section 1.—That Joseph W. Alsop, Jr., Silas A. Robinson, Samuel Russell, O. Vincent Coffin, C. W. Harris, J. C. Broatch, Robert N. Jackson, George A. Chaffee, Charles G. R. Vinal, A. Putnam, John R. Pitt, Jr., O. F. Grover and George M. Pratt, all of Middletown; George H. Comstock, of Center Brook; Isaac Arnold, of Haudam; Wm. Glover Buell, of East Hampton in Chatham; W. W. Coe, of Portland; Wm. Lyman, of Middlefield; H. R. Wooster, of Deep River; Charles S. Hough, of Essex, and George H. Davis, of Durham, and all such other persons as may be from time to time associated with them, together with their successors, be, and they hereby are, constituted a body corporate and politic, by the name of "The Middlesex County Association for the Protection of Fish and Game;" and by said name shall have perpetual succession, and be capable in law to purchase, lease, hold, possess and convey real and personal estate, and to receive any real and personal estate devised or bequeathed by any person or persons capable of making the same; *provided*, that the said corporation bill shall not at any time hold real estate exceeding in value the sum of ten thousand dollars. And said Corporation shall have power to sue and be sued, plead and be impleaded, in all courts and places whatsoever; may have a common seal, and may change and alter the same at pleasure; may elect such officers as they may find necessary and convenient, and make and carry into effect such by-laws as they may deem necessary, not repugnant to the laws of this State and the United States.

Sec. 2.—This Act may be altered, amended, or repealed at the pleasure of the General Assembly, and shall take effect from the date of its passage.

Approved, March 26, 1878.

STATE OF CONNECTICUT, ss: *Office of Secretary of State.*

I hereby certify that the foregoing is a true copy of record in this office.

[L. S.] In testimony whereof, I have hereunto set my hand, and affixed the Seal of said State, at Hartford, this 30th day of March A. D. 1878.

DWIGHT MORRIS, *Secretary of State.*

FORM OF LEASE.

Know all men by these presents, that.....of the Town of.....Middlesex County, State of Connecticut, for, and in consideration of One Dollar to each of us in hand paid by "The Middlesex County Association for the Preservation of Game and Fish," and an Honorary Membership to each of us in said Association with all the privileges of regular membership except that of voting, during the term of five years, or so long as we shall respectively continue this license, have let unto said Association for the term of five years from the.....day of.....18... the right to stock with game any and all lands and farms owned by us respectively, within said County, and all streams and ponds thereon with fish, together with the right to protect the same, and the sole right and privilege of hunting and fishing thereon and therein; said rights of hunting and fishing to be exercised by its individual members under such regulations and restrictions as the said Association may itself adopt.

It being understood and agreed that all damages done to our walls and fences by said members while in the exercise of the above granted privileges, shall be promptly repaired by them; and further, that upon six months notice, in writing, prior to the first of April in any year, either of us may revoke our share of this license, and the same privilege is reserved to the Association.

Signed with our hands and sealed with our seals this.....day of.....18

FORM OF PERMIT.

Middlesex County.

Association for the Protection of Game and Fish.

This Permit is not good unless endorsed with name of the holder and countersigned by the President or Secretary of the Association.

Not Transferable.

N.B.—Members are cautioned to keep this permit by them, as if they cannot show it when called for they will be liable to be turned off the lands of the Association.

REMINISCENCES OF AN OLD FOGY—No. 1.—I have shot wild geese and wild turkeys in the same corn-field on the Missouri, between the Osage and the Gasconade. I have shot deer in Pennsylvania and Missouri, duck and wild fowl in New Jersey, Ontario West and in Virginia; but old age will tell, and now I can only think about those things, for I am too old and have laid aside my gun, rod and tackle. I did have a son who, as they said here, could catch fish where there were none, but, alas! last summer he went to the "Happy Hunting Ground," and so I am left with only my recollections. They may amuse your numerous readers, and so I send them.

In the fall of 1868 we had a hard storm of wind and rain

My house fronts the west. One room in the second story was unoccupied, and as at that time there were no ladies in the house, it was not often entered. A pane of glass was out in one of the windows, and it was not put in because hawks often lit in the locust trees in the lawn. If a door was opened they took the alarm and flew off; so we shot them through the broken pane. One day, when the room had been long unentered, I went in for some purpose, and on the mantel I found sitting a dead bird. It had perfectly dried up sitting on its feet, and was, to my astonishment, a "Stormy Petrel." I can only suppose that in trying to cross from the bay (Chesapeake) to the seaside it accidentally in the storm flew into the room through the broken pane, lit on the mantel, died there of starvation, and in its attenuated condition dried up.—C. R. M.

ADIRONDACK VISITORS who intend to enter the woods by way of Ausable Forks will learn with satisfaction from our advertising columns that a new stage line will be started July 1, to run from that point to the Saranac Lakes. What has long been wanted by sportsmen going over this route is some one on the stages, who, during the long day it takes to reach the lakes, could inform them regarding localities, guides, equipments, etc. Now Chas. J. Greenough proposes to conduct a first-class mail line of Concord coaches, especially for sportsman going into the woods. He has been known for years as one of the most popular guides of that country; he knows every square foot of ground in the North Woods, and has, moreover, the faculty of making friends, hosts of whom, among them Mrs. R. B. Hayes and Mr. Wheeler, will be glad to hear of his fortunate prospects. We recommend our friends to go by way of the Greenough line of stages; they will find comforts not to be had on other lines, and from the proprietor they will receive square and fair treatment.

SMALL CALIBRE FOR GAME.—Westerly, R. I.—In reply to the query of T. J. S. in your issue of May 12, I will say I use a 22 Ballard rifle, 28 in. barrel, 8 lbs. weight. I consider weight and length of barrel matter of taste only, not having any effect on the shooting after a person gets used to the arm.

With the best of ammunition, (and no other should be used under any circumstances) no reasonable person can find any fault with the accuracy and penetration of this rifle at 100 yds. For the first 50 yds. the trajectory of balls of this calibre does not vary perceptibly from that of the large calibres, but above that distance the curve is more noticeable. I would like nothing better than to give T. J. S. ocular demonstration of the powers of this little weapon, which looks so harmless to the unfamiliar eye. I am sure he would buy one. For several reasons they are the best of any for squirel shooting; the cost of shooting is next to nothing; the report will not scare your game if you do not kill it; you can practice indoors, and when hunting you will not need to use quite as much care in shooting toward inhabited territory.—N. E. M.

HAWKS AND OWLS—Northumberland, Penn., May 13.—Many reports have been given me of the quail that have wintered over here. No doubt the large amount of corn that was left in the fields last fall rescued their lives, and they are heard now in the evenings as plenty as before. Last fall was the best quail season we have had for several years, and no doubt a great part of it is due to our club paying fifty dollars bounty on hawks last summer. I advise all clubs to look after the hawks, and the birds will increase more than anticipated.—J. H. E.

CANTON, *N. Y., May* 9.—George Muir, of this county, recently treed with a dog and shot a large panther a few miles from the head of Cranberry Lake; also got a wolf in a trap in the Big Inlet Swamp. George is a guide, but is somewhat out of health this season.—X.

CALIFORNIA—San Francisco, May 16.—I was shooting last night at Niles, Cal., and had the success to kill 6 (six) Jack snipe; they are coming in large flocks, and the prospects for the season are very good.—C. K. C.

SOUTH CAROLINA.—Rock Hill, May 12.—The cold Winter did not kill out the partridges in this section, we have enough left for next season, even if these are never hatched this year.—F. H. L.

MIGRATORY QUAIL.—Some of the migratory quail released in Monroe County, this State, last season, are said to have returned.

—Deer at any price—venison.—*Lowell Courier.* On the contrary, it is generally sheep.—*Boston Post.*

NEW PUBLICATIONS.

A NAMELESS NOBLEMAN is the initial volume of the Round Robin series of anonymous novels, publishing by James R. Osgood & Co., of Boston, which is to contain works of American authors. The plot of the book shows some originality, but the story cannot be said to be particularly well told. The scene is laid partly in France and partly in America, and the story is said to be founded on the traditions of an old Massachusetts family. The second volume of the Round Robin series, A LESSON IN LOVE, is now in press. Price, $1 per volume.

ODE TO A HORSESHOE.

THOU relic of departed horse!
Thou harbinger of luck to man!
When things seem growing worse and worse,
How good to find thee in the van!

A hundred thousand miles, I ween,
You've traveled on the flying heel—
By country roads, where fields were green,
O'er pavements, with the rattling wheel.

Your toe-calk, in that elder day,
Was sharper than a serpent's tooth;
But now it's almost worn away;
The blacksmith should renew its youth

Bright is the side was next the ground,
And dark the side was next the hoof;
'Tis thus true metal's only found
Where hard knocks put it to the proof.

For aught I know you may have done
Your mile in two nineteen or twenty;
Or, on a dray-horse, never run,
But walked and walked and pulled a plenty.

At last your journeys all are o'er,
Whether of labor or of pleasure,
And there you hang above my door,
To bring me health and strength and treasure.
—*From the June St Nicholas.*

No one can be sick if the stomach, blood, liver and kidneys are well. Hop Bitters keeps them well.

Sea and River Fishing.

FISH IN SEASON IN MAY.

FRESH WATER.

Brook Trout, *Salmo fontinalis.*	White Bass, *Roccus chrysops.*
Pickerel, *Esox reticulatus.*	Rock Bass, *Amblopites.* (Two species).
Pike or Pickerel, *Esox lucius.*	
Pike-perch (wall-eyed pike) *Stizolothium americanum, S. griseum,* etc.	War-mouth, *Chænobryttus gulosus.* Crappie, *Pomoxys nigromaculatus.* Bachelor, *Pomoxys annularis.*
Yellow Perch, *Perca fluviatilis.*	Chub, *Semotilis corporalis.*
Striped Bass, *Roccus lineatus.*	

SALT WATER.

Sea Bass, *Centropristis atrarius.*	Pollock, *Pollachius carbonarius.*
Striped Bass, *Roccus lineatus.*	Tautog or Blackfish, *Tautoga onitis.*
White Perch, *Morone americana.*	
Scup or Porgie *Stenotomus argyrops.*	

FISHING ABOUT NEW YORK.—We are prepared to direct anglers to fishing resorts easily accessible from this city. This information will be given upon personal application to this office or to those who may inclose self-addressed envelope. The kind of fishing, the distance and the time to be spent should be stated.

The angler, I think, dreams of his favorite sport oftener than other men of theirs. There is a peculiar excitement in it, which perhaps arises from somewhat of the same causes which make the interest in searching for ancient treasures, opening Egyptian tombs, and digging into old ruins. One does not know what is under the surface. There may be something or there may be nothing. He tries, and the rush of something startles every nerve. Let no man laugh at a comparison of trout fishing with antiquarian researches. I know a man who has done a great deal of both, and who scarcely knows which is the most absorbing or most remunerating, for each enriches mind and body, each gratifies the most refined tastes, each becomes a passion unless the pursuer guard his enthusiasm and moderate his desires. It is nothing strange that men who throw their flies for trout should dream of it.—W. C. PRIME.

SOME FISHING CLUB RULES.

THE famous actor, Richard Brinsley Sheridan, once drew a set of by-laws for the rules and regulations of a fishing club. These, in the handwriting of Mr. Sheridan, are now in the possession of the Walton and Cotton Fishing Club, London, having been presented to it by W. Dunn, Esq., treasurer of the Drury-lane Theatre, who was also a member of the club. We give them for the humor contained, much of which is local and applies to persons long since dead, believing that there is enough to interest the angler of to-day, if he have humor, and if he have none, let him imitate the lively flea and skip it, for a man with no sense of humor is a poor companion at any time.

His "Rules and Regulations" were: That each male member of the party shall forthwith subscribe the sum of five pounds five shillings toward the general expenses, and that such subscriber do really pay the same into the hands of the treasurer.

Henry Scott, Esq., Captain of the Light Infantry of the South Hants, to be collector of the said subscriptions in the town department, the said captain having given a great proof of ability for that office, inasmuch as he has already collected five guineas from Gigas, alias Matthew Lee, Esq., and the society have the strongest hopes that he will give an equally unexpected proof of his integrity by paying over the said sum into the hands of the treasurer.

A journal is to be kept of the occurrences of each day, which, among other interesting matters, is to contain an account of the number of fish caught, their respective weights, by whom caught, etc., etc.

The said journal is, at a proper time, to be printed and published; and although the party are confident that the said journal will also be a record of wit, humor, pleasantry, and possibly even of deep observation, from the acknowledged and various talents of the said party, yet, disdaining all personal advantage, it is resolved, in humble imitation of the example set by the Rev. W. L. Bowles, that in case any copies of the said fresh-water log-book should be sold, the profits shall be solely applied to the benefit of the widows and orphans of deceased fishermen.

No drawing, painting, sketch or model of any trout shall be taken at the general expense, unless such fish shall have exceeded the weight of five pounds, and shall have been *bona fide* caught by one of the party, and not privately bought at Stockbridge.

Any member describing the strength, size, weight of any immense fish which he had skillfully hooked, dexterously played with and successfully brought to the bank, when by the clumsiness of the man with landing-net—only conceive how provoking—the said fish got off, shall forfeit half-a-guinea—and so, *toties quoties*, for every such narrative. To prevent unnecessary trouble, the said forfeits are to be collected by the Rev. I—— O——.

There shall be but one hot meal in the course of the day, and that shall be a supper at nine o'clock; cold meat and other refreshment in the tents, or at the water side, at two o'clock.

A committee is to be appointed to provide these repasts, and shall be called and entitled the Catering Committee, and their decision as to snack and supper shall be final.

Any member willing to send in any stores for the general benefit, at his own expense, shall be permitted so to do, and is entitled to be laughed at accordingly.

All fish, by whomsoever caught, are to be considered as general property; and if there are sufficient to send any as presents, the choice of the fish shall be determined by lot, always excepting such as shall be sent to the drawing-room, which are to be a tribute from the firm.

Any gentleman, falsely, shabbily and treacherously concealing the number of fish he had caught, and slily sending off any of the same as a present to ladies or others, shall forfeit, on detection, one guinea for each fish so purloined from the common stock, and be publicly reprimanded at supper for the same. Mrs. Sheridan is not to draw up the form of this reprimand.

Any person restless and fidgety, presuming to insinuate that sea-fishing is preferable to the tame and tranquil occupation of this party, and detected in endeavoring to inveigle elsewhere any of the liege and dutiful subjects of Izaak Walton, shall, on conviction, be sentenced to fourteen minutes abstinence from ale, beer, porter, wine, brandy, rum, gin, hollands, grog, shrubb, punch, toddy, swiperus, caulkers, pipe, cigars, quid, shag, pigtail, shortcut, varinas, canaster, pickater, and if such culprit shall appeal against the severity of the above sentence as a punishment disproportioned to the utmost excess of human delinquency, he shall be entitled to have a hearing, and Nat Ogle assigned to him as counsel.

The Rev. —— is not to chew the tobacco called pigtail after sunset, as he will then join the society of the ladies; nor for the same reason is Jos. Richardson, Esq., M.P., and author of the "Fugitives," to flick his snuff about during supper, even though he should have been competing with Nat Ogle.

If any of the party, deserting the rod shall assume the gun, it is recommended to them—as white-*wales* are not likely to be seen and black-whalers are unworthy their pursuit—to direct all their attention to green whalers, alias plovers, which will afford not merely good sport to the shooter but considerable aid to the larder.

A copy of these rules and regulations, fairly and legibly transcribed, is to be posted over the chimney of the eating-room of the society's house at Lickford, provided the panel on any side of the said room is of size to contain such paper. If not, authentic copies thereof shall be delivered to each member.

HUMAN AGENCIES AS AFFECTING THE FISH SUPPLY.*

IT may safely be said that wherever the white man plants his foot and the so-called civilization of a country is begun the inhabitants of the air, the land and the water begin to disappear. The bird seeks a new abiding place under the changed conditions of the old, but the return of the season brings him again within the dangerous influence, until taught by several years of experience that his only safety is in a new home. The quadruped is less fortunate in this respect, environed as he is by more or less impassable restrictions, such as lofty mountains, deep rivers and lakes and abrupt precipices, and sooner or later reaches the point of comparative extinction, or reduction to such limited numbers as not to invoke any continuance of special attack.

The fish, overwhelmingly numerous at first, begin to feel the fatal influence in even less time than the classes already mentioned, especially such species as belong to the fresh waters and have a comparatively limited range.

The cause of this rapid deterioration is not to be found in a natural and reasonable destruction for purposes of food, of material for clothing or other needs. The savage tribes, although more dependent for support upon the animals of the field and forest than the white man, will continue for centuries in their neighborhood without seriously diminishing their numbers. It is only as the result of wanton destruction for purposes of sport or for the acquisition of some limited portion only of the animal that a notable reduction is produced and the ultimate tendency to extinction initiated.

Of the abundance of animal life in North America, in the primitive days of its occupation by the European immigrant, we have an ample history in the accounts of the earlier travelers. Buffaloes in enormous hordes reached almost to the Atlantic coast, wherever extensive plains existed. The antelopes rivaled in numbers those of Central and South Africa. The deer of various species were distributed over the entire continent from the Arctic regions southward, and from the Atlantic to the Pacific. The moose existed far south of its present limit. The elk was a familiar inhabitant of Pennsylvania and Virginia. Wild fowls, such as ducks, geese, swans, etc., of many species, were found during the winter in countless myriads in the Chesapeake and other Southern bays and sounds.

Now what remains of this multitude? The buffalo has long since disappeared from the vicinity of the Mississippi River, the deer is nearly exterminated in many localities, though still holding its own under favorable circumstances, and the antelope is restricted to limited areas. The wild fowl, congregated at one time in bodies miles in extent, are now scarcely to be seen, although still proportionably more abundant in the winter season on the coast of California and toward the mouth of the Rio Grande in Texas than anywhere else.

Perhaps a still more striking illustration is seen in the fishes. It is still within the recollection of many old people (showing how plentiful the fish must have been) that the apprentice and pauper, in the vicinity of the Connecticut River, protested against eating salmon more than twice a week. This noble fish abounded in all the waters of New England as far west as the Connecticut, and even to the Housatonic, though we have no evidence that they ever occurred in the Hudson River or farther to the south. The shad was found in every stream of the coast from Georgia to the Gulf of St. Lawrence, and, although still ascending most of these waters during the spring, has been sadly reduced in abundance. Within even fifty years no waters of the same extent in the world could show such numbers of shad and herring as the Potomac River below the Great Falls. Martin's *Gazetteer* of Virginia, published, in 1834, at Alexandria, states that the preceding year twenty-five and a half millions of shad were taken by the various Potomac fisheries, as well as seven hundred and fifty millions of fresh water herring. This, by a moderate estimate, would amount to six hundred million pounds of fish secured in six weeks in this single system of waters. This *Gazetteer* also states that during the same year nearly one million barrels of fish were packed on the Potomac, requiring as many bushels of salt. These were consumed in the United States or shipped to the West Indies and elsewhere. What is the condition of things at the present time? In 1866 the catch of shad on the Potomac had dwindled to 1,326,000, in 1878 to 224,000, the latter not 1 per cent. of the yield of 1833. The catch of herring in 1833, estimated, as stated at 750,000,000, had been reduced in 1866 to 21,000,000, in 1876 to 13,000,000, and in 1878 to 5,000,000; again less than 1 per cent. of the yield of the first mentioned period.

A similar reduction has taken place in the abundance of the striped bass or rockfish, a species inferior to none in its excellence and economical value for food. John Josclyn, gent., in 1660 says that three thousand bass were taken at one haul of the net in New England. Thomas Morton, in 1632, says of the Merrimac, that he has seen stopped in the river at one time as many fish as would load a ship of a hundred tons, and that at the going out of the tide the river was sometimes so full of them that it seemed as if one might go over on their backs dryshod.

Mr. Higginson, in 1630, says that the nets usually took more bass than they were able to land. Even so recently as 1846, one hundred and forty-eight tons are said to have been taken on Martha's Vineyard at two hauls of the seine. Per

*From Report of U. S. Fish Commissioner Baird for 1878.

contra, the catch in the Potomac in 1866 amounted to 316,000 pounds; in 1876, to 100,000; in 1878, to 50,000.

Many more instances of the enormous abundance of the anadromous fishes (marine species running up from the ocean into fresh waters for the purpose of spawning) in different parts of the country in former times could easily be adduced. Similar illustrations of the former abundance of fishes exclusively inhabitants of the salt water can be brought forward to any extent. In the early days of the Republic the entire Atlantic shore of the United States abounded in fish of all kinds. Where cod, mackerel and other species are now found in moderate quantities they occurred in incredible masses.

The halibut, one of the best of our fishes, was so common along the New England coast as not to be considered worthy of capture, and was considered a positive nuisance when taken. It is only within a few years that our people have come to learn their excellence and value, but they have already disappeared almost entirely from the inshores of New England, and have even gradually become exterminated in nearly all waters of less than five hundred feet in depth.

The inquiry now arises as to the causes of the terrible depletion of the inhabitants of the water, and one so detrimental to human interests. The question relates in part to an actual extermination, and in part to a disappearance from accessible fishing grounds. The practical result to the fishing interest is about the same in either case.

It is quite safe to assume that most species of the ocean fishes, in their abundance and ability to escape the pursuit of man, are less amenable to destructive influences than those of the interior waters, the halibut being perhaps one of the few exceptions of a species that may be considered actually exterminated over a certain area. That the supply of nearly all other kinds in the inshore fisheries of America everywhere has diminished in enormous ratio is unquestioned. What were and are the causes, and what the remedy?

One most plausible solution of the problem is to be found in the very close relationships between the so-called anadromous fishes and those permanently resident in the ocean. The anadromous species are represented by the salmon, the shad, the fresh water herring or alewife, and some other kinds, which, although spending the greater part of their life in the ocean, periodically enter the fresh waters, in greater or less numbers, and ascend as high as they can for the purpose of finding suitable places wherein to deposit their spawn. This done, the parent fish soon returns, leaving the young to follow. The young shad or herring remain in the river three or four months and then go down to the ocean. The salmon is more persistent, the young remaining from one to two years, after which they too descend to the sea, and, like the shad and herring, for the most part there attain their entire growth. It is not thought that either the parent fish or the young go to any great distance from the mouths of the rivers, and it is believed that the fish born in one stream never think of entering any other than that in which they first made their appearance.

Bearing in mind the countless myriads of these fishes formerly entering our rivers—the shad and herring along the entire coast of the United States to the Bay of Fundy, the salmon from the Connecticut eastward—and noting the extent to which they are preyed upon by the more rapacious inhabitants of the sea, we may understand why such multitudes of the larger fish formerly approached the shores in pursuit until deterred by the increasing shoalness or freshness of the water. Even then, however, they would remain near the shore, lying in wait for the parents and their young returning in such vast quantities during the later months of the year. In all probability these constituted a chief inducement to the movement of the predacious fish to the coast in such numbers during the spring and summer. In autumn and winter the sea-herring and the fish of the cod family visit the shores for quite another purpose, namely, to deposit their eggs. But from whatever motive, the fact remains that years ago throughout the twelve months an ample supply of the finest fishes was within the reach of every one, so that a fisherman with a small hand-line and an open boat was able to support his family without any difficulty.

Now, with the continued reduction in abundance of the salmon, shad, and fresh water herring, the summer fisheries have dwindled and nearly disappeared, leaving only those of winter with its inclement weather to furnish occupation to the fisherman, and compelling him in the most dangerous season of the year to betake himself to the Georges, La Have, Quereau and other banks, especially to the Grand Banks of Newfoundland, to prosecute his work in expensive vessels, and exposed to perils and privations of a terrible character.

Assuming, then, that the chief agency in the decrease of the ocean shore fisheries has been the reduction in the number of the anadromous fish, *i. e.*, those passing up from the ocean into the fresh waters to spawn, let us inquire into the causes of the diminution of the latter. They certainly were very plentiful in the early days of European colonization in America, but at that period all the rivers were open to the sea, without dams or other artificial obstructions. Few or no sawmills cast into them sawdust and other refuse; no gas works polluted them with coal-tar, creosote, etc., and paper mills, factories, etc., running off poisonous compounds, were unknown. The fishing apparatus was confined to lines and nets of no great extent, not sufficient to barricade the streams and impede the upward movement of the fish.

After the settlement of the country began, these possible dangers came to have an actual existence. It is probably to the erection of dams, however, that the first great diminution was due. The salmon, the shad and the herring proceeding from the ocean to the headwaters of their native stream, were met by an impassable barrier, which they were unable to surmount, cutting them off from their favorite spawning ground, and, indeed, in many cases, from the only localities where the operations of reproduction could be properly performed. They wore themselves out in fruitless attempts to overcome these obstructions, and were compelled finally to return to the ocean without depositing, or, at least, utilizing their spawn. A second year, a third, and even a fourth would probably make but little difference in the number making the attempt to ascend, this being due to the fact that four years is the average period from birth at which most fish are mature and able to exercise the reproductive act. By the end of the fourth year, the last crop of young fish hatched in the upper waters of the river will have made its appearance as mature males and females. After this the diminution takes place with increasing rapidity, until five or six years afterward the fish are found to have disappeared entirely from the stream. So much for the dams. As for the other causes, sawdust and other refuse matter get into the gills of fish and produce irritation and subsequent death. Coal-tar efuse is known to be a very great detriment to the healthful condition of water so far as fish are concerned, and it is probable that a part at least of the decrease of shad and herring in the Potomac is due to the discharge from the gas works of Washington and Alexandria.

The rapid increase in the size and number of the nets, whether pounds, seines, drift or gill nets, that has manifested itself within the last twenty years has doubtless had a similar effect with the dams in producing a decrease. The fish are harassed and worried by them, and hindered in an equal degree from reaching their spawning ground, and thus another drain on the supply is added to the many already in operation.

What, now, are the remedies to be applied to recover from this lamentable condition of the American fisheries (a condition which, we may remark, has existed in all countries of Europe, but which in some of them has already been greatly lessened by the proper measures)? These are twofold. One consists in the enactment and enforcement of legislation protecting what we have, and allowing natural agencies to play their part in the recovery; the other consists in the application of the art of artificial propagation of the fish. Either, alone, in some circumstances, will answer a very good purpose. The two combined constitute an alliance which places at our command the means of recovering our lost ground to a degree which, but for the experience of the last ten years, would hardly be credible.

THE FLY-CASTING TOURNAMENT.

WE print the list of prizes, as arranged by the Prize Committee of the New York State Sportsmen's Association at the coming tournament. The list is larger than ever before, and of greater value. We think that the arrangement will give perfect satisfaction to all, the amateurs having a class by themselves which should bring out new fly-casters.

This has been a change long needed, as heretofore the amateurs have had to cast against acknowledged champions, if they cast at all, and this is a point for which Mr. Mather, the director of fly-casting this year, has labored. Some proposed changes in the rules will be given in our next issue.

Salmon Fly-Casting. Entrance, $5.

Thursday, June 23, 1881, at 10 A. M.

First Prize.—One split bamboo salmon rod, 18 feet in length, in three pieces with two tips in grooved case, and sack. Especially constructed for this contest, and donated by B. F. Nichols & Co., 36 Beach st., Boston. Value, $50

Second Prize.—One split bamboo fly rod, reel and line, donated by Peck & Snyder, 124 Nassau st., N. Y. Value, $25.

Third Prize.—Five dollars, gold.

Fourth Prize.—One year's subscription FOREST AND STREAM, donated by the Forest and Stream Publishing Co., through Fred. Mather.

Striped Bass Casting, Cuttyhunk Style. Entrance, $5.

Thursday, June 23, 1881, at 11 A. M.

First Prize.—One split bamboo striped-bass rod, with steel pivot, rubber and German silver reel filled with a 21 thread linen line. Rod silver mounted and in fine case. Donated by J. F. Masters, 55 Court st., Brooklyn. Value, $75.

Second Prize.—Automatic reel with hard rubber discs, gold mounted and appropriately inscribed and decorated. Donated by Loomis & Plumb, Syracuse, N. Y. Value $50.

Third Prize.—Five dollars gold.

Fourth Prize.—One year's subscription FOREST AND STREM, by the Forest and Stream Publishing Co., through Fred. Mather.

Trout or Black Bass Fly-Casting. Entrance $5.

Thursday June 23, 1881, at 2 P. M.

Class A open to all members of the Association.

First Prize—Fishing tackle to be selected by the winner, of the value of $50. Donated by Chas. F. Imbrie, of Abbey & Imbrie, 48 Maiden Lane, N. Y.

Second Prize—One greenheart fly rod with click reel and waterproof line. Donated by J. B. Crook & Co., 50 Fulton st. N. Y. Value $35.

Third Prize—One split bamboo fly rod German silver mounted, cane wound butt, two tips, with bamboo tip case, rubber click reel and fly line. Donated by Wm. M. Cornwall, 81 Warren st., N. Y. Value $25.

Fourth Prize—Five dollars in gold.

Fifth Prize—One year's subscription FOREST AND STREAM, by the Forest and Stream Publishing Co., by Fred. Mather.

Class B.—Open to all members of the Association, excepting those who have won a first prize at this or a previous convention in a casting contest open to all.

First Prize—Two rods, (trout and bass), all lancewood and silver mountings. Each rod consits of one butt two second joints of different weights and three tips with extra bamboo tip case. All in handsome black walnut case lined with velvet and bound with four bands of silver. Specially made for this occasion and donated by Fred. B. Divine, 76 State st., Utica, N. Y. Value $50.

Second Prize—One split bamboo fly rod with click reel and Holberton's full length fly book with improved Hyde clips, Russia leather cover. Donated by Conroy, Bissett & Malleson, 65 Fulton st., N. Y. Value $40.

Third Prize—One pair MacKintosh wading pants with boots. One Hallock hunting coat, donated by Goodyear's Rubber Manufacturing Co., 488, 490 & 492 Broadway, N. Y. Value $40.

Fourth Prize—Five dollars gold.

Fifth Prize—One year's subscription FOREST AND STREAM, by the Forest and Stream Publishing Co., through Fred. Mather.

Class C open to all members of the association who have not won any prize at this or a previous convention.

First Prize.—One Leonard split bamboo Catskill fly rod, gold mounted, with Mills & Son's best rubber click reel, filled with their "Standard" enamelled water-proof fly-line. Donated by William Mills & Son, 7 Warren st., N.Y. Value $60.

Second Prize.—One trunk rod, with reel and line complete. Rod silver mounted and in fine case. Donated by J. F. Masters, 55 Court st., Brooklyn. Value $25.

Third Prize.—One Henshall black-bass rod, with extra second joint and two tips. Donated by S. W. Goodridge Grafton, Windham Co., Vermont. Value $15.

Fourth Prize.—One elegantly bound copy of Dore's "Ancient Mariner." Donated by Harper Bros, Franklin sq., N. Y. Value $10.

Fifth Prize.—One expensively bound copy of "Pastoral Days" (W. H. Gibson). Donated by Harper Bros. Value $10.

Sixth Prize.—One oil painting, "Quail Seeking Refuge from Stress of Weather." Donated by Henry W. Abbott, 11 Commonwealth ave., Boston.

Seventh Prize.—One hundred cigars. Donated by F. W. Mertens & Son, 175 South st., N.Y. Value $10.

Eighth Prize.—Five dollars gold.

Ninth Prize.—One year's subscription to FOREST AND STREAM, by the FOREST AND STREAM Publishing Co., through Fred Mather.

N.B.—No more than one prize can be awarded in any class or contest to the same contestant. If the prizes should outnumber the competitors, the awards in each class will be made in the order of merit, and the surplus prizes revert to the Long Island Sportsmen's Association.

WESTERN FISHES.

WE have received advance sheets of the "Proceedings of the United States National Museum, 1881." It contains a check list of duplicates of fishes from the Pacific coast of North America, distributed by the Smithsonian Institution in behalf of the United States National Museum, prepared by David S. Jordan and Pierre L. Jouy. The list contains 62 families, 157 genera and 245 species.

Mr. Jouy describes a new species of cyprinoid, *Squalius aliciæ*, from Utah Lake, which is closely related to the *Tigoma intermedia* of Girard. Rosa Smith describes a new Gobioid fish, *Othonops eos*, from San Diego, California. Dr. Tarleton H. Bean describes *Uranidea marginata*; *Potamocottus bendirei* and *Myctophum crenulare*. The two first were received from our correspondent, Capt. Charles Bendire, U. S. A., and one of them has been named after him.

Under the heading of "Notes on the Fishes of the Pacific Coast of the United States," Prof. David S. Jordan and Charles H. Gilbert give a list of the species known to occur along our Pacific coast, between the Mexican boundary and British Columbia, together with notes on the distribution, habits, size, value, etc., of each species, in advance of the publication of a general descriptive work. The common names in use by the fishermen are also given. We will refer to these notes again and give some extracts from them.

BASS, RED-SNAPPERS AND TARPOM.

A CORRESPONDENT of your paper, writing from Putnam Co., Florida, describes with spirit his experiences in fishing for red-snappers and bass on that coast, together with a tarpom adventure, in which he, like most anglers who have encountered the fish, came by the worst. He appears to have used the rude method of fishing commonly practiced on that coast—the heavy hand-line and hook which is necessary in dealing with red-snappers in fifteen fathom water, but not so with the shoal water fish, like red bass, sea trout, mangrove snappers, cavalli or ladyfish, all of which may be taken on that coast with rod and reel, affording the finest of sport. In that way we take at Mosquito and Indian River inlets bass up to thirty-five or forty pounds. As to the tarpom, called by naturalists *Megalops Atlanticus*, it is a fish of such immense strength and swiftness, as well as size, that it can seldom be taken with rod and line, either in its furious leaps tearing itself loose—its mouth being tender, like the herring family, to which the tarpom belongs—or parting the line, or breaking the hook. It enters the inlets in April in schools, pursuing the mullet, and may often be seen leaping five or six feet from the water like an immense salmon, which it resembles in silvery brightness and activity. It is sometimes taken with the "grains," a strong line and buoy being attached, which controls the rushes of the fish.

I myself have twice hooked a tarpom while fishing for bass with rod and reel, but my line was all taken from the reel at the first rush, and parted without in the least checking the fish, which went off seaward in great leaps.

I am told that the great feat of killing this fish on a rod was performed last winter at Indian River Inlet by a veteran angler of Philadelphia. The time expended in the contest I did not learn, but the weight of the tarpom was said to be 140 pounds—about double the weight of the heaviest salmon ever killed on a rod. With rod and reel of the strongest, and three hundred yards of 15 thread linen line, strong muscles and skill in using them, and good luck—it is therefore possible to kill the tarpom on a rod. The fishermen tell me that no common net will hold this fish, which has sharp labial bones which cut their way through the meshes; also, that it is a rich and well flavored fish on the table.

S. C. C.

Halifax Inlet, Florida, May 3, 1881.

TROUT IN THE ADIRONDACKS.

MOIRA, FRANKLIN CO., N. Y., May 17.

TROUT fishing in this part of the Adirondack region is now at its best. The late warm weather cleared out all the ice and snow, and during the past week many fine lots of trout were caught in the St. Regis and Salmon rivers and also in Meacham and Ragged lakes and many of the ponds. Many salmon trout were caught at Meacham Lake the past week, one weighing fifteen pounds. From now until the middle of June or the first of July is, in my opinion, the best part of the season for trout fishing.

If any of the readers of the FOREST AND STREAM would like to get a fine specimen of the crane for mounting they can do so by coming here. In a large piece of woods three miles north of here there are hundreds of them now nesting. Every dead tree has from one to five nests in it. They choose the dead trees, of which the woods are mostly composed. This is the third season they have nested in that vicinity. Many boys and men go there to shoot them for the sport. It seems hardly right to shoot them, but residents near claim they have caught all the fish out of the large brook that runs through the woods they are nesting in. Two young men last Saturday afternoon shot a dozen with rifles in a short time.

A. C.

TAKING SWALLOWS WITH THE FLY.—The Rochester *Union* tells us that Mr. John Harris, the Arcade confectioner, laid aside the cares of business Tuesday, and made a visit to Caledonia Creek, trout fishing. The day was cold and unfavorable for taking trout, but he managed to put a few good ones in his creel. If he had not caught a fish at all, the experience he had would have been ample compensation. He was using the very small fly essential to success on the creek, and an unusual number of swallows were skimming over the water, and when Harris began to whip the stream the birds commenced to dart at the flies. There was no way of preventing them taking the flies, and before he stopped fishing he caught three of the birds on his hooks. Very light tackle

was employed, and when a bird took the fly it would sail off in the air and afford a novel experience to the angler. They were all released uninjured, and soon after their liberation joined the flock and began their gyrations as if nothing had happened.

A NEW GAME FISH.—The San Francisco *Call* records the taking of "*Stingarees*," *Anglice* sting rays, *Trygon centrura*, for sport. This might be done on the Atlantic coast as well. It says: "Excellent sport may be had in Richardson's Bay, near the whistling post, at Sausalito. Those who have repaired to this place for the love of sport report that stingarees are numerous, and that the fish affords excellent diversion. The requirements for success are a stout line, and care must be taken to have the hooks properly affixed to wire, and the angler must further provide himself with a gaff-hook, which is strongly tied to a short pole, with which the fish is landed. The water at this place is shallow, and the stingarees vary in weight from five to forty pounds. They are very powerful, take the hook freely, and are exceedingly game, and at times cause the line to whizz through the reel. Only a small portion of the fish—the fins—are good eating."

MINNESOTA BASS FISHING—Pillsbury, Minn., May 7.—Magnificent black bass, wall-eyed pike and pickerel fishing here now. For the above species of fish I believe this to be the best locality in the United States.—J. FRANK LOOKE.

Fish Culture.

[Continued from page 311.]

EPOCHS IN THE HISTORY OF FISH CULTURE.*

BY PROF. G. BROWN GOODE.

XX. 1853—*Beginnings of Fish Culture in the United States.*—In 1853, Dr. Theodatus Garlick and Prof. H. A. Ackley, of Cleveland, O., succeeded in artificially propagating the brook trout (*Salvelinus fontinalis*). This may be considered as the beginning of fish culture in America, though there is some reason in the claim of Rev. Dr. Bachman, of Charleston, S. C., who has published an account of experiments successfully carried out, in 1804, upon the corporal (*Semotilus corporalis*) and the trout. Bachman's experiments bear much the same relation to the history of American fish culture that those of Dom Pinchon bear to those of France. Dr. Bachman's results were published in 1855, those of Dr. Garlick in 1857. [MILNER: Rep. U. S. F. C., Part II., p. 533. GARLICK, Ohio Farmer, 1857].

In Mr. Milner's excellent paper on "The Progress of Fish Culture in the United States" may be found accounts of the experiments of other pioneers, Kellog & Chapman in 1855, Muller & Brown in 1857, Ainsworth in 1859 and Seth Green in 1864. The experiments of Captain N. E. Atwood in 1856 are also deserving of prominent mention [Report Mass. Commissioners, 1856].

In 1854 was published, in New York, by the Appletons, a treatise on Artificial Fish Breeding. This, in connection with the publication of the results of Garlick and Ackley's work in 1857, and the report of the Massachusetts Commission in the same year, to which was appended a translation of the essay of Jules Haimer, had a most important influence on the development of public interest in fish culture. The writings of Coste, too, were in the hands of many Americans.

XXII. 1854—*Beginnings of Fish Culture in Belgium.*—In February, 1854, a fish-breeding establishment was organized by the Belgian Government, De Clerg, an engineer, having been sent, in November, 1853, to France to investigate the subject of fish culture therein. [MOLIN: op. cit., p. 8.]

XXII. 1854—*Beginnings of Fish Culture in Holland.*—In 1854, the King of Holland established a fishery commission, and set up a hatching apparatus in his palaces at Bois and Wiss. [MOLIN: op. cit., p. 8.]

In 1860, a fisheultural establishment was founded in the Zoological Gardens at Amsterdam, which was successful in the culture of salmon. [DE BONT: La Culture du saumon et de ses congeneres et la Pisiculture au Jardin Zoologique d'Amsterdam—Amsterdam, 1872. BOUCHON-BRANDELET: op. cit., p. 215.]

XXIII. 1854—*Beginnings of Fish Culture in Russia.*—In 1854, V. P. Vrasski, after studying the French literature of fish culture, made experiments on the eggs of the eel, pout and the trout, and after independently discovering the process of dry impregnation, in 1860, established an extensive breeding station at Nickolsky, in the province of Novgorod, which was afterward extensively subsidized by the Russian Government. [SOUDAKEVICZ: Report of U. S. Fish Commission, Part II., 1853, p. 604.]

A large government establishment was founded in the province of Suwalki, in 1860, breeding trout, salmon, and several species of whitefish. [IBID, p. 512.]

XXIV. 1856—*Beginnings of Public Fish Culture in the United States. Massachusetts Fish Commission.*—May 16, 1856, the General Court of Massachusetts appointed three commissioners "to ascertain and report to the next General Court such facts respecting the artificial propagation of fish as may tend to show the practicability and expediency of introducing the same into the Commonwealth, under the protection of law." Capt. N. E. Atwood, one of the commissioners, experimented with the trout and succeeded in fecundating, though not in hatching, their eggs. He also made observations upon the breeding of mackerel, having in contemplation their artificial propagation. The committee published a report giving a resume of past progress in fish culture, and a translation of Jules Haime's famous essay in the *Revue des Deux Mondes*. Public opinion was not, at this time, quite ripe for the substantial encouragement of fish culture, and it was not until 1865 that Massachusetts established its fish commission upon the present basis. [Report of Commissioners appointed under resolve of 1856, etc. 1857, p. 64.]

XXV. 1856—*Discovery of the Russian Method of Dry Impregnation.*—Mr. V. P. Vrasski, a Russian fish culturist, discovered, in 1856, the dry method of impregnation, not publishing his results, however, until 1871. The same or a similar method was described by Carl Vogt as early as 1857. [MILNER: op. cit., p. 540.]

XXVI. 1857—*Early action of the States of Vermont and New Hampshire.*—In October, 1857, a report on the artificial propagation of fish was made to the General Assembly of Vermont by Mr. George P. Marsh. At almost the same time a similar report was made to the Legislature of New Hampshire by Mr. A. H. Robinson. These had an undoubted effect on public opinion, and led to the efforts at restoring the salmon streams which shortly followed. [VERMONT: Report made under authority of the Legislature of Vermont on the artificial propagation of fish, by George P. Marsh, Burlington, 1857. 8vo., p. 52, appendix.]

XXVII. 1857—*First Attempt at Propagation of Whitefish.*—In November, 1857, Mr. Carl Muller, of New York, and Henry Brown, of New Haven, obtained whitefish eggs, in Lake Ontario, impregnated them, and transported 1,000,000 to Lake Saltenstall, near New Haven. In 1858 the experiment was repeated. No results are reported. [Report U. S. F. C., II., pp. 534-545. Report of Commissioner of Patents for 1859, 1860, p. 227.]

XXVIII. 1857—*First Attempt at Propagation of Lake Trout.*—In the same manner, in 1857 and 1858, Messrs. Muller & Brown transported several millions of lake trout eggs. No results are reported. [Report U. S. F. C., I. c.]

XXIX. 1857—*First Attempt at Propagation of Pike-Perch.*—In May, 1857, Messrs. Muller & Brown obtained fertilized eggs of pike-perch, and planted them in Lake Saltenstall. They are supposed to have been destroyed by the fall freshets. [Report U. S. F. C., I. c.]

XXX. 1862—*First Attempt to Introduce Salmon into Australasia.*—This attempt was made by Mr. H. R. Francis, from England to Tasmania, and was a failure. In 1864, and in subsequent years, successful effort were made. From 1869 to 1876 many hundreds of these planted salmon were found. [Report N. Y. F. C. II., pp. 7-24; VI., pp. 319-23.]

XXXI. 1864—*First Breeding of Salmon in America.*—In 1864 Mr. James B. Johnston, of New York city, hatched out in the studio building in New York city the eggs of salmon procured by him in Europe. None of the fry were liberated. [NORRIS: American Fish Culture, p. 114.]

In 1865, it is said, Seth Green applied to the French Establishment at Huningue for some salmon eggs, and received 5,000, which died, however, in the New York Custom House.

XXXII. 1864—*The Establishment of the Green Hatching House.*—Mr. Seth Green was the first American fish culturist who carried on fish culture upon a basis pecuniarily profitable. [NORRIS: op. cit., p. 99. MILNER: op. cit., p. 535.]

XXXIII. 1865—*Establishment of the New Hampshire Fish Commission.*—In 1865 Henry A. Bellows and W. A. Sanborn were appointed Fishery Commissioners and Dr. W. W. Fletcher, of Concord, N. H., was sent by the State Legislature to Canada to obtain salmon eggs. This was the first practical move in public fish culture in America, though Massachusetts, as has been seen, made a preliminary step ten years before. [MILNER: l. c., p. 543. Report of the Select Committee on Fisheries, 1865. Reports of the Commissioners on Fisheries made to the Legislature of New Hampshire. I., 1866; II., 1867; III., 1868; IV., 1869; V., 1870; VI., 1871; VII., 1872; VIII., 1873; IX., 1874; X., 1875; XI., 1876; XII., 1877; XIII., 1878; XIV., 1879; XV., 1880; XVI., 1881.]

From 1866 to 1879 the State of New Hampshire appropriated $22,668 for purposes of public fish culture.*

XXXIV. 1865—*Establishment of the Fish Commission of Vermont.*—In 1865 the Fish Commission of Vermont was established, Albert D. Hagor and Charles Barrett being appointed commissioners.

From 1871 to 1879 $7,800 was appropriated for purposes of public fish culture. [Reports of the Fish Commissioners of the State of Vermont. I., 1866; II., 1867; III., 1869; IV., for 1871–2 (1872); V., 1873–4 (1814); VI., 1876; VII., 1877–8 (1878); VIII., 1879–80 (1880).]

XXXV. 1865—*Beginning of Fish Culture in Austria.*—In 1865 the Government establishment at Salzburg was founded, and in 1873 every province in the Empire was provided with its own breeding establishment. [BOUCHON BRANDELET: Report U. S. F. C., Part II., p. 518.

XXXVII. 1866—*Establishment of the Fish Commission of Connecticut.*—In 1866 the Fish Commission of Connecticut was established, F. W. Russell and Henry C Robinson being appointed Commissioners. From 1868 to 1880 $43,300 was appropriated by the State for purposes of public fish culture. [Reports of the Commissioners, I., 1867; II., 1868; III., 1869; IV., 1870; V., 1871; VI., 1872; VII., 1873; VIII., 1874; IX., 1875; X., 1876; XI., 1877; XII., 1878; XIII, 1879; XIV., 1880.]

XXXVIII. *Establishment of the Pennsylvania Fish Commission.*—In 1866 the Pennsylvania Commission was organized, but no regular commissioners were appointed until 1870, when James Worrall was elected by the Legislature to that office. From 1873 to 1880 the State has appropriated $99,630 for purposes of public fish culture. [Reports of the Commissioners for the Restoration of the Inland Fisheries, I., 1870 (1871); II., 1871 (1872); [see Report U. S. Fish Culture, II., p. 782]; III., 1873 (1874); IV., 1874 (1875); V., 1876 (1877); VI., 1877 (1878); VII., 1878 (1879).]

XXXIX. 1866—*The Establishment of the Canadian Commission of Fisheries.*—The Dominion of Canada this year established its Fishery Commission, which has since, under the direction of Commissioner W. F. Whitiker, performed such efficient service.

XL. 1867—*The Establishment of the First Hatching Establishment in the United States for Public Fish Culture.*—Although New Hampshire, as has just been stated, was first to take active measures toward restocking its streams, Massachusetts in 1867 again took the lead, establishing a hatchery for shad at South Hadley Falls on the Connecticut River. [MILNER: op. cit., p.542, Massachusetts Reports.]

XLI. 1867—*The Invention of the Seth Green Shad Box.*—While operating on the Connecticut River in 1867, Mr. Seth Green devised that form of floating hatching box, with wire bottom, tilted at an inclination toward the current, which bears his name and which has been so extensively used in shad hatching in all parts of the United States. [MILNER: op. cit., p. 543. Rep. Mass. Comm. Fishories, 1868, p. 35, pl. 11.]

XLII. 1867—*Successful Propagation of the Shad.*—The shad was this year successfully propagated at South Hadley, Mass., by Mr. Seth Green, working in behalf of the New England Commissioners, and at his own expense, though the apparatus was provided. This was the first attempt to propagate any member of the herring family. [MILNER: l. c., Mass. Reports, II. c.]

[TO BE CONTINUED.]

*For the statements of amounts appropriated by the several States given in this and other instances I am indebted to Mr. Charles W. Smiley.

A NOVEL SHIPMENT OF CARP.

LAST Saturday the Pacific Mail steamer Colon took out thirty carp for Ecuador, in charge of Mr. Aguirre. They were sent by Professor Baird through Mr. Blackford, of the New York Fish Commission, and as after their arrival in Ecuador they will still have a ten days' journey to the plantation of Signor Jijon, near the city of Quito, upon the backs of Indian carriers, they required special cans for their transportation.

These cans are made of strong tin, flattened on one side to fit a man's back, with places for the strap, which passes across the Indian's forehead, from which they depend. They are covered with felt and have perforated wooden covers to protect them from the tropical heat, and, when filled with water, will weigh one hundred pounds. The water will not be changed from the time of leaving New York, but will be aerated by dippers, Mr. Aguirre accompanying them to the end of their journey, Messrs. Hoadley & Co., the New York agents, having given them every facility on shipboard. This is the greatest feat yet attempted in fish transportation, and we will watch for reports of the result with great interest. Ten days' journey on the backs of men, in a tropical climate, is enough to break down the endurance of even a carp.

CARP IN CALIFORNIA.—I have taken much interest in your articles on the growth of carp in America. I made the assertion about nine months ago in a Sacramento paper that I believed that we could beat the world on their growth. I will cite an instance or two. We have plenty of them that at twenty months old will measure fifteen inches in length. I let one man have two small carps eight months old, and at the age of twenty months they were twenty-one inches long and weighed five pounds. Now this and similar results are very flattering to the carp producers, and it shows those who are aquainted with the carp about what we may expect from them. Yet I hardly think that these statements (although partly beyond contradiction) properly set them before the minds of those unaquainted with them. I fear they will expect rather too much. I think from experience that about five inches for each season is a fair average growth, at least that is about what I obtained, although I always have been over-stocked since the first season.

With the same number of fish to the same area I think we can obtain one-fourth or at least one-eighth more pounds here than they can in Germany as my carp hardly ever go into winter quarters. This may be the reason of it. LEVI DAVIS.

REPORT OF THE MISSOURI COMMISSION.

THE first report of the Missouri Fish Commission, for 1880, is naturally small, the bill creating the commission being only a little over a year old. They report an increased interest, on the part of the people of the State, in their work, and the fact that the fishes of the State were becoming scarce in places of former plenty. They complain, however, that the protective laws are violated everywhere, a not unusual complaint in States to which fish protection is new and where the people have not been educated to respect public rights to fish and game, and common enough in States where they have had years to become thus educated.

After examining many springs, with a view to establishing a hatchery, they finally established one in Buchanan County, on what is called the "Brown Spring," about three miles south of the southern limit of the city of St. Joseph, on condition that ten acres of land on which the spring was situated be conveyed, in fee simple, to the Fish Commission. The citizens of St. Joseph very liberally contributed $1,000, and bought the land and presented it to the Commission. Mr. C. H. Brownell, a fisheulturist, lately of Michigan and formerly in the employ of the New York Commission, was engaged as superintendent, and the work begun. 200,000 eggs of the California salmon were obtained from Prof. Baird, hatched and distributed. Live brook trout for breeders were bought and placed in Schicht's Pond, in Pulaski County.

In the appendix to the address to the people of Missouri by the Fish Commission" gives a copy of the fishery laws and an appeal to support and obey them, a list of Missouri food fishes, etc., and letters from Prof. Baird and others on the subject. The Missouri Commission are evidently on the right track, and have done well in securing a practical man in Mr. Brownell to do the work.

WHAT TO STOCK WITH.—We have just finished making a lake which is about 380 yards long and 85 yards wide, varying in depth from four and one-half feet to one foot. The bottom is mud and gravel. It is fed by a running brook and runs out over draw gates. What fish are best adapted to stock the water with, and to whom should we apply for them? We want a fish that will give us good sport to catch them in time. We are told that German carp would be best, but we prefer your opinion in the matter. —J. S. H.

If your pond is cool enough in summer try brook trout. For them it should not rise above seventy degrees. If not right for them try carp. Your pound is not deep enough for black bass. Read the articles on carp breeding in our last four issues. For trout apply to any trout breeder, and for carp to E. G. Blackford, Fulton Market, New York. We know nothing of the sporting qualities of carp, if they have any, but old writers credit them with fighting qualities.

CENTRAL FISHCULTURAL SOCIETY.—We have republished, in pamphlet form, the papers and discussions of the Central Fishcultural Society at their last meeting in Chicago. The reprint contains, in handy form, much matter of permanent value to fisheulturists. Six copies have been mailed to each member, and to others it will be sent postpaid on receipt of price, 50 cents.

—Those of our friends who may desire reliable information and advice as to investments in stocks and securities will do well to consult, either in person or by mail, Mr. Frank Blydenburgh, of No. 66 Pine street, New York.

Dyspepsia, Biliousness, Nervousness and Miserableness all cured with Hop Bitters.

The Kennel.

FIXTURES.

September 1, at Pittsburgh, Pa. Close of entries Pennsylvania Field Trials. First Annual Derby. I. R. Stayton, Secretary, Pittsburgh, Pa.

September at St. Louis, Mo. St. Louis Kennel Club Third Annual Bench Show. Charles Lincoln, Superintendent.

October 1 at New York City. Close of entries Eastern Field Trials. Trials commence on Thanksgiving Day. Jacob Pentz, Secretary, P. O. Box 274, New York City.

EASTERN FIELD TRIALS CLUB RULES.

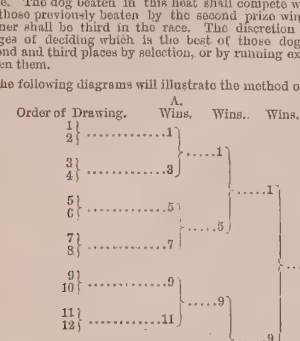
WE republish such of the rules of this club as were amended at their last meeting. The other regulations remain as published in our issue of May 12:

RULE 2.—The judge or judges, shall be selected by the Executive Committee, and their names shall be publicly announced as soon as possible after their selection, and before the closing of the entries. When a judge from ill-health or other satisfactory cause is prevented from attending a meeting or finishing it, the Executive Committee shall have the power of deciding what is to be done.

RULE 11.—A natural bye shall be given to the lowest available dog in each row. No dog shall run a second bye in any stake unless it is unavoidable. When a dog is entitled to a bye, either natural or accidental, his owner or nominator may select any available dog to run off the bye from the beaten entries in his stake, if required by the judges.

RULE 12.—Every dog must be brought up in its proper turn without delay; if absent for more than twenty minutes its opponent shall be adjudged the winner and entitled to the heat, and shall in that case run a bye. If both dogs be absent at the expiration of twenty minutes from the time of call to run by the judge or judges, said judge or judges shall have the power to disqualify both dogs or fine the owners any sum not to exceed the amount of ten dollars.

RULE 16.—If any subscriber, his deputy or handler, openly impugns the action or decisions of the judge or judges, during the progress of a trial, he shall forfeit not more than $20, or less than $5, at the discretion of the majority of the Executive Committee of the club.

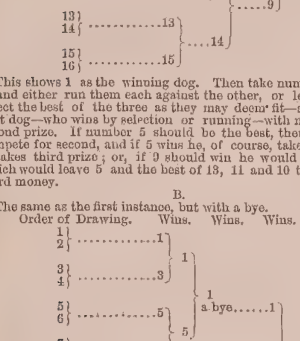


RULE 17.—When two dogs, the property of the same owner, or of confederates, shall remain in for the deciding trial, the stake shall be considered divided, and also if the owner or deputy of one of the two dogs, induce the owner or deputy of the other dog to draw him for a consideration or bribe of any nature whatsoever. If however, either dog be drawn without consideration, from lameness, injuries, or from any cause clearly affecting his chances of winning, the other dog may be declared the winner, on the facts of the case being clearly proved to the satisfaction of the judge or judges. This same rule shall apply when more than two dogs remain at the end of a stake which is not run out; and in case of a division between three or more dogs, of which two or more belong to the same owner, these latter shall be held to take equal shares of the total amount won by their owners in the division. The terms of any arrangements to divide winnings, and the amount of any money given to induce the owner of a dog to draw him must be declared to the Secretary.

RULE 20.—Dogs shall be drawn in braces by lot, and run in heats, and the beaten dogs to be retired (except as hereinbefore

mentioned) and the winners to be run again in the order in which they ran their successive heats. The last dog beaten by the winner of the first prize shall compete for the second prize with the best of those dogs previously beaten by the winner of first prize. The winner of this heat shall be declared the winner of second prize. The dog beaten in this heat shall compete with the best of those previously beaten by the second prize winner, and the winner shall be third in the race. The discretion is given the judges of deciding which is the best of those dogs beaten for second and third places by selection, or by running extra heats between them.

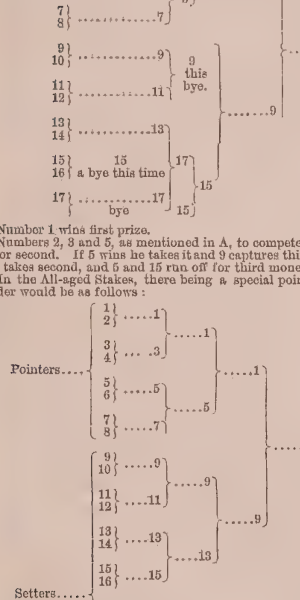
The following diagrams will illustrate the method of running:



A.

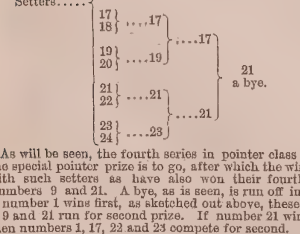
This shows 1 as the winning dog. Then take numbers 2, 3 and 5, and either run them each against the other, or let the judges select the best of the three as they may deem fit—and run such best dog—who wins by selection or running—with number 9 for second prize. If number 5 should be the best, then 5 and 9 to compete for second, and if 5 wins he, of course, takes second and 9 takes third prize; or, if 9 should win he would take second, which would leave 5 and the best of 13, 11 and 10 to contest for third money.

B.



The same as the first instance, but with a bye.

Number 1 wins first prize.



Numbers 2, 3 and 5, as mentioned in A, to compete with number 9 for second. If 5 wins he takes it and 9 captures third. If 9 wins he takes second, and 5 and 15 run off for third money.

In the All-aged Stakes, there being a special pointer prize, the order would be as follows:

As will be seen, the fourth series in pointer class decides where the special pointer prize is to go, after which the winner competes with such setters as have also won their fourth heats, viz.: Numbers 9 and 21. A bye, as is seen, is run off in its own class. If number 1 wins first, as sketched out above, these numbers 2, 3, 5, 9 and 21 run for second prize. If number 21 wins first money, then numbers 1, 17, 22 and 23 compete for second.

If in the first case the winners should be different, and should be placed among the pointers, the following should explain the positions taken:

RULE 21.—The judges shall order up the dogs as soon as they have determined which is the best according to the scale of points in rule 23. Unless a dog shows such lack of merit, that in the opinion of the judges he cannot be placed, all dogs shall, if time permit, have at least two chances to show their behavior on birds.

RULE 22.—Pointing fur, feather or reptile, if the judges deem the same e xcusable, shall not be considered false points. A dog making a false point and discovering it to be such, without any encouragement from his handler, shall not be penalized.

RULE 23.—Positive points of merit: Pointing, nose and staunchness, 40; pace, quartering and style, 20; retrieving, 10; backing, 10; obedience and disposition, 10. Total, 100. Two wilful chases lose the heat.

RULE 24.—No person, except the judges, attendants and reporters, will be permitted to accompany the handlers of dogs. Two persons will not be permitted to work one dog at the same time. If, from any cause, etc., as given before.

KENNEL CLUB FIELD TRIALS.

[From the London Field.]

THE Kennel Club Field Trials were this year, by the kind permission of Mr. Geo. Brewis, held over his Chesterford Park estate. The attendance on the first day was very good, the day being fine; but very few spectators saw the proceedings throughout on Wednesday, as a thunder and hail storm visited the scene of action, and scattered all but the very enthusiastic few, the officials and the reporters, and on Thursday the meet dwindled to a mere handful of field-trial men. The judges were Messrs. Whitehouse and Shirley, with whose decisions I do not entirely agree; but the "heats" plan, on which they worked the awards, was very much to blame in the matter. Moreover, in one or two cases, the judges came to their decisions with unaccountable dilatoriness, and in others with equal unsatisfactory rapidity. Thus, a brace of dogs were down, on one day for an hour and a half, and another brace on the same day for only two and a half minutes! Now, granting that in the latter case one of the runners had certainly committed egregious mistakes, yet it is certainly rather quick work to put out a dog in such a short time, and more inexplicable when the identical mistakes performed by other dogs were overlooked. The draw took place, as usual, at the Rose and Crown, Saffron Walden, Essex, 9:30 P. M., on Monday, when a good many sportsmen put in an appearance—a great contrast, this, to last year's draw, when only very few were present. Mr. Wilson, the new Kennel Club Secretary, assisted by Mr. Geo. Lowe, managed the draw quickly and in a business-like manner, and the cards were out early in the morning on Tuesday with commendable punctuality.

TUESDAY, MAY 3.

We met at Chesterford station at ten o'clock, and at once a move was made to a promising wheat field, where we began the SEVENTH FIELD TRIAL DERBY, for pointer and setter puppies bred in 1880; 152 subs.

Pointers.

Sir T. Lennard's liv w d Gunner, by G. Lowe's Y. Bang—owner's Teal (Priam and Scamp's dam), 10mo. ..... beat Mr. G. Pilkington's liv w d Morit, by Mr. S. Price's champion Bang—owner's Fancy (6067), 14mo.

Mr. Purcell Llewellin's bk w t Dashing Ditto, by owner's Dash II.—Rifle, 11mo. ..... " M. Joe Platt's bk w b Bloom, by Struggle (son of Rhyl)—Wreath by champion Rock, 15mo.

Major Platt's bk w d Wild Rose, by Tam O'Shanter—Mr. James' Daisy, sister to Dash II., 15mo. ..... " Mr. G. Brewis' bk w d Bobbie Burns, by Tam O'Shanter—Fussy, by Blue Prince, her dam Rhoda, 13mo.

II.

Pointers.

Gunner beat Will o' the Wisp | La Vole beat Moffat
Fatima beat Wild Drake | Luck of Bron-y-Garden (a bye)

Setters.

Rose of the Valley beat Silk | Dashing Ditto beat Wild Rose
Fred beat Gentle

III.

Pointers

Gunner beat Luck of Bron-y-Garden | Fatima beat La Vole (drawn)

Setters.

Rose of the Valley beat Fred | Dashing Ditto (a bye)

IV.

Pointers.

Fatima beat Gunner.

Setters.

Dashing Ditto beat Rose of the Valley.

Final for Winner of the Derby.

Dashing Ditto (setter) beat Fatima (pointer).

Awards—First prize in setters, and absolute Derby winner, Mr. R. Ll. Purcell Llewellin's dog Dashing Ditto; first prize in pointers, Mr. R. Lloyd Price's bitch Fatima; equal second prizes in each breed, Mr. G. Thomas's setter bitch Rose of the Valley and Sir Thos. Lennard's pointer dog Gunner.

The pointers were first taken in hand, and we began with the first brace on the card, viz., Sir Thos. Lennard's Gunner and Mr. G. Pilkington's Merit. Gunner was throughout the better goer of the two, but he occasionally went too fast for his nose, and he began by running slap into a brace, disregarding wing *in toto*, and beat evidently upon having his fling first, before settling into steady work. This done, however, he did well, as he found two brace of birds successively, and although Merit backed him well each time, the flag of course went up for Gunner.

Mr. R. Lloyd Price's Fatima and Mr. J. H. Salter's Romp's Baby ran next, and at first start Fatima drew up, a goodish way, to a brace which both had winded. She next chased a hare for a hundred yards or so, and her chances looked anything but bright for the time being, as Romp's Baby, who is a grand goer, something like her mother, old Romp, was going in style; in a fallow, however, she flushed, and had to be ordered down. Fatima then roaded a long way again, and pointed a brace; Romp's Baby declined backing. Then both got on point, but Fatima's was false, whilst Romp's Baby, on the contrary, was on a brace. Then Romp again pointed a brace and a rabbit, and was well backed, and in the next field both found a brace of birds; but a moment later Romp ran into three birds, and then again put up an odd bird, and did not notice wing at all in either case, whilst Fatima was pluming down a brace, and her flag went up. Romp's Baby will be a rare good one with time and care.

Mr. J. H. Salter's Wild Drake and Mr. G. Pilkington's Mirth were next. Wild Drake false pointed to start with, when Mirth declined backing, and to a hare the latter had to be spoken to, though not evidently very strongly inclined to chase. Drake then false pointed again, and then flushed a brace, pottering right into them. This he repeated in the next field, and Mirth joined him. Then the dog flushed again twice, and the bitch once, and as she went after two hares for some fifty yards Wild Drake won.

Mr. R. Lloyd Price's La Vole and Mr. F. Lowe's Borax were the next brace, and we expected grand things of La Vole, but she was getting in use, and began rather stale. However, she warmed up a bit to her work, and soon drew up for a long way to a bird, but could not make it out, and we put it up, when she dropped well to wing. Borax backed her well, and then he took a false point. He, by the way, was not running fast by any means—seemed out of form, in fact—and the brace, therefore, showed no great work, as the bitch did not run near her previous form either. However, she false pointed, and then took a capital point on a brace, then a false point, then dropped to fur well. Finally, in a fine clover field, she ran right into a brace, knocking them up badly, and in the next clover again she took a false point, but the dog was not working at all, and she won.

We then went to the tent wherein luncheon was spread, and, this over, we took in hand Mr. F. Lowe's Blanche of Devon and Mr. Lloyd Price's Luck of Bron-y-Garden, who were started in a lovely wheat field, when Blanche took at long range a point, which Luck took also, declining to back. Then Luck flushed a brace, and in the next field again put up an odd bird. He next pointed a brace, and Blanche dropped to a hare. Then Luck flushed a bird, and dropped; and then both found birds, Luck dropping to gun well. But next, when Blanche pointed a brace, she dropped well to gun. Finally Blanche found a brace, when Luck, backing her back, caused her to put up her birds jealously, and Luck won; but I thought Blanche had done well, and the decision was questionable.

Mr. G. Pilkington's Moffatt and Mr. R. Lloyd Price's Lady Zoe had a short thing. Moffatt found well, and dropped to gun capitally; then she took three false points running, and Lady Zoe flushed two birds badly, then both pointed, each a brace, in the next field. Finally, Moffatt ran right into a brace; but her flag went up. Something else might have occurred, which I did not see, to account for this decision. Mr. H. Grant's Will o' the Wisp scored a bye. This ran us through the card, so far as the pointers were concerned, and we began the setters by running Mr. E. Bishop ns (Mr. Barclay Field's) Belgium and Mr. G. Thomas' Rose of the Valley. To a hare the bitch behaved exceedingly well, then she took a point immediately afterward, Belgium backing her well. She next dropped to wing well to a bird, and to gun was perfect. Rose then took to pointing larks, was well backed each time, then Belgium found birds, blinked her point, and Rose took it. Rose twice false pointed, and was backed admirably each time; she is a very pretty, merry worker, full of life and dash, and she won easily, as Belgium did not seem to know Charles Bishop, who was working her, hence, very probably, her want of dash and confidence.

Mr. Thomas Armstrong's John o' Groat ran against Lord Downe's Silk. John first false pointed, but found a brace well immediately afterward; then he chased a lark, and false pointed. Then Silk pointed a bird, while John was wasting his time pottering near the fence. Again Silk pointed, a hare this time, and won. Silk had been improving very much since Shrewsbury, and ran more smartly.

We then ran Mr. G. Thorpe-Bartram's Gentle against Mr. Purcell Llewellin's Darling Novice. Gentle pulled up neatly to a brace of birds, Novice backing beautifully; then Gentle flushed a bird down wind, dropped to it, and another bird got up, she remaining down very steadily. Both then false-pointed once or twice; it was getting late, the birds were on the run evidently. Howbeit, in the next field both turned for a point on a hare, but Novice had it first; Novice, however, could not make out her game, and the flag went up for Gentle. Mr. Joe Platt's Rollo and Lord Downe's Fred came then forward. Rollo ranged well, but he chased a hare up to the fence, while Fred pointed larks once or twice. Then Rollo took a good point, and Fred also found the same birds; and Rollo once more found another brace, but in the next field he chased again, and was put out. Mr. Joe Platt's Bloom and Mr. R. Ll. Purcell Llewellin's Dashing Ditto had also a very decisive spin. Bloom false-pointed, Dashing backing readily; Bloom next put up a brace of birds, which not only Ditto was pointing, but to which she herself had drawn for a point, and into these birds she deliberately rushed, thereby taking the point and knocking up the birds, and, as she chased them, all these misdeeds rightly put her out. The next brace were Major Platt's Wild Rose and Mr. G. Brewis' Bobbie Burns, and they had probably the very shortest trial on record. Bobbie false pointed, and the bitch took a lovely point on a brace whilst going in her usual superb style. She next pointed a hare, and then a brace of birds, and won. This trial lasted two minutes and a half, so that Mr. Brewis (Bobbie Burns' owner) can boast of not having been over-favored by his two friends, the judges, as the ground over which his dog ran was very bare indeed, and the dogs were down such a very short time that but little could be seen of them. For the ties, Gunner ran his bye with Will o' the Wisp. Gunner, going very fast, flushed twice, and then found a brace. Will did not extend himself at first, but he soon warmed up to his work, and they pulled up together capitally on a brace. Will, however, soon after pottered up another brace, and Gunner, behaving remarkably well to a hare, won. Fatima and Wild Drake then came on. Wild Drake twice false pointed, Fatima backing to perfection both times, but she next flushed. Drake pointed a brace of birds well, while Fatima false pointed twice. This, however, Drake was also guilty of; but it was nearly dark, and no good work could have been expected at that time from any dog.

WEDNESDAY, MAY 4.

We met at 9.15, at Chesterfield Park, Mr. Geo. Brewis's seat, and the brace which had been taken up overnight were slipped behind the house in a stubble. Going down wind, Fatima flushed, then Wild Drake false pointed, and also flushed wild birds, and again false pointed, Fatima backing well. He then pointed a wild brace, and in the next field he pulled up just in time to another brace, which Fatima had unaccountably passed over without finding. In the next field, a rough common, Wild Drake flushed a brace, and, refusing to obey whistle, he went on, and put up another and lost. The dogs, however, had been slipped down wind, and he had gone on his own "hook," to take the wind, for which he was blamed; but so far he was right in my opinion. His flushing, however, was inexcusable. Moffat and La Vole were slipped on the same common, when La Vole, drawing for a point, the birds were put up by the breakers; then both bitches false pointed, and this Moffatt repeated again in the next field, being well backed throughout. Then La Vole took a false point, which Moffatt shared, and Moffatt pointed a brace, having roaded them well. Moffatt then had two more false points, then she found and left her point, putting up the birds, and in the next field she again flushed a brace after having found them; then she dropped well to a hare, and then she found a brace, and put them up once more, and, of course, La Vole won, although her chances had been anything but rosy at one time. She had had a tremendously long trial, and was perfectly knocked up.

We began the setter ties with Silk and Rose of the Valley. Rose, going beautifully and quartering splendidly, began badly by flushing a brace—dropping, however, to wing readily; she then dropped well to a hare, then pointed near the fence, and as we saw a bird rising beyond she won. It began then raining very hard, and Fred and Gentle were slipped in the midst of a shower; Gentle found a brace well, and Fred flushed another brace, then the bitch dropped in time to a wild brace, and the running was stopped for refreshing the inner man. After luncheon Fred found, left his point, and we flushed them; then Gentle flushed a brace twice running, one in each of the next two fields, and the dog won. Dashing Ditto and Wild Rose ran next; Dashing Ditto pointed a brace which Wild Rose ran into, and when Dashing again found a bird she did not back her, so that Dashing Ditto's flag went up readily, poor Wild Rose having for the nonce forgotten her previous good behavior.

The weather then cleared up a bit, and the two pointers Gunner and Luck were sent on. Gunner false pointed, and Luck took a good point on a brace of birds, when Gunner made an excellent back. Then Gunner took a false point, Luck backing him; then both flushed when running side by side down wind; then Luck found a brace and blinked them, and at the bottom of the next

field she winded a brace and went up to them, putting them up and not dropping; this she repeated in the next field, and in her next cast she found a brace, trotted them up again in an exasperating manner, and only dropped when repeatedly ordered; so the dog won with nothing particularly good to his credit.

Mr. Lloyd-Price's Fatima then came on the card against his La Vole, but Mr. Price drew the latter, Fatima thereby scoring a win; and for the second ties Rose of the Valley was called against Fred. Fred found a brace of birds in style, Rose backing him only to order; then the bitch found also a brace in very excellent form; then Fred got again on a brace; then he stopped short, well, to a wild brace, and the bitch dropped well to wing; she then found a brace well, and won, but it was, to say the least, a very near thing, as, so far, their score was very evenly balanced; so why the bitch won then was rather a puzzler, if points only were considered. At the same time her style was undeniably superior to Fred's.

Gunner and Fatima were next. Gunner flushed, and did not drop, but he next pinned down a brace, only fairly well, as they were very close under his nose. He then flushed two birds, Fatima pointed a brace, and Gunner flushing a third brace, the bitch won well.

Rose of the Valley and Dashing Ditto had a good though short run. Dashing Ditto winded a brace a tremendously long way, roaded them carefully, and stood them beautifully; this was a truly grand bit of work, and she repeated it again on another brace, showing marvelous nose and breaking throughout, and she won, putting Rose quite in the shade for the time being, as she never gave her a chance to score, doing all the work herself. For the final, we had this winning setter bitch Dashing Ditto and the winning pointer bitch Fatima brought into an immense field with capital cover, and they were sent on with tremendous excitement among the field. Fatima flushed and refused to drop, and then false pointed, and both were very steady to fur, several hares being afoot together at the same time, but Fatima did not drop to them; then both false pointed, and both found a brace.

Just then a clap of thunder gave us warning that a storm was brewing. Great coats were requisitioned; but proceedings had to be stopped while the storm lasted, as the hailstones would have punished the dogs badly. Finally, Fatima pottered up and found a bird in the fence, and the setter getting a brace in style in the middle of the field, and the pointer declining to back her, Ditto won the Derby outright.

It had been proposed to give up the All-aged Stakes; but the proposal was reconsidered, and, at ten past five, we began the

ALL-AGED STAKES, for sixteen all-aged pointers or setters, dogs and bitches.

Viscount Downe's liv w d Sam III., by Dash III.—Silk, 4yrs (setter)	beat	Mr. J. P. Platt's w bk d Don, by Rhyl—Liz, 3 yrs (setter)
Mr. Pilkington's liv w b Laurel, by S. Price's Champion Bang—owner's Jessamine, 2yrs (pointer)	"	Mr. Barclay Field's liv w b Sal, by Riot; dam by S. Price's Bang, 3yrs (pointer)
Mr. R. Purcell Llewellin's lem w b Countess Rose, by Count Windom—Norna, 3yrs (setter)	"	Mr. Heywood Lonsdale's rd w d Baron, by Fred V.—Rue, 1yr, 10mo (setter)
Mr. R. Lloyd-Price's liv w b Tick, by Drake—Ready Money, 3yrs (pointer)	"	Mr. F. Lowe's bk w d Ilis Grace (late Duke of Devon), by Tam o' Shanter—Nott's Blue Bell, 2yrs (setter)
Baron Von Amerongen's w b d Prince II., by Champion Prince—Rilie, 4yrs (setter)	"	Rev. S. East's bk w d Day Star, by Mr. Pilkington's Dash—Duchess, 3yrs (setter)
Mr. R. Purcell-Llewellin's bk w t d Dashing Bondhu, by Dash II.—Countess Bear, 2yrs (setter)	"	Messrs. Wyman and Buchanan's rd b Kathleen, by Rover—Pamela, 2 yrs (setter)
Sir T. Lennard's liv w d Priam by Y. Bang—Teal, 4 years (pointer)	"	Mr. Lloyd Price's liv w b Belle Faust, by Faust—Belle, 3 yrs (pointer).

II.

Laurel beat Sam
Tick beat Countess Rose | Dashing Bondhu beat Prince II.
Priam (a bye).

III.

Laurel beat Priam | Dashing Bondhu beat Tick.

IV.

Dashing Bondhu beat Laurel.

Awards.—First prize, Mr. R. Ll. Llewellin's setter dog Dashing Bondhu; second prize, Mr. Pilkington's pointer bitch Laurel; equal third, Mr. R. Lloyd Price's pointer bitch Tick and Sir Thos. Lennard's pointer dog Priam.

The first brace on the card were Viscount Downe's Sam III. and Mr. J. Platt's Don, both setters. Don began by committing a bare-faced flush, and did not drop to wing; and Sam also flushed, but his birds settled close to him again, and both dogs declined pointing—no scent, clearly; then Sam behaved well to a hare, whereas Don put up a bird, and, chasing it, extinguished his chances.

Mr. Pilkington's pointer bitch Laurel then ran against Mr. Barclay Field's pointer Sal. Sal twice false pointed, the birds having evidently run through the hedge, and Laurel dropped only when told. Both then took two good points, and Laurel again found, but was unsteady; then, when Sal got another point, Laurel backed her, and, in so doing, she turned round and got the birds too; then Laurel pinned down a brace, was well backed, and won.

Mr. Purcell Llewellin's setter Countess Rose was then called with Mr. Lonsdale's setter Baron. It was then ten minutes to 7 P.M., and really much too late for running dogs. Both dogs went off at a remarkably good pace, but Countess Rose finished, then pointed twice, Baron backing her only when quite close to her, whereas, when he also false pointed, the bitch backed him at some hundred and fifty yards in grand form, and then she took a point on a brace of birds. In their next cast Countess Rose found a brace in beautiful style, Baron being again not quite steady in his back, and, of course, Countess won.

It was then 7:10 P.M., and quite time we should give up work.

THURSDAY, MAY 5.

The meet was announced for nine o'clock, but we began only at a quarter to ten. The first brace on the card were His Grace and Tick, but the judges, thinking that Mr. F. Lowe had drawn his dog, and the second brace not being on the ground, ran the third brace. However, Mr. F. Lowe explained matters, and eventually ran his dog; but for the sake of clearness I now append the beat, so as to keep right with the card. The morning was lovely and everything that could be desired for hunting dogs; but in the afternoon we were again treated to a steady downpour, the last runs taking place under very depressing circumstances on that account—so much so that only half a dozen spectators or so witnessed closely the deciding trials.

Mr. F. Lowe's setter dog His Grace and Mr. R. Lloyd-Price's pointer bitch Tick. Tick first false pointed near the hedge, His Grace acting well behind. As regarded quartering, the dog beat his ground well; Tick did not, much to our surprise. However, His Grace also false pointed, Tick being also very steady behind. She then found a brace, according to her breaker's statement, but right out of sight, and the setter flushed twice. Then Tick pointed a brace, then both false pointed, and the setter again flushed, and Tick pointed another brace. In a rough fallow both false pointed, and His grace pottered up a bird, so he lost his heat well right throughout.

The Rev. S. East's setter Day Star and Baron von Amerongen's setter Prince II., ran next. At 11:15 they were slipped in the same fallow (the Baron and Mr. East working their own dogs), when Day Star found, and Prince, dropping to back, took also the point, neither being very steady to wing. The Prince was staunch to two hares, and dropped in the midst of two brace of birds in the hollow. Prince then pointed two larks, then he found a brace of birds in capital form, Day Star meanwhile false pointing on two larks. Then Prince in the next hollow turned to whistle suddenly, and a brace got up, but it was not his fault certainly. Day Star then flushed a brace, and Prince won. Baron Amerongen should be complimented on his pluck in bringing his dog all the way from Germany to compete against English dogs on their own ground. Prince is English bred, of course, and is a fine and really good dog. Properly broken and more freely worked, he would prove a very hard nut to crack for most dogs.

Messrs. Wyman and Buchanan's Kathleen and Mr. R. Ll. Purcell Llewellin's Dashing Bondhu were really the first brace worked. Kathleen, who was four weeks gone in pup, of course went slowly, Bondhu showing off well. The bitch began with a false point, and was indifferently backed. The dog then found a brace, Kathleen backing him readily. In a rushy meadow, the dog false pointed too, but in the next he pointed a hare, and was well backed again, and in a clover field he found a bird capitally. He again found, a brace this time, and won very easily. Sir Thos. Lennard's pointer Priam and Mr. R. Lloyd Price's pointer Belle Faust had a short but decisive run. Priam took a false point, and was backed superbly from one end of the field to the other. Then Priam dropped beautifully to a hare, and the bitch chased another hare clean out of the field, yapping after it, and was thereby put out.

For first ties, Laurel and Sam appeared. Sam finished a brace, and Laurel pulled up just in time to another, Sam backing her well; then both ran into another brace. Then Laurel false pointed and Sam found a brace, and Laurel also pointed another, then Sam again knocked up a bird, there being palpably no scent. We then went to a fine clover field, when Sam pointed a hare, Laurel performing an excellent back. Then she found three birds, they were running on bare ground in front of her and she blinked them, then ran back to them again and put them up. She then pointed a lark and found a bird, Sam taking the point unwittingly, and the bitch won.

After luncheon Countess Rose and Tick came up, and were slipped in a long narrow wheat field, where Tick false pointed, and in the next field Countess Rose did the same, but in some rushes she pointed, and it turned out to be a moorhen. Throughout she quartered her ground beautifully, but in the next field she missed a bird which she might and ought to have found, and in her next run she flushed a brace of birds, dropping to wing. Then Tick pottered up to two birds which were running before her; she dropped, and they rose: it was not a good point by any means; but still it was a point, and she won.

Prince and Bondhu had a very sharp and quick trial. Dashing Bondhu found a brace at very long range, roading them well, and in his next sweep he found another brace again. Both dogs went at a rattling pace, but Prince wants "finishing" touches to his education. However, he next pointed, and Bondhu backed him exceedingly well; the birds got up, settled again, and then Bondhu found the birds also; a very good bit of work on Bondhu's part.

For second ties Priam and Laurel came up, when Priam put up two brace which he should have pointed, and when Laurel got on birds he went behind her and took them too. Then he false pointed, and the flag went up for the bitch. This had been a very long and tedious trial, as no birds could be found. Tick and Bondhu ran next. Bondhu found a brace, roading them up the hill a tremendously long way; and Tick also found a brace, and then another, and Bondhu again pinned another brace down in the hollow near the fence. Tick then false pointed, while Bondhu took two good points in superb style and won. For the final he came against Laurel. In a bare field Bondhu found a brace, and in the next they repeatedly picked up the scent of a hare which had cantered across the whole length of the field; but the bitch having declined to back Bondhu on his previous point, and he being always ready to do so, he won. A drizzling rain was then steadily pouring down, and the meeting dispersed without any votes of thanks being offered to the judges or to Mr. Brewis; an oversight, clearly, on the part of the few spectators whose spirits, however, proved too much damped to admit of any enthusiasm being fictitiously raised. And thus ended, very quietly, the K. C. Field Trial Spring Meeting for 1881.

No mention was made by the judges of their award as to the K. C. challenge cup, which, it was officially stated some time ago, was to be run for simultaneously with the All-Aged Stakes; but we presume that Mr. Pilkington takes it this year with his Laurel, since that bitch ran second to the winner, and her owner is (we believe we are right in saying) a number of the K.C.

NEBRASKA BENCH SHOW.—The Lincoln Annual Bench Show of Nebraska sporting dogs opened at the Fair Grounds on May 17, and continued on the three succeeding days. As already noticed in the FOREST AND STREAM, thirty classes were provided for in the entry list, and these contained twenty-eight entries. The management was in the hands of Lieut. Isaac T. Webster, U. S. A., who proved himself to be as efficient in bench show matters as he is known to be courteous and painstaking, and the awarding of the prizes was attended to by Messrs. Samuel M. Chapman, J. T. McCartney and F. E. Brown. Subjoined is the list of entries which is followed by the list of awards:

Class 3.—Pointers—dogs: Bucher, entered by J. H. Harley, Lincoln, Nebraska; Bird, William Bracey, Osceola, Nebraska; Rock, W. T. Irwin, Topeka, Kansas; Prince, J. E. Baum, Lincoln, Neb.

Class 4.—Pointers—bitches: Queen and pups, Morris Ottmans, Omaha, Neb.; Grace, Lieut. I. T. Webster, Lincoln, Neb.

Class 7.—English Setters—Fleet the 2d, Ed. Johnston, Omaha, Neb.; Major, W. T. Irwin, Topeka, Kansas.

Class 9.—Champion Irish Setters—dogs: Tim, C. H. Buford, Lincoln, Neb.

Class 10.—Setters—bitches: Topsey, C. H Buford, Lincoln, Neb.; Nora, B. E. B. Kennedy, Omaha, Neb.

Irish Setters—dogs: Hugh, S. C. Elliott, Lincoln, Neb.; Hamlet, C. H. Buford, Lincoln, Neb.; Medas, H. Martin, Lincoln, Neb.

Class 12.—Irish Setters—bitches: Nellie B. Mamie and Lute, C. H. Buford, Lincoln, Neb.; Diana, Dr. C. Strassberger, Lincoln, Neb.

Class 15.—Gordon Setters—dogs: Jack, Wm. Carnaby, Omaha, Neb.; Colonel, J. E. Baum, Lincoln, Neb.; San, Lt. I. T. Webster, Lincoln, Neb.

Class 16.—Gordon Setters—bitches: Topsey, R. H. Collins, Lincoln, Neb.

Class 21.—Irish Setter Puppies—Tim and Jerry, Dr. Livingston, Plattsmouth, Neb.

Class 22.—Puppies—bitches: Nell, Dr. C. Strassberger, Lincoln, Neb.

Class 23.—Spaniels—Prince, Chas. L. Baum, Lincoln, Neb.

Class 29.—Greyhound—Split, C. H. Buford, Lincoln, Neb.

Class 30.—Deerhound—Bugle, C. H. Buford, Lincoln, Neb.

The awards were: Class 3—W. T. Irwin's Rock, 1st; J. E. Baum's Prince, 2d.

Class 4—Pointer Bitches.—Lieut. Webster's Grace, 1st; M. Ottmann's Queen, 2d.

Class 9—J. D Jones' Tim (entered by C. H. Buford) 1st.

Class 10—Bitches—B. E. B. Kennedy's Nora, 1st; J. C. McBride's Topsey, 2d.

Class 11—C. H. Buford's Hamlet, 1st; S. C. Elliott's High, 2d.

Class 12—C. H. Buford's Mamie, 1st; C. H. Buford's Nellie, 2d.

Class 7—E. Johnson's Fleet, 1st; W. T. Irwin's Major, 2d.

Class 15—C. Baum's Colonel, 1st; Lieut. Webster's San, 2d.

Class 16—R. H. Collins' Topsey, 1st.

Class 21—R. H. Livingston's Jennie, 1st; R. H. Livingston's Line, 2d.

Class 29—C. E. Strassburger's Nell, 1st; C. H. Buford's Split, 2d.

The list, though small, is said by our correspondent to have contained some excellent dogs, and next season we trust to see the number of entries largely increased.

VALUABLE BITCH POISONED.—I have had the misfortune to lose the fine Gordon bitch Fannie. She was poisoned in or near my yard on Tuesday last by some scoundrel. She was out of imported Hope by imported champion Grouse, and was the property of my friend, Mr. A. H. Thomas, of Warrensburgh, N. J., who valued her very highly and greatly feels the loss, as she was not only thoroughly broken and an excellent field dog, but so kind, affectionate and intelligent. She had many friends. I will give fifty dollars for any information that will lead to the discovery of the brute that poisoned her.—W. H. PIERCE.

THE COCKER SPANIEL STANDARD.—*Editor Forest and Stream:* Permit me to reply to the communication from Mr. M. P. McKoon which appeared in your last issue. This gentleman is taking a good deal upon himself in the way of assuming that he alone is correct in everything he has done, whereas the whole or nearly all the trouble in connection with the scotching of the wheels of the Cocker Spaniel Club can be charged to his account. Firstly, he was the instigator of the ridiculous cry against Mr. Geo. D. McDougall's attempting to get the club together, and succeeded in so disgusting that gentleman by the accusations he made that he withdrew his name as Secretary *pro tem.* After the election of the committee the course of Mr. M. P. McKoon ran in the same grooves, and his insult to Mr. Moore caused that gentleman also to retire in disgust from the club. This committee, which we elected to frame a standard for our acceptance, dilly-dallied for one reason and another, losing the opportunity to give us extra prizes at New York, until at last a meeting was got together. At this meeting appeared Mr. M. P. McKoon armed with three proxies, Mr. Geo. D. McDougall and Mr. J. Otis Fellows. The latter gentleman will not, I am sure, concede I am taking a liberty in saying that through an unfortunate accident he has lost his hearing, consequently the use of a slate is necessary, and at a meeting of this kind he is placed at a great disadvantage. Here, then, we had one member (Mr. McKoon) with four votes for what the other might suggest it was Mr. M. P. McKoon and his three proxies who ruled the roast, and it was his production almost entirely which was presented at and so severely cut to pieces at the meeting of the club.

I, as a club member, felt that the committee had not done its work properly, and considered that the manner in which the standard had been forced upon us a direct violation of the trust we had placed in the hands of the committee, and I am sure the majority of the members will agree with me that we wanted something besides proxy votes all held by one member.

The opinion entertained by Mr. M. P. McKoon, that he as a committee man had greater authority than the power which gave him office, is so contrary to all rule and precedent, that no person of common sense will indorse it. Were we as a club to accept his and his three proxy votes as greater than our voice in the matter? I guess not.

The committee reported a fraction of the work intrusted to them to arrange for us, and the members present received their report and proceeded, as all similar bodies do, to make such amendments as they considered necessary. I quite agree with your correspondent that the standard did come through this ordeal "in quite an acceptable form," thanks to the sound sense of the gentlemen whom he calls "a small handful of the club who were certainly incompetent to do such work creditably." What about the small handful of the committee, and the one man with the controlling power of three proxies in his pocket?

As instances of the competency of this four-vote majority, I may say that the standard reported provided for long ears, and the representative of the four votes fought this theory to the bitter end, saying, as an evidence of his knowledge, that the ears should extend to the split of the nose. Let any member take the longest eared spaniel he knows, and see what kind of a monstrosity a dog with ears of the description would be. He also went in for long legs, voting against a cocker being low in the leg, and reached the crowning absurdity in giving the following description of the head:—"Head (15) should be of medium length, with prominent brow rising from nose; nose broad and open: muzzle of medium length and breadth." Could anything be more indefinite than that, and is it not a good thing that the club exercised its right to adopt a standard to its liking, and not the crude attempt recommended by the proxy votes?

The question as to exact wording of the adopted standard will doubtless be brought before and investigated by the organization committee, and I have nothing, as a private member, to say pending such investigation. As to the threat of Mr. M. P. McKoon not to send in his two dollars unless he has his way entirely, I certainly for one will not grieve over his decision, as thereby he may secure the much-to-be-desired harmony necessary to the welfare of the club. JAS WATSON.

Editor Forest and Stream: The Committee on Organization respectfully request the favor of space in your columns for an open letter, which is also in part a reply to the communication of Mr. M. P. McKoon, which appeared in your last issue.

A letter from Mr. McKoon, dated May 14, and sent under cover to Mr. McDougall, was handed to our secretary. It began as follows: "I notice in FOREST AND STREAM the published Standard Constitution and By-laws of the American Cocker Spaniel Club, and I notice alterations in the standard since its adoption by the club. Now, these errors must be publicly corrected by having the standard (only published with the errors corrected, or else we will be obliged to make an exposure of the thing, which would place those having it to copy after adoption in rather an embarrassing position before the public and general clubs. The errors I refer to are * * * * * * Correct them and have them appear, by all means, in next issue of FOREST AND STREAM. Not being present at the adoption of Constitution and By-laws, I cannot speak of any errors that might have crept in them. * * * I am sorry, for your sake, any errors crept into the standard, and you will have them corrected, of course, at the very first hour."

Our secretary objected to the tone of this communication, which implied guilty falsification by him and ourselves, while the threat of exposure and direction to alter the published standard at Mr. McKoon's dictation were, in his opinion, ungentlemanly and not a proper way to address the committee. On his own responsibility and in order to facilitate matters, he returned Mr. McKoon's letter, and left out the objectionable matter he eliminated, but it be returned to him as secretary of the committee having the matter in hand. The committee desires to unqualifiedly indorse the action of its secretary in so returning the letter for the reasons assigned, and it confidently appeals to the good sense of the members to support it. In reply to this letter of the secretary, the following communication was received:

"FRANKLIN, DEL. CO., N. Y., May 19, 1881.

"JAS. WATSON: Your impertinent epistle is at hand. I have had about all the abuse from your hands I intend to stand, personal or otherways. I inclose you again my letter calling for the standard the committeemon made, or else the one the club adopted, and you better attend to it forthwith, if you do not want the whole world to collapse on you. I am not a great deal surprised at the tone of your epistle before me, as I never knew a singed snake but what squirmed and sizzled as you do, but you will have a chance to squirm more if you don't attend to this matter as you should. Your letter calls for the disgust and contempt of any decent man, and certainly of M. P. McKOON."

We, as a committee, are at the service of any and every member of the club, when appealed to in a becoming manner, but we object, and shall continue to do so as long as we hold office, to recognize the subject matter of any letter which is accompanied by insinuations against our good faith, or personal abuse of the committee or its individual members. We have declined to permit the secretary to lay the questions of errors in the standard as set forth by Mr. McKoon, before us, not that we are unwilling to investigate the matter and have any errors corrected, but because of the tone of Mr. McKoon's letters, and we ask you to let us make the matter public in order that all may be able to form their own opinions as to whether our action is justifiable or not.

To Mr. McKoon we have simply to say—present your request for investigation with what you claim are errors, in a gentlemanly manner, and we will, as in duty bound, attend to it. Pending that, however, our secretary is instructed to cease correspondence with you.

Yours respectfully,

J. L. MORRILL, Chairman.
A. MCCOLLOM,
JAMES WATSON, Secretary.

Committee of Organization of the American Cocker Spaniel Club.

[The FOREST AND STREAM has received from Mr. M. P. McKoon with a request for its publication a copy of the following communication which he has sent in printed form to the members of the club:

"As one of the Cocker Club entrusted committee, I am certain that

I owe to those many reputed breeders and admirers of this breed who were led to follow several of us into the club—and with the same honorable intentions for the general good of the breed—my *public resignation from anything and everything* pertaining to that club. We were in hopes, after the committee and public club meetings, and *adoption of a standard* by them, to see an end to the disgusting frauds, and to see that standard published in its virgin form. But, alas! our hopes in *this were also blasted.* Were the genuine club in a position to know of the many frauds forced upon them and us? I know that *not one decent man* with any respect for himself, or interest in the welfare of this breed, would allow his name to be connected in *any form* with this organization, and I am as fully aware that no such show managing committee will so disregard their own interests as to think for one instant of countenancing the thing in their midst, and have no hesitancy in signing my name hereto. But I do blush with shame that I ever suffered myself to dirty my hands and name with this affair, and my only excuse is, that I *hoped* general good might be obtained from it. Such being impossible, I now wash my hands after this contest, and step *out.* M. P. McKOON.'

This letter has also been sent to us by some of its recipients, with inquiries as to the alleged frauds named therein. Of the merits of the case we do not profess to be informed. Mr. McKoon's charges, however, are vague; and they are still further weakened by the intemperate language which he employs. The committee express their readiness to submit to investigation any charges which may be preferred in a proper way, and we can see then no obstacle to a speedy termination of the present unhappy condition of affairs. If any member of the Cocker Club entertains the belief that the gentlemen entrusted with preparing the adopted standard for publication allowed alterations to be made in it before its publication, that member owes it to the gentlemen concerned, not less than to the club, to present his charges in a specific and temperate way. Until such a direct charge is made and sustained, the public is not warranted in withholding its hearty support from the committee.—ED. F. & S.]

AN EXPLANATION GIVEN—New Haven, Conn., May 20.—I notice in your edition of May 12 that the owner of Elcho (in an article headed An Explanation Wanted), takes exception to my advertising for sale a red Irish pup, claiming him as from "Highland Lass" by Elcho. I will give him all the explanation that I can. The pup was presented to me last December by a gentleman in Washington, D. C. The following letter, which preceded him, gave me all the information that I have on the subject. In it, you will observe, he says that the dog is what I represented him to be. If I have fallen into error please set me right, as I would not misrepresent anything for my whole kennel of dogs, knowing what trouble it is liable to make, and especially as I should seriously object to the owner of Elcho or any one else laying claim to anything of mine if he was not entitled to it.—G. E. OSBORN.

The following is a copy of the letter referred to by Mr. Osborn, the original of which has been submitted to us:

"WASHINGTON, D. C., December 27, 1880.

"I send you by Adams Express a little dog by the celebrated dog Elcho and out of the bitch Highland Lass, both imported by Col. Right Reeves, of Maryland. I hope you will give him all the chance you can. I know you will be glad to get him. The father is a tan and the mother is red."

[Mr. Osborn is a gentleman well known to us, and it is evident that the duplication of names has been the misleading cause of this mistake.—ED.]

SLIPS.—Mr. W. Potts, of Oldham, England, has sold to a well-known gentleman in this city the superb bull terrier dog Young Royal and a bitch of same strain. The brace arrived here about ten days ago in fine condition. During the past year the dog Young Royal has been a great winner in the best of company at the big shows on the other side, and even the critical Mr. Harry Jennings tells us that "he is the very best dog of the kind he ever saw come to America"....112 dogs have been lost and advertised for in our local papers during the present month....A worthy priest of Pennsylvania has just imported from Essig two Leonburg dogs; they were consigned to Mr. Goldsmith, forwarding agent, this city.... Mr. Chas. D. Scott, Schenectady, N. Y., has resigned from that bone of contention the Cocker Club.

WANTED.—Will the owner of orange and white setter dog known as Phelps' Dick please send his address to this office? Will Mr. Blake, of this city, owner of Gordon setter dog Duke, please send his address to this office? Will our correspondent who wrote to us regarding the pedigree of the Gordon setter dog Grouse please send his address to this office, as his letter has been mislaid?

KENNEL NOTES.

*** Breeders and owners of dogs are invited to send memoranda of names claimed, bred, whelps, sales, etc., for insertion in this column. We make no charge for the publication of such notes; but request in each case the notice be made up in accordance with our form, that the name of both owner and dog be written legibly, or printed, and that the strain to which the animal belongs be distinctly stated.*

NAMES CLAIMED.

Lang—Mr. J. W. Bragg, Pittston, Pa., claims the name of Lang for his Gordon setter pup, whelped March 16, 1881, by Dr. Aten's Glen out of Mr. R. E. Fisher's Dover Lass.

Strap—Mr. John W. Ricker, Dover, N. H., claims the name of Strap for his red Irish setter, whelped March 22, 1880, by Elcho III. out of Ruby.

Nimbus—Mr. Thomas Rudman, Washingtonville, N. Y., claims the name of Nimbus for liver and white cocker spaniel dog puppy by Mr. M. P. McKoon's Captain out of his Beauty.

Sandy—Mr. Edwin S. Neal, New York City, claims the name of Sandy for red Irish setter dog puppy, whelped March 14, 1881, by Lister's Bang out of Tappan's May.

Duke—Mr. W. H. Courson, Newton, N. J., claims the name of Duke for black, white and tan beagle dog puppy one year old by Ringold out of Bridget.

Dutchess—Mr. W. H. Courson, Newton, N. J., claims the name of Dutchess for fawn, black and white beagle bitch thirteen months old by imported Rambler out of Bessie.

Flush—Mr. R. J. McKay, Pittsburgh, Pa., claims the name of Flush for red Irish setter puppy whelped August 15, 1880, winner of first prize at the Pittsburgh Dog Show, January, 1881, by Mr. W. N. Callender's champion Rory O'Moore out of Mr. W. H. Pierce's bitch Norah.

Nell—Mr. L. W. Dart, Jr., New London, Conn., claims the name of Nell for his red Irish setter dog, whelped September 7, 1879, by Messrs. Lincoln & Bellyar's Arlington out of Mr. Max Wenzel's Dot.

Chloe—Mr. S. Leonard Albert, Jr., Boston, Mass., claims the name of Chloe for his white, black and tan setter bitch puppy, whelped February 2, 1881, by Royal Blue (Gladstone-Mersey) out of Diana (Rock-Maud).

Max and Dan—Mr. T. L. Sartwell, Bradford, Pa., claims the names of Max and Dan for brace of Irish setter dog puppies by Kent out of Flo. Purchased of Mr. W. P. Graham, Madison, Ind.

Zetta—Mr. William A. Rea, Boston, Mass., claims the name of Zetta for black, white and tan setter bitch puppy, whelped February 2, 1881, by Royal Blue (Gladstone-Mersey) out of Hardy's Diana (Rock-Maud).

Smoker—Mr. W. J. Percival, Paw, Mich., claims the name of Smoker for black and tan beagle, whelped July 12, 1880, by Ward's Sport out of Muse III.

Maid—Mr. Jacob J. Kirkman, St. Paul, Minn., claims the name of Maid for beagle bitch puppy by Barber (imp. Brilliant-Imp. Equity) out of Freckle (imp. Trumpeter-imp. Faithful).

Blackie II.—The Cummings Cocker Spaniel Kennel, So. Acworth, N. H., claims the name of Blackie II. for imported black spaniel bitch by champion Rean out of champion Blackie. Bred by Mr. A. H. Easten, Hull, England.

Brush II.—The Cummings Cocker Spaniel Kennel, So. Acworth, N. H., claims the name of Brush II. for imported black spaniel dog by champion Brush out of champion Rhea. Bred by Mr. A. H. Easten, Hull, England.

Florance—The Cummings Cocker Spaniel Kennel, So. Acworth, N. H., claims the name of Florance for liver bitch puppy by Snipe out of Cute.

Jess and Juno—Mr. Fred. W. Thornber, Bristol, Pa., claims the names of Jess and Juno for black, white and tan dog and bitch foxhound puppies out of Vr. H. B. Low's imported bitch Fanny of Orangeville (sire's name omitted).

NAME CHANGED.

Rowdy Boy—Mr. Wm. H. R. Du Bois, New York City, claims the name of Rowdy Boy for his brindle and white bull terrier dog, formerly Tobey, eighteen months old, bought of Mr. J. S. Bacon and bred by Mr. Isaac Varian's bull terrier dog Jemmy out of Mr. Henry Bomberry's bitch Nell.

BRED.

Ailsa-Johnnie Fae—Mr. John Davidson's (Monroe, Mich.) imported English setter Ailsa to Johnnie Fae, May 6.

Abbess-Johnnie Fae—Mr. John Davidson's English setter bitch Abbess to Johnnie Fae, May 10.

Glenlintass-Prince of Orange—Mr. John Davidson's English setter bitch Glenlintass to imported Prince of Orange, May 10.

Doll-Prince of Orange—Mr. John Davidson's English setter bitch Doll to imported Prince of Orange, May 14.

Tyne-Benledi—Mr. John Davidson's English setter Tyne to Benledi, May 14.

Madge-Elcho III.—Mr. Thomas I. Egan's (Halifax, N. S.) red Irish setter bitch Madge to Mr. Adolph Nelson's champion Elcho III. (Elcho-Rose), April 15.

Music-Victor—Mr. M. M. Nessley's (Elizabethtown, Pa.) beagle bitch Music (Dan-Fanny V.) to Victor.

Countess-Royal—Mr. Washington A. Coster's (Flatbush, L. I.) Dilley pointer bitch Countess Royal to Mr. A. E. Godefroy's Croxteth, May 17.

Lofty-Brush II.—The Cummings Cocker Spaniel Kennel's cocker bitch Lofty to same owner's imported Brush II.

Victoria-Brush II.—The Cummings Cocker Spaniel Kennel's cocker bitch Victoria to same owner's imported Brush II.

Chain's Bitch-Joe, Jr.—Mr. Will Chain's (Columbia, Tenn.) white and lemon setter bitch to Mr. G. W. Campbell's Joe, Jr., May 15.

Zip-Joe—Mr. C. N. Goodman's (Springfield, Mass.) pointer bitch Zip (Snapshot-Fanny II.) on May 15 to Dr. Chas. A. Lyman's imported Bob (champion Don E. K. C. S. B. S. 4,201-Ainsworth's Beauty).

WHELPS.

Peggy—Mr. A. E. Godefroy's (Guymard, N. Y.) pointer bitch Peggy whelped April 7 nine puppies by Croxteth.

Flirt—Mr. A. E. Godefroy's cocker spaniel Flirt whelped May 14 four puppies, three dogs and one bitch, by Mr. McKoon's Captain.

Zulette—Mr. H. W. Hill's (Hartford, Conn.) cocker bitch Zulette (Romeo-Juliette) whelped May 9 seven puppies, four dogs and three bitches, by Riverside Cocker Spaniel Kennel's champion Charlie.

Fan—Mr. A. M. Martin's (Stamford, N. Y.) red Irish setter bitch Fan whelped May 14, 1881, ten puppies, five dogs and five bitches, by Mr. E. L. Suley's red Irish setter Sard.

Ollie—Mr. H. W. Gauss's (Wilmington, Del.) setter bitch Ollie (Dan-Peach) whelped May 20 ten puppies, by owner's Warwick. In color the puppies are lemon and white, lemon Belton, blue Belton and black, white and tan.

Floss—Mr. G. W. Campbell's setter bitch Floss whelped May 16 six puppies, four dogs and five bitches, by Otso. One white dog and two white bitches living.

SALES.

Ruff—S. B. Dilley, Rosendale, Wis., has sold to Mr. Frank L. Usher, Potsdam, N. Y., his pointer puppy Ruff by champion Ranger out of Fleet (1st N. Y.)

Monarch—Mr. M. Rathburn, New York City, has purchased from Mrs. A. Hitchcock, Hackensack, N. J., her imported mastiff dog Monarch (King-Phillis).

Spaniel Whelps—Gen. W. S. Tilton, Togus, Me., has purchased from the Laclede Kennel Club a liver colored bitch spaniel puppy by imp Benedict out of Vanda. Also the liver colored dog puppy Bachelor by Benedict out of Mr. Fellows' Pansy.

Roscoe—Mr. Wm. H. Hawkins, Fall River, Mass., has sold to Mr. E. Odell, of New Orleans, his lemon and white setter dog Roscoe.

Bloomer—Mr. Eugene Powers, Cortland, N. Y., has sold to Mr. G. E. Perlee, New York City, the liver and white cocker bitch Blossom by Wildair out of Mignon.

Trim—Mr. Colin Cameron, Brickerville, Pa., has sold to Mr. Frank Sowers the beagle dog Trim (Chandler's Sport-Baker's Milly.

DEATHS.

Drag-Curlew Whelps—Mr. J. Otis Fellows has had four puppies by cocker spaniel Drag out of Curlew died of diarrhœa May 23.

Remember that a little Hop Bitters saves big Doctor bills and cures when all else fails.

Yachting and Canoeing.

FIXTURES.

May 22.—Quaker City Y. C. Opening cruise.
May 23.—Shinnecock Y. C. Annual regatta.
May 23.—Cooper's Point Y. C. Annual regatta.
May 24.—Gananoque open regatta, second and third-class yachts.
May 24.—Southern Y. C. Professional races.
May 26.—Southern Y. C. Professional races.
May 26.—Fordham Y. C. Challenge cup.
May 27.—San Francisco Y. C. Cruise to Vallejo.
May 28.—San Francisco Y. C. Cruise to Napa.
May 30.—Knickerbocker Y. C. Opening cruise.
May 30.—South Boston Y. C. Inland regatta, City Point.
May 30.—Atlantic Y. C. Opening cruise.
May 30.—Cape Ann Y. C. Spring regatta.
May 30.—Seawanhaka Y. C. Opening cruise.
May 30.—Jersey City Y. C. Opening cruise.
May 30.—Warwick Y. C. Open regatta, Fall River.
May 30.—Bunker Hill Y. C. Open regatta 22 ft. and under.
May 30.—Pennsylvania Y. C. Spring regatta
June 1.—Southern Y. C. Corinthian races.
June 3.—Southern Y. C. Corinthian races.
June 4.—Harlem Regatta Association. Canoe races.
June 4.—Quinsy Y. C. Opening cruise.
June 6.—East River Y. C. Opening cruise.
June 6.—Hudson River Y. C. Annual regatta.
June 6.—Quaker City Y. C. Spring regatta.
June 7.—Empire Y. C. Annual regatta.
June 9.—New Jersey Y. C. Annual regatta.
June 10.—Eastern Y. C. Opening cruise.
June 11.—Delaware River open regatta.
June 11.—San Francisco Y. C. Cruise to Martinez.

June 11.—Pacific Y. C. Moonlight cruise.
June 15.—Newburyport Y. C. Annual regatta.
June 16.—New York Y. C. Annual regatta.
June 16.—Boston Y. C. Annual regatta.
June 17.—Lynn Y. C. Spring regatta.
June 17.—Marblehead open regatta.
June 18.—Dorchester Y. C. Nahant regatta.
June 18.—Seawanhaka Y. C. Corinthian races.
June 20.—East River Y. C. Annual regatta.
June 20.—Quaker City Y. C. Chester regatta.
June 23.—Jersey City Y. C. Annual regatta.
June 25.—Quaker City Y. C. Harbor cruise.
July 1.—Gananoque open regatta, second and third class yachts.
July 1.—San Francisco Y. C. Cruise to Monterey.
July 1.—Royal Canadian Y. C. Governor General's Cup.
July 2.—Quinsy Y. C. First championship regatta.
July 2.—Nellie-O'Conner match, San Francisco.
July 2 to 5.—Quaker City Y. C. Chesapeake-Bay cruise.
July 4.—Larchmont Y. C. Annual regatta.
July 4.—Cleveland, Ohio, A. A. Annual regatta.
July 4.—Lynn harbor. Open regatta.
July 4 and 5.—Quaker City Y. C. Corinthian regatta, Penn's Grove.
July 9.—Beverly Y. C. Championship regatta, Swampscott.
July 12.—Pacific Y. C. Annual regatta.
July 15.—Atlantic Y. C. Annual cruise. Black Rock.
July 16.—Dorchester Y. C. Club house regatta.
Aug. 3.—New York Y. C. Annual cruise.
Aug. 2.—Quinsy Y. C. Second championship regatta.
Aug. 6.—Beverly Y. C. Champion regatta, Nahant.
Aug. 6.—Pacific Y. C. Annual cruise.
Aug. 6 to 20.—Quaker City Y. C. Annual cruise, Chesapeake Bay.
Aug. 6.—San Francisco Y. C. Annual regatta.
Aug. 11 to 14.—American Canoe Association. Lake George meet.
Aug. 31.—Quinsy Y. C. Third championship regatta.
Sept. 1.—Quinsy Y. C. Championship cruise.
Sept. 3.—San Francisco Y. C. Cruise to Drake's Bay.
Sept. 3.—Dorchester Y. C. Fall regatta.
Sept. 7.—Royal Canadian Y. C. Annual regatta.
Sept. 10.—Beverly Y. C. Championship regatta, Marblehead.
Sept. 17.—San Francisco Y. C. Corinthian matches.
Sept. 18.—Quaker City Y. C. Fall regatta.
Sept. 24.—Beverly Y. C. Special regatta, Swampscott.
Sept. 25.—Quaker City Y. C. Closing cruise.
Sept. 26.—San Francisco Y. C. Moonlight cruise.
Nov. 5.—San Francisco Y. C. Closing cruise.

CRUISE OF THE SCHOONER SUNSHINE, 1880.

(CONCLUDED.)

THURSDAY, Aug. 19—Pilot on board at five A. M., and those below were soon awakened by his familiar chatting and guffaw while trying to make himself agreeable to the captain. A cold wind from the southward brought us out of the harbor and on our way. No difference in this region which direction the wind blows from—cold blasts are from every quarter. The sail in and out among the islands northward to Bar Harbor is exceedingly picturesque—innumerable wooded spots and bold, rocky shores, mainland, southwest Harbor nestling at the foot of the Mount Desert, and the eastern slope of the island covered with beautiful summer villas. The highest mountain rises to the same height about as the Highlands of West Point on the Hudson, and is not dissimilar in appearance. Imagine all this facing directly on the ocean and you have an idea of the looks of the place, I trust. Bar Harbor came in sight at eleven A. M., and at the same time, behind us, the steamer from Bangor, on which our pilot wished to return. The breeze freshening, we hurried along, and at half past eleven rounded to off the steamboat wharf, the anchor chains rattling through the hawse-holes as we brought up at the eastern termination of our cruise. No time was lost in lowering a boat and rowing the pilot on board the steamer, which was reached as it was casting off from the dock. After getting ourselves to rights by putting the sails we had a chance to look around and view this much lauded seaside resort. Several yachts were at anchor and looked as if they had been at anchor all summer. A noticeable feature of the harbor is its "bar," from which it derives its name. At high tide it is covered with three or four feet of water, and, apparently, any vessel might sail over to the water beyond; but at half tide the water commences to rush over with much noise, and at low tide vessels which at high tide were seen beyond the bar are then only visible by their mast heads—the rise and fall is twenty feet or more. After a hearty lunch Dolliver and Trio went ashore to see the sights and hunt up friends. The village is an odd-looking place. The hotels, stores and out-buildings have sprung up without the remotest regard for taste or propriety—they look as though they had dropped in a heap from the clouds. Here will be seen the handsomest hotel covered by stores and buildings, another tucked away in a hollow under the shelter of a hill, the view of the ocean, studded with its beautiful islands, entirely forgotten.

The air is delightful, the watering place style prevailing in paddling in canoes and driving about the country. Bathing is impossible, the temperature of the water forbidding it. One of our party tried a plunge, and it was comical to watch the expression of his face when he arose to the surface and "put for" the yacht again. The drives are the finest views imposing when the sky is clear, but why any one should leave the vicinity of Boston, Nantucket, Martha's Vineyard, Buzzard's Bay or Newport, to choose so cold, foggy and desert a place, passes comprehension. As good fishing, as pleasant driving and sailing are to be had on the coast of these places mentioned, and also surf and still water bathing. Let us not forget to mention among the attractions of Mount Desert its delightful and long continuing fogs, raw, cold, damp and dispiriting. They shut down and you cannot see a hundred feet, and they pierce to the very soul and marrow. Such a fog we woke to look out on the next day.

Friday, Aug. 20—Out we haul our thickest garments and heavy overcoats, those who with forethought had provided winter underwear gladly put it on, and tried to look happy. Breakfast and a hot cup of coffee helped to warm us, but we were glad to sit below in the cabin until the afternoon, when at last the sun managed to break through and give us hopes of getting away the next day with a clear horizon.

Saturday, Aug. 21.—Weighed anchor at six A. M. and stood out of the harbor with a clear sky and light southerly wind. At half-past six o'clock a fog shut down so thick that it was with much difficulty we found our way back to the anchorage. All day the fog refused supreme until sunset, when, like the day before, it peeped through the mists to see if we were all there, and, finding us all safe, quickly went to sleep behind the hills. 'Tis truly named Mount Desert.

Sunday, Aug. 22.—In the morning we went to church. The day was bright and clear with a northwest wind, and in the afternoon we "up anchor" and stole away. It did not take long to hoist the sails. In the dimness of evening we sailed by the southward point of the island, the wind came around southwest, and, setting watches, we prepared for all night work. Mt. Desert Rock Light was the only one in sight until 12:30 A. M., when the light on Matinicus Island opened up.

Monday, Aug. 23.—Breakfast at 6 A. M., wind light and dead ahead. Matinicus bore north five miles distant. Wind remained light all day. At times we scarcely moved, and at sundown had proceeded only as far as Muscongus. At midnight Seguin, Halfway Rock and Cape Elizabeth lights were visible.

Tuesday Aug. 24.—Calm all forenoon, and, as the yacht was surrounded with dog-fish, we tried to amuse ourselves catching them, but it was no go—at least they are a lazy fish and delightfully hook and, without resistance, allow themselves to be hauled aboard. We soon wearied of this, and having once more reached the regions of the southwest winds, and a welcome breeze springing up, we were quickly heeling to our sails as the steward reported, the water short, and we resolved to make Portsmouth harbor that night. Sighted Boon Island at half-past three and entered the Merrimac River at 5:30 P. M. In order to make certain of water and provisions we decided to push on to the city, about some two miles from the mouth of the river according to charts; but a head tide came to greet us, and three miles were two miles "long drawn out" before we covered them. It was the last halt of the ebb, and a "Heligate" of an ebb it was. The channel is narrow, and, once in it, there is no turning around without risk. Fortunately the wind was fair and fresh. For one hour we reached with a full roll of land bearing the appropriate name of "Pull and be d—d Point." We did not pull, because we couldn't, nor did we indulge in swearing, because of the Commodore, but we did keep up considerable quiet thinking. Eight-thirty P. M. and Kittery Point on one side, a red stone beacon on the other; a mile and a quarter on our way. The wind then slackened and the eddies for the next hour coyly endeavored to lead the yacht to the other side of the beacon and land us safely in some tempting mud berth. Nine o'clock, and a man coming down the river in a small boat hailed us as he approached, the current took him by so fast that it was not until he had passed a hundred yards astern that his voice reached the yacht. This we believe to be the swiftest current on record—ice boating is nothing to it. Finally, at 9:45 P. M., we dropped anchor off the eastern part of the city within sixty feet of the shore and in twelve fathoms of water. No other vessels were anchored either near us or opposite the city; but a few were hauled to the docks with strong-set lines. Lieutenant and T. and H., on their way to Boston, went ashore to find out, we believe, the lay of the town. The town, to our surprise, is a noble-looking old place with stately buildings and wide streets, bordered by the beautiful elms of New England. But even here there is the usual "more-dead-than-alive" appearance characteristic of the Eastern seaports, and there is one thing even New Englanders are not sleepy about, and that is in their curiosity to learn other persons' business. They can "spot" a stranger as far as they see him, and will immediately besiege him with inquiries such as "Who be you?" and "What from?" and, if you inquire for a certain person, "What do you want him for?" It was quite amusing on our way back to the yacht, after visiting stores, post office, etc., to listen to these kindly inquiries. On reaching the dock the flood tide had begun, and Charon, in his way across the styginan stream, had never pulled harder than he did on carrying us to the yacht. Reaching there we found all had turned in, and we almost stumbled over the sleeping form of the sailing-master on deck, who did not dare go below, not knowing where the flood tide in its strength might drift us. Fortunately we were well found and, unmooring out of the current, and the night passed uneventfully. The next morning we were told that vessels seldom dared anchor there, as they would drag all over the stream, and we heard strange stories of vessels being carried up the river pulled harder than we ever strove under the bridge and sinking in twenty fathoms of water. The Yankees are pretty good story tellers, but we could easily believe these.

Wednesday, Aug. 24.—A steamboat wharf above us was the only place to coal, and at 6 A. M. got a breath of wind in order to bring up in the opposite direction from the dock. We began to think we were not to get any water after all. At the suggestion of some of our interested friends ashore we placed a flag in the rigging, though there were no visible signs of a tug-boat. Shortly the ferry-boat running between Portsmouth and Kittery came alongside and agreed to return in half an hour and fill our tanks from theirs and also tow us to the entrance of the harbor. By the time the tug-boat returned the yacht had worked her way into the strength of the current and was darting from side to side on her anchors like a race horse at the mooring. Two soldiers in a Government boat, shooting by for Kittery, remarked that there was a "regular Hancock current in around here," and we agreed with him, when our Commodore replied that it certainly was ebbing fast enough for them. Our friend H. left us here in order to join family and friends at Prout's Neck, much to our regret, as we had hoped to keep all together to the end of the cruise. It was not until 10 A. M. that the tug took us in tow. In fifteen short minutes we shot down and out of the river, bidding a hearty adieu to the ferry-boats, the stone Beacon and the point of unmentionable name. As we rounded the antiquated fort at the entrance the hawser was cast off and, spreading our canvas, with a northerly wind, swiftly put Portsmouth and surroundings out of sight. We were in the humor for a long run and fortune favored us. There were occasional drizzles of rain in forenoon and a steady and moderate wind until 4 P. M., when it became calm. We were then some three miles off Cape Ann lights. Though the wind had ceased, the sea did not go down and all the afternoon and evening the masts and rigging swayed and creaked from side to side, "a sure sign of storm in the distance," sailors say. We exam

fined the barometer frequently, occasionally scanning the horizon and watching the seas roll in from the ocean. The sailing-master advised putting in for Marblehead or Gloucester, but, anxious to get back to the city, we decided "stick her through." Fortunately we got only the tail end of the blow, which we afterward learned swept the piers at Long Branch and sank some vessels near Fire Island. Lieut. Hunt and one of the men took the first watch from 10 P. M. till half-past 12 A. M.

At half-past 9 A. M. a gentle N.E. breeze filled the sails and we started on our journey across Massachusetts Bay. A sudden gust struck us twenty minutes later and the mainstopmast buckled almost double before we were aware and saved it, quickly lowering topmast, staysail and other light sails, and bought a new jacket again. On her course and the little boat settled nobly down to her work with three standing sails. At half-past 10 P. M. Cape Ann lights were still visible. Our course for Highland light on Cape Cod was S.S.E., distant forty miles. The wind freshened steadily and at 11 P. M. Cape Ann lights went down below the horizon, we lifted the clear, beautiful light on the Highlands. It is remarkable with what accuracy these guiding stars along our coast have been located. From Eastport to New York the coast is dotted with lights, and at night, again by her course and the little boat settled nobly down to her work with three standing sails. At half-past 10 P. M. Cape Ann lights were still visible. Our course for Highland light on Cape Cod was S.S.E., distant forty miles. The wind freshened steadily and at 11 P. M. Cape Ann lights went down below the horizon, we lifted the clear, beautiful light on the Highlands. It is remarkable with what accuracy these guiding stars along our coast have been located. From Eastport to New York the coast is dotted with lights, and at night, again by her Elizabeth, Cape Ann and the Highland lights are visible twenty-one knots away. The only one surpassing them in brilliancy is on the Navesink Highlands, which can be seen twenty-four knots at sea. The moon, which had risen about 9 o'clock, was rapidly ate its way through the clouds and, excepting a mist that shot across its surface, shone strong and clear, lighting up the snow-white crests of the waves as they came plunging toward us. It was difficult to sleep down below, the little boat pitched so, and all hands found it hard to enjoy the sight. The wind drew around N.N.E. and settled there. At 1 o'clock A. M. the Highlands bore W.S.W. and nearing fast. We had been sailing a point better than our course for the last half-hour, fearing the wind might haul around ahead and keep rapidly at its lee shore. The little boat behaved splendidly, ducking into and taking the waves as though brought up to such work. We congratulated ourselves on not having racing sails and booms. The waves dashed over the bow, but none reached aft—a great good for a 30-foot schooner." Perhaps our friend of the FOREST AND STREAM would have preferred being at the helm of one of his Monitor-sided cutters, with the waves washing from stem to stern—and so would not we.

At half-past 1 A. M. Highlands bore N.W. by our compass, then S. ½ W., so we were nearly dead before it. The log in the last two hours had registered over twenty-two miles and we were glad to lower the mainsail and take things easily. We ran along the Cape about four miles off, the distant rumbling of the breakers at times audible at occasionally we caught a glimpse of the surf. Now and then the side-lights of a coaster would bear down upon us, every sail set. It was their breeze, and many of them would have troubled our large yachts that night.

Thursday, Aug. 25.—At 6 A. M. we had passed over Nantucket Shoals and were in the sheltered waters of the Sound. The breeze was still blowing fresh and a grand spectacle was around us. The previous day not a vessel was in sight and now we were surrounded by a large fleet of coasters waiting for the wind to haul. The land wind had brought them together during the night—schooners, three-masters, barks, brigs, two sloops-of-war, etc., all canvas to the breeze and as much as they could stand. America may at least be proud of her coasting navy. Most strong-headed tide in New York harbor, the wind slackening in the afternoon, did not reach Newport until half-past 5 P. M.—a good twenty-hour run, seeing we were off Cape Ann at half-past 9 the night before.

Friday, Aug. 26.—Despite of reaching home before Sunday, sails were set, anchor weighed and we passed out by Fort Adams at 5 A. M. Wind light from N. E. Our "balloons" again in requisition and at 1 o'clock were through the "Race" and in the familiar waters of Long Island Sound. A southerly wind helped us on and by the time noon had arrived, skimming along the Long Island shore, quickly left astern Horten's, Mt. Misery and Old Field. At midnight lay becalmed off Eaten's Neck, but a light morning air brought us to the "Gate" at 9 o'clock A. M.

Saturday, Aug. 27.—There the tide met us and we took tow to Governor's Island. After a short sail we rounded to off the A. Y. C. clubhouse, at Bayridge, at noon. After a hearty farewell dinner we parted, each to his home, but with pleasant associations of a month's cruise in the little schooner Sunshine. JUNIOR.

THE AMERICA CUP.

THE formal challenge issued by the Bay of Quinte Y. C. in behalf of the new sloop Atlanta, now building, was forwarded to the New York Y. C. May 11. It reads as under:

BAY OF QUINTE YACHT CLUB,
BELLEVILLE, Ont., May 10, '81.

SIR—At the annual meeting of the Bay of Quinte Yacht Club, held on Friday evening, May 6, the following resolution was adopted by a unanimous vote moved by D. E. Robertson, seconded by W. H. Campbell: "That this club do issue a challenge on behalf of Captain Cuthbert to the New York Yacht Club, the present holders of the America Cup, to compete therefor in September next." In pursuance of the above resolution the Bay of Quinte Yacht Club hereby for and on behalf of Captain Alexander Cuthbert, a member in good standing of said organization, challenges the New York Yacht Club to sail a match or series of matches, as may be mutually agreed upon, for the possession of the cup known as the "America Cup," according to the rules and upon the conditions under which the same is held by the New York Yacht Club. The challenger names as its challenging sloop yacht Atlanta. Certificates of the measurement and ownership of said yacht are inclosed herewith. In consequence of the season being so far advanced, the Bay of Quinte Yacht club are constrained to ask that the New York Yacht Club will waive the six months' notice to which they are entitled and name an earlier period for the contest than that which it is their privilege to fix. The month of September is therefore suggested, as above, as a suitable time. You will oblige the undersigned by laying this communication before the New York Yacht Club at your earliest convenience.

Yours truly, RICHARD S. BELL,
Sec'y Bay of Quinte Yacht Club, Belleville, Ont.
To CHARLES A. MINTON, Sec'y New York Yacht Club, New York.

Accompanying the challenge are certificates from W. A. Bramish, Customs Surveyor, that the Atlanta will measure about forty-five tons, by Custom House rule, and from Messrs. S. T. Greene and J. H. Starling, Measurers of the Bay of Quinte Yacht Club, stating the length of the yacht to be 62 feet 10 inches on the water-line and 7 feet 1 inch over all.

A FLAT DENIAL.

SOME silly brains have started the story that Philip Elsworth sent Cuthbert the model for the Atlanta. The same source has again been interviewing spurious "prominent members" of the N. Y. Y. C. and making them say that they knew the Canadian to be no fair sailing else than an American yacht they would meet her nevertheless. This whole story is without foundation, and we are authorized to deny that Elsworth furnished Cuthbert with any model as well as the romance that John Sawyer, of this city, had engaged to make the sails for the Atlanta. The attempts made by certain journals to curry favor with yachtsmen at home by pandering to popular clamor in prejudicing their readers in advance against the challenging yacht are as disreputable as they are unsportsmanlike. We pride ourselves on fair play and regard to the usages of this time, and would rather have him get away with the cup than see the good name of the yachting community tarnished by truth emanating from the curbstone and kitchen cabinets.

DRIFT.—Hamilton, Ont., has a fleet of fifteen "luggers," after the Clyde pattern. Sharpies are being introduced on the Canadian side. Cuthbert is to build more of his kind. The Canadians are laughing at the efforts of the penny-a-liners of the New York daily press in their attempts to exclude the Atlanta from the America Cup. The vulgarity of the attack made upon the standing of the Bay of Quinte Y. C. is the parent when we say that the scum of the city, judges on the bench, members of Parliament and the principal merchants form the Club. No wonder the journal in which this shoddyism first found vent has had to cat its own words. Oriole, schooner, Royal Canadian Y. C., has been entirely rebuilt. Mr. Hughes offers the yacht Cuthbert built for sale; wants a larger one of the same sort; takes no stock in sandbag dingers. Yachting is going to be lively among the Thousand Islands this season; Dr. Holland's new steamer, built by the Herreshoffs, is guaranteed to run eighteen miles, and the Idlewild and Sport their new side-wheelers. Next Newburgh, at the Idlewild and Sport Islands. The flyer Lelia is creating astonishment on the lakes. It is now the fashion to form "syndicates" to buy a yacht. Sloop Veronica claims to be the fastest of her length in knockabouts; is 61 ft. on deck and 20 ft. 8 in. on water-line and has been bought by G. E. Jacobs; we wish we had little cabin craft like her in New York, in place of the silly sand-bag shifters. Classes and prizes offered by Boston Y. C. not popular; too much centreboard prejudice; about the only club in the East that takes its cue from New York hobbies. It is simply assinine to denounce the Atlanta as a joint-stock racing machine; we should like to know what else our own sloops are but racing machines. *Truth* gives space to canoeing notes; keep it up.

NEW YORK YACHT CLUB.—Nineteen new members have been elected, as follows: Horatio Hathaway, John A Monsell, Alfred de Barry, George Work, Travis C Van Buren, Samuel A Wood, J Livingston de Peyster, Charles F Wetmore, B F Dawson, M D; William A Cole, John P Townsend, Francis A Stout, Arthur W Blake, Isaac Metcalf, Robert Goelet, Morris J Asch, M D; Frank Hinman, John D Prince and Lucian Blake. Long may this prosperous club increasing the fleet to the respectable number of 105 vessels. The committee on the America Cup reported no reason why the original deed of gift should be altered, and challenge for the cup is therefore still governed by the letter of the donors, dated July 8, 1857. Mr. E. A. Buck offered two cups, value $500, to be sailed for by schooners and sloops of the New York and Eastern clubs in August. The rendezvous of the fleet for the August cruise is to be New London harbor and the cruise is to be made to Newport. The recommendations to the by-laws are, as it will at last take the fleet to sea. A voyage to Boston has, however, been promised so often that a good August blow may again this year cause the high drafts to "funk" and turn tail to the westward

ALBANY, New York, May 26:

Life Membership Match—200 Yards.

Ties shot off—2 Oram winner.

THE TRAP.

WASHINGTON GUN CLUB, May 12.—The annual shoot and opening of the new club house of the Washington Gun Club of the Eastern District, in Ridgewood Park, this afternoon, was a great event in the history of the association. Organized one year ago, under the presidency of Mr. Henry Altenbrand, the club rapidly grew in favor with the business men of that section of the city, so that to-day one hundred and seventy-six of them belong to it. It is the only club in the district belonging to the State and Long Island Sportsmen's Association. Although one of the youngest, it is the second largest club in the State Association, and out of the eighty prizes to be shot for at the coming tournament on Coney Island the Washington Club presented thirty. The club house, large and well commodious structure, pronounced by President Altenbrand to be, like the grounds, the finest in the State, was only completed the day before, so that the event was a dual one as already stated. In the gathering were several members of the Fountain and another gun club.

J Smith.....	21 " 0 0 1—1	M Christopher..	21 " 1 0 1—2

The officers of the club are as follows: Hay. Altenbrand, President; Samuel Guthrie, Vice-Prest.; Herman Hederman, Treas.; T. L. Wenzel, Sec. Trustees: Alfred Hodges, Jost Moller, Wm. Denyse. The club has 176 members, and 10 new members proposed. Among our last members elected is our newly elected Congressmen Hyatt Smith.

CAPITAL CITY GUN CLUB.—Washington, D. C., May 21.—A match was shot this afternoon between two teams, each composed of eight members of this club, chosen by Messrs. Mills and McLeod, the two Captains. Cards rotary trap, screened; 20 yards rise; 20 glass balls to each man; the best total score of either team to win. The result was as follows:

E L Mills, Captain.....	1 1 1 1 1 1 1 1 1 1 1 1 1 0 1 1 1 1—19

The club is now in its second year of existence, and is rapidly growing in numbers. Its members embrace some of the first business men of the city as well as several government officials, all of whom take much interest in the affairs of the club and its practice matches, the latter taking place each Saturday afternoon at Eagle Park, in the suburbs of the City, and afford fine recreation for men, the most of whom are engaged in sedentary employment. We made some fine scores last year, and the record of Forest and Stream will show, and hope to make still more improvement before the close of this season. E.

ESSEX ROD AND GUN CLUB.—Newark, N. Y.—On Wednesday, the 18th inst. a series of eight competitions, under the following conditions: Five single from H. & T. traps, one barrel, and 5 from 3 traps, both barrels; handicap rise, under 25 yards, which requires the hut of gun to be held below the elbow until the bird is on the wing, and which prohibits the shooting of second barrel at a bird on the ground. The birds were a mixed lot, and the wet weather made them slow to rise. The shooting as a whole was not up to the average of the club.

Ties: Siems, 6; Twaddell, 8; Ricker, 9.

MOBILE, May 16.—The following is the score of the Gulf City Gun Club for the monthly medal shoot, May 11:

Wm B Holt.....	1 0 1 1 1 1 0 1 0 1 1 1 1 1 0 1 1 0 0 1—14
Jas S Alexander.....	1 1 1 0 1 1 0 1 1 1 1 1 0 1 1 0 1 1 1 1—16
Edmund Carre.....	1 1 1 1 1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1—19
H P Wells.....	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 1 1 1 1—19
Jno Alston.....	0 0 1 2 0 0 1 1 1 1 1 1 1 1 0 0 1 1 0 0 1—13

Ties on nineteen.

Carre.....	1 1 1 1 1—5 1 1 1 1 1—5
Vass.....	1 1 1 1 1—5 1 1 0 1 1—4

The above was a match at 20 balls, 18 yards, 3 traps, the winner of the medal to shoot at 21 yards. Vass and Carre had both won before.

Sweepstakes match, 10 balls, 21 yards:

Carre.....	1 1 1 0 1 0 1 1 0—7 F S Fry.... 1 1 1 0 1 1 0 1 1—8
Alston.....	0 1 1 1 1 1 1 1 0—8 Vass..... 1 1 1 1 1 1 1 1 1—10
Alexander..	1 1 0 1 1 1 1 1 1—9 SEM.

CAZENOVIA GUN CLUB, Cazenovia, N. Y., May 2.—The annual meeting of the Cazenovia Gun Club took place Friday evening, May 20. The following officers were elected:—President, Dr. E. M. Bass; Vice-President, Geo. H. Brown; Secretary, W. Deles Wells; Treasurer, W. J. Dwyer; Executive Committee, Burr Wendell, J. H. T. E. Burr, Geo. P. Atwell. Burr Wendell presented the club with a beautiful gold badge, to be shot for once a week. Card's trap, Card's rules; winner medal, worsted 3 yards each time, missing it, up to 30 yards. Quite a number of new members were elected. The club never was in so prosperous a condition, and expect to break all the balls shot at. HAMMERLESS.

VINCENTOWN, N. J., May 16.—The Coaxen Glass Ball Club of this place held their semi-monthly contest for badge here to-day; Card's trap, 18 yds.:

W S Hilliard.....	1111111110—9	Capt W D Haines....	1011111010—7
S S Butterworth.....	0101011011—6	W J Irick.....	1100000011—4
R H Irick.....	1000101100—4	F S Hilliard.....	0101011100—5

W. S. Hilliard won badge twice in succession for the first time. Should he succeed in wining it at our next shoot the badge will become his permanent property. SHELDRAKE.

SHEBOYGAN FALLS, Wis., May 18.—The boys have been having a busy time of it lately and think they are doing good work. The scores stood, 15 balls each, at 20 yards:

John Munier.....	9	12	7	8
L Baldwin.....	13	11	13	12
J Marshall.....	12	13	12	15
J Slyfield.....	8	6	11	14
	42	41	43	49

DETROIT, Mich., May 19.—Ed. Gilman won that everlasting State State medal again Thursday. He has won it so often that it ought to be given him by acclamation now. The score made was as follows:

Ed H Gilman.....	1111101111—9	John E Long.....	1111101110 —8
Charles Jewett.....	1101100110—6	Golf Stanton.....	0111111ow
E J Roos.....	1111110ow		

In the sweepstakes shoot, Messrs. Long and Roos divided first money, and second money was divided by Messrs. Gilman and Jewett.

CATAWISSA, May 21.—Regular weekly contest of Catawissa Club: Card's rotary traps, 18 yds:

Thomas.....	0111111010111111011—16	Stadler.....	0101111010011111001—10
Yetter.....	1101101100011101110—13	Fox.....	0111010100111111001—13
Aldrich.....	1111111111111111010—18	Reifsnyder	1101011111110010011—14
Eyer.....	1001001111111111001—14	Rinard.....	0010111010110011001—12
G Waters..	1101111011111010111—16	Harman...	1001010100100000110— 7

H. B. A.

GARDEN CITY GUN CLUB.—Regular monthly contest at Hempstead, L. I., for a gun; 5 ground traps, 80 yards boundary:

Barker, 23 yds.....	1111111111—10	Brooks, 29 yds.....	1111111110—9
Carman, 28 yds.....	1111111111—10	Little, 28 yds.....	1111111101—9
G W Creed, 29 yds..	1111100111— 9	Charles, 28 yds.....	1111101011—7
Seaman, 30 yds.....	1111111011— 9		

Barker won the shoot off with three straight.

WASHINGTON GUN CLUB.—President, Henry Altenbrand; Vice-President, Samuel Guthrie; Secretary, J. Wenzel; Treasurer, Herman Hiederman; Trustees, Supervisor Alfred Hodges and Captain C. Trustow. There are 124 active members in the club.

BEATING THE RECORD.—On the 30th inst., Decoration Day, John C. Haskell, of Lyon, will undertake to surpass the record of Capt. Adam H. Bogardus in breaking 500 glass balls in 25m. 16s., the balls to be thrown from two of Bogardus traps, 14 yards rise, traps 12 feet apart, balls broken in the air to count. Capt. Bogardus will offer a cup to amateurs and he and his four sons will give an exhibition of their shooting.

THE STATE SHOOT.—Twelve thousand wild pigeons have been trapped in Indian Territory and are now at Jersey City, where special coops have been prepared for them, and where they will remain until the tournament.

THE IOWA TOURNAMENT, held by the Iowa State Association for the Protection of Game and Fish, is postponed for want of birds. When time is fixed due notice will be given.

LOUISVILLE, Ky., proposes to have "the best shoot of the year." Owing to the uncertainty of procuring pigeons, the postponed date has not yet been fixed. It will be announced in these columns.

$500 will be paid for any case that Hop Bitters will not cure or help. Doubt not.

Answers to Correspondents.

☞ NO NOTICE TAKEN OF ANONYMOUS COMMUNICATIONS.

W. M., South Worcester.—A letter for you at this office.

S. R. H., Plainfield, N. J.—The last edition of Hallock's Gazetteer was published in 1880.

J. W. B., Pittston, Pa.—We do not know of any book that treats of the Gordon setter exclusively.

C. B. D., Providence, R. I.—Your treatment was quite right; give him also a little sulphur each day for a week and then a dose of castor oil.

M. B. McK., Mercer, Pa.—You can get young carp this summer or fall by applying to Prof. S. F. Baird, U. S. Fish Commissioner, Washington, D. C.

R. W. N., Plattsburgh, N. Y.—Ans. In Lake George black bass fishing begins July 20. In other parts of New York on June 1. In Vermont July 1.

DETONATION, Cincinnati, O.—You will find "detonation" defined in our Dittmar powder pamphlet, of which we have sent you a copy. If you have any regard for your gun do not use Dittmar in it.

SETTER, Philadelphia.—The Volume II. of National American Kennel Club Stud Book should have been published one year ago. For information on the subject address Mr. Jos. H. Dew, Columbia, Tenn.

E. C. F., Bellows Falls, Vt.—1. The saltpetre has probably congested the kidneys. Give a half teaspoonful of bicarbonate of soda twice a day in water, and two grains of quinine three times a day. 2. Apply preparation recommended W. B. G., issue March 10, page 116.

S. W. M., Galveston, Texas.—Do brook-trout have scales? Ans. They do. A careless observer will not see them, because they are small and covered with a thick mucous coating. If a piece of the skin be dried they show plainly. The scales are not removed in cooking.

W. E. H., New York City.—The case of your cat is an extremely interesting one to us. We would suggest a fish diet; it is excellent for cats. Give a little sulphur in his milk once a day for a week or two, and while undergoing this treatment avoid giving him a bath on the dock.

C. F. O., Eaton, N. Y.—Read the article on gun barrels in our last issue. The drop of stock best adapted to yourself you can determine by experiment, and you can then have the drop altered to suit you. The cheek should be so that when brought to the shoulder the eye readily catches the centre of the rib.

INQUIRER, Clinton, Wis.—1. In selecting a pointer or setter puppy how can I tell whether he has a good nose? 2. How can I prevent a dog from biting his game? 3. Can food be given to a dog that will destroy his scenting powers? Ans. 1. By trying him on game. 2. By following the instructions given in our article on dog breaking, published in the FOREST AND STREAM, April 15, 1880. 3. Yes, improper feeding will lessen the power of scenting.

W. F. S., Woonsocket, R. I.—Where and when can I get carp for the purpose of stocking a natural pond, finely adapted to the culture of this excellent fresh water fish of which we have learned so much through your paper? Ans. Apply to Prof. S. F. Baird, U. S. Fish Commissioner, Washington, D. C. You may get them in September or October, and the expense will probably be the transportation from New York. There is no charge for the fish.

J. J. S., New Brighton.—The three names, fyke net, hoop or set net, are applied to one form of net. The body of the net is a cylinder distended with hoops and having from one to three funnel-shaped traps, which are so easy to enter, but hard to get out of. At the point of entrance there are wings spread in a V form to lead the fish in. They are set with three poles, one at the bag and one at the outer end of each ring.

C. E. J., Zanesville, O.—1. What is the best bait for bass and salmon besides live minnows? 2. What kind of bait is used for trout in July? Ans. 1. For black bass use the "dodson" or helgramite and the crayfish. There are no salmon in Ohio, notwithstanding your note says they are biting freely. You probably mean the pike-perch, which is in some parts miscalled "salmon." If so there is no better bait for them than minnows. 2. Worms, minnows and trout flies.

W. B. P., New York City.—1. Will a red setter pup that is kept out of doors (exposed to sun) grow darker than if he were kept in the house? 2. Does bathing make his coat darker or lighter? 3. What effect does salt water have on his coat? 4. Can anything be fed to him or rubbed on his coat which will make him darker? 5. Does a confined partridge (quail) give out enough scent to make it worth while to get some to train pups on? 6. Can you tell me of some man who can supply them? Ans. 1. No, it will probably fade. 2. No. 3. None that we know of. 4. Food will not affect his coat. The coat can be artificially darkened, but nothing can be rubbed over it that will permanently keep it so. 5. Yes, but training dogs on trained birds we cannot recommend. 6. We know of no one who has any live quail for sale; it is too late in the season.

Any gentleman who would like to purchase a fine country residence on Manhasset Bay, North Shore, L. I., should consult advertisement of J. P. Travers this week.

NOTICE!

Advertisements received later than Tuesday cannot be inserted until the following week's issue.

BRAIN AND NERVE FOOD.
VITALIZED PHOSPHITES.
Composed of the NERVE-GIVING principles of the ox brain and wheat germ. It restores to both brain and body the elements that have been carried off by disease, worry, overwork, excesses or nervousness. It promotes digestion and strengthens a failing memory. It prevents debility and consumption. It strengthens the brain, gives good sleep, and recuperates after excesses. Physicians have prescribed 300,000 packages.

The Kennel.

Draft of Black Cockers.

The undersigned offers for sale the following draft from his kennel:

(1) Queen, imported brood bitch, about eight years old, winner of prizes, healthy, strong, well-broken and good breeder. Grand coat, heavy and flat and heavily feathered. Pure black. Weight, about 25 lbs. in condition.

(2) Kris, young dog, magnificent coat and feather. Splendid color and shape. Fit to win prizes in any company. Never shown. Age, 18 months. Full weight will not exceed 26 lbs.

Full particulars on application to J. P. KIRK, 44 King St., West Toronto, Ontario. May26,2t

FINE DUCK RETRIEVERS.—We have for sale a few puppies (whelped April 14) by the fine imported Irish water spaniel Judy (imported by Gen. W. B. Shattuc as a mate to champion Barney); sire Sandy. Pedigrees furnished. These pups when of suitable age will be delivered f. o. b. at $20 each. Orders filled in rotation of receipt. These puppies are beauties, and just the age to break for this fall's shooting. Those who have shot on Redfoot Lake, Rice Lakes or slash bottoms know how invaluable this breed of dogs is. Natural retrievers, easily taught, devoted to the sport and capable of great labor even in icy water, they are truly the duck shooter's friend as well as servant. Address orders to W. T. DORTCH, P. P. F. & D. Club, Clarksville, Tenn. May19,2t

FOR SALE—(1) Red Irish setter dog Pier, bred by Ridstone, perfectly broken, and fit to win on the show bench, 3d. (2) Lemon and white setter dog Lothario, 2 years and 3 months old (Royal Ben-Lady Beacon-field), a very promising young dog, retrieves well and fit to shoot over, $100. (3) Web, black smooth-coated retriever dog 3 years and 6 months old, perfect on land and water, prize stock, and would win anywhere on the bench, $50. Apply to FRANK BLYAN, Monroe, Conn. May26it

THE GREAT SINGLE BREECH-LOADER.

FOREHAND & WADSWORTH'S NEW BREECH-LOADER has so completely distanced all the others that it stands alone. There is no second. It is the only single gun worth having. As described in the above cut it is now complete, with rebounding lock, pistol grip, lever fore-end, nickel-plated frame, and is beautifully finished throughout. The barrels are either steel or twist. When steel they are bored out of a solid bar of steel, differing in this respect from all others, which are merely old musket barrels refinished. When twist they are the best imported barrels and of very fine grain. They are bored either cylinder for use in the field, or choked for very close shooting. When choked the targets will not suffer in comparison with Greener's, James', or even Colt's. Hitherto we have been far behind our orders, but having greatly increased the production we can fill orders immediately. The cost of these guns is a mere trifle. We are sole agents at New York for Colt's Club Guns, and also for Enos James & Co., Birmingham.

We offer a small JOB lot of the celebrated Webley Guns of all sorts at about half price.

P. O. BOX 4,309. **H. & D. FOLSOM, 30 Warren St., New York.**

The Kennel.

ST. BERNARDS FOR SALE.—The undersigned, wishing to reduce his kennel, offers for sale several magnificent imported Mount St. Bernard dogs and bitches, carefully selected from the best European strains. To be sold for no fault. For prices, pedigrees, etc., address,

Hotels and Resorts for Sportsmen.

Black Bass and Maskalonge

THE CELEBRATED FISHING GROUNDS OF THE
THOUSAND ISLANDS.
St. Lawrence Hote and the Rathbun House,
CAPE VINCENT, N. Y.
[Terminus of R. W. & O. R. R.]

Under one management the Rathbun House has been enlarged to double its former capacity, and both houses refitted and refurnished throughout. They are located in the immediate vicinity of the very

BEST FISHING GROUNDS OF THE ST. LAWRENCE RIVER.

Competent oarsmen with first-class boats at reasonable prices can always be obtained. Malaria, mosquitoes and hay fever are unknown at this point. The terms for board at either of the hotels are from $7 to $14 per week, according to location of room.

See FOREST AND STREAM of July 1, 1880, "Bass and Maskalonge Fishing," for description of the attractions, and send for circular containing full particulars.

H. L. FOX, CAPE VINCENT, N. Y.

ADIRONDACKS.

Sportsmen and Tourists going to the woods via Plattsburgh after July 1 can find me at the Fouquet House, that city, and on the train for Ausable Forks Tuesday, Thursday and Satu day mornings to arrange for conveyances and seats in coach for the lakes. My coaches being new and of Abbott & Downing's latest approved pattern, I am not only able to offer more comforts and conveniences than other lines, but having guided over the entire Adirondack region so long I can furnish my patrons with such reliable information as may assist them in carrying out their plans for hunting or fishing. CHAS. J. GREENOUGH, Stage Prop. and U. S. M. Agt., Saranac Lake, Franklin County, New York.

SARANAC LAKE HOUSE,
(Formerly "Martins,")
ADIRONDACKS.

I beg leave to inform the traveling public and old patrons of this well known and popular resort that I have purchased it and will open it to visitors on or about May 15. The house is being thoroughly renovated with new furniture throughout, and every comfort and convenience to make it equal or superior to any other Hotel in the country. An A1 table; best of attendance; superior and experienced guides. Neither expense nor pains will be spared to give my guests satisfaction.
Address MILO B. MILLER,
Saranac Lake, Franklin Co., N. Y.

FOR MOOSEHEAD, 7 P. M.

Excursion Lists will be ready about June 1.
LUCIUS TUTTLE, GEN. PASS. AGT.
Boston, May 12, 1881.

"THE FISHING LINE."
TAKE THE
Grand Rapids & Indiana R. R.
THE ONLY ROUTE TO THE
Trout, Grayling & Black Bass Fisheries,
AND THE
FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF
NORTHERN MICHIGAN.

The waters of the
Grand Traverse Region.
and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections.

The hotel accommodations are excellent, and will be largely increased in time for the season of 1881 by new buildings and additions.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. Time Cards, Folders and further information, address

A. B. LEET, Gen'l Pass'r Agent,
Grand Rapids, Mich.

Fishing Season at Rangeley Lakes Again Open.

Hotels and Routes for Sportsmen.

TO SPORTSMEN:

The Pennsylvania R. R. Co.,
Respectfully invite attention to the
SUPERIOR FACILITIES
afforded by their lines for reaching most of the TROUTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

THE LINES OF
Pennsylvania Railroad Company
also reach the best localities for
GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principle cities to KANE, RENOVA, BEDFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for

Trout Fishing, Wing Shooting, and Still Hunting.

Also, to

TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

For rates, etc., apply to
L. P. FARMER, Gen'l Pass. Agent.
FRANK THOMSON, Gen'l Manager. feb17-6

Chesapeake & Ohio R'y.

THE ROUTE of the SPORTSMAN and ANGLER TO THE BEST HUNTING AND FISHING GROUNDS OF VIRGINIA AND WEST VIRGINIA,

Comprising those of Central and Piedmont Virginia Blue Ridge Mountains, Valley of Virginia, Alleghany Mountains, Greenbrier and New Rivers, Kanawha Valley, and including in their varieties of game and fish, deer, bear, wild turkeys, wild duck, grouse, quail, snipe, woodcock, mountain trout, bass, pike, pickerel, etc.

Guns, fishing tackle and one dog for each sportsman carried free.

The Route of the Tourist,

through the most beautiful and picturesque scenery of the Virginia Mountains to the White Sulphur Springs and other famous summer resorts.

The C. & O. R'y is reached by rail at Huntingdon, W. Va., from the West, Northwest and Southwest; at Charlottesville, Va., from the North and East, and at Richmond, Va., from the South.

The completion of the Peninsular Extension in the summer of 1881 affords

THE ONLY ALL RAIL ROUTE TO THE "YORKTOWN CENTENNIAL"

and establishes a continuous rail line, via Richmond, Va., and Huntington, W. Va., between the mouth of Chesapeake Bay and the Pacific Ocean.

CONWAY R. HOWARD,
G. P. & T. A., Richmond, Va.

Old Dominion Line.

THE STEAMERS of this Line reach some of the finest waterfowl and upland shooting sections in the country. Connecting direct for Chincoteague, Cobb's Island, and points on the Peninsula, City Point, James River, Currituck, Florida and the mountainous country of Virginia, Tennessee, etc. Norfolk steamers sail Tuesday, Thursday, and Saturday. Lowes, Del., Monday and Thursday at 3 P. M. Full information given at office, 197 Greenwich Street, New York.

Bromfield House, Boston.

EUROPEAN PLAN.
MESSENGER, Proprietor.

TIM POND TROUT FISHING.

The boarding camps at this resort will be in readiness for sportsmen May 20. The abundance and quality of trout, the improvements in camps and boats, the facilities for reaching this pond and the beauty of lake and mountain scenery makes this one of the most desirable resorts in Northern Maine. The proprietor, Kennedy Smith, will give his personal attention to the wants of his guests. The railroads will sell tickets for round trip to Smith's farm in Eustis, and 1 buck 6 and teams will be ready to haul passengers and baggage from farm to camp at reasonable rates. Board and use of boat one dollar per day. Address KENNEDY SMITH, Eustis, Maine.

SUMMER RESORT.
ON SHINNECOCK BAY, LONG ISLAND

Having added largely to my house I am prepared to take two or three families for the summer. Surf and still water bathing, also good snipe shooting. Good boats and guides ready at all times. Plenty of sea food cooked in best manner.

References—J. R. Shepherd, 831 Broadway, New York. Wm Dutcher, 320 Broadway, New York.

Address WM. N. LANE, Good Ground, Long Island.

FARRAR'S POCKET MAP OF THE RICHARDSON-RANGELEY LAKES REGION, including all the lakes, ponds and rivers of that famous country, as well as the head waters of the Connecticut River, Connecticut and Parmachenee Lakes, etc.; cloth bound. Price, post-paid by mail, 50 cents. CHARLES A. J. FARRAR, Jamaica Plain, Mass.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 1lb canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 1lb and 5lb canisters and 6¼ and 12½lb kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels; gives both a good penetration and a close pattern, will be found well adapted for glass ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 4 being the coarsest. Packed in 6¼lb kegs and 1lb canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 1lb canisters and 6¼ lb kegs.

Dupont's Rifle Fg. "Sea Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ¼lb, 1lb and 5lb canisters, 6¼, 12½ and 25lb kegs. Fg coarse, FFFg. fine.

Dupont's Sporting, Mining, SHIPPING and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by **F. L. KNEELAND, 87 Beaver St., N. Y.**

N. B.—Use none but DUPONT'S Fg. or FFg. for long-range rifle shooting.

The Hazard Powder Co.,

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound *only*.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and ½ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration*. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG in kegs of 6¼, 12½, and 25 lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist*. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* Powder of the country.

Superior Mining And Blasting Powder.

GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

TO CORRESPONDENTS.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen.

Communications upon the subjects to which its pages are devoted are invited from every part of the country.

Anonymous communications will not be regarded. No correspondent's name will be published except with his consent.

The Editors cannot be held responsible for the views of correspondents.

All communications of whatever nature should be addressed to the Forest and Stream Publishing Company, Nos. 39 and 40 Park Row, New York.

FOREST AND STREAM.

Thursday, June 2.

INTRODUCTION OF SKY LARKS IN AMERICA.

THE good influence of the charming writings of Mr. John Burroughs are not confined to this country. Many of our readers will remember, in "Notes of a Walker," published not long ago in *Scribner's*, his description of his feelings on hearing the song of a stray English skylark which he came upon during one of his walks. In the same paper Mr. Burroughs suggested that this species should be introduced into this country, and that it would thrive here as well as in Europe. Acting on this suggestion, Mr. Charles R. Rowe, of Cornwall, England, sent out to Mr. Burroughs a number of the birds, which reached this city April 23d last. The story of their importation and subsequent treatment is told, in answer to our inquiries, by the recipient of the birds, in the following letter :—

ESOPUS, N. Y., May 24, 1881.

Editor Forest and Stream :

You ask about the skylarks sent me from England. Twelve pairs were procured for me by Mr. Rowe, but only ten birds lived to be shipped. Of these seven reached me April 24 in good condition. I kept them in confinement about a week, when two of them died from the effects of myriads of small lice. The remaining five I liberated in a wide, low meadow just back from West Park landing on the Hudson. Up till a few days since I have daily seen a pair of them in the meadow, and had hopes that they would breed there, though I could not determine the sex of the birds. I have heard no song from them, but only their call note. On one occasion I saw one so-called meadow-lark drive one of them from the grass. I do not regard the experiment of introducing the larks a success, and all similar experiments will doub less fail. The birds become dispersed and lost in our vast territory. A likely way to succeed, I think, would ne to liberate the birds on some island off our coast, where the climate would be more like that of Britain, say on Nantucket or Martha's Vineyard. The birds would not be so apt to lose each other, and would probably plant a colony from which in time they would spread to the mainland.

JOHN BURROUGHS.

Mr. I. W. England's attempts to acclimatize the skylark have been undertaken on a larger scale, and consequently with a better promise of success. Two hundred birds were shipped to him in December last, one hundred and seventy-five of which reached New York. During their transportation to Ridgewood, New Jersey, some escaped, and others afterwards died, so that when they were turned out, about May 1, to shift for themselves, there remained but seventy-four healthy birds. Since their liberation they seem to have done very well. They have been heard to sing, and some of them have mated, and their nests have been found containing eggs, and later, young. No doubt a number of these will reach maturity.

Will the birds survive the coming winter? Will they migrate in the fall, and thus escape the fate that is sure to overtake them if they remain with us? We trust that they will. In the mean time, however, they should be protected by every means that can be devised. The professional collector is one of the worst enemies that these newly introduced birds have to fear, and it is to be hoped that he will spare these little strangers.

"ONLY A TALLY OF NOSES."

IN 1878 the National American Kennel Club gave birth to its first offspring in the shape of Volume I. of the Stud Book. It is a production that has never reflected especial honor on its parent, being a complication of inaccurate entries. In looking back at the means employed in its creation, we are not surprised at the paucity and defects of its information as a record. It was a long time, some eighteen months, before it was ready for distribution, even after registers, collected from various sources, had been placed in the hands of the compiler. At least it came in a lump, and then had to be taken as a dose. But no sooner had it seen the light than the public was promised Volume II., and entries were solicited from the breeders and owners of dogs for that purpose. Many have responded to the call, but from the outlook at present we are about as far off from having a really accurate and authentic record as ever. For a long time we possessed our soul in patience, awaiting the action of the club that had the matter in charge; but at last, worn-out by having to answer numerous correspondents, that we knew no more of the matter than they did, and fearing that several of them might lay violent hands on themselves at the supposed loss of their twenty-five cent pieces, we applied to headquarters, and at last not in vain, as the following reply from Mr. Dew will show. It reads thus:—

COLUMBIA, TENN., May 24, 1881.

Editor Forest and Stream:

Your favor, making inquiry as to time of closing entries and publishing Volume II of the Stud Book has been received. I regret I cannot answer your questions definitely. The publication depends upon the action of the National Association and as Secretary I only receive and file properly the entries forwarded. I think it high time that some action looking to the closing of entries and publication should be taken, and it will not be amiss for the sporting papers to ventilate the matter. I was much in hopes that some action looking to this end would be the result of the New York called meeting. The correspondence that it necessitates more than doubles the duties of the Secretary. I am in almost daily receipt of letters such as yours and also letters of inquiry as to pedigrees furnished the late Secretary, many of which I am at a loss to answer. Suppose you start the ball. JOSEPH H. DEW, *Secretary N. A. K. Club.*

Now there is much of practical and outspoken sense in Mr. Dew's communication, and at the same time he shows clearly where the burden of blame should rest. To strike at the root at once, it is clear to us from correspondence now in our hands that the National American Kennel Club was not in 1877 and 1878, or since, in a financial condition to justify the attempt of the publication of any such important work as an American Kennel Stud Book. A reference to the letters of Mr. L. H. Smith, chairman of the publishing committee, in 1878, justifies us in this opinion, for a delay of months was occasioned in higgling over a very paltry sum. We agree fully with Mr. Dew, it is full time that something should be done, for over a year has elapsed since it was officially announced that the entries had closed. The book was promised early in the summer of last year, then immediately after the November trials, and now the entry is open again for an indefinite period, and every dog in the land may have had his day before the record is in the hands of the printer.

It is a certain thing that the entry should close at once and the book be published immediately, or the scheme should be abandoned and the money returned to the subscribers. But unless the book is accurate it will be of no possible value. It would be greatly to be deplored if the club should have to give up the publication of the record, for only an organization of the kind should be allowed to take the matter in hand. No private enterprise should be considered sufficiently responsible. The National American Kennel Club is unquestionably the best of its kind in the country, but still it is not doing itself justice or commanding the position it should occupy. In its long list of members there are many respectable and wealthy men, but they cannot be expected to pay the expenses of the organization. The club must be put on a sound financial basis; this is absolutely necessary for its success. The dues should be increased, and a fund provided for contingencies. Guarantee funds and passing the hat around are always means to be avoided, and no man should be allowed to pay more or less than his neighbor. If members do not pay their dues they should have no quarter, but be dropped from the roll. As a well filled larder is indispensable to a well-appointed house, so is a balance in bank necessary for the success of any organization. The meeting called at the New York show was for this express object of devising a plan to raise funds to pay off a long-standing indebtedness. Those behind the scenes "were conspicuous by their absence." But Mr. C. H. Raymond was there, and he offered to personally assume the club's indebtedness, but the generous offer was most properly declined. Thus the matter stands.

CAMPING OUTFITS.—Now is the time for camping parties to look over our advertising columns to decide on what they want to take in the woods. Rods, reels, lines, flies, boats, clothing, rubber goods, etc., will be found in profusion until the weight of the outfit becomes a serious question, and then the subject for discussion will be "what can we do without?" No matter what may be decided upon to leave behind the party must eat, and here we would call attention to the canned goods of Thurber & Co. We have long known the firm, and find their goods of first quality and reliable in every respect. They have their vegetables packed on the spot where they are grown, and so secure the highest perfection possible. Sportsmen will do well to follow our advice and ask for Thurber's canned goods.

TO STUDY AMERICAN FISHCULTURE.—Mr. George Eckardt, Jr., son of the proprietor of the great carp ponds at Lubbinchen, near Guben, Germany, arrived by steamer Mosel on Sunday. Mr. Eckhardt will remain in America about a year and study our methods of fisheulture. He will first go to the shad hatchery of Col. McDonald, in Virginia, then on board the Fish Hawk to see the hatching of Spanish mackerel. In August he will go to the U. S. salmon-breeding ranch on the McCloud River, California, with Mr. Stone, and later will visit the salmon works of Mr. C. G. Atkins, in Maine.

THE LIGHTEST FLY ROD.—The first prize in Class C, for amateurs, at the coming fly-casting tournament is, "One Leonard split bamboo Catskill fly-rod, gold-mounted, with Mills & Sons best rubber click reel, filled with their 'standard' enameled water-proof fly-line. Donated by Wm. Mills & Sons, 7 Warren street, New York. Value $60."

We especially mention this prize because we believe it to be the lightest fly-rod yet made. It weighs less than four and three quarter ounces, and is a nicely-balanced little tool. It is ten feet in length, and in expert hands no doubt will do good service.

FOOD AND HEALTH is a bright weekly published in this city and edited by Mrs. Amelia Lewis. It is sensible, able and growing in influence. It is not an organ of the long-haired men and short-haired women disciples of any food craze, but is a practical paper for everyday life.

MESSRS. WILLIAM READ & SONS, of Boston, Mass., inform us that the Scott & Sons gun has been awarded a special gold medal at the Melbourne Exhibition of 1881. As will be seen by their advertisement elsewhere, the Messrs. Read have in their warerooms a full stock of these guns.

HOW THE ICHTHYOPHAGOUS DINED.

THE dinner of this famous club came off on the evening of the 27th of May, as advertised, and was a great success. At 5 P. M. the steamer left the foot of Fulton street and proceeded up the East River to Thirty-third street, where more guests were waiting to be taken on board, and then steamed away through Hell Gate and up to the hotel of Mr. John H. Starin, at Glen Island, which is above Throg's Neck, where the East River becomes Long Island Sound. The hotel is seventeen miles from the starting point and is beautifully situated for a summer resort.

About one hundred persons sat down to the table, which formed three sides of a square. Many more would have been present but for the false impression that the Club is a private affair, when in reality it consists of only the President and three others, who are a committee of arrangements. Invitations are sent out and the "members" are those who choose to attend. The nominal sum charged for tickets hardly covers the wines, all deficiencies being otherwise provided for. The country had been scoured for weeks for things aquatic which are not eaten, through absurd prejudice against their appearance. Now, the Ichthyophagous holds, if it holds anything, that much good food is lost to man through this ridiculous prejudice, which says that certain things "were made to eat" and certain other things "were never meant to be eaten." "How do you know?" asks the Club; "did you ever eat them?" "No," says popular prejudice, "but I don't believe they were made to be eaten." "Why not?" again queries the Club. "Because they don't look fit to eat and nobody eats them," answers prejudice. This is all that prejudice has to say, his grandfather never had them on his table and he is satisfied to feed things to his pigs or let them

THE ICHTHYOPHAGIST'S DREAM.

be wasted for this slight reason, if it is a reason. The motto of the Club is: "He who eats a hog, or any portion of one, has no right to despise the flesh of any creature that the Creator has made."

No shark was to be obtained, but, by one of those fortunate chances, a fisherman from Cape Cod came into Fulton Market with a "man-eater," which he brought in as a curiosity. Blackford bought it and, notwithstanding its stomach contained the left leg of a colored boy, with a boot and a piece of his tarry trousers, the Club considered it a prize and was happy. The hellbenders were obtained through the kindness of Dr. Beachley, of Meyersdale, Penn., who personally interviewed the fishermen and secured them. Their absence would have disappointed Prof. Cope, who came from Philadelphia on purpose to eat the menopoma which he has so often dissected and found to contain wholesome-looking muscle, but which it never occurred to him to eat until he saw that the Ichthyophagi proposed to serve it.

The company sat down at 7 P.M. At each plate was a card with a nightmare in shape of a sleeping individual, who, having dined on the hellbender, was visited by them in his sleep. The reverse contained the following:—

MENU.

Little neck clams. Sauterne.

Potages.

Consomme of Mossbunker. Bisque of Razor Clams.
Amontillado.

Hors d' œuvre.

Boudins of greysnapper a la Blackford.
Horse-shoe crabs a la diable. Sardines. Anchovies.

Releves.

Drum a la Cope. Filet de boeuf a la Richelieu
Pommes duchesse. St. Emilion.

Entrees.

Raie au beurre noir. Sheepshead a la Normandie.
Saute of shark—Chinese style. Squid a la Starin.
Pain de menhaden a la Goode.
Asperges. Niersteiner.

Sorbet des Princes.

Roti.

Striped bass a la Mather. Pomery.

Gibier.

Hell benders. Sea robins. Angle worms.

Pieces Froides.

Lophius a la Baird. Sturgeon a la Ichthyophage.

Salade.

Seaweed.

Dessert.

Glaces nantiques. Petits fours. Fruits.
Fromages. Cafe. Liqueurs.

The first new thing was the consomme of mossbunker menhaden). This was made from "Goodale's Extract of Fish," an article made on the same principal as Liebig's extract of meat, but not yet put upon the market. It contains the pure muscle juice, and later in the evening was referred to by Dr. Hammond as having more life-giving and stimulating qualities in it than champagne. The razor clams (*Solenensis*) made a fair bisque, and the wonder is that they are not eaten in this country. They are said to be best when broiled (Jones' Animal Creation). The greysnapper (*Lutjanus caxis*) is a fine fish from the Gulf Stream much esteemed in Burmuda, but rare here. The deviled horseshoe crabs, (*Limulus polyphemus*) were lacking in delicacy, their pronounced character might suit some palates better than ours. The drum, like the filet of beef, was good, but not uncommon; one of the members voted it "too respectable." The raie (*Anglice* Ray or Skate) with black butter was not good. We have eaten skate and called it delicious, this whether the fish or the cooking, seemed coarse and strong. Why the sheepshead, the best of salt-water fishes, was served, unless as a concession to the weakness of some of the brethren who had a little prejudice left, we don't know. The shark was very fair, not as coarse nor as strong as might be expected, and the tarry trousers of the African sailor had not flavored it with pitch as was feared. It was noticed that the niersteiner was freely used with this dish. The squid needed more of it to our thinking. Menhaden a la Goode was good, but bony. Striped bass, another concession to the weak stomachs.

The hellbenders were most excellent, the only fault being the small pieces consequent upon a limited supply. Seabobins (or sculpins) were also good. Lophius is the genuine name of the monster known as goosefish, fishing frog, angler, monk-fish and great sea-toad. It had a flavor of all the fishes which entered its ponderous jaws never more to return, it seemed like one of those things which one could eat but not "banker after." The angle worms and sea-weed salad did not appear because, being easy to obtain, they were left to the last and not attended to in time. The "angle worms" were not to be the earth worm, *Lumbricus (terrestris,)* but the sand worm found on the sea coast at low tide, called lobworm, or bug-worm, (*Arenicola piscatorium.*) They are said to be good when first placed in warm water to make them eject the sand and then dropped into hot fat like dough-nuts.

The President, Mr. John Foord, arose with the coming of the sorbet and congratulated the club on the improvement in the *menu* from last year, and said that in time it might be possible to get up a dinner of articles which no human being had tasted of. He then stated that the club contained a poet, and called on him to recite his verses, and Mr. Fred Mather read his alleged poetry, "When the Ichthyophagous Dines," from FOREST AND STREAM of May 12th. Mr. George Werrenrath, the accomplished tenor of Plymouth Church, sang in Italian, German and English, to a piano accompaniment by Mr. Benedict. Hon. Robert B. Roosevelt was then called upon and maintained his character of one of the best of after-dinner speakers. He referred to the fact that these dinners were having an effect upon the members; Mr. Phillips had increased in weight to 250 pounds, while the speaker equalled to 312 pounds, Mr. Blackford weighed 200, and the President of the club had increased his waist measure. Professor Cope being called on gave then a little scientific nomenclature which nearly broke his inferior maxillary. Captain J. H. Mortimer told some good stories, the military band from David's Island serenaded the club, and at 11:30 they rose and went to the boat. On the way home songs were sung and nothing marred the harmony of one of the most famous dinners on record which language cannot describe and only those who were there can thoroughly appreciate.

—Mr. William E. Dorwin, who has been known for a long time as the capable and efficient superintendent of the Brighton Beach Railroad, has retired from that office to take charge of the extension of the Delaware, Lackawanna and Western Railroad. Being a railroad man, Mr. Dorwin is, perforce, an expert angler. He recently made a vacation trip to the Vermont hills, whence he returned laden with the finny trophies of his deftness.

SEVENTY-FIVE YEARS AGO.—In the *Evening Post* for June 26, 1806, the New York Sporting Club announces the expulsion of two members for shooting woodcock out of season.

The Sportsman Tourist.

EL CONQUISTADOR.

"Half-way down, while picking our way through an old windfall ignotus kicked something which rattled. Stooping to see what it was he picked up a jagged, rusty knife and a bleached human skull. Nothing else could we find though we searched carefully. Of what tragedy these were the sole mementos we could only conjecture. Was it red man or white, hunter, warrior, miner or prospector, who had perished miserably in this gloomy thicket? What was the manner of his taking off—by wasting disease, by famine, by ravening wild beast or by his brother man? Was it, indeed, a man's skull at all, and not, perhaps, a woman's?—FOREST AND STREAM, *May 19.*

TWO hunters toiling up a cliff
Of the blue Colorado range,
Paused for a moment to survey
The landscape, wild and strange;
Far off, chain of mountains dim
Along the horizon crept,
While groves and valleys soft below
In tranquil beauty slept.
Near by El Conquistador rose,
Its steep sides dark with tufted woods,
Its peaks wind-swept and lightning-scarr'd,
All seamed and rent with torrent-floods.
And here a little mountain vale
Its natural garden fair outspread;
Fair with its grass, its trees, its bloom,
And the bright, blue heavens o'erhead.

And here the careless foot upturn'd
A skull, a jagged, rusty knife.
Were these the sole memorials
Of some foul, murderous strife—
Sole relics of a tragedy
That stained these grasses green;
These moldering bones that here have lain
For years, unknown, unseen?
Was it the red man or the white,
Hunter or miner, Indian brave,
That perished in this lonely spot,
Dead, and denied a grave?

Or, haply, 'twas some tender maid,
Some Indian squaw, some emigrant,
Sailing across Atlantic seas,
To die in this sequester'd haunt.
But who this mystery may solve,
The story of these bones unfold?
Ah, never! 'till the last Great Day
When all earth's secrets shall be told.

Ah, many who seek this Western clime
Were outlawed men from foreign shore;
Men steep'd to the very lips in crime
With heart of iron and hand of gore.
They blast the rock, they dig the mine,
They sift the sands where nuggets shine,
And ever in savage midnight fray
Are prompt with the bloody blade to slay.

Shelter Island, May 21. ISAAC MCLELLAN.

NOTES OF AN ANGLER IN THE NORTH.

BY FAIRCHILD, JR.—FIRST PAPER.

AS Canada is to be the anglers' and sportsmen's paradise in the coming years, I shall endeavor, in the following series of short sketches, to describe some of the most marked features of that portion of the Dominion embraced between Quebec on the north shore of the St. Lawrence River and Lake St. John and the Saguenay River, the discharge of this lake, together with some slight account of the people dwelling upon the outskirts of that mighty wilderness, and what facts in the natural history and fishing of the country may appear to me to be new or of interest to the general reader.

I shall avoid the continuous narrative, and thereby some of the dull, trite and stupid incidents of the daily journal, as I am quite convinced that the hour at which the writer may have arisen, or the detailed account of what he may have had for breakfast, have very little interest to any one but himself.

SOME FACTS ABOUT THE COUNTRY.

Canada is destined before many years have passed to enjoy a supremacy as a resort for those enthusiastic and adventurous anglers and sportsmen who, no longer content with the tame sports of the East, and the West having passed into the hands of the husbandman, must seek for game worthy of their prowess in the primeval wilds of Canada. Such they will remain for generations to come; for the long arctic winter and immense snowfall, together with the unproductiveness of the soil, unfit it for settlement. So inhospitable is the climate that the cultivated lands on the north shore of the St. Lawrence are but a mere fringe. Quebec, the venerable and antiquated, still stands within the shadows of the forests. From the summit of the storm-beaten cape which surmounts the town, the eye roves over a well cultivated valley, dotted with smiling homesteads, and rests upon a range of mountains, whose blue summits blend into the azure of the sky. These mountains—the Laurentides—extend to the Labrador coast, and are the barriers which agricultural development will never surmount. To the hardy and intrepid sportsman they are but the sentinels that guard his domain from the ruthless and rapid destruction that is overtaking some of our fairer but too accessible regions.

This boundless wilderness is intersected with a network of lakes and rapid shallow rivers, all of which absolutely teem with trout, and many of the latter with salmon. The vast forests are the ranging grounds of the lordly moose and fleet-footed caribou—the reindeer of the western hemisphere—while the mink, otter, beaver, lynx, fisher, and bear are also found in abundance. The widely scattered and solitary posts of the Hudson Bay company are still to be seen beside the lonely lakes of the interior. The nearest post to Quebec is at Lake St. John, one hundred and twenty-five miles distant. Since the completion of a government road to this lake, which is the head of the Saguenay River, a section of the country has been opened to the angler that is prolific in fine fishing, but strict candor necessitates the assertion that the latter must be musquito and fly-proof, as both insects appear to flourish amidst the dank, dark forests of the North. The thin-skinned man's life would be rendered utterly miserable from the attacks of these little pests.

Winter is the season of the year most affected by the Canadian sportsmen for their trips into the interior to hunt the caribou and moose, and for fishing. Inured to the cold from infancy, they defy its utmost severity, and find themselves as happy sitting before their little camp-fire in a hole in the snow, while the storm shrieks wildly through the shadowy pines above them and the thermometer marks 30 deg. below zero, as in their comfortable homes. Upon their broad snow-shoes they traverse the wilderness to its remotest parts.

THE INHABITANTS.

Upon the outskirts of this wilderness dwell a singular people, a race long settled upon the land they till, but who,

amidst the progress of the last two centuries, have successfully resisted its encroachments, and to-day exhibit the strange anomaly of French customs, manners and habits of the 17th century preserved to the 19th in the new world, under a foreign government. A happier, more contented peasantry do not exist, and their virtues are manifold. They are a social, loving people, and delight to live within sound of the parish church bell. Very devout, they have an immense number of *fete* days, during which all labor is suspended to enable them to attend the mass and the subsequent festivities. Sunday is pre-eminently the happiest day of the week. If in summer, no sooner is mass concluded than the whole parish adjourns to the greensward upon the river bank and partake of their frugal meal amid much raillery and laughter, and then the afternoon is given up to dancing and singing, courting and canoeing, and other innocent amusements.

They labor no harder than is necessary to provide for their simple wants. They are a self-contained people, and extreme indigence is rare among them. The wives and daughters spin and weave their own linen and woolen cloth wherewith they clothe themselves; their small farms yield sufficient for the family use; the maple bush the sugar and syrup; the nearest stream or lake abundance of luscious trout for fast days; the *sapin* swamp its quota of snared hares and partridges. They have little to sell, still less to purchase.

They are exceedingly courteous and polite in their intercourse with each other and toward strangers; even the little children bow and courtesy on the road when passing you. They are hospitable in the extreme, and anticipate the every wish of the traveler who seeks their door. Above all they are devoted to their native soil, the *beau Canada*. When the long arctic winter spreads o'er the land, and all labor is suspended, the people abandon themselves to the delights of that social intercourse of which they are so fond. Day and night the roads resound with the lively tinkling of sleigh bells and the merry laugh and song, as gay parties of young and old wend their way to and from each other's houses.

"Thus dwelt together in love these simple Acadian farmers;
Dwelt in the love of God and of man. Alike were they free from
Fear, that reigns with the tyrant, and envy, the vice of republics.
Neither locks had they to their doors, nor bars to their windows;
But their dwellings were open as day and the hearts of the owners;
There the richest was poor, and the poorest lived in abundance."

Happy the angler who, in his short respite from the harassing cares of the busy world, finds his way among such pleasant pastures green.

JOTTINGS BY THE WAY.

The elevation of the banks of a river at the foot of a rapid mark the height of that rapid. In the estuaries of rivers and the head of rapids islands are always formed. Deep holes in rivers instead of filling up from the deposits brought down from above by the floods gradually grow deeper. To effect this there must be a strong under-current, during heavy freshets, or whirlpools with a set toward the lower end of the pool. In no other way could they purge themselves. Among ledges of limestone and blue clay in river bottoms large round holes are frequently found. These holes are formed by a hard flint-like spar stone, and the action of the current, which whirls them around and around precisely as the burr stones of a mill revolve.

Snow is dissolved by thawing to one-fortieth part of its bulk, and the process of melting it is so slow and toilsome that it is of the utmost importance in winter to find water near camp. It is always advisable, therefore, to camp beside a lake or a rapid stream. From the former enough water can be collected from the surface of the ice by scraping away the snow. The weight of the latter depresses the ice and causes the water to rise over it, which it also prevents from freezing. All frozen waters must have a breathing place, therefore air-holes are always to be found, or rather avoided, in lakes and rivers. They are necessary, too, for the life of the fish.

In summer thunder-storms are of frequent occurrence, and rage with great violence for a short time. They spring out of what was but a few moments before a bright, unclouded sky, but they as quickly disappear, and all nature smiles again. Wind storms are not uncommon that lay waste extensive tracts of country, leveling the mighty forest before them like so many reeds. Such tracks are termed windfalls by the settlers, and are execrated by every one who has occasion to cross them.

Forest Indians always walk intoed for two very good reasons. Were they to walk with the toes turned out they would be constantly tripping amidst the loose roots and the brush, and secondly, the habit of wearing snowshoes enforces the intoe step. It is an imperative law of snowshoeing, to red and white alike, to walk with toes well turned in; an at. tempted violation of this unwritten code is swiftly followed by a severe punishment—a "header" into four or five feet of snow, from which it is no easy matter to extricate one's-self.

Cattle on a bush farm, where they are much troubled with flies and mosquitoes, soon lose all dread of a fire, and often seek its protection as against their little winged tormentors. Often large smudge fires are burned for them in their pastures. I have often seen them rush headlong into it to obtain relief from the venomous attacks of the insects.

Large forest trees much exposed are often split by the extreme action of the frost, which expands their outer fibres more than they can bear. The rent is always accompanied by a loud report like the explosion of a small cannon, and is startling in the extreme in the quiet stillness of night. Rocks are sometimes similarly acted upon where there are seams into which the water percolates and then freezes.

Wherever extensive fires have burned off the coniferous forests an entirely different growth takes place. Birches, poplars, wild cherry, etc., spring at once into luxuriant growth and form a tangled gnarl through which it is difficult to force a way. Many bush fires are occasioned by the lighters striking some old dry *chicot*.

Trout are not often captured by the fish hawks, for they are about as quick as their feathered foe, and at the first flash they dart away. It is the heavy sluggish fish, such as the suckers, which lie motionless and asleep in the warm, shallow waters, that fall a prey to the keen-eyed hawk. As the capture of such vile fries is no small gain to a stream, the fish hawk must be considered a benefactor to the race of anglers. Suckers consume an immense amount of trout spawn.

People always smile incredulously when the angler relates his ill luck in losing his largest fish, but it is nevertheless the case that the very large fish more often escape than find their way into the angler's creel. I have captured some old stagers that from the numerous scars about the mouth showed their frequent acquaintance with the angler's fly.

Rivers upon which much logging is carried on, while they may abound with trout, afford poor fly fishing. The fish are so often disturbed by the drifting logs that they seek the still, deep waters, and feed upon the bottom. The Jacques Cartier, one of the most beautiful rivers in Lower Canada, and a famous one for large fish, has been almost ruined for fly fishing the past few years from this cause.

Trout, when they attain a very large growth, become almost entirely cannabalistic. The better to conceal their nefarious practices, they seek the deep, dark waters of some hole in the stream, sallying forth at night upon their smaller and more helpless brethren. Early in the spring they seek the rapids to cleanse themselves from the parasites that infest them, and they will then rise to the fly, but very rarely at other times.

Feeding and the nature of the water are the two principal causes of the diversity in the coloring of trout, and their form. In very rapid, clear streams the trout are very brilliantly marked, and are lithe and long. In the quiet waters of the lakes the lazy life and abundant food gives them a rotundity of form and duller markings.

Large trout are usually found in couples. Can it be that as they advance in life they permanently mate? Is it simply a platonic affection, the desire for the congenial companionship, the mutual aid and sympathy extended to each other? Who knows!

[TO BE CONTINUED.]

A MICHIGAN FISHING TRIP.

I HAVE just received the neat pamphlet issued by the Grand Rapids and Indiana Railway Company, and while looking through its pages at the illustrations and the general information therein contained, occasionally a headline would attract my attention, calling to mind a beautiful creek, lake, camping-place, town or hotel, and I found myself in a very short time with the book on my desk and thinking over the delightful trip one may take from Traverse City to Petoskey. I will try and sketch a trip that, to me, was one of the most enjoyable I have ever taken, and one you will not be satisfied with going over once, but will wait with anxious anticipation for the time to come when you can again traverse the same route.

The old reliable Grand Rapids and Indiana road, with its courteous attaches, will land you safely at Traverse City. Here you will find a neat, clean, cool little town, facing the west arm of Grand Traverse Bay, with as good a hostlery as one would wish to find—the Park Place Hotel. Stop here a day and rest, then take the early morning boat for Elk Rapids, thirty-three miles distant via Loug or West Bay routs, touching at Old Mission, arriving at Elk Rapids about noon, at which point you will change boats for the inland route. Take the spring-wagon, which meets the boat, and you will be whirled along the long dock—piled with iron ore high on either side—down onto a short stretch of level road, around a mill over a stream nearly above a large fish chute, and in about five minutes brought up whirling at the Lake View House, a clean, homelike little inn, where you will be treated well by a very gentlemanly landlord. As you step out on the hotel porch in front you have a beautiful view of Traverse Bay, and to the right and left attractions enough to interest you until time is called to take the little steamer for the Lewis House Landing at the head of Torch Lake. As you leave Elk Rapids you pass neat white houses, with their beautiful green lawns in contrast, lumber mills, a very large blast furnace, etc. Leaving these behind our little steamer puffs away taking us along at a lively rate through Elk River—two and a half miles long, and considerably wider than the usual Michigan River—into Elk River, nine miles long, a very beautiful sheet of water and clear as crystal. Crossing this we again go through one of those narrow, crooked, little streams for a short distance into Round Lake, three miles long, thence through Torch River, four miles long—a purely typical northern Michigan river—into Torch Lake eighteen miles long. The steamer makes two stops on the trip through this beautiful lake, landing you at the Lewis House dock early in the evening, where you stay all night. Mr. Lewis, the proprietor, is as genial and whole-souled a landlord as you would wish to meet. Should it be moonlight walk over a narrow strip of land about one fourth of a mile to the beach on Grand Traverse Bay, where you will find a beautiful, broad, sandy beach, a walk here gives a refreshing, rejuvenating feeling and then back to the hotel for a good night's sleep. After an early dinner the next day Mr. Lewis will take your baggage in his "street car" over to the bay shore where you again take passage on the steamer for Petoskey, on the way making a stop at a small (saw mill) town, and then into Charlevoix, a very pleasant and at the same time peculiar looking place, situated back a short distance from the lake, on both sides of a small stream, on quite a little bluff overlooking, to the east, a short distance, Pine Lake, and to the west, Lake Michigan. By evening you land at Petoskey, where you take up quarters at either of the comfortable hotels there—the Occidental or Cushman, both good. Here you will want to stop a day or more, as it is quite a bee hive, everybody you will see in good humor, and all evidently looking for something. This place is at present the terminus of the G. R. and I. Ry., and should you desire any information not obtainable elsewhere call on Mr. Quaintance, the agent of the company at this point, whose gentlemanly and accommodating manners have given him an enviable celebrity. At this point a stroll down the beautiful pebbly beach will be in order and amply repay for the time and trouble taken, and you will here, with little trouble, find many handsome stones, and many very fine agates are here picked up. The same can be taken to one of the number of lapidaries there who will polish or make from it a memento which you will long cherish as a souvenir, a glance at which, at any time, will bring back many pleasant recollections. From this point you will have the beautiful inland route through to Cheboygan, which all should take, and which I will not mention here further as I have taken up space in your columns heretofore with details of this trip.

I have made this sketch a flying one. You can well lengthen it to good advantage by making a longer stay at Traverse City, Elk Rapids or Lewis House. There is more sport and more to interest one at Elk Rapids, however, than at the other mentioned points.

Excellent fishing may be had at any place you may choose to stop. At Traverse City, deep water fishing, and near the town trout, bass, etc. At Elk Rapids shoulder your rod at the hotel, and you can be back again in one hour with quite a respectable string, and undoubtedly the same at the head of Torch Lake. At Elk Rapids I know you can, for I have tried it. Go, take this trip, see and be convinced.

Columbus, O., FRANK N. BEEBE.

ON THE SAWKATAWABET.

PONTIAC, MICH.

IN season, it is no exaggeration to say that the forests of the south shore of Lake Superior are "fairly alive" with game, consisting chiefly of pigeons in July and August, when the huckleberry is ripe, ruffed grouse and that variety commonly called spruce partridge, in September and October, and in fall and winter innumerable hare and red deer. Nearly every rill, rivulet and river has countless numbers of speckled trout, and the flesh of the same is invariably hard and compact, owing to the frigorific temperature of the waters in which they live and sport. In places where wild rice or celery grows, many varieties of water fowl may be seen, and owing, in a measure, to the fact that they are rarely disturbed, are comparatively quite tame and easily approached.

Not long since Friend B—— and myself decided to put in a week or two, fishing and hunting, in the vicinity of the Sawkatawabet River. This stream rises in the south range of Keweenaw county, the extreme northern county of the Upper Peninsula, flows in a southerly direction and empties into Keweenaw Bay. It drains about seventy-five square miles of territory, and in consequence of its being the receptacle of several small creeks increases to quite a volume ere it dashes, picturesquely, over the ledge of rocks at its mouth. It is of an icy coldness, and, moreover, is remarkably translucent, except in the season of freshets, when it is of a darkish red, and with its driftwood and other *debris* is anything but attractive to the eye.

In the early days of the month of September, with our camp outfit, with dogs, guns and ammunition, and with old Joe, our cook, guide and woodsman, a veritable Pathfinder, we took our places in a light spring-wagon and were transported over a well-kept road, through beautiful forests and romantic dells, past love yfarms nestling in the shadows, and over hills from whose summits ever and anon were afforded us charming vistas of land and water for a distance of about ten miles to the head of Lac La Belle. Here we procured a Mackinaw boat, and placing our baggage therein, were soon afloat, headed to the mouth of the canal which connects this lake with Keweenaw Bay. Meeting, as soon as we landed, our old friend John Mayhe, a half-breed who, with his family, occupied the old Government lighthouse, we engaged comfortable quarters for the night, and we also subsidized John and an Indian named Frank for our voyage to the river. We also at this point made preparations for an early start in the morning of the coming day. Inasmuch as Frank was the proud owner of a water craft which he guaranteed would outrun anything on the lakes, we concluded to follow his advice, to wit, discard the Mackinaw which brought us down and proceed on our journey in his yacht. Everything having been completed for the morrow's sail, it became incumbent upon us to while away in the a most agreeable manner possible the few hours intervening before bed-time. This we did in rowing around the foot of the lake near the head of the canal, at the suggestion of a fisherman, who assured us that we would probably have the pleasure of killing a beaver or two.

The conditions were indeed favorable to success, as the night was still and the waters glassy and smooth. As we approached a bayou we expected, from what we had heard of them numerically, to see one or more of the quadrupeds at no great distance from us, but for a time, however, we were doomed to disappointment. Carefully and patiently we paddled wherever we thought there was a prospect of obtaining even a transitory view of the game we were after, and it was not until some time had elapsed that we heard a splash, and at a distance of sixty yards or more we could see the miniature waves circling away from the spot where a beaver had dove to the bottom. In a moment or two another plunge was heard, and the ripples indicated the place where this one had taken his immersion. It was not long before plunge after plunge and splash after splash kept up quite a little tempest, but we were unable to get a shot at any of them, although they were apparently in close proximity to us. They kept along the margin of the lake, on the edge of the rushes, where the tall trees would cast their shadows and render them unobservable to us until they rippled the water, when it was too late for execution. We saw that it was necessary for us to change our base of operations, which we accordingly did, and it was not long after we had taken a position as near to the shore as practicable before an opportunity presented itself. Simultaneously B. in the stern of the canoe and I in the bow discharged our weapons at two handsome beaver, whose heads were distinctly visible, and moving slowly above the surface. We soon discovered that B. had fired with fatal effect; and, elated at his success, he lifted his beaver into the boat. My shot, however, was a failure, as not even a piece of fur could be seen to console me with the reflection that I had at least not missed entirely. It was now useless to attempt to kill any more of this species of game, as our guide, who knew well the habits of this animal, informed us that they were easily frightened, and would keep concealed or move away to safe distances.

In the morning we were up bright and early, made a hasty toilet, ate a light breakfast, and got everything into the yacht preparatory to starting. During the early morning a stiff breeze came up from the east, and by the time we were ready to pull out there was quite a commotion on the bosom of Bite-de-gris. However, our Indians were determined to brave the elements, and struck boldly out for Point Isabelle, three miles distant. Off this point the sea was running quite high, but inasmuch as the wind was quartering aft and our craft was riding the waves as easily and gracefully as a duck, we got along very nicely on our course to the mouth of the river. The direction we took, which at times lay near a bold headland and again at some considerable distance from the shore as we were passing a bay, presented to the eye an ever-changing and beautiful panorama. The agitated sea on the one side, and the dark, interminable forests on the other, culminating at the background in a high ridge with Mounts Houghton and Gratiot as distinctive features, displayed nature in her weirdest, wildest grandeur. The shore, in places, was rocky, and discovered no coves in which the hardy mariner could find a haven of refuge.

Late in the afternoon we arrived at our destination. As we were sailing into the river we observed a flock of thirty or more ducks of the red-head species, directly ahead of us. Becoming alarmed, they arose and flew in a line for the lake, which brought them over us. For a few minutes we had sport such as the most enthusiastic duck hunter might envy, and when it ceased we counted, as our trophy, ten fat, large ducks.

Selecting a spot for our camp within easy access of water, we bade adieu to John and Frank, who were to return to their homes and were desirous of taking advantage of the

favorable breeze which then prevailed. Our tent was pitched in a grove of pines, the ground was covered with pine-needles, and evidence was abundant that this had been the camping-place for parties of Indians in previous seasons. It was not long before Joe had a splendid fire before which we became comfortably warm, and over which he soon had a kettle of boiling water. The supper which our cook prepared for us was fully appreciated, and the piping hot tea was unhesitatingly pronounced by B—— to be the best he had ever tasted. I can assure you that we enjoyed our first evening in the woods. We sat and chatted by the bright light of the blazing wood, and listened with wrapt attention to Joe's recital of his experiences and adventures as a trapper, hunter, packer and guide in the forests of Northern Michigan and in the service of the Hudson Bay Company of British America. We were so close to Lake Superior that the noise of the waves breaking upon the shore was plainly heard, but it did not disturb us in the least, as we lay rolled up in our blankets upon beds of balsam boughs. We arose in the early dawn, greatly refreshed by our slumber, and after a hearty breakfast, with hot coffee, prepared ourselves for a days' sport of hunting and fishing. The game we were principally after were partridges, and we concluded to follow the river up to "the meadows," two miles perhaps in distance, and try our luck in skirting the same. I had my dog, "Prince," and as it was his first trip this season, I was a little anxious to know whether or not he would discover a track, follow it and "tree" the bird as well as in years agone. I have known that dog to remain under a tree barking at a partridge among its branches for over an hour at a time, and being half spaniel and half hound he had the scent of the one and the deep, sonorous voice of the other, which would enable one to know him as much as a mile away. In this region one can do no wing shooting with partridges, the forests are so dense and the underbrush so thick that it is rarely one ever sees the game. The first we know of its presence is, if the bird is near, its whir as it flies, which, if it be some distance away, the barking of the dog indicates that he has it in a tree.

We finally reached "the meadows" without bagging any game on the way. "The meadows" covered a tract of about one hundred acres, through which ran a good-sized stream. Into this we cast a fly, and were compensated with a half-dozen trout, which weighed from a half pound to a pound each. While enjoying this sport we heard Prince at our left barking deep and loud. We soon found him at the roots of a balsam tree, and from his agitated manner we knew that he had flushed a covey. Looking up into the limbs I saw a beautiful spruce partridge standing erect motionless, and apparently with a sense of absolute security. Aiming at his head he fell with a heavy "thud," and was soon bagged. The dog then started to the right and was soon barking up another tree, and B. brought down his first bird. In this way we managed to get five plump partridges, while some, frightened at the sound of the guns, flew away.

The shooting of ruffed grouse during the rest of the day was but a repetition of the above. After tramping eight or ten miles we found ourselves at camp at four o'clock in the afternoon, somewhat fatigued and fully prepared to enjoy the dinner which Joe soon placed before us. We killed fifteen birds in all since morning. Many more we might have had if we desired them, but game which is so easily shot with the aid of a good dog should not be wantonly destroyed. At this season they were quite large, weighing on an average a pound each.

We stopped in the vicinity of this river about a week, at the expiration of which time John and Frank hove in sight and carried us back to Lac La Belle. The return trip was somewhat more pleasant than the previous one. The water was not so boisterous, while the breeze was from the right direction and carried us along at the rate of five miles an hour.

We arrived home in due time, having had an enjoyable trip from the beginning to the end.

While in the woods we saw quite a number of bear and deer tracks, and with trained hounds undoubtedly could have had some splendid sport hunting them. The right time to hunt bear, however, is later in the season, when there are six inches or more of snow on the ground, so that they can be easily followed.

A trip such as we took will hurt no one. If he be inclined to dyspepsia the exercise of threading the forest will give him a keen appetite and aid him in digesting that which he has eaten. It is wonderful how much one can eat in the woods, undoubtedly much more than one does at home. Everything conduces to make one hungry. BALSAM.

THAT DUCK HUNT IN A STEAM LAUNCH.

THE ENGINEER-AND-FIREMAN SPEAKS.

DEAR FOREST AND STREAM:

I am the "my brother" in that piece in a recent issue of yourself entitled, "Duck Hunting in a Steam Launch." That was one of the expeditions that I did not wish told to a great extent. Knowing the writer's fondness for print, I had previously expostulated with him in regard to his publishing an account of it.

I talked of it but little here, except to a few who were disposed to be charitable toward us in the way of joking But with all my persuasion I had a strong suspicion that my brother would leak the whole thing out after he packed his household goods and moved to Nebraska. So I kept a nervous watch out through your columns for his ink. Well, it came very soon, it seems to me, in a graphically and elaborately written narrative, published May 5.

Of course I do not deny anything said therein, for it was a hard, rough and almost perilous trip to us, with our dilapidated craft and inexperience in steam navigation. Still I desire to add a supplemental account by way of letting light shine more fully.

The engineer-and-fireman (that's the writer) is represented, when the launch was stranded on a hard lump and took a great lurch from the waves of a passing steamboat, as leaping into the skiff *like a frog*. Now, the only reason B. H. P., let it be stated, did not leap like a frog, or something else, was that the skiff was considerably beyond his reach, and nothing more inviting within reach than water about ice cold, and of unknown depth, just outside the launch. This was his visible predicament as the glare of the fire through the open furnace door gleamed upon him, and of which I pressed him to an open confession afterward.

Now, as to Delta being taken for Vicksburg. That was entirely a matter relating to the pilot, *i. e.*, B. H. P. himself. I am described as "fireman-and engineer" with no lantern. The night is represented as dark, and I will add that the river was foggy. When the furnace door was shut darkness reigned around the little engine, and nothing was visible across the broad waters of the Mississippi save too dull lights, seen very dimly, about the size of apples. This was just after the misfortune at the mouth of Old River, while nearing the right bank of the Mississippi, and the two lights were supposed to be electric lights on steamboats moored at low water landing at Vicksburg, and so commented upon by both pilot and engineer. Ordinarily, from the present position of the launch at night, the Delta and Vicksburg wharfboats were nearly in line, and the thousand lights which dotted the hills of the historic city left no doubts as to the location of that place, but at this time the fog obscured the view. The engineer was busy with his coal of fire which he had burned on the end of a broom-handle watching the steam gauge on one side of the upright tubular boiler and the glass water gauge on the other, the passage being quite contracted and made the more difficult to movements by diagonal iron rods which served to stay the boiler. The question of landing was not strictly a part of his business, and it was only on occasions of emergency that he proceeded to give his views. He deemed it an occasion of this kind when he found that the pilot had mistaken Delta for Vicksburg and was trying to make a landing; and it took no little explanation to give said pilot a clear insight into the nature of things, though the fog had partially lifted and objects were more distinct. This was the Delta banks, that tree there was a tall gum, very familiar in daylight, but barely discernible now, those lights over there were on Delta wharfboat, those pale lights down yonder were at the Vicksburg wharfboat, and those still fainter lights to the left were along the shore at the foot of the Vicksburg hills. "Oh, yes!" "Well!" ejaculated the pilot, as he began to grind his little wheel, and dong, dong went the gong, a signal to the engineer to let on more steam.

The remaining distance was easy sailing, as the term goes; at least it should have been. Deep water, down stream, nothing in the way. But that pilot! Why, he ran the vessel down to the Vicksburg bank, found the only bar there was on a bank two miles long, and ran upon it, after first having tried to hit an empty coal barge. We syphoned to no purpose; we backed and went ahead; we raised steam until it hissed through the safety valve, and tried all the motions over and over again for half an hour. The pilot had put the vessel this time where no efforts of her own could release her.

Now, Mr. FOREST AND STREAM, my individual feelings were to get out of this dilemma as quietly as possible. We had failed the previous day from the incapacity of our vessel to reach the ducking grounds by two miles; had spent the following night beneath a leaky roof in a cold rain; had missed the opportunity of enjoying the evening and early morning sport—the cream hours in duck shooting; had an oasis at high noon of an hour of magnificent sport, during which time about forty game birds were bagged, including ducks, snipe, plover, and a large, unknown bird we wish to learn the name of, and that night had lost all, including ammunition, decoys, and other valuables, when the skiff broke loose and disappeared in the impenetrable darkness. I was black almost beyond recognition with soot from cleaning the flues. I was also tired. I had fired on one side of the boiler, and run a rickety engine on the other, and had a tricky pump to watch. I had further stood faithfully at the lead line between times and sounded while *my* brother slid the Gentle Savage up on the bars. I shall never forget his genius to do that. True, as he says, I steadily yelped "Hold her out, don't you see that bar yonder?" but the careful pilot as steadily held her in toward the most dangerous places. His talent on the entire trip had run in that way, so I was not only physically but mentally tired as we stuck in the mud on this last bar. I was also reasonably chagrined at having had so many accidents. I wanted to slip off home in the dark without disturbing any one. Now, what do you think was done? Why, the pilot took an elevated position and yelled. Yes, yelled. He yelled for the fisherman for help. His tone had the strength of forty voices. He stirred up everybody within a quarter of a mile; told them what we wanted and what was the matter with us. I thought of suicide, then of my wife and children, and deferred it. I think five or six skiffs came to our relief. We smouldered the fire, put out anchor (a useless precaution) and slipped off home with our guns, about all we had saved.

That night I swore my brother to future secrecy; but the next morning he gave the whole thing away to a local editor, who published a burlesque account in the following issue, and, amongst other absurdities, stated that we had killed two bears, an alligator and a mule. I still held my peace, and would have said nothing even yet to FOREST AND STREAM.

You know B. H. P.'s address. Please send him a marked copy containing this, and tell him that though he has agreed to come back here next fall on the back of the first Southward bound blue-winged teal, I can't hunt ducks with him again. He talks too much. W. L. P.

Vicksburg, May 23, 1881.

Natural History.

WHAT IS A SPIKE BUCK?

THE following extract from Hardwicke's Science Gossip, written by E. A. Brunetti, shows very plainly that the author, who in turn quotes Darwin, considers the spike buck in this country to be a new species, or that a spike buck of the *Cervus virginianus* variety has been enabled to propagate his peculiarity, and thus in time to have created that which will be an entirely new species. We have always been taught that a spike buck was one with a two-year-old head of horns, and that the branches or prongs did not appear until he was older. We may be wrong, however, and would call upon those acquainted with the habits and growth of our American deer to aid in the correction.

If a spike buck could propagate his peculiarity of horns, why should not the two-year-old eagle of the bald variety, which it is known does not gain his white head and tail until three or four years after birth, and which begins nesting the season after his being hatched in his dusky plumage, be enabled to propagate offspring that will continue in dark feather? But the young of these two-year-old eagles in their turn change as their parents do when three or four years old, and put on the white head and tail peculiarity of their race.

Mr. Brunetti says: "Can new species originate by crossing?" In Mr. H. D. Barday's letter of October he says: "There are some 20,000 species of animals, and not one instance is known of different species being crossed without sterility ensuing in the animal thus begotten."

In reply to this I would state that a new species of deer has originated under our eyes in the United States, the following being extracted from Darwin's "Descent of Man," vol. II., pp. 255, 256: "A writer in an excellent American journal (the *American Naturalist*) says he has hunted for the last twenty-one years in the Adirondacks, where *Cervus virginianus* abounds. About fourteen years ago he first heard of a spike buck. These became from year to year more common. About five years ago he shot one, and subsequently another, and now they are frequently killed." The new species has a horny spike projecting forward from the forehead more slender than antlers and about half as long, the end being a sharp point. The same writer thus concludes: "Undoubtedly the first spike horn buck was an accidental freak of nature; but his spike horns gave him the advantage and enabled him to propagate his peculiarity. His descendants, having a like advantage, have propagated the peculiarity in a constantly increased ratio till they are slowly crowding the antlered deer from the region they inhabit. I think we have here an unquestionable case of a new species arising. Other species may have originated in the same manner.—E. A. BRUNETTI."

We would call upon the readers of the FOREST AND STREAM living in sections of the country where deer frequent to likewise inform us if spike bucks are more numerous than formerly.—HOMO.

We well remember when the theory that the spike buck is a distinct species was first published. It has never, we think, received any general acceptance in this country, and we have often heard it ridiculed by old hunters who believe that the spike buck is simply a young male whose horns have not yet forked. At all events, spike bucks are not confined to *Cervus virginianus*. We have killed spike buck elk (*C. canadensis*), and have seen specimens of the mule deer (*C. macrotis*) that would come under the same category.

The claim that the single spike is advantageous to the deer is based on the belief that it is a more efficient weapon in fighting than the curved and many pronged horn of the older buck. It must be remembered, however, that while the stab of a single spike would no doubt make a more serious wound than the curved and branched horn, it is much less efficient for defence than the latter. The branching antler protects the face of the fighting deer, but the spike buck has no such protection. His horns would push through those of his opponent, but would not be long enough to reach the opponent's face. Every one who has seen two deer fight knows that they come together head to head, push for a long time, and then separate for another charge. Considering the method of fighting, and that the horns of the spike buck are very much shorter than those of the larger horned deer, it would seem that the spike horns would be a positive disadvantage to their possessor. And this view is confirmed by the testimony of hunters who state that the spike buck will always flee from the larger buck.

TWO BIRD BOOKS.

WE have recently received parts of two works now publishing, relating to North American birds.

The first of these is entitled "Illustrations of Nests and Eggs of Birds of the United States," with text by Thos. G. Gentry. The author is well known as an enthusiastic ornithologist and has contributed two interesting volumes to the literature of his favorite science. If he gives us a satisfactory work on oology he will have conferred an undoubted boon on all who are interested in our birds. A work on this subject is sorely needed, for although several such have been undertaken, and some of them by those well qualified to carry them to a successful termination, none has as yet been completed.

Every one will acknowledge the obstacles which stand in the way of the author of such a work. It would be hard to select objects more difficult of satisfactory delineation than the nests and eggs of birds, and it is most unusual to find the artist and the ornithologist united in one and the same person, as they should be for such a work. It is almost impossible for the average artist to depict these objects; for while he may be very accurate in details, he will fail to catch the general effect, the *ensemble* without which his pictures are hopeless failures.

Five parts of Mr. Gentry's work have appeared, and while some of the illustrations are deserving of great praise, there are others of which so much cannot be said. The plate of the nest of the Towhee Bunting is not happy either in treatment or in execution, nor do the nest and eggs of the Cat Bird at all resemble those that we are familiar with. The plates illustrating the nest of the Ruby Throat, the Downy Woodpecker and the Red Eyed Vireo are, on the other hand, very good.

The text by which the plates are accompanied is interesting, and written in a pleasing style, and the work is, on the whole, one that we think will find favor with many egg collectors. J. A. Wagenseller, 23 North Sixth street, Philadelphia, is the publisher.

Although Mr. Rathbun's "Bright Feathers" has no special reason for being, yet it is a work that will find favor, no doubt, with a large class who are interested in birds without knowing very much about them.

Mr. Rathbun has chosen the Rosebreasted Grosbeak for the subject of the second part of his work, and he certainly could have selected no more beautiful bird. The coloring, however, in the plate before us, is not what it should be. It fails to show the peculiar delicacy of plumage so noticeable in this species, and the work on the plate seems a little coarse. The text is very readable.

A TREE-CLIMBING WOODCHUCK.—*Old Chatham, N. Y., May* 23.—As I was out fishing to-day, we heard our dog barking around the foot of an elm tree, and thinking he had a cat up it, we paid no attention to it until we got up to the tree, when what was our surprise in seeing a large woodchuck up in the branches, as nimble as a cat. He was up at least 25 feet from the ground, and, as no one except the dog desired to kill it, we let it go. I have seen many woodchucks, but never saw one up a tree before. Perhaps your readers have, but I doubt it. RIO.

LEAVES FROM THE NOTE BOOK OF A SCHOOL GIRL.

May 13. The fly-catchers seem to be made of springs. Their motions are the most angular of any of the feathered tribe. They always choose some conspicuous place on which to alight, as the top of a tree, a fence post or a dead limb. The note of the least fly-catcher or "chebec" is as when one snaps a string—a quick jerk of the head and the "chebec" comes like the click of the spring.

The chimney-swallows have homes rather difficult to reach, though it may not seem so. When they wish to descend the chimney, they circle round and round till they think they are directly over the opening, then, lifting their wings till these are nearly vertical, flutter down. They sometimes miss the mark, and dart off to try again.

The summer yellow-bird catches insects with more grace than the fly-catchers. Every motion of the yellow-bird is a curve. It takes its time, yet it is always sure of the mark.

May 14 Saw a robin fly some distance to catch an insect in the air.

May 16. The wren is a perfect model among birds of the passionate lover. He is in perfect ecstasis over his mate. His song is short because he is so eager that he knows not what to say, and the notes nearly trip one another up, they come so fast. While he is singing his wings quiver with excitement.

May 17. In flight the bobolinks hold their wings down, not horizontal or up as with most other birds. They sing most commonly during flight, and bring their song to a close just as they reach the ground. If they light on a post or a tree the song is continued

The crows do not seem to be very much afraid of the poles and strings put around a corn-field. Two were sitting on a tree near a field, deliberating. "Caw, caw, caw, caw," says one. "Caw, caw, caw," replies the other. Then they slowly flap over and settle down in the midst of the poles and strings. Warning!—Farmers, always put string around your corn-fields. It is a first-rate thing for fly-catchers to alight on.

May 19. Saw a chestnut-sided warbler in our apple-tree. It caught insects like a fly-catcher.

The nut-hatch seems a very humorous little body. He runs around the trunk, his head oftener down than up, and squints under the bark with a most quizzical expression. There almost seems to be a twinkle in his eye as he pulls out the unlucky bug.

May 22. The woodpecker never runs down a tree-trunk. When he wishes to be lower down he flies or drops down. Authority—Prof. Scott, of Westneld. The nut-hatch goes oftener down than up.

Very many birds accompany their short notes, especially those of excitement by some motion of the body. The robin jerks out his chirp of excitement with his tail. It seems as if the chattering of the swallows was made by the wings, as the swift fluttering of the wings always comes with the twittering.

May 13. The cuckoo is a shy bird, keeping itself hidden in the foliage, turning its head from side to side on the look-out for danger.

Above the trees a crow is seen pursuing its heavy flight, with laborious flapping wings. On a sudden the enemy, in the form of a king-bird, or perhaps two of them, is upon him They dart down upon him with all their force, fly up in a short circuit, poise themselves and come down again, their swift movements contrasting with the crow's steady flapping Perhaps the crow is frightened, but his motions do not show it, though he does seem to be getting out of the way as fast as is consistent with the dignity of his character. When his pursuers have chased the enemy from their domains, they leave him to the tender mercies of the next king-birds who may happen to spy him, and return for more crows, hawks or insects, just which comes handiest.

Mr. B. was troubled by a colony of swallows which took possession of his large, old-fashioned chimney, one spring, sending the smoke down and causing great inconvenience. One day, while the birds were all away, he went up and put a wire network across the opening of the chimney. About sunset the birds returned. Imagine their feelings when they discover their doors barred against them! They rush wildly back and forth, they dash against the branches of the elmtree in the yard, they dart here and there in their frenzy till long after dark. At last they are obliged, in despair, to seek other homes. Poor swallows!

Hatfield, Mass., MARGARET MILLER.

RATTLESNAKES CLIMBING TREES—New Orleans, May 25.—*Editor Forest and Stream:* In answer to the question, Do rattlesnakes ever climb trees, I will relate what I once saw.

In the spring of 1869, about the middle of April, I was behind the plantation hunting wildcats. The dogs had started one, and were leading him a lively race, and I was sitting on my horse listening to the music of the chase, when my attention was drawn to some object up a large water oak that was standing in an opening by itself, and leaning at an angle of about 15 degrees. There was water all around the tree, as there had been in the morning a heavy rain, but the land being high the water did not remain long after, the rain stopped, but went to the swamp, leaving the land dry. The object that I saw was about thirty feet from the ground, and lying on a limb about ten feet from the trunk of the tree that made out at about right angles, and forked where the object lay.

I rode up to the tree but could not make out what it was, and having my rifle with me I sent a ball up, when down came one of those large d amond rattlesnakes (*Crotalus adamanteus*) about six feet long.

On a former occasion I shot one out of the top of a tree that had fallen down, having some large limbs lying about ten feet from the ground.

Those are the only two that I ever saw on trees, but I have seen thousands on rocks that looked as hard to climb as trees.—T. P. LOVEJOY.

A WELL-MARKED TURTLE.—A box turtle was found in a field at Baiting Hollow, Long Island, a few days since with the following marked on its bottom shell:—"B. F. Y., 1836; B. F. Y., 1841; B. F. Y., 1851." B. F. Youngs, of Riverhead, marked the turtle first forty-five years ago, and also the second and third times. After marking it for the fourth time "B. F. Y., 1881," he let it go again.

The above item from the *Sun* reminds us of a snapper once found by a friend of ours, which was probably the oldest turtle ever found. It was marked, "In the year of our Lord 1."

BIRDS THAT EAT FISH.

MR R. BOWLDER SHARPE, the eminent British ornithologist, recently delivered, under the auspices of the National Fisheries Exhibition, a most interesting lecture on fish-eating birds. A novel and attractive feature of the discourse was the exhibition, by means of an oxy-hydrogen, of a number of excellent paintings of fish-eating birds. Mr. Sharpe's lecture is reported in the *Live Stock Journal*, and we give below an epitome of it.

Mr. Sharpe said, fish-eating birds were chiefly swimming birds—cormorants, ducks, gulls, etc.; but there were many birds of prey that were distinctly fish-eating birds. The white-tailed eagle was very fond of fish, though it did not catch them for itself. It was renowned for the way in which it followed the osprey or seafishing eagle, and robbed it of its prey. While the golden eagle was feathered to its toes, the tarsus of the white-tailed eagle was bare. The majority of birds of prey had a tibia or thigh-bone only just a little longer than the tarsus, but in the osprey the tibia was twice as long as the tarsus. While some birds had three toes in front and one behind, others two in front and two behind, the osprey had an outer or reversible toe, which he had the power of turning backwards or forwards, so that in catching hold of a fish his toes were at right angles to each other, which gave him a circular grasp, a great help to him in seizing such slippery prey as fish. But the osprey was now pretty nearly extinct in England. Owls were fish-eating birds. Waterton once saw a barn owl dive into a pond for a fish. In Africa there were some regular fish-eating owls which had the bare tarsus, so that they could wet their feet without fear of catching cold from damp feathers. Coming to the perching birds, there was a certain group which was separated from them by the osteological structure of the sternum or breast bone; and amongst these was the kingfisher. This bird, which would soon make a good meal of the contents of an open trout tray, did not do much damage in the river, where he caught small minnows, etc. People would be sorry to miss the kingfisher from our rivers; and, luckily, his habits were so shy that he was able to take care of himself. Ladies had much to answer for in the destruction of the kingfisher. When there was a demand for his plumage for ladies' hats, there was an immense slaughter of these birds on the Thames. Foreign kingfishers, though of the same shape as ours, lived in forests, and not on the banks of rivers, and had only three toes instead of four. The form of the kingfisher was such as to adapt him exactly to catch fish. He had no long tail to retard his motion when he plunged into the water; but he had a long bill with which to cleave the water, while his short tail served as a rudder. Then the robin had been seen to eat fish—a bird one would not have expected to take such food. Among the waders, or long-legged birds, the greatest culprit as a fish-eater was the heron. Though an arrant fish-eater, it was doubtful whether the heron did the damage attributed to him, as he lived principally on eels. He was not, however, averse to frogs and small animals; and the lecturer told the story of a heron in captivity which seized a rat that had been stealing his fish, held him under water in his bill, and then swallowed him at one gulp. He also mentioned an instance of an eel strangling a heron, an illustration of which is shown in the exhibition. The bitterns were rare visitors. Like the heron it ate small fish and frogs; but unlike the heron it was solitary, not sociable in its habits. The spoonbill, which ate small fish and aquatic insects, used to be found in Norfolk; and some of the large family of storks, much protected in Germany, were formerly residents in England Cranes did not do much damage to fish. The knot was an interesting swimming bird, from the mystery which surrounded its breeding haunts; but it was a credit to English naturalists that they had reduced the number of unknown haunts of European birds during the last few years from six to one. Another bird which was maligned because it was said to devour small fish and ova was the moorhen; but he had never found any evidence of its being a fish-eater. The same might be said of its cousin, the coot. These birds should be protected for their extremely tame disposition. Moorhens could be tamed so as to go about the house like common fowls. Coming to the swimming birds, Mr Sharpe said that there was no doubt that ducks at the mouth of rivers ate a good number of fish; but the golden eyed duck was under the accusation of being an absolute fish-eater. It would be difficult to defend the goosander from the like accusation, as he probably lived on scarcely anything else but fish.

ABOUT LOONS—Pocasset, MASS., May 12.—In your issue of April 28, "B. D. R.," of West Milford, W. Pa., asks for some information about loons. His bird was not very large The last one that I shot is before me now; it measures thirty-six and one-half inches in length and four feet five inches in extent. Weighs nine pounds, and is light for the dimensions. Here this is not called a large one. I am told that one was killed at Calaumet Beach which weighed twenty pounds. "Beach" weight, I guess, with the shooter's arms for balances. I once knew one to weigh by scales sixteen pounds; that was a white one—a female; they are said to grow to the largest size. I have seen them in Chesapeake Bay, where they are often caught in the fish pounds.

Both species—*C lymbus glacialis*—and *U. septentrionalis* are found at Buzzards' Bay in abundance. The last is locally known as "Pegging awl," "Peppershin" or "Tuckmunk." It is much smaller than the former species, and weighs about four pounds. It is spotted like its larger brother on the back. The male has a slate or drab-colored head, with a red spot on the throat, whence its name—red-throated diver. The female is like the larger white loon in colors.

Loons have been known to breed in Plymouth, Mass. A few years ago Mr. Warren Douglass found a nest on the shore of "Oliver's Neck." He was wading along the shore fishing for pickerel, and saw the loon on her nest. She fluttered off into the pond at his approach; there were two white eggs in the nest. Can any one tell if they lay more than two? "Oliver's Neck" is a point in White Island pond, and is owned by the White Island Club. Some of the members found the nest soon after, and took the eggs, my informant said. I am also told that they have bred on the island on Half-way Pond. I have seen loons there in the summer, but could not find any nest. In a former article I spoke of the loon as a tough bird—how tough you may judge by the following, which I had *verbatim* from the shooter. He had been on Hog Island Point and shot at a loon, which, he said, was thirty yards high; the bird fell at an angle of forty-five degrees, struck on a big flat rock and rebounded off into the water twenty-five feet, looked about him, then dove and went his way. One would think that a ninety-foot fall—though broken by a rock—might disjoint the framework of any bird. "B. D. R.'s" loon was about the average size; eight such loons slung on a pole, and the ends of the pole on the shoulders of a brother shooter and the writer, made a heavy load to tote up from the shore. A live loon can pick hard, and a dead one is hard to pick, nevertheless some of the softest beds in these parts have loon's feathers in them. MERGUS.

The information given by our correspondent relative to the breeding of the loon in Massachusetts is interesting, but are the eggs of either species of loon mentioned white? We think not.

THE IBEX IN THE ALPS.—The ibex, it would appear, promises to be again naturalized on the Alps. A herd which was turned out on the Grisons are reported to have survived the Winter without damage and to be making themselves at home in the vicinity of the glaciers. This cannot fail to be a source of gratification to the thousands who make Switzerland their Autumn play-ground. For some time past the Alps were each year getting barer and barer of life. The chamois had almost disappeared from some of the more accessible parts, and even the marmot could scarcely have long survived the edelweiss, which the Government of the different Cantons have also put under their protection. The ibex, or, as it is more familiarly called, the bouquetin, is a species of goat which shares with the chamois the upper reaches of the mountains. But it climbs even higher than that animal, and can rarely be seen far below the limits of perpetual snow. In German Switzerland, where it is known as the steinbock, the ibex was at one time comparatively common. But the persecution of tourists and the multiplication of cheap rifles have all but exterminated it on the higher alps, and of late years it could rarely be seen except on those of Valois and Piedmont, where, thanks to the enlightened efforts of the late King Victor Emmanuel, it was carefully protected.—*London Telegraph.*

A HINT FOR THE SMITHSONIAN.—We are permitted to publish the following from a letter of a well-known Canadian ornithologist, Mr. John Neilson: "I read with much attention all such notes as appear in the FOREST AND STREAM respecting the migrations of birds. Coming as they do from all quarters of the country, they afford the student a means to study the migratory habits of our fauna, so mysteriously erratic in many species. Stations of observation should be established at all points where the service of competent persons could be obtained, such persons to send in monthly and semi-annual reports to a centre, some one of your large institutes. The material thus collected and properly collated would present matter possessing very high ornithological value. The migratory course of each species could be accurately determined, and other information of paramount importance secured tending to perfect our knowledge in this most interesting science."

A FLORIDA GALLINULE—Hornellsville, N. Y., May 22.—I shot a bird here yesterday and want to know what it is, that is if you can tell from my poor description. General appearance like an over-grown rail; length 13 inches from end of bill to end of tail; bill about 1 inch long, the end of bill cream color, the base bright red; wings and back black; neck and breast blue-black; under tail coverts white; some white or gray on belly; legs about 5 inches long, three long toes and a short one; color of legs pea-green, and some bright red on thigh just below the feathers.

Nothing like it ever seen here before by the *oldest inhabitant.* I should like to know what it is, and in what position to mount it.—J. OTIS FELLOWS.

Your bird is a Florida gallinule (*Gallinula galenta*), a near ally of the rails and coots. It should be mounted in the position of a rail, as in habits it closely resembles those birds.

INSECTIVOROUS PLANTS.—The generally accepted belief that the insectivorous plants are nourished by the animals which they capture, is not believed by the veteran florist, Mr. Peter Henderson, of Jersey City. That gentleman has been making some experiments on this point, and concludes that these plants do not derive any more nourishment from their victims than do the pines and hemlocks, which destroy such great numbers of insects by their resinous exudations.

In the summer of 1878, Mr. Henderson and Mr. W. J. Tait made experiments, using 100 plants in each test, and the conclusions which they reached were that those plants which had received no "animal food" were quite as vigorous as those which had been fully supplied with insects. The plants used in the experiments were the well-known "Venus fly-trap." Further experiments on this point are required to settle this point definitely, but those which have been made are certainly extremely interesting.

THE ENGLISH SPARROW NUISANCE—Dedham, Mass., May 14.—I had, a week ago, a fine row of peas about a hundred feet in length, but now they are ruined by the English sparrows having cut off the tops of the largest portion, and they are still at it. I have three lots more yet to come up, which I wish to save if possible. Can you suggest some means of poisoning them? Something that, if they leave any, will not be dangerous for my dogs or hens, which will have the run of the ground after my crops are off in the autumn?—F. A. T.

Shoot the birds. That has been found effective in other instances. It will take some time and ammunition, but it is the only thing to be done.

NOTE ON THE SCARLET TANAGER—Westfield, Mass., May 21.—During the cold rain of this week, which lasted about four days, a large number of scarlet tanagers were noticed hopping about the dooryards and sidewalks unable to fly. Between men, boys and cats many were caught. The bird is seldom seen in this vicinity, and a great many thought it a new species. Other birds are as lively as ever. Why isn't the tanager?—S.

AN OLD EAGLE—Wilkesbarre, Pa., May 22.—In the middle of April an eagle was shot at Nakskoo, Denmark. It measured 78 inches from tip to tip of wings. Round its neck it carried a chain with a small sealed vial attached. In the vial was found a paper with the following inscription:—"This eagle was caught and again liberated anno 1792 by N. and C. Anderson, Boto, on the island of Falster, Denmark."—P. P.

SPRING NOTES.—Framingham, Mass., May 14, 1881.—Though the season may fairly be called a little "backward" here, I have noted the arrival of two of our warblers rather earlier than usual, viz., the black poll (*D. striata*) and the black and yellow (*D. maculosa*) on May 11.—F. C. BROWNE.

Game Bag and Gun.

THE NEBRASKA SPORTSMEN'S CONVENTION.

LINCOLN, Nebraska, May 17.

THE State convention of sportsmen met at the Board of Trade Rooms, at 8 P. M. President J. C. McBride called the meeting to order. Upon the calling of the roll of membership the following clubs were represented by full delegations, viz:

Omaha Sportsman's Club—B. E. B. Kennedy, John N. Petty, W. H. S. Hughes, J. F. McCartney and S. B. Hathaway.

Working Men's Club, Omaha—E. Lecder, F. R. Smith, Geo. Jones, John McDonald, Wm. Robinson.

Lincoln Sportsmen's Club—J. H. Honeywell, S. C. Elliott, S. S. Brock, C. E. Strassberger, Dr. F. S. Rouse.

Osceola Sportsmen's Club—J. M. Woods, N. W. Logan, L. A. Beltzer, W. F. Miller, J. H. Abbott.

Silsby Gun Club, Syracuse—Joseph Rogers, W. T. Peet, A. B. Barney, Ira. P. Conger, F. E. Brown.

Plattsmouth Sportsmen's Club—Gen. R. R. Livingston, Sam. M. Chapman, Geo. S. Smith, F. E. White, W. T. Matthews.

Norfolk Sportsmen's Club—J. S. McClary, C. P. Matthewson, Wm. Sattler, C. Selah, S. W. Hayes.

Nemaha County Sportsmen's Club—W. T. Den, W. M. Kauffman, W. W. Browning, Church Howe, A. R. Davis.

On motion a committee of three on credentials was appointed by the president. The committee retired and soon returned and reported the foregoing list of delegates entitled to seats. Report adopted.

The address of the retiring president was read, as follows:

Gentlemen of the Convention:

Custom seems to call upon the retiring president of this association for a few last words, something in the form of a message, reviewing the past and suggesting topics for consideration now and in the future. Since your last meeting quite a revival in shooting and fishing circles has taken place, as is witnessed by the number of new clubs organized in the State, most of which contemplate an early membership in this association. Whether they ultimately become members or not we have the satisfaction of knowing that in spirit they are valuable allies, and that the good work begun six years ago will be more carefully guarded in the future.

The stocking of the streams with valuable fish by the State Fishery Commissioners, all of whom are members of this association, has had a cheering effect upon Nebraska sportsmen, and we are still more encouraged by the splendid appropriation of $7,400 to be expended by them in their good work.

By the act approved Feb. 29, 1879, the catching of fish in any of the waters by means of nets, seines or baskets of any kind is prohibited, and a severe penalty is inflicted upon the guilty party; yet such is the greed of man, or more generally of boys, that many cases of violations have no doubt occurred and are occurring in the interior of the State, and a sharp lookout for violaters of this law is recommended.

In accordance with your instructions given at your last meeting, 2,000 copies of the game laws of the State, in poster form, were printed and distributed to the local clubs, a large number posted at railroad stations, and a copy mailed to each postmaster of the State with a request to post it up in the office. Railroad officials afforded facilities in this good work, and directed agents to post up the laws in a conspicuous place, all of which, your president believes, was of great benefit to the game and fish interests of the State.

Through the sentimentality of a few visionary persons the Legislature of 1875 enacted a most ridiculous law which protected hawks and owls from destruction, and permitted them to prey not alone upon the song-sparrow, the wren and hundreds of other native birds, but to appease their never-ceasing hunger upon the quail and the prairie chicken. There is no sportsman in the State who annually kills as many birds as the average hawk or owl destroys. He is a constant and unrelenting "pot-hunter." From break of day until nightfall he skims the prairies in search of the lesser of his tribe; and he is no respector of age, for he devours not only the old but the young also, and is particularly fond of the fledgelings and the eggs. After darkness sets in, and the hawk is compelled to retire, the "moping owl," his alert and nocturnal recruit, takes up the work of destruction, and thus, day and night, these ravenous bird killers plied their vocations, and were protected by law because of their reputed appetites for grasshoppers. Your president is not a believer in the theory advanced by the over zealous advocates of that law. The hawk and owl do not subsist upon grasshoppers, except in the absence of the more toothsome quail or sparrow, and if they did the large number of small birds annually destroyed by them would pick up millions of locusts and other noxious insects, where owls and hawks would destroy but few. It is in consideration of the destruction annually wrought by hawks and owls that I recommend their destruction on every occasion. I would go even further, and advise local clubs to offer a bounty for each head of hawk or owl delivered to them. This would incite the market hunter and the "pot hunter" to join in the work of extinguishing these most destructive enemies of our game birds.

There are many who think that the open season for quail shooting is too circumscribed by the present law, that December should be added to October and November. But for the fact that the past winter was unusually severe upon quails, and that thousands of them perished, an attempt would have been made to have the law amended in that respect at the last session of the Legislature. Under the circumstances, however, it was hoped that through the shortness of the open season and strict obedience to the law the birds would be spared and would multiply and replenish their decimated ranks and furnish better sport in the future.

If the loss has fallen less heavily upon quails than has been reported and they shall continue to increase as in the past it may be well to ask the Legislature of 1883 to extend the open season so as to include the month of December.

The reports of the secretary and treasurer show that by economical management the annual dues from members of the association are sufficient to meet all ordinary expenditures, and but for the expense of publishing the game laws, and the still greater expense of the bench show, the association would have a balance on hand sufficient to commence another year's work. However, these expenses have not been in vain, and their lessons do not go unheeded. The bench shows have not only taught many of us what good dogs are, but we have learned to appreciate a good dog and to own one. The field trial, while, owing to the slight attendance of our own members, was not a success, nevertheless, taught us several things, the most satisfactory and important of which was that we have a great many dogs in Nebraska that for practical purposes are as good as any sportsman can wish, and even better than some foreign dogs exhibited on that occasion. I am satisfied that many of our sportsmen who have good dogs, failed to attend, for the reason that they feared to run their dogs against the "crack" dogs of the country, anticipating a defeat that would have been ignominious; but now that they have witnessed the actions of the best in the field will be willing to pit their own against any that may come. For that purpose and to stimulate these trials, I recommend that a field trial be had the coming season on prairie chickens in August, and not to be deferred until the birds get old, wild and scarce. Such a trial, if open to the world and properly advertised, would bring a large number of fine dogs and an interesting time be had.

Finally, allow me to extend my thanks to the officers and members of the association for their kindness and willingness to aid me in the discharge of the duties of office, and to return my thanks for the honor you conferred upon me in this connection. J. C. MCBRIDE, President.

After reading of the President's message, on motion the President appointed a committee of five to agree upon a place for holding the next annual meeting of the association and report to-morrow evening.

J. F. McCartney, of Omaha, declined to serve as one of the judges at the bench show, whereupon Mr. J. S. McClary, of Norfolk, was appointed in Mr. McCartney's place. Upon request of Mr. F. E. Brown he was also relieved from a similar duty and Mr. Dew, of Brownville, Neb., was appointed in his stead. On motion, the meeting adjourned until to-morrow evening at 8 o'clock.

Lincoln, May 18, 1881.—Meeting called to order by Vice-President Matthewson, in the absence of the President. The following business was transacted:

The reports of the officers and committees being in order, they were severally received and placed on file. The treasurer's report showed a small balance of money on hand. The secretary's report contained sundry bills, etc., unpaid. The same were audited, and ordered to be paid.

The committee appointed at the last annual meeting to present resolutions on the death of Maj. T. T. Thornburgh, reported appropriate preamble and resolutions expressive of the sterling character of the deceased; the good fellowship he maintained with this association, and the loss sustained by his sad and unexpected death. The report and resolutions were adopted and were ordered to be spread at large upon the records of the association.

The committee appointed to fix the place for holding the next annual meeting reported in favor of Omaha, and their report was adopted.

Election of Officers.—The election of officers for the ensuing year being in order, the following gentlemen were duly elected:—

President, B. E. B. Kennedy, of Omaha; Treasurer, R. W. Furnace, of Brownville; Secretary, J. F. McCartney, of Omaha; Vice-Presidents, J. S. McClary, of Norfolk; J. W. Petty, of Omaha; Josiah Rogers; Edward Luder, of Omaha; J. H. Harley, of Lincoln; L. A. Biltzer, of Oscaolu; W. H. Hackney, of Brownville; Gen. R. R. Livingston, of Plattsmouth; C. E. Strassberger, Lincoln; W. L. May, of Fremont; E. S. Hawley, of Nebraska City. On motion, Sam M. Chapman, of Plattsmouth, was elected a member of the executive committee. On motion, it was unanimously voted to hold a field trial of dogs on prairie chicken the last week in August or first week in September next at or near Norfolk. The executive committee was given the matter in charge, and instructed to advertise the same in Eastern papers.

Mr. Chapman submitted the report of the judges of the bench show containing list of awards. Adopted. Resolutions of thanks to the outgoing officers were severally adopted.

Gen. Livingston, Mr. Kennedy and Mr. Harley made report of last year's field trials with severe though merited criticism upon the lack of attention given to the matter by Nebraska sportsmen, attributing the same to cowardice, etc.

On motion, the president appointed John W. Petty, W. H. S. Hughes and C. P. Matthewson a committee to report resolutions at next meeting respecting the death of G. H. Collins, of Omaha.

On motion, the convention adjourned *sine die*.

THE LONDON SOCIETY.

AT the annual meeting of the London (Ontario) Fish, Game and Insectivorous Birds Protective Society, last week, Dr. Niven in the chair, the secretary, D. Skirving, presented his report, which was as follows:

"It is most gratifying to find that now most of the sportsmen in and around London take a deep interest in the protection of our fish, game and insectivorous birds, and that each year new members are added to our list of subscribers. The good effects of the society are being felt all over the district, as the number of head of game obtained in the London district by local sportsmen will attest. I think I am not exaggerating when I state that more game birds were found last shooting season than during any three seasons previous. From information received from various sources, which I consider most trustworthy, I can state that quail have wintered well in this locality, notwithstanding the severe frost of January and February, and I think next fall we will have more birds than ever if they are only well looked after the coming summer. I regret that the Legislature at its last session, at the solicitation of the fruit-growers, amended the Insectivorous Birds Act, and placed robins on the list of birds that may be shot. Still, they did it in a very gentle way. The Act reads: 'Robins may be destroyed during the fruit season by the owners of fruit-bearing trees or plants.' I wish to impress upon the society that any one caught shooting robins at any other time is liable to be fined as formerly. If the Legislature had seen fit to place meadow larks on the game list, making an open season from the 1st of September to the 1st of January, we would think they deserved praise. We, as a society, have asked this, but it has not been granted. Possibly, when the scientists, who are now experimenting on them, give a description of the contents of their stomachs, they may then be placed on the list of birds suitable for food. During the past year only two infringements of the law have been reported. The offenders in both cases, I am happy to say, were fined five dollars each and costs. I am satisfied that if the farmers would only report all violations of the law coming under their notice it would have a very marked effect, and not only would the pot-hunter become extinct, but the game birds would rapidly increase in numbers. We have issued during the year about 500 large posters with the close season for fish and game, and the fines and penalties attached for the violation of them. I would suggest, when getting out the new bills for this year, we, in addition, offer a reward for the head of each fox, skunk, weasel and hawk killed, or a prize to any one producing the greatest number of heads; as, undoubtedly, they destroy as much, if not more, game than all the shooters put together. The fishing interests are being well and closely watched by the energetic fishery officer, Mr. Peter McCann. Within the past few weeks he has had some eight or ten persons up for catching bass out of season, and the majority of them have been fined $2 each and costs. Mr. McCann reports the fishways on the Thames to be in good order, with the exception of Blackfriars' dam, which will be remedied this spring. Last year we had some correspondence with the Fishery Department at Ottawa relative to the close season for bass, suggesting that it be changed to, say, from 15th May to the end of June, as we consider that to be the time during which the fish spawn, but we were unable to get Mr. Witcher to change the time, which at present is from 15th April to 15th May. Some of the Chatham fishermen, last session, also tried to get the law changed, but were likewise unsuccessful. This is to be regretted, as during the latter part of May and beginning of June bass are quite unfit for food. The fish in the river this year are very plentiful, and already great quantities have been caught—below Cashmere—one family alone netting $300. Last year several enterprising gentlemen leased a well-known trout stream in the neighborhood, and replenished it with trout at considerable expense, with very gratifying results, and this year other two streams are being leased for a similar purpose. If the shooters would show as much energy, and get the farmers as a body to assist them in protecting game, in a few years we would have the best fishing and shooting grounds in the Dominion."

For the destruction of vermin, hawks, owls, skunks, foxes, etc., it was decided to offer $50 to the person who killed three hundred and over; second prize, $25, for two hundred and fifty; third prize, $15, for two hundred. The persons competing for the above prizes must give satisfactory proof to E. Raymond & Son, furriers, of having killed the birds or animals. Mr. Meredith brought up the question of prohibiting the destruction of trout under a certain size. He thought if anglers were allowed indiscriminately to take out trout of all weights and sizes the streams in Western Ontario would soon be depleted.

The election of officers was proceeded with, resulting as follows: President, Dr. Niven; Vice-Presidents, Dr. Woodruff and W. C. L. Gill; Sec.-Treas., D. Skirving; Executive Committee—T. H. Smallman, Harry Bruce, S. C. Elliott, W. T. Strong, J. Puddicombe, A. McCrae and L. McDonald.

GAME IN INDIANA.

INDIANAPOLIS, May 9, 1881.

SNIPE, with us, have come and gone again. We had very little fit weather for snipe-shooting this spring, the atmosphere jumping from cold, up to and during the middle of April, to an uncomfortable warmth from the first week of May to the present time. Snipe and plover were rather plentiful for a short time, though. A company of four hunters are reported to have killed 116 plover in a single day on the flats west of the city, across White River. Your correspondent had the pleasure of bagging thirteen snipe and eight plover in a morning's hunt east of town. In company with a couple of friends, I am going down to Martinsville, Ind., about the 19th or 20th of this month, and spend a couple of days among the squirrels, which are reported as quite plentiful this spring. Should we have any luck it will be a pleasure to give the readers of FOREST AND STREAM an account of the ups and downs of a squirrel hunt in Hoosierdom.

During the recent session of our State Legislature a bill was introduced into the House prohibiting quail-shooting for two years. It passed the House, but was not brought up in the Senate. We are, therefore, to be governed by the old law, which allows quail-shooting during the months of November and December of each year. There are no partridges in this section, at least not enough to pay for hunting them, although they are found in considerable numbers in the northern part of the State, as are also prairie chickens.

The woodcock season opens here the first of July. The law on this point is very good, but by that time the weather is generally so intensely hot as to melt the ardor of the most enthusiastic sportsman, and but few care to indulge. For myself, when I have a spare day in midsummer, I prefer to seek the shady banks of White River, and there, with pipe and rod, while the hours away. SILAS.

WISCONSIN NOTES.

MENOMONIE, WIS., May 23.

NOTWITHSTANDING the dreariness of last winter, considerable sport was enjoyed by hunters and farmers in this vicinity; a large number of deer were killed during the season, with an occasional bear to make it interesting. All winter a destructive war was waged on the wild animals hereabout. From November to March Dunn county paid $471 bounty on scalps. There were killed thirty wolves, one hundred and twelve foxes and thirty-seven wild cats. Most of them were killed with poison.

A curious circumstance connected with the above-mentioned business happened. One Borland was putting out poisoned baits when he discovered three wolves in the bushes; he threw his baits and retreated a few rods, when one of the wolves advanced, ate, died; and in fifteen minutes was being dragged home by Borland.

The prospect of a plentiful supply of prairie chicken this season is flattering; but few were killed last season owing, in part, to their advanced age and consequent wildness at the opening of the season. Reports from farmers are to the effect that chickens are numerous, and appear to be attending strictly to business; nests with a score of eggs in each have been found.

Our Legislature last winter made few changes in the game laws. It is now unlawful to kill woodcock between the first day of January and the tenth day of July; quail, partridge, prairie chicken or grouse of any kind, or any wood-duck, mallard or teal duck between the first day of January and the fifteenth day of August; any deer between the first day of January and the fifteenth day of September; or any otter, mink, muskrat or fisher between the first day of May and the first day of November. MC.

SOME HINTS ABOUT GUNS.

FROM Mr. W. W. Greener's very comprehensive book, "The Gun and Its Development," of which we have received advanced sheets through the courtesy of Mr. Henry C. Squires, of this city, we condense the following useful hints. We have already spoken of the great practical value of Mr. Greener's work. It is a book which should be in every sportsman's library.

CONVERTING MUZZLE-LOADERS INTO BREECH-LOADERS.

Some guns will admit of this conversion; others will not. The barrels best adapted for this conversion should be very strong at the breech, so as to allow for boring the chambers to admit the cartridge-case, and yet be strong enough to resist the large proof charge that they are subjected to in England. There are but few muzzle-loaders strong enough for converting. If the work is properly done, the altered gun will shoot as well, and in some cases better than before.

CONVERTING PIN TO CENTRAL FIRE.

This must be done by a thoroughly practical gunmaker, for if the holes to receive the extractor legs are bored out of position, the breech-ends are materially weakened and the guns made exceedingly dangerous.

CLEANING GUNS.

Unless a gun can be properly cleaned after a day's shooting, it had better be let until the proper time can be given to it. The best plan is to wipe out with petroleum or turpentine, and then wipe dry, afterward oiling the barrels. Before putting away at the end of the season, or after shooting near salt water, the barrels should be well-cleaned inside and out with boiling water, wiped dry and oiled. Before being put away for a length of time the barrels should be stopped at each end by greased wads, muzzle stoppers, or the baize-covered sticks sold for the purpose. For oil, any animal oil is good if pure, such as refined neatsfoot oil. The breech-ends of the barrels should never be touched with emery, or other cutting or brightening composition. The lugs of the barrels and the working parts of the breech action should be oiled occasionally. For wiping out the barrels, a cleaning-rod, plenty of rag or tow, and a bristle brush are all that is necessary. If rust appears a wire brush may be used, care being taken not to scratch the barrel.

The best lubricant for gun-locks and gun-actions, Mr. Greener has found to be a mixture, one-half best neatsfoot oil, and one-half pure paraffin, well mixed; the oil prevents the paraffin from evaporating, while the paraffin keeps the oil in a liquid state.

THE COST OF GOOD GUNS.

A first-class gun, says Mr. Greener, is expensive because the best material and the best workmanship are employed. In every stage of the manufacture, from the first selection of the iron and steel, through all the successive processes of welding, boring, grinding and filing the barrels, and the preparation and fitting of the different parts, there may be a vast difference in the quality of the work. In the simple matter of filing the gun-lock, for instance, there are as many as ten different classes of workmen who do this one particular work at prices varying according to their abilities. The engraving is a branch of the trade which is thought to add greatly to the cost of the gun, but it is inconsiderable in comparison with other branches. It is possible to completely smother a gun with cheap, common engraving for a few shillings. The chief item in the cost of good guns is the regulating of the shooting, and alterations of the choking and boring. In addition to the expense of fine boring, occasionally large numbers of cartridges are required, and a deal of time occupied in shooting and regulating the first-class gun. Most of the best gunmakers test the arm both in the rough and when finished. Next to safety, this is certainly the most important point in a gun, and the greatest care should be taken by the maker to insure good results when the gun is in actual work But this, in turn, is a point about which the cheap gun makers take little trouble.

CHOKE BORES.

The term "choke-bores" means simply "barrels whereof the diameter of the bore at the muzzle is less than the bore at some point behind the muzzle, other than the chamber," while any barrel constricted at the muzzle to the extent of .5,000ths of an inch, may be termed a modified choke. A full choke is constricted to the extent of .30 to 40,000ths of an inch; but the larger the bore, the greater must be the muzzle. The constriction of the bore must be from one-half inch to one inch from the extremity of the barrel; this constriction if placed three inches or more from the muzzle, fails to throw the shot close together, but will give better penetration than a cylinder bore.

HOUNDING VS. STILL-HUNTING.

WE continue the publication this week of the numerous replies received in response to our request for experience and observation on the subject of deer-hunting. There is no necessity of calling attention to the value of the data we are collecting and setting forth here. The views are those of experienced, well-informed observers The particular points of the inquiry are as follows:

1st. What is the character of the country referred to?
2d. What is the prevailing method of hunting deer?
3d. Describe hounding deer, as practiced in the section referred to, and its effects. Does it drive deer out of the country?
4th. Describe in like manner still hunting and its effects.
5th. What class of men kill the most deer?—market hunters or parties of sportsmen?—residents or non-residents?
6th. Would resident sportsmen approve of a law prohibiting hounding deer? Would the residents assist in enforcing it?
7th. Would they approve of a law permitting hounding, but prohibiting the killing or capturing of the deer after it has been run into the water? Would such a law be practicable?
8th. What is the open season for deer?
9th. What are the winter habits of deer, so far as you have personally observed them.

FLOATING IN THE ADIRONDACKS.

The slaughter of deer in the Adirondack region has already begun. This week a party of six or seven hunters, with guns, jacks, etc., have gone up to the St. Regis and vicinity for a two weeks' hunt for deer by floating. And others are preparing to go soon. And between now and July 1 there will, I have not the least doubt, be more deer killed than in all the remainder of the season besides. That has been the case in the several years past, and I see no reason why it will not be the case this year. We have no game protector in the county, nor nearer than in Hamilton county, who for protecting this county might just as well be in New York city, for unless he tramps through the wilderness fifty or sixty miles, he could not reach here without going around a distance about as far as it would be from that city.

I never could understand why these three northern counties, Clinton, Franklin and St. Lawrence, which contain a large portion of the Adirondack region and many of the best hunting and fishing localities within the State, were without a game protector, while in the centre of the State they have appointed them in counties where there is but little game and little market for its sale. It looks to me as if the places or counties to appoint them would be where game is plenty and where it is sold. These persons who hunt deer in May and June hunt only for the sport, as they call it, of shooting the deer, and killing all they can in numbers to boast of afterward. If the venison was brought to their doors to sell they would not pay a cent a pound for it. They know the deer are tame in the spring, and easily approached at night with a light, and therefore go early to kill all they can. These first hunters are residents of the county mostly, but during June many come from abroad and night-hunt. There will hardly be a night when there is no moon between now and July 1 but what lights can be seen on the 16-mile level, 9-mile below and level on East Branch and many of the ponds south and south-east from here, and also as far east as Clinton county. This is what is killing off the deer, not hounding, as some hotel keepers and pot-hunters would like to make out. If a correct count of all the deer killed during the year by hounding and floating could be had, I would stake all I have got that two are killed by floating to one by hounding, in these three northern counties at least. ADRION ONDACK.

Near the Adirondacks, May 23.

THE BEAVER RIVER COUNTRY.

1. Undulating forest lands interspersed with streams, lakes, beaver meadows and burned timbered lands.

2d. May, June and July, out of season, prevailing custom, jack light hunting. August, September, October, November and December, in season, prevailing custom, hunting with hounds.

3d. Parties are placed to watch "runways" where the deer are most apt to take to the water. A guide or woodsman knowing the country then takes one or more hounds to a section known to contain deer that are most apt to run in the direction of the stream or body of water his party are to watch; sometimes several miles away. Late in the fall or early in winter they start the hounds not far from the water, as at that time deer are fat and "take to water" sooner than during hot weather. Hounding temporarily drives deer away from sections where practiced, and if persisted in effectually clears them out.

Still-hunting is the most scientific method of hunting deer. It is generally pursued during the first light fall of snow, which enables the hunter to track the deer and to move quietly through the woods; is attended with great privations and fatigue, many disappointments and constant vigilance. All combined will not guarantee a deer to the hunter between break of day and evening twilight. Still-hunters are so few (I do not in any way refer to crusters) in number that deer do not decrease in numbers very materially through their agency.

5th. Out of season, spring and summer non-residents of Adirondacks. In season, the first part, non-residents or sportsmen. When cold weather sets in, market hunters. And again out of season in winter—crusting. Contiguous non-residents kill more than all the rest combined.

6th. Residents of the Adirondacks would assist in enforcing laws that seemed to them more for protection of deer, and not so much for the benefit or pleasure of outsiders, who only go to them for pleasure. And I think they would approve of a law allowing only a few weeks of hounding, commencing Sept. 1.

7th. First, I do not think so. Second, I do not think it would.

8th. The fawns are dropped in May, and generally are able to care for themselves after July 15th. Open season would therefore naturally begin then and last till about January, or deep snow time.

I agree with one of your correspondents that "the present law, with a little alteration in the time for hounding to commence and duration thereof, would be good enough, even allowing floating, if it could be enforced." Just the point I should like to have settled. How is the law to be enforced? His testimony in regard to numbers of deer killed graphically states the customs of hunting in the Adirondacks—19 killed out of season and 12 during legal open season, to which he adds 4 killed since he left. Take the 19 killed during 46 days, 17 of them were killed in 15 days, at a time when deer should not be hunted even. They are easily fooled in June. The last of July they get more wary and are approached with greater difficulty. He gives July credit for only two deer killed, 17 in 15 days of June, 2 in 31 days in July. I should not wonder if the reason for only two being "recorded" as killed during that month was owing to a little more "music" day times than the deer liked. Floating in August would do no harm where hounds are used. He starts August off with 4 killed before hounds. There were but 15 days in August during which hounds could be legally used for driving deer. That was doing well for August. September should have been better, and October twice or three times better even than Sept., in a region where 17 can be killed in 15 days floating, for the fat deer does not like to run far, and will take to water quickly. Well, I suppose the deer were pursued in hot weather every day by the different parties and betook themselves to parts unknown to starters of dogs. They found "the 16-mile level" too hot. The starter of hounds generally knows where to go, but sometimes he will not go there. A starter might readily fool greenhorns by starting hounds in hot weather within hearing of his party, and let them hear the "music" for awhile, and allow them to convince themselves of the true reason for not killing the deer so started. They think he did his part, but the deer would run away off to some other stream or lake. Just so! I have known a conscientious starter to put out the hounds seven or eight miles away, then walk back to camp only to hear, "we waited till two o'clock and heard no dog, so gave up the watch. Just after we came in a big buck swam across the river," etc. Or if any number of the party got tired and went to sleep, the starter is happy to hear, "the first thing I knew a deer jumped in, the water not being deep enough for him to swim in. I could not get my gun up before he disappeared on the other side." A party of that kind will get very few shots, and every night their dogs come home with tails down, and a starter knows there is no use in over exerting himself. WOLLAT.

While here on my annual spring fishing trip, I have the FOREST AND STREAM regularly sent in to me. I read B. A. M.'s letter on the "Hounding vs. Still-Hunting" discussion in your number of May 19th with much pleasure, as I can from quite a number of years' experience verify his conclusions. But on one point that he does not touch, I think special mention must be made, and that is the proportion of deer wounded and not secured by the hunters by jack or still hunting is far greater than by any other way of hunting. My guide, "Honest John" Plumley of Murray's Rock (whose statement is that of all guides who honestly tell what they know of the matter), is that on the average not over one out of five shot at is ever got by the night hunter. He says that he has paddled a sportsman up to as many as twenty-four deer in one month and only one deer was secured, though most of the rest had probably been wounded by a few buckshot and had died in the woods. He says that on some carry or lonely inlet he has often came upon the carcass of a deer that had thus been wounded by some midnight fusilade, and had died where skin and venison could benefit no one.

For five years past I have made one of a party to come in on an October hunt with hounds, and during that five years not one deer that was shot at and wounded got away from us. We have always had excellent success (an average of one deer each for a week's hunting, but find we must go farther back every year, as the pot or still hunters, who spend the summer hunting for the hotels, are fast clearing all the easily accessible places. I have considerable hopes that the State Game Constables will stop at least part of this early killing this season, as they appear to be more active than usual this spring; and I hope that the fear of the $75 fine may save the life of not only many a doe and her fawn that are sure to die if she is killed, but of many a noble buck that would cheer the heart of the real hunter, as on some crisp October day he stands on some river runway listening to the hounds on the mountain side ready for the quick shot with his Winchester rifle as the lordliest of all our game gives a few bounds in sight.

I think that if my brother sportsmen would follow my plan, viz.: a two-weeks' or more fishing trip in the last two weeks of May before black flies bother much, and fishing is the best; then take the same time in October for hunting, and not try and combine the two in July or August they would not only enjoy themselves much better, but find their general health improve, and would join the guides and myself in condemning the useless slaughter that always accompanies floating or still-hunting.

I believe that all reputable guides in the Adirondacks would sign a paper requesting all visiting sportsmen not to ask them to paddle them up to a deer, and not to run their hounds till after the middle of August under any circumstances.

As they know and all say, that unless this summer hunting is stopped their "occupation will soon be gone." Winter killing is now practically stopped, and we must attack the next objectionable feature, and I thank you for the opportunity given to thus thoroughly place the matter before the public. M. S. NORTHRUP.

In Camp, Racquette Lake, May 24.

THE YELLOWSTONE BUFFALO SLAUGHTER.

IT is estimated by competent authorities that 100,000 buffalo hides will be shipped out of the Yellowstone country this season. Two firms alone are negotiating for the transportation of 25,000 hides each. When to this is added the immense amount of skins and furs of other kinds—deer, elk, antelope, bear, beaver, etc.—some idea may be formed of the extent of the Yellowstone pelt and fur trade.

Most of our citizens saw the big load of hides that the C. K. Peck brought down last season, a load that hid everything about the boat below the hurricane deck roof. There were 10,000 hides in that load, and they were all brought out of the Yellowstone on one trip, and transferred to the C. K. Peck. How such a load could have been piled on the little Terry, not even the men on the boat appear to know. It hid every part of the boat, barring only the pilot house and the smokestacks. But such a load will not be attempted again. For such boats as ply the Yellowstone there are at least fifteen full loads of buffalo hides and other pelts. Reckoning 1,000 hides to three carloads, and adding to this fifty cars for the other pelts, it will take at least 350 box cars to carry this stupendous bulk of peltry east to market. These figures are not guesses, but estimates made by men whose business it is to know about the amount of hides and furs awaiting shipment.

Nothing like it has ever been known in the history of the fur trade. Last season the output of buffalo hides was above the average, and last year only about 30,000 hides came out of the Yellowstone country, or less than a third of what is there now awaiting shipment.

The past severe winter caused the buffalo to bunch themselves in a few valleys where there was pasturage, and there the slaughter went on all winter. There was no sport about it, simply shooting down the famine-tamed animals as cattle might be shot down in a barn-yard.

To the credit of the Indians it can be said that they killed no more than they could save the meat from. The greater part of the slaughter was done by white hunters, or butchers, rather, who followed the business of killing and skinning buffalo by the month, leaving the carcases to rot. When the buffalo are all killed off, as they bid fair to be in a very few years at this rate, then everybody will wonder that the government did not do something to preserve this, the noblest of animal game, or at least prevent the killing of the buffalo for the hides alone.—*Sioux City Journal.*

PROGRAMME OF THE STATE SHOOT.

FIRST DAY—MONDAY, JUNE 20, 1881.

At 12 o'clock, noon, the Reception Committee, Judge Henry S. Lott, Chairman, will attend at the Long Island Sportsmen's Association Headquarters, at the Hotel Brighton (Breslin's), at Coney Island, to meet delegates and friends, to exchange courtesies, to assist in the location of visitors in satisfactory lodgings, and generally to make such final arrangements as may be advisable.

A special chowder, with appropriate accompaniments, will be provided.

Delegates and others from abroad are especially invited to avail themselves of this appointment.

After all preliminaries shall have been consummated, an opportunity will be afforded to view the grounds selected for the tournament, and also by special train to visit the city of Brooklyn with the committee, and inspect the prizes, which will be grouped in attractive form in the exhibition windows of the Brooklyn Furniture Company, 561 Fulton street.

Return trains will leave the city for Coney Island to accommodate those wishing to participate in the meeting of the Convention.

At 8 o'clock in the evening the Convention will meet in the east

dining hall of Breslin's Hotel, Brighton, when the credentials of delegates will be received and the Convention organized. Delegates are respectfully requested to wear their club badges during the Convention.

All the contests for prizes during the Convention are open to members of the Association only, and will be conducted under the rules of the Association.

Special Notice to clubs.—Express tents and bulky baggage to "Long Island Sportsmen's Association," care Wm. Engeman, Coney Island, N. Y.

SECOND DAY—TUESDAY, JUNE 21.

Contest No. 1.—At 8 o'clock A. M.; class shoot; ten single birds; entrance fee, $5. Class A, or first class of ties.—First prize: Brooklyn Furniture Company, one parlor suit of eleven pieces; value, $1,000; second prize: $50 gold. Class B, or second class of ties.—First prize: Daly gun, Schoverling, Daly & Gales, 81 Chambers street, New York, $225; second prize: $50 gold. Class C, or third class of ties.—First prize: suit of clothes, S. L. Pettit & Co., $100; second prize: $20 gold. Class D, or fourth class of ties.—First prize: regulator clock, Benedict Bros., $50; second prize: $15 gold.

Contest No. 2.—Amateur Match. Open to those never having won a prize at this or any previous convention of the Association in a contest for which entrance has been charged; class shoot; seven single birds; entrance fee, $5. Class A, or first class of ties.—First prize: Parkergun, Parker Bros., Meriden, Conn., $250; second prize: Domestic Sewing machine, Henry Bristow, Brooklyn agency, $75. Class B, or second class of ties.—First prize: One case of Nonpareil shirtings, F. C. Chamberlain, New York, $200; second prize: Old Judge tobacco or cigarettes, Goodwin & Co., $50. Class C, or third class of ties.—First prize: Two pairs of Bobbinette Swiss lace curtains, W. & H. Mumford, Brooklyn, $100; 2d prize: Twenty-four gentlemen's dress shirts, Wechsler & Abraham, $75. Class D, or fourth class of ties.—First prize: $10 gold; second prize: $5 gold.

THIRD DAY—WEDNESDAY, JUNE 22.

Contest No. 3.—At 8 o'clock A. M., or upon completion of previous shoots; single trap shoot; Pierce Diamond badge. Class A, or first class of ties.—Prize: The badge, to be held by the winner each year in trust, and to be accounted for to the State Association. The winner to receive the entrance fees at the next annual contest; entrance fee, $10. Class B, or 2d class of ties,—Prize: $100 gold. Class C, or third class of ties.—Prize: $50 gold. Class D, or fourth class of ties.—Prize: One case Curtis & Harvey's powder, E. H. Madison, Brooklyn.

Contest No. 4 (on conclusion previous shoot).—Ten double rises; class shoot; entrance fee, $5. First prize; Bronze piece, "An American Hunter on Horseback shooting a Bison," the Le Roy Shot and Lead Manufacturing Company, New York, $300; second prize: Schilling gun, Wm. Read & Sons, Boston Mass: case donated by Schuyler & Duane, New York, $125; third prize: Elaborate baby carriage, also two children's "Tally-Ho" sulkeys, C. W. F. Dare, New York, $75: fourth prize, Suit of clothes, J. Barnum & Son, New York, $50; fifth prize: $25 gold.

FOURTH DAY—THURSDAY, JUNE 23.

Contest No. 5.—At 8 o'clock A. M., or on completion of previous shoots; class shoot: seven single birds; entrance fee, $5. Class A, or first class of ties.—First prize: gold watch, Tatham & Bros., N. Y., $250; second prize: "Picturesque America," D. Appleton & Co., $50. Class B, or second class of ties.—First prize: Three barrel Baker gun, A. C. Smith, Syracuse, N. Y., $250; second prize: Pair Impbien pheasants, Welch & Creighton, New York, $50. Class C, or third class of ties.—First prize: Colt gun, Hodgkins & Haigh, New York, $150. Second prize: Ebony wall cabinet, Herts Bros., New York, $50. Class D, or fourth class of ties.—First prize: $10 gold; second prize: $5 gold.

Contest No. 6.—2 P. M., or on completion of previous shoots; not class shooting. First prize: Livingston Sportsmen's Association Cup, donated by James W Wadsworth, Geneseo, N. Y., $300; second prize; Garden City Club trophy, Garden City Gun Club, Hempstead, L. I., $150; third prize, $20 gold: fourth prize: Case of 24 one pound cans Curtis & Harvey's powder, W. Stitt, New York, agent.

FLY-CASTING.

For programme of the fly-casting, Thursday, June 23, see last issue of this paper.

FIFTH DAY—FRIDAY, JUNE 24.

Contest No. 7.—At 8 A. M., or on completion of previous shoots; class shoot; ten single birds; entrance, $5. Class A, or first class of ties.—First prize: Hammerless breech-loading shot gun, W. W. Greener, Birmingham, England, through Henry C. Squires, American agent, New York. Second prize: "Game Birds of America," Charles Scribner's Sons, $50. Class B, or second class of ties.—First prize: Case of cigars and cigarettes, Straiton & Storm, New York, $100; second prize, violin bow and box, Dr. I. C. Monroe, Brooklyn, $40; third prize: One case of 24 one-pound cans of Laflin & Rand powder, Laflin & Rand Powder Company, New York. Class C, or third class of ties.—First prize: Remington gun, E. Remington & Son, Ilion, N. Y., $75; second prize: suit of clothes, James Dilphant, New York, $50. Class D, or 4th class of ties.—First prize: Refrigerator, McGill & Cooper, Brooklyn, E. D., $50; second prize: $10 gold.

SIXTH DAY—SATTRDAY, JUNE 18, 9 A. M.

Contest No. 8.—Not class shooting. First prize: Dean Richmond trophy. Second prize: The Star Stirrup Cup, Theodore B. Starr, New York, $150; third prize: $30 gold.

Press Shoot.

Contest No. 9.—At the conclusion of the Dean Richmond Trophy Contest, Saturday, June 25, 1881, five single rises, open to writers employed on the newspaper press and representatives of sportsmen's papers. Entrance complimentary. First prize: "Around the World with General Grant," donated by the author, John Russel Young, $25; Diphant, New York, $50. Class D, or 4th class of ties.—First prize: Refrigerator, McGill & Cooper, Brooklyn, E. D., $25; third prize: Morocco writing desk, Sears & Cole, New York, $25; fourth prize: One hundred cigars, F. W. Mertens & Son, New York, $10.

Best Average.

For best average in contests 1, 3, 4 and 7, the FOREST AND STREAM AND ROD AND GUN medal, Forest and Stream Publishing Company, New York, $100.

Best Consecutive Score.

For best consecutive score of birds killed without miss during the first week of the tournament. Open only to members of the following clubs, viz.: "Monroe County." "Dansville Sportsmen's Club," Audubon Club, Rochester," "Rochester Gun Club," and clubs of the Long Island Sportsmen's Association. Oil painting, "Pair of Canvas Back Ducks," painted by J. B. Stearns; donated by M. A. Stearns, Dansville, N. Y., $250.

RIFLE SHOOTING.

Thursday, June 23, at 12 noon. Contest No 1.—Individual; ten shots; distance, 100 yards; off-hand; entrance, $5. First prize: One Remington, Creedmoor, long range rifle, E. Remington & Sons, through A. Alford, New York, $50; second prize: Special badge, A. M. Shepard, New York, $30; third prize: Dash lamp, Wm. Porter, Jr., New York, $25; fourth prize: $5, gold.

Contest No. 2.—Team shoot. Teams of three members of a club belonging to the association; each members to be residents of the county in which the club is located; ten shots each member; distance, 100 yards; off-hand; entrance, $15. First prize: Best aggregate score, the Nonpareil Sporting Club Tankard, of sterling silver, Nonpareil Sporting Club, Brooklyn, $75; second prize: Second best aggregate score, the Tiffany cup of sterling silver, Tiffany & Co., New York, $75; third prize: Third best aggregate score, $25, gold.

PISTOL SHOOTING.

Friday, June 24, at 12 noon.—Ten shots at the word; distance, 15 yards; string measure; entrance, $2. First prize: One fancy revolver, Smith's 5-shot, Charles J. Godfrey, New York, $15; second prize: Two 6¼ pound kegs Dupont's Eagle Duck Gunpowder, New York, $15; third prize: Two 6¼ pound kegs Dupont's Choke Bore Gunpowder, F. L. Kneeland, New York; fourth prize: One malleable iron, loading board, Farnham Loading Board Company, White Mills, Pa., $3; fifth prize: One loading board of same character and value as the last above prize, $3; sixth prize: $2, gold.

The illustrated programme of the week will be ready for delivery before the convention, and will contain an authenticated history of the New York State Association for the Protection of Fish and Game, with verified scores, prepared by Abel Crook, Esq., President of the association. Also a history of the Long Island Sportsmen's Association, prepared by E. N. Cook, Esq., the Corresponding Secretary of the State Association. Also an illustrated sketch of Coney Island, prepared by S. S. Conant, Esq., of Harper Bros., from statistics furnished by Judge A. G. Cropsey, of New Utrecht, and other appropriate matter.

On conclusion of the foregoing contests, the State Tournament will stand adjourned, and the following contests will take place, in which any member in good standing of any organized Club within the United States of America may participate.

These additional contests are by request of many friends of the New York Association, and the prizes are by consent of the donors, most of whom have expressed a preference that their gifts should be placed in an "Inter-State Tournament." The New York State Association Shooting Rules, so far as they may be applicable, shall govern. Contestants, in addition to entrance, to pay cost of birds shot at by them.

MONDAY, JUNE 27, 1881.

Contest No. 10.—At 9 o'clock A. M.; class shoot; ten single birds. Entrance $5. Class A, or first class of ties.—First prize: W. & C. Scott gun, $150; second prize: Suit of clothes, Treadwell, Jarman & Slote, New York, $50. Class B, or 2d class of ties.—First prize: Sterling silver dinner set, 36 pieces, F. & H. Lemmerman, $100; second prize: Leather trunk gun case, Thomson & Sons, New York, $35. Class C, or 3d class of ties.—First prize: Chest of tea, Robert Wells, $50; second prize: Three hundred cigars, F. W. Mertens & Sons, New York, $30. Class D, or 4th class of ties.—First prize: Split bamboo trout fly rod, B. F. Nichols & Co., Boston, $25; second prize: Card's latest trap for glass balls, W. H. Cruttenden, Cazenovia, N. Y., $15.

Contest No. 11.—On conclusion of previous shoot; five double rises; class shoot; entrance $5. Class A, or 1st class of ties.—First prize: Bronze piece, representing an English woodcock rising from the marsh, McCoy and LaBrie, New York, $100; second prize: One case specialties, donated by Pond's Extract Co., Brooklyn, E. D., $50. Class B, or 2d class of ties.—First prize: Henry Richards gun, manufactured by W. & C. Scott & Sons, John P. Moore's Sons, New York, $75; second prize: English corduroy hunting suit, Edwin S. Harris, New York, $35. Class C, or 3d class of ties.—No. 6, eight day, regulator clock, E. N. Welch Manufacturing Co., New York, $25.

TUESDAY, JUNE 28.

Contest No. 12.—At 10 A. M. or conclusion of previous shoots. Fifteen single birds and ten double rises. Entrance $25. Class shoot. First prize: for leading aggregate score, $1,000, gold; second prize: For second aggregate score, $500, gold; third prize: For third aggregate score, $300, gold; fourth prize: For fourth aggregate score, $200, gold.

N. B.—Twenty-five per cent. of all the entries in this contest will go to the Long Island Sportsmen's Association for expenses, and the balance will be apportioned in above ratio, and the prizes will be prorated by proportionate decrease if different entries be not made to fill, and by ratable increase if entries shall exceed the number necessary to fill.

WEDNESDAY, JUNE 29.

Contest No. 13.—At 10 o'clock A. M; class shoot; five traps: Hurlingham rules; ten birds to each contestant Entrance $5. First prize: One Charles Mortimer gun, John W. Hutchinson, New York, $75; second prize: Sole leather gun trunk and traveling trunk combined, Crouch and Fitzgerald, New York, $25; third prize: Split bamboo, heavy Newport bass rod, John P. Moore's Sons, New York, $20; fourth prize: One split bamboo bass rod, B. F. Nichols & Co., Boston, Mass., $20.

Special Contest.—Flying clay pigeon and trap. On Friday, June 24, if time will permit. If consest cannot be held on that day, it will take place on completion of the Inter-State contests. Conditions—Each contestant to shoot at ten (10) single clay pigeons and five (5) double rises. Rules of New York State Association to govern, so far as applicable. Entrance, three dollars ($3). The pigeons and traps are manufactured by Ligowski & Co., 33 Vine street, Cincinnati, Ohio. Class shooting.—First prize: $10, gold; second prize: One Ligowski trap and 1,000 clay pigeons. Both above prizes are donated by the manufacturers.

EXTERMINATION OF WOODCHUCKS.—In one of your March numbers I noticed an article from "G. F. W.," stating that he had used the pond turtle successfully in the extermination of woodchuck. His mode of operation was as follows: To secure the turtle by tying a string to one of his legs and dropping a few drops of turpentine under his tail; he would then scramble into the hole and the woodchuck would come rushing out. I would like to state that I have carefully tried the experiment—not once but many times—with various species of turtles, and I find the receipt will not work, for two reasons. In the first place the turpentine has not the desired effect, and secondly, the turtle will not enter the woodchuck hole, and cannot be forced to do so. I have grave doubts that "G. F. W." was ever successful, and would like to hear further from him.—W. B. L.

A TIP OR TWO TO WOODCOCK SHOOTERS.—Avoid if possible the country "gin mill," with its gang of loafers, bad liquor and swarms of flies. When there is yet time locate in some clean and wholesome farmhouse, where good food, quiet, and a good night's rest will make up for supposed business. Dress in a flannel shirt with a rolling collar, it being somewhat of a protection against the mosquitoes, and wear a light linen shooting coat without sleeves. For pantaloons stout flannel is the best. Light but strong laced ankle shoes, with low, flat heel, and broad soles for the feet, and for the head a straw hat with crown high enough to stow away several leaves of cabbage, or a small flat sponge, which keep wet. And remember that for keeping birds free from taint, there is nothing equal to a wicker fish creel, which is light and easily kept out of the way on the back by a couple of straps.

IN Oregon, the other day, a farmer scattered poison about the holes of the ground squirrels, which are a great pest there. The next morning he found a number of dead squirrels. The second morning he found a dead crow that had eaten of one of the poisoned squirrels. The next morning he found a dead skunk that had eaten the crow that had eaten the squirrel that had eaten the poison.

OREGON.—A well-informed correspondent of the Portland (Oregon) *Rural Press*, says that a good game law is imperatively demanded for that State. "The slaughter of deer and birds is carried on unhindered through the months of May, June and July, and in a few years the people will complain of the scarcity of game where once the woods and prairies were teeming with it. Only yesterday a boy was hunting, and boasted of shooting a hen grouse as she was sitting on a nest of eggs."

FOXES RELIEVING EACH OTHER.—I could verify the statement made in a recent issue of your paper, stating that the red foxes when pursued by hounds will relieve each other, as I have often known them to do so. And hereabouts, where the hunting is for sport entirely, and the fox rarely killed, I think the foxes enjoy the sport quite as much as the others engaged in it.—T. S. (West Chester, Pa.)

SHOOTING PUMPKINS.—One way to learn to shoot moving objects is thus told by Mr. C. O. Smith, of Tuscarora: "My father taught me to shoot on the run, long years ago when we were living in Chenango county, and when I was but a little boy. We would go out on a side hill, and my father would roll a pumpkin down it. While it was under way I fired, and I practised so constantly and patiently that I got so I could hit the vegetable every time. I did this so I could learn to shoot a deer on the run, and it gave me excellent practice and skill."

TENNESSEE.—Savannah, May 11.—Squirrels have been unusually plentiful this spring, and large numbers have been shot. A couple of men came in this afternoon with twenty-six. In about three weeks black mulberries will be ripe, and at that time young squirrels will be fully grown, and can be easily found in the early morning and late afternoons feeding in the mulberry trees. A good many fine gobblers have been shot in the bottoms near here this spring.—WILL.

POISONING QUAIL.—A California paper says that quail are very abundant in Santa Barbara county. In some places the farmers are compelled to poison them in order to protect their growing crops. Five acres of Lima beans were wholly destroyed by these birds on one farm.

TEXAS.—Dallas, May 20.—Prairie-chicken, pheasants, grouse and other small birds promise to be plentiful. Many hundreds of deer have been killed this season only for their hides. Such work should be stopped.—RENO.

LONG ISLAND SPORTSMEN'S ASSOCIATION.—A special meeting will be held at the Royal Arcanum rooms, Friday evening, June 3, at 8 o'clock, sharp.

It is impossible to remain long sick or out of health where Hop Bitters are used.

Camp Fire Flickerings.

By the way, that reminds me—

CAN anything equal the solemn grandeur of a forest at night? Can anything approach the feeling of perfect solitude that steals over the weary sportsman as he wraps his blanket about him and lies down to sleep in the wilderness, while the pine trees murmur a lullaby?

Well do I remember the first time I slept alone in the trackless forest. The solemn stillness of the scene and the sense of utter isolation from the rest of mankind impressed me deeply, and I was sad. When I awoke, also, I had a feeling of vague unrest. This I can explain. It was due partly to the general feeling of stiffness which pervaded my frame, and partly to the demonstrations of a company of ants that had crawled down the back of my neck and started a caucus. But now I am never sad in the forest. I have become accustomed to the feeling of loneliness, and the appropriation of my person by various forms of animal life has no novelty for me. A man can accustom himself to almost anything. I have a friend who, when he awoke one morning and found a rattlesnake comfortably established by his side, swore in four different languages that the person who ever again found him tempting Providence by sleeping in the woods was authorized to conduct him to the nearest lunatic asylum. To-night that man is snoring peacefully in the Adirondack wilderness.

Did you ever notice what a difference a fire makes? I have slept in the woods summer after summer for a number of years, but I can never build a camp-fire at night without watching the change which it works in on the surrounding forest. Before the fire is lighted you feel like a pigmy—a nothing—in the sombre vastness; but touch a match to the collected dry leaves and twigs, and what a change! A world of your own is immediately created, aglow with the warm, red light, and limited by the surrounding gloom. It seems as though this small portion of the wilderness was your own, and the loneliness which you may have felt is gone, dispelled by the cheerful light of the camp-fire. I love to lie within this circle of light and watch the sparks as they rise through the branches to die out in the blue heaven beyond, and I have often thought that if a man wants to think, with his mind free from all outside influences, the place to do it is encamped in some grand old forest, and the time—

"Silent night, peaceful night."

SAM.

THE tales of great slaughter on turkeys, recently narrated in FOREST AND STREAM by "Splasher" and "J. H. J," bring back to my memory the circumstances of a noteworthy single shot I made long ago. It is about fifteen years since I and another boy, W. W., both flowing over with love for shooting, took a periodical tramp to Irondequoit Bay to hunt ducks. I say "hunt," for we seldom shot more than one a day, but enjoyed rowing up on the flocks and blazing at them with our light single barrels. On the ever-memorable day of my great shot we had pulled our punt for miles without shooting anything and were about to start for home, when on rounding a point, we came on a youth of about our own age, who was also after ducks. He had six decoys and was armed with an old musket of enormous calibre, the barrel about four feet long and heavy in proportion. His luck had been no better than ours, notwithstanding his superior equipment, for although there were a good many ducks in the bay they would not come into his decoys and his great gun had not spoken with any effect during the day. This we learned after a short conference with him, in which he announced his ill-fortune with a profusion of adjectives that would not look well in print. We soon struck a bargain that promised ill to the ducks. The stranger and I were to get in the blind while my friend W. (who has since, poor boy, solved the great mystery) was to take one of the boats and drive a flock of red heads that were a short distance out in the bay. The owner of the big gun said he had two ounces of No. 1 shot and eight drams of powder in it. My fourteen-gauge gun contained three drams of powder and an ounce of No. 6. My friend W. did his part of the work well and in half an hour seven or eight fine red heads were within thirty yards of the blind and huddled together. At the word there was one report and all but one of the ducks lay flopping on the water, while one flew away, evidently hit hard. The boy with the big gun jumped up and shouted, "I killed them all!" As we were to divide, I did not dispute him, but while

..we were trying to push off his boat to pick up the birds they one by one recovered strength enoug to fly away and left nothing but feathers on the water. It then occurred to me that the big gun should have done better execution, and I told its owner to put in the ramrod and try if it went off. He did so and found the charge in the gun. Then his remarks on the situation would discount "our army in Flanders."—ROXEBY.

Why do Hop Bitters cure so much? Because they give good digestion, rich blood and healthy action of all the organs.

Sea and River Fishing.

FISH IN SEASON IN JUNE.

FRESH WATER.

Brook Trout, *Salvelinus fontinalis.*	*Stizostethium americanum, S. griseum,* etc.
Rainbow Trout, *Salmo irideus.*	Yellow Perch, *Perca fluviatilis.*
Dolly Varden Trout, *Salvelinus malma.*	Striped Bass, *Roccus lineatus.*
Grayling, *Thymallus tricolor* and *T. montanus.*	White Bass, *Roccus elongatus.*
Black Bass, *Micropterus salmoides* and *M. pallidus.*	Rock Bass, *Ambloplites.* (Two species).
Pickerel, *Esox reticulatus.*	War-mouth, *Chænobryttus gulosus.*
Pike or Pickerel, *Esox lucius.*	Crappie, *Pomoxys nigromaculatus.*
Pike-perch (wall-eyed pike)	Bachelor, *Pomoxys annularis.*
	Chub, *Semotilus corporalis.*

SALT WATER.

Sea Bass, *Centropristis atrarius.*	Pollock, *Pollachius carbonarius.*
Striped Bass, *Roccus lineatus.*	Tautog or Blackfish, *Tautoga onitis.*
White Perch, *Morone americana.*	Weakfish or Squetague, *Cynoscyon regalis*
Bluefish or Taylor, *Pomatomus saltatrix*	
Scup or Porgie *Stenotomus argyrops.*	

FISHING ABOUT NEW YORK.—We are prepared to direct anglers to fishing resorts easily accessible from this city. This information will be given upon personal application to this office or to those who may inclose self-addressed envelope. The kind of fishing, the distance and the time to be spent should be stated.

Though Cheviot's top be frosty still,
He's green belaw the knee,
Sae don your plaid an' tak' your gad
An' gang awa' wi' me.
The pools are glittering i' the beam,
The primrose blooms in Brinkburn Ha';
The sawmon's lyin' i' the stream,
The western breezes saftly blaw.

R. ROXBY.

HINTS FROM AN OLD ANGLER.

KEEP your flies from moths in tight vessels (wide-mouth glass bottles, small preserve jars, etc.), except when on your vacation angling.

Before going into the woods provide yourselves with cotton gloves with elastic wristbands, to which add light silesia or light twilled cotton gauntlets, with elastic bands. Let the gauntlets reach above and outside of the coat sleeve, to halfway to elbow. Clip the ends of thumb and forefinger stall of gloves, for convenience in baiting your hook or handling your flies. A lace bag veil, with elastic cord to close up on your hat and long enough and wide enough to tuck in under your coat collar, will be of comfort during some blackfly days as well as nights when insects pester you

Take a bottle of tar and oil to keep off black flies and other insect pests (¼ tar, ¾ olive oil). Don't turn up your nose as to the tar and oil until you have tried it. I have used it for twenty years in preference to all other preparations, and my nose is on its line yet

Always carry India-rubber (such as is sold by stationers), to smooth out and straighten your sinew or worm gut on hooks and flies.

Take a supply of guide rings and strips of metal, with plenty of thread. You may break your fly rod and have to extemporize one from a young cedar or wild cherry. One made in this way will give satisfaction to the user, if not to the home rod maker.

The use of cotton gloves has a further use than above-mentioned. You can hold a fish without it slipping through your fingers, and they will prevent your hands getting sunburnt.

W.

FISH IN MINNESOTA.

NOW that the season has opened, let me claim a corner and relate to the interested readers of the FOREST AND STREAM a tale so harrowing of death among the finny beauties that it will make you all feel like coming and joining in the battle. But come, there's room for you, fish for you, and welcome for you all. Two weeks ago Detroit Lake once more cast off its icy fetters, and sparkled again in the shining light. We open our season here with the spear and pitch-fork. As soon as the ice goes out the pickerel begin to run up the Pelican River which is about twenty feet wide by a foot deep, and very swift current. Then the suckers follow, then the buffalo fish and redhorse, until the river is literally a mass of fish, and when you descend in a boat they move ahead in a mass that raises the water a foot, and it flows over them like a cataract. They literally dam the stream. Large numbers of them are speared, and the Norwegian farmers secure wagon loads, and salt them down for summer use. Their method is to post a man in a bend of the river, another will walk down in the water driving the fish before him while the other fellow will scoop them out with a common fork, and they secure a wagon box full in a few hours. But the people soon tire of this barbarous mode of sport. Black bass and wall-eyed pike soon after will take the hook and then comes the sport.

Yesterday morning myself and partner started out to try our hand on the bass and wall-eyes, and six o'clock saw us with our minnows, rods and all, headed across the lake for the fishing grounds. But they didn't bite. No; in three hours we only caught three fish, two rock bass and one wall-eye. We were determined not to give up without trying again so we portaged out boat about a quarter of a mile to another neck of the lake, and tried again. This time we had better luck. I had a new rod which I was desirous of trying and I soon had the chance. The first one I hooked was a large pickerel, and he put the rod to a good test. I gave him about fifty feet of line and he then slacked up, and I had him pretty well tuckered out when he gave a lunge and "away into the unknown depths." Then they began to bite lively, and we soon landed about fifty pounds among which were four fine big-mouth bass which weighed about three or four pounds. My rod stood the test like a charm, and bent nearly double sometimes without a crack. We then started home, and after losing a fine trolling hook and line arrived home without any further mishap at 3 P. M., and then took our breakfast and dinner in one, but we made up for lost time in a hurry. We considered this rather poor luck, and hope for better success next time.

To-day I saw the finest lot of fish I have seen for many a day. Four gentlemen started at noon for Lake Sally about three miles from town, and at six they returned, and proudly, too, for they had just reason. Two hundred and fifty pounds composed their "pile," and it was a sight to behold. Fourteen of their largest bass weighed exactly fifty pounds, and the largest one "tipped the beam" at six pounds. They caught them in a few hours, and they report that the fish bit as fast as the lines were thrown.

We are soon to go off on a trip, and its account will be duly furnished to the FOREST AND STREAM readers. Look out for ten-pound bass stories. HIAWATHA.

THE SALMONIDÆ OF THE PACIFIC COAST.

FROM advance sheets of "Proceedings of United States National Museum" we take the following list of the salmon family of our western coast. It is embodied in "Notes on the Fishes of the Pacific Coast of the United States," by David S. Jordan and Charles H. Gilbert.

We have given some account of the revision of this interesting family by Prof. Jordan and Mr. Gilbert before, but it was merely a list of species and their synonyms and the changes in nomenclature, but in the present case we have the name, some of the synonyms, common names, seasons, habits and other important items, as well as a table showing the distinguishing marks of the five different species of salmon.

FAMILY SALMONIDÆ.

52. *Salvelinus malma* (Walb.) J. & G.—Dolly Varden Trout; Bull Trout; Salmon Trout.

(*Salmo spectabilis*, Grd.; *Salmo campbelli*, Suckley; *Salmo lordi*, Gunther; *Salmo tudes*, Cope; *Salmo callarias*, Pallas; *Salmo bairdii*, Suckley.)

Abundant in lakes and streams of the Cascade Range from Mount Shasta northward to Alaska. Large numbers are found in the salt waters of Puget Sound, where they are taken in seines and with hook and line.

In the mountains it is usually quite small; in the lakes larger. At Seattle and in Frazer's River it often reaches a weight of 12 pounds. It is an excellent food-fish. It feeds on sticklebacks (salmon-killers), herring and other small fish.

53. *Salmo irideus*, Gibbons.—California Brook Trout; Rainbow Trout.

From Mount Shasta to San Luis Rey River, in streams of the Coast Range and west slope of the Sierra Nevada. Less common north of California, and seldom seen in salt water. It is not often sent to the market of San Francisco. It seems to be much smaller in size than the other species of the coast, rarely becoming more than 18 inches in length. The largest specimens seen are from McCloud River, and very deep bodied.

54. *Salmo gairdneri*, Richardson.—Steel-head; Hard-head: Black Salmon.

(*Salmo truncatus* Suckley.)

Found in the mouths of the large rivers from the Columbia northward, and occasionally in the Sacramento. It appears with the salmon and is usually thought to be migratory, but is probably not so, or migratory to a small degree. It spawns later than the salmon, and most of the individuals taken during the time of the salmon run in the spring are spent, and their flesh is of no value. In other rivers than the Columbia and at other seasons it is esteemed an excellent food-fish. Its length is about that of an ordinary Quinnat salmon; the body is less deep and the tail heavier. The usual weight is from 14 to 18 pounds. It is never canned, as the flesh is pale and grows paler when boiled, and the bones are firm and stiff.

55. *Salmo purpuratus*, Pallas.—Oregon Brook Trout; Salmon Trout; Lake Trout

(*Salmo clarki*, Rich.)

Very abundant in all waters north of Mount Shasta and through the Great Basin and Rocky Mountain region; occasional southward to Santa Cruz. Found in abundance in salt water in Puget Sound and about the mouth of the Columbia. It is usually seen of but 2 to 8 or 10 pounds in weight, but occasional specimens, weighing as much as 25 pounds, are taken in the Columbia in summer (C. J. Smith). These latter are known usually as steel-heads, although the common steel-head is *S. gairdneri*; the young as brook trout, and the partly grown as salmon trout. This is the most widely distributed of our trout, and it is subject to many variations.

56. *Oncorhynchus kisutch* (Walb.), J. & G.—Coho Salmon of Frazer's River; Silver Salmon; Kisutch; Bielaya Ryba. Skewitz.

Sacramento River to Puget Sound and northward; very abundant in summer and fall. It is rarely taken in the Columbia in the spring, but great numbers run up the river in the fall. It is one of the smallest of the salmon, reaching a length of about 30 inches and a weight of 4 to 8 pounds. As a food fish it ranks with the young of *O. chouicha*, which it much resembles. It may be readily distinguished by the few (40-50) pyloric cœca. In *O. chouicha* there are about 180 pyloric cœca. In fall the males become greatly distorted and hook-jawed, and specimens in every stage can be found in late summer.

57. *Oncorhynchus chouicha* (Walb.), J. & G.—Quinnat Salmon; King Salmon; Chouicha; Chinnook Salmon; Spring Salmon; Columbia River Salmon; Sacramento Salmon; Winter Salmon; White Salmon. Sawkwey.

From Ventura River northward to Behring's Straits, ascending Sacramento, Rogue's, Klamath, Columbia and Frazer's rivers in spring, as well as the streams of Alaska, Kamtschatka, Japan and Northern China; in fall ascending these and probably all other rivers in greater or less abundance; the young taken in Monterey Bay, Puget Sound, etc., in summer, in considerable numbers. This salmon, by far the most important fish in our Pacific waters, reaches a weight of about 70 pounds. The average in the Columbia River is about 23 pounds; in the Sacramento River about 18; in other rivers usually still smaller.

58. *Oncorhynchus nerka* (Walbaum) Gill, & Jordan.—Blue-back; Sukkeye; Redfish; Rascal; Frazer's River Salmon; Krasnaya Ryba.

From Columbia River to the Aleutian Islands; the principal salmon of Frazer's River; unknown in Eel River, Rogue River and in the Sacramento. In the Columbia River it is much less abundant than the Quinnat salmon, and its flesh is less firm and paler. It reaches a weight of 5 to 8 pounds, four "blue-backs" being counted at the canneries equal to one Chinnook salmon. It runs chiefly in the spring, few of them being seen on Frazer's River or the Columbia in the fall. Like the Quinnat, it ascends streams to great distances. It is known in the fall as redfish. In the upper courses of the Columbia and Frazer's River this species and the preceding are the only salmon found. The blue-back, in all its protean forms, can readily be distinguished by the much longer and more numerous gill-rakers.

59. *Oncorhynchus keta* (Walb.), G. & J.—Dog Salmon; Quarlsch; Kayko; Le Kai.

San Francisco to Behring's Straits; very abundant in the fall, when it runs in all streams, but not to a great distance. Not seen by us anywhere in the spring. It reaches a weight of 12 to 20 pounds. As it is taken only in fall, after the development of the organs of generation has caused the deterioration of the flesh, it has little economic value. Considerable numbers are salted or dried by the Indians.

60. *Oncorhynchus gorbuscha* (Walbaum), Gill & Jordan.—Humpback Salmon; Haddo; Hone; Holia.

Sacramento River northward to the Arctic Sea; abundant in Puget Sound on alternate years, 1880 being a year of scarcity. Occasionally seen in the Columbia and Sacramento, but not sufficiently abundant to constitute a distinct run. It reaches a weight of 3 to 7 pounds, being the smallest of the salmon. The females are canned in summer and fall, the hook-jawed males being rejected.

The following table gives some of the specific characters of the species of *Oncorhynchus*. The figures given are the averages of variation, so far as known:

Name.	Number of gill-rakers. Number of anal ray (developed).	Number of pyloric cœca.	Number of scales in a longitudinal series.	Number of branchiostegals.	Average weight (pounds).	Markings.
Kisutch	10/13	13	70	128	13–14	6	Back spotted; tail unspotted, except upper ray.
Chouicha	10/14	16	160	142	15–19	20	Back and tail spotted.
Keta	9/14	15	160	145	13–14	12	Dorsal region with fine spots, which are often obsolete.
Nerka	16/28	14	80	132	13–15	6	No spots anywhere in spring; young with vague spots on back; tail speckled in fall.
Gorbuscha	11/17	14	225	180	12	4	Back and tail spotted.

61. *Hypomesus pretiosus* (Girard), Gill.—Surf Smelt.

From Monterey to Alaska; very abundant north of San Francisco, and often seen in the San Francisco markets. It deposits its spawn in the surf in the spring. It reaches a length of nearly a foot and becomes very fat. As a pan-fish it ranks very high, being scarcely inferior to the eulachon. The *Hypomesus olidus* of Kamtschatka has been shown by Dr. Bean to be a different species, spawning in fresh waters.

62. *Thaleichthys pacificus* (Richardson), Grd.—Eulachon; Hoolakin; Candlefish; Greasefish; Smelt.

From Oregon northward, ascending the rivers in spring in enormous numbers, but not for a great distance. It is especially numerous in Frazer's River and Nass River, and very many ascend the Columbia. The run in Frazer's River takes place in May. They are exceedingly fat, and when dry are said to burn like a candle. On Nass River is a factory for the manufacture of eulachon oil, intended as a substitute for cod-liver oil. The fact that eulachon oil is semi-solid as lard-like at ordinary temperature is a serious hindrance to its salability for this purpose. When fresh, the eulachon is one of the very finest of pan-fishes, and many of them are sent to the markets of Victoria. Pickled eulachons are sent to San Francisco. It reaches a length of a little less than a foot.

63. *Osmerus thaleichthys*, Ayres.—Smelt.

From Monterey northward; rather common, but not in such great numbers as the surf smelt and the eulachon. It is smaller and less valuable than these. Little distinctive is known of its habits. Those brought into market are usually soft, and are less salable than the spurious "smelt," *Atherinopsis*, with which they are often mixed. It is rarely more than 6 inches in length,

64. *Osmerus attenuatus*, Lockington.—Smelt.

Everywhere round with the preceding, and scarcely less common. Nothing distinctive is known of its habits, and it may possibly turn out to be the female of the same species.

THE COOKING OF THE CARP.

MRS. AMELIA LEWIS, editor of that useful paper, *Food and Health*, says:

There are various ways of cooking the carp in an appetizing manner. We shall mention them here: 1. To plain broil it. 2. To stew it in gravy. 3. To bake it when stuffed.

1. To plain broil it. Scale and clean the carp well, dry it, wrap it round with a piece of larded paper and now put it on the pan that has been slightly greased. When done, sprinkle a few drops of lemon juice over it, if you prefer it.

2. To stew it in gravy. Make a gravy with a small piece of melted butter, some flour stirred into it, add a couple of shalots chopped very fine, some peppercorns, mace, two cloves, salt, and now amalgamate with a little warm water. Put in, additionally, some claret or port, or, if you do not wish to use these, some malt vinegar and a spoonful of sauce or musbroom catsup, also a couple of lemon slices. Place your carp into the sauce, either whole, cut in half or in pieces, according to its size, cover up tight and let gently simmer for half an hour or so. Some put a few slices of ham under the carp. The carp and gravy, eaten with potatoes, salad, parsnips and cabbage stewed or mushrooms, make a very good dish.

3. To bake carp when stuffed.—Clean the carp and prepare your stuffing, some bread, finely chopped suet, a little parsley and thyme, a small chopped onion, pepper, salt and nutmeg, chopped lemon peel, moistened with the yolks of two eggs, stuff the fish with it and tie up.

Wrap the fish in greased paper, and either place butter in

tin, or some lard or a few slices of bacon. Place this in oven or cover over on top. When done, make a brown gravy with the fat in the pan, and pour over the fish, or eat dry, if you prefer.

Beetroot salad or potato salad can well be eaten with it. Also, mashed or fried potatoes, and various vegetables, green peas or beans.

The flesh of the carp represents among fishes the tastiness of the fowl among poultry or the pig among the meat of the domesticated animal. It is savory, aromatic, and also nourishing to a degree, and carp will become a very valuable fish food.

TROUTING WITH AN AUTOMATIC REEL—Syracuse, N. Y.—I wonder if many of your readers have already taken their rods and made as delightful trips as I enjoyed last week. It makes one mourn when he starts toward a trout stream in Central New York, to think that there are now so few of them left, where the beautiful fish are not so badgered and persecuted that little attraction is left for the sportsman. But I know of one little brook, fed by numerous springs, that winds in the cool shades of an old wood, or tumbles over shallows and under fallen trees, making innumerable favori e haunts for the wary fish that, not many years ago, fairly swarmed in them. That is down in the southern portion of Cortland county. Of course, the little stream is much visited, but I have never failed of a respectable catch from its pure waters; and this year, from the marvellous backwardness of the spring, I found it had been less fished than usual at this season. So much the better for me, and I passed two days with friends beside its banks in the enjoyment that is known only to the angler and the lover of Nature's peaceful scenes.

By the way, I made at that time my first trial of the new automatic reel, invented and made in this city by Messrs. Loomis and Plumb. Have you tried it yet? I think I have seen it advertised in your columns. From my limited experience with the new device, I can say nothing but good of it. You understand, doubtless, that the entire work of reeling in the line is accomplished by a spring, and one who has not used the reel can hardly imagine the felicity of holding his rod, freeing the reel of the brake, while an exciting contest goes on between the fish and the spring. The least slack line is impossible, and, indeed, all crank drudgery, if I may so term it, is done away with, while the enhanced sport remains. I hope to hear from you an editorial expression on this topic.

Do you and your readers know that here in Central New York the work of protecting fish and game is more actively prosecuted, perhaps, than anywhere else in the country? So vigorously have the game constables prosecuted unlawful fishers, that a wholesome fear of heavy penalties exists, which must work for good. A few nets have been found in our little Onondaga Lake, where those peculiar whitefish breed that are so much coveted, while a general warfare has opened on Oneida Lake, and several arrests have been made. In this connection the Onondaga County Sportsmen's Club has done excellent work.

Good-bye for three weeks, when I hope to write you from the best bass fishing grounds in the country.—WALTON.

TROUT AND BLACK BASS.—It is not entirely safe nowadays to recommend to sportsmen any near-by locality as offering any great inducements in the way of trout fishing, so diligently has not only the rod, but the base uses of pot-fishermen been applied to lessening the resources of streams and lakes. But it is safe to say that a day's travel will not take the angler to any fishing grounds where better sport may be engaged than that still offered by the streams of Ulster, Sullivan and Delaware counties, N. Y., and Pike county, Pa. Milford, Stockwater and Hawley, in the latter county, are centres from which start brooks that still yield good returns to the fly. The Sawkill, Vandemark, Raymondskill, Drymans and Adams brooks, near the former place; the Shohola, Taylor's creek, Beaver brook and West Hope brook, near Lackawaxen; and a number of streams easily found from Hawley, are all good ones. First-class accommodations in the way of stopping places, guides, &c., are amply provided. Monticello, Callicoa, Fallsbury and Morston, in Sullivan county, and Ellenville, in Ulster county, are likewise well surrounded by trout streams.

Black bass fishing will open on June 1. The Delaware River is now acknowledged to be the favorite bass-fishing water within easy reach of New York. Six-pounders were taken at Milford, Port Jervis, Pond Eddy, Shohola, Lackawaxen and Narrowsburg last season. It is estimated that over 15,000 bass were captured with the hook and line between Milford and Narrowsburg during the summer of 1880—a distance of forty miles. Besides the river, there are over fifty lakes within from two to eight miles from the above places, stocked with bass, which are daily resorts of lovers of black bass fishing. Norrambury, the farthest distant of the places named, is 123 miles from New York; Milford and Port Jervis are 88; Shohola, 107; Lackawaxen, 110, all reached by convenient trains on the Erie Railway only.

A GAME PROTECTOR SPEAKS.—Ithaca, N. Y.—The conspiracies which seem to be formed in nearly all sections of the State in violation and in defiance of the fish protecting law have, I trust, been at last—if not broken up—at least thwarted in their illegal aims in most localities

The result of my investigations last fall and winter, in which I succeeded in bringing some well-laid schemes to light, I was in hopes would deter such practices at least in the fisheries of Cayuga Lake. Recent developments, however, show that the rascals are still at work, and also that fish piracy is not confined to the lower slums of the community with which the authorities have heretofore had so much trouble. Respectable, in other respects law-abiding, citizens are found to carry on the illicit business. At the head of Cayuga Lake I recently captured and confiscated two fykes, the property of Harvey Barker. A seine belonging to ex-Game Constable Van Drool was raised in the same locality. In response to an appeal of some parties at the foot of the same lake, I went there and after considerable vigilance discovered twenty-seven fykes and one gill-net scattered around in the various fisheries which I immediately took possession of and confiscated. The plans of those outlaws seem to be deep-laid and almost defy detection. So general do they appear, that the co-operation of officers and citizens alike is necessary to break them up. Their retreats are at last discovered, and their practices unearthed, and by proper vigilance on the part of the local officials, I trust that the unlawful trade may be extinguished, and the offenders punished as they deserve.

D. B. NORTON, State Game Constable.

TROUTING IN ULSTER AND DELAWARE COUNTIES.—New York, May 23.—Just returned with Mr. A. Whitney, of Brooklyn, from Ulster and Delaware counties, on our annual hunting expedition. We fished every day for two weeks, and had it not been for the Rev. James Beecher, a genial, kind-hearted gentleman whom Mr. Whitney was well acquainted with, we would have come home completely disgusted. Beecher's Lake was the only place where we could catch any number. Mr. Whitney and myself caught 224, and only stopped because we had enough. Mill Brook, I am afraid, will be a failure this year; water was very low last fall. The mink and a few net fishermen took off there was left in the large pools. And the winter, we must remember, was very hard, the water freezing to the bottom. Fish, I am told, were frozen in. The break-up of ice came, and a great number of trout were killed by being dashed against rocks and stones before they thawed out. They put in thirty thousand trout in streams at Shandaken and Big Indian last Saturday. The people in this locality are waking up to the fact that it is necessary to keep fish in streams or city folks will not come their way and leave the mighty dollar.

We fished Furlough Lake, a lovely spot, four miles from Grant Mills, and owned by Mr. Ward De Silva, whom we stopped with, and caught only a few, but were satisfied that it is a good place, and when trout take a notion, I know one can get all he wants. Go to Arkville on Ulster and Delaware R. R., and private conveyance 15 miles to Mr. De Silva.—H. C. WEST.

TROUT IN WASHINGTON TERRITORY—Spokan Falls, W. T., May 8.—Trout-fishing has begun. To one accustomed to one-quarter and one-half pound speckled beauties, the privilege of taking them varying from one to eight pounds seems immense. Cour d'Alene and Pen d'Oreille lakes and the Spokan River are full of fish, which take the fly at this season very readily. I landed one weighing six and one-quarter pounds to-day and several weighing from one and a half to three and a half pounds. I will write you shortly about the country and the manner and way of getting to it.—J. H. R.

SWALLOWS AND BATS TAKE THE FLY—Rochester, N. Y.—In your last issue you tell how John Harris, of this city, was fishing for trout on Annin's preserve, Caledonia Creek, and, although the fish did not take the fly well, he had the novel experience of catching three swallows on his hook, the birds mistaking the small artificial fly for their natural food. The late Sam. Drake, of this city, one evening had his fly taken by a bat, and to his astonished comrade explained that it was probably a cherubim.—ROKEBY.

WRISTLET FOR FLY-CASTING—Providence, R. I.—In an article on "Quacks and Anglers," you ridicule "Galvanic Wristlet." I would say, however, that any one who will try it will find that a good silk elastic wristlet, 2½ inches wide, such as can be ordered of any druggist, will prove an excellent support to the wrist, and I for one could not cast but a short time without mine, which I never fail to take when going for a trip. Let fellow-anglers try and report success.—"PHIL."

THE CRAFT FOR TROLLING.—Oceanic, N. J., May 24.—The fishing season may be said to have opened. I have taken, this morning, six fine bass striped, the first of their season—average 2 lbs. I have fished on the waters of the North Shrewsbury for twenty-five years, and I have never had a boat that pleased me so much as my 12 ft. 50 lbs. Rushton canoe. I recommend this canoe to all fishermen, more especially trollers like myself.—G. H. W.

A BIG STRIPED BASS.—New Rochelle, N. Y.—On the 24th of May Mr. Walter J. Davids caught with a hook and line, using a squid for bait, a striped bass four feet two inches long and weighing fifty-eight pounds! It was taken in New Rochelle harbor, Long Island Sound, in about twelve feet of water near the village dock.—H. W. M.

ADIRONDACK TROUTING—Moira, May 24.—Trout-fishing is just splendid. Many have been up to the ponds and streams and caught big strings of them. One man caught thirty pounds alone at the outlet of Meacham Lake, last week. The boys continue to shoot the cranes nesting in the swamp below here. There are are hundreds of them.—A. C.

GRAND LAKE STREAM SALMON,—A correspondent, G. A. B., writes, under date of May 14, that the salmon fishing (*Glaveri*), at Grand Lake Stream is first rate; fish, large and plenty.

—Anglers going from Boston to the Maine trout country have a choice of routes, among them that of the Eastern Railroad, which carries one through at excursion rates, which are noted in our advertising columns. Send to the agent for an excursion list.

No matter what your feeling or ailment is, Hop Bitters will do you good. Prove it.

—The beaver is one of those animals whose instinct and intelligence have been most discussed among naturalists. Cuvier, it is well known, used to demonstrate by a series of experiments with a beaver taken when quite young and artificially suckled, that the admirable industry and intelligent appreciation of certain laws of nature evinced by the works of beavers spring from a blind mechanical force—pure instinct, unrelieved by the higher faculty. Cuvier fed his young prisoner with branches of willow, of which it ate all the bark, cutting up the peeled stems into pieces, piling them up in a corner of the cage as building material. He then provided it with earth, pebbles and tree branches; they were all used by the beaver in the manner peculiar to his species. "This," argues Cuvier, "was blind instinct; no good could result from the trouble which it gave itself, for it needed no house." Buffon's argument, that solitary though free beavers do not know how to construct dams, is refuted by Cuvier's young prisoner, who constructed and built his dams and dykes.

There are numerous traits in the beaver's activity that appear incompatible with the argument that only blind instinct moves the little workers. To watch two beavers at work gnawing down a big tree—I have seen them on several occasions at work on cottonwoods not infrequently two and two and a half feet in diameter—each worker keeping strictly to his side, the incision being made with perfect, one might say mathematical accuracy, to bring the tree in its final plunge to the very spot they want it, athwart a creek, or, as an additional protection to their dam, a foot or two on the upper side of it, where the danger from the swift current is greatest, is a sight which will probably convince even the most unbelieving. An experiment made on several different occasions by me tells its own tale.

Coming in the course of my rambles upon quite fresh beaver work, say a moderately big cottonwood tree five or six inches in diameter, standing on a slope, and already cut through by them, I would put my shoulder to it, and, if possible, break it down, so that it fell up the slope in a direction opposite to that which the beaver evidently intended. Visiting the spot the next day, or two days afterward, the tree was invariably lugged round, with the top downhill or athwart the little creek, the foundation work probably of a new dam.—*London Field.*

Fish Culture.

THE CODFISH.

FROM advance sheets of a future report of the Report of Commissioners of Fish and Fisheries of the United States, we make the following extracts from "A report on the history and present condition of the shore cod fisheries of Cape Ann, Mass., together with notes on the natural history and artificial propagation of the species," by R. E. Earll:

"The recent inquiry into the decrease of the food-fishes of the east coast of the United States by the United States Commission of Fish and Fisheries, under the direction of the commissioner, Prof. Spencer F. Baird, has led to the establishment of temporary stations at different points along the coast, where special attention has been given to the study of the more important species for the purpose of gathering definite information of their relative numbers past and present, their geographical distribution and their habits. Of late the commercial importance of what might be styled the great ocean fisheries, together with the complicated questions that are continually arising between our own government and our more northern neighbor regarding them, has led Professor Baird to give particular attention to this subject, with a view to becoming more thoroughly acquainted, not only with the habits and movements of these species, but also the methods employed in their capture and the extent and money-value of the fisheries.

"With this end in view, he selected Gloucester, Mass., as the most suitable location for the fishing in 1878, where he arrived with his assistants early in July, and at once began the investigation of the subject."

"The late James W. Milner, deputy commissioner, arrived early in the fall to take charge of the experiments, and Mr. Frank N. Clark, a professional fishculturist in the employ of the Commission, came soon after to personally superintend the work in the hatching-room. Mr. Milner remained long enough to see the preliminary apparatus and machinery placed in position and the first eggs taken, when he was obliged to return to Washington on account of his serious sickness. A little later Mr. Clark was called away to look after the interests of the Commission in another State, and Capt. H. C. Chester superintended the work in the hatchery during the remainder of the season."

"A 4-inch pipe was laid from the hatching-room to a point in the harbor at the end of the wharf, and sunk below low-water mark. The outer end of this pipe was fastened to the piling of the wharf, and inclosed in a box with wire-cloth openings to keep out the animal life of the harbor. The inner end communicated with two 300-gallon tanks, placed in an elevated position in the center of the room, to be used as reservoirs for the salt water. These reservoirs were tapped from beneath by smaller pipes that extended along the walls of the building, at a height of 4 or 5 feet, with faucets at short intervals, from which the water was supplied to the eggs by means of rubber tubing. In one end of the room was an 8-horse-power steam-engine, for working the pump that brought the water from the harbor to the reservoirs in a constant stream, the quantity being regulated by the outflow.

It was of course unknown what hatching apparatus could be successfully used, as no eggs of the cod had ever been artificially hatched; and indeed it was not then quite clear to the minds of those in charge to which of the three classes, sinking, floating, or adhesive, the eggs of the cod belonged. Cones similar to those used in shad hatching (figured in the report of the Commissioner of Fish and Fisheries for 1873-74 and 1874-75, p. 370) were selected as likely to give the best results, put up along the sides of the hatching-room, and connected with the faucets by the rubber tubing."

After recording the failure of the cones, and of Mr. Milner's inverted cone with a twisted tube at the apex to give the water a spiral motion as it ascended, while the outflow was in the form of a circle surrounding and just above the inflow, in a line with the sides of the cone, through the buoyancy of the eggs clogging the screens. Of Clark's hatching-box, the Ferguson bucket and a hatcher, of Mr. Earll's designing, through the sediment and mud in the water, he says:—

"Captain Chester was at this time devising an apparatus which should not only give a certain change to the water, but also partially keep the sediment from the eggs. This apparatus is known as the Chester bucket. It consists of a tin cylinder 18 inches in diameter and 24 inches deep, with four rectangular openings, each 2½ inches wide, extending from near the bottom to within 5 inches of the top. These and the bottom of the cylinder are covered with wire-cloth to prevent the eggs from escaping and the dirt from entering.

"On the outside of the cylinder, along one side of either opening, are placed strips or pockets of tin, at an angle with the side, and extending partially over the openings, so that the adjacent pockets face in opposite directions. As the cylinder rotates on its axis the water is forced in at the two opposite openings and out at the others.

"Beneath the wire-cloth bottom are four more strips of tin, radiating from the centre, and placed at such an angle that the rotation of the cylinder forces the water against them, and up through the bottom. The whole is placed in a trough nearly filled with constantly-changing water, and sunk to such a depth that the water nearly fills it. The cylinder turns on a pivot, the power being applied from the engine by means of shafting, to a horizontal arm firmly fixed to its axis, and is kept constantly turning back and forth through an arc of 90 deg., thus keeping the water changing and giving the eggs a tendency toward the top centre.

"When this apparatus had been thoroughly tested, and found to give good results, the cones were taken down, and water-tight troughs placed along the sides of the hatching-room to receive the Chester buckets, and from this date the hatching operations were conducted with a fair degree of success; and while, with pure water, the modified Clark trough or some equally simple apparatus might give excellent results, yet to Captain Chester belongs the credit of having partially overcome the existing difficulties, and of inventing the first apparatus successfully used in hatching floating eggs.

"The time required for the development of the eggs of the cod-fish, after they are thrown from the parent, varies greatly, being dependent largely upon the temperature of the surrounding water. Of those taken November 13, the first hatched in 13 days, while of those taken December 17, the last did not hatch until February 5, thus requiring 51 days, giving a difference of 38 days for eggs taken within little over a month of each other. The period of 51 days represents an extreme case, and the circumstances may be worthy of consideration. These eggs, as above stated, were taken December 17 from four fish apparently in good condition, and placed in a basket in the hatchery. January 28, the basket was thought to contain too many eggs, and a few were taken out and placed in a floating box, with wire-cloth bottom, anchored in the harbor. The difference in temperature of the water in the two places averaged from one to two degrees.

"Of those remaining in the building, the first hatched January 17, and the last on the 23d, making a variation of six days.

"On January 25, the first fish were noticed from the harbor lot, and from that time they continued to hatch slowly until February 3, when not more than 10 per cent. were out, and two days later, when the first fish were 11 days old, and the eggs 51 days from the parent, a few still remained unhatched.

"The number of fish hatched during the experiments was not far from 550,000. At first, while the apparatus remained so imperfect, the loss was great, and nearly or in some cases quite all of the first few lots of eggs were killed. But with the introdution of new methods one difficulty after another was overcome, and the percentage of loss was gradually reduced. The manner of caring for the eggs while hatching soon came to be better understood, and this too had a decidedly beneficial effect, so that, barring the loss resulting from impure water, there was a constant gain in the percentage hatched, and the loss during the last of the season did not exceed 40, and was frequently not over 30 per cent.

"When first hatched, the little fish remain nearly motionless, or, at times, indulge in the same spasmodic efforts so noticeable when freeing themselves from the eggs. In a day or two they become more active, darting about for short distances in the water, with a peculiar motion and considerable rapidity. In a few days they begin to absorb the yolk-sacs, and seem quite vigorous, while the pigment cells increase rapidly, giving them considerable color. When they had reached this stage they were usually taken to the outer harbor and liberated to become accustomed to their future surroundings before the yolk-sacs were absorbed, thus giving them the opportunity of seeking their natural food when the first instincts of hunger should lead them to desire it.

"The young cod seem more hardy than those of most other species, and may be kept for a considerable length of time with small loss. In one case fully 50 were put in an 8-ounce bottle and kept in a room at a temperature of 50 deg. F., without change of water for four days before the first ones died. Early in January a number were sent by express to Professor Baird in Washington, where they arrived in good condition, with no care on the way except that given by the baggage master on the train."

[Continued from page 332.]

EPOCHS IN THE HISTORY OF FISH CULTURE.*

BY PROF. G. BROWN GOODE.

XLIII. 1867—*Establishment of the Maine Fish Commission.*—The Maine Fish Commission was organized by the election, as commissioners, of Nathan W. Foster and Charles G. Atkins. From 1867 to 1880 appropriations were made to the amount of $36,975. [Reports of the Commissioners (later Commissioners) of Fisheries for the State of Maine, I., II., 1877, 1868 (1869); III., 1869 (1870); IV., 1870; V., 1871 (1872); VI., 1872 (1873); VII., 1873 (1874); VII., 1874; VIII., 1875; IX., 1876; X., 1877; XI., 1878; XII., 1879; XIII., 1880.]

XLIV. 1868—*Establishment of the New York Fish Commission.*—The New York Commission was organized in 1868, the Hon. Horatio Seymour, Hon. Robert B. Roosevelt and Seth Green being chosen commissioners. From 1868 to 1879 $165,000 was appropriated for fish culture. [Reports of the Commissioners of Fisheries of the State of New York, I., 1869; II., 1870; III., 1871; IV., 1872; V., 1873; VI., 1874; VII., 1875; VIII., 1876; IX., 1877; X., 1878; XI., 1879; XII., 1880.]

XLV. 1868—*The Successful Propagation of the Lake Whitefish.*—The successful propagation of the Lake whitefish was first accomplished in 1868 by Mr. Seth Green, at the New York State Hatching House at Caledonia, and by Mr. Samuel Wilmot of the Canadian Fish Commission. In 1869 Mr. N. W. Clark, of Clarkston, Mich., was successful in several efforts. [MILNER: Rep. U. S. F. C., II., pp. 545-552.]

XLVI. 1869—*Beginning of Shad Culture in the Hudson River.*—In 1869, Mr. Seth Green, acting for the New York Fish Commission, began the culture of shad in the Hudson River. [MILNER: Report U. S. F. C., II., p. 544. Reports, New York Commission.]

XLVII. 1870—*Establishment of the Deutscher Fischerei Verein.*—In 1870 was established a German Fishery Society, which has had so powerful an influence upon the progress of fish culture in Europe. Prominent among its originators were Messrs. Von Behr, Von Bunsen and ——. [Circulars of the German Fishery Society, 1870 and 1880.]

XLVIII. 1870—*Establishment of the California Fish Commission.*—In 1870, by the election of B. B. Redding, S. R. Throckmorton and J. D. Farwell as commissioners, the California Commission was established. From 1870 to 1879 $37,000 was appropriated for purposes of fish culture. [Reports of the Commissioners of Fisheries of the State of California, I., 1870–1871 (1872), II., 1872–3 (1874), * * * * *.]

XLIX. 1870—*Establishment of the New Jersey Fish Commission.*—In 1870 the New Jersey Commission was organized, R. P. Howell and J. H. Slack Commissioners. From 1872 to 1880 the appropriations were $29,560. [Reports of the Commission of Fisheries of the State of New Jersey, I., 1871 (1870?); II., 1872 (1871?); III., 1872; IV., 1873; V., 1874; VI., 1875; VII., 1876; VIII., 1877; IX., 1878; IX., 1878; X., 1879; XI., 1880.]

L. 1870—*Establishment of the Rhode Island Fish Commission.*—In 1868 Rhode Island appointed commissioners to investigate the practicability of restocking the waters of the State with salmon and other migratory fish. In 1871 regular commissioners of fisheries were to have been first chosen, these being John H. Barnard, Newton Dexter and Alfred A. Reed, Jr. Between 1870 and 1879 the State appropriated $10,500 for purposes connected with fish culture and the fisheries. [Reports of the Commissioners on Inland Fisheries, I. (?), 1869; II., 1872; III., 1873; IV., 1874; V., 1875; VI., 1876; VII., 1877; VIII., 1878; IX., 1879; X., 1880.]

LI. 1870—*Atkins' Device for Penning Migratory Fish.*—This device, which was provided for in 1870, but not carried into effect till the following year, consisted in obtaining seed fishes by purchase through the whole period of immigration into the rivers prior to spawning, and preserving them in ponds for from four to six months. "This," says Milner, "is an original method, never, I believe, before adopted in any country." [MILNER: l. c., p. 543.]

LII. 1870—*Successful Propagation of Lake Trout.*—Although experiments with this species were made in Connecticut as early as 1857, and also by Mr. Wilmot in 1868, and by Mr. N. W. Clark in 1870. The first considerable success was that by Mr. Seth Green in the same year. [Reports New York Commission. MILNER: Rep. U. S. F. C., Part II., p. 553.]

LIII. 1871—*Establishment of the American Fisheculturists Association.*—In 1871 the American Fisheulturists Association was organized. Its original members were William Clift, A. S. Collins, Fred. Mather, Dr. J. H. Slack and Livingston Stone. Its influence upon public opinion, and the aid it has rendered to fish culture, have been important beyond the possibility of statement. Its meetings have all been held in New York city, with the exception of the special meeting in Philadelphia in October 1876. At the seventh annual meeting, 1878, the name of the society was changed to "The American Fisheultural Association." [Transactions American Fisheulturists Association, I., 1872; II., 1873; III., 1874; IV., 1875; V., 1876; VI., 1877; VII., 1878; VIII., 1879; IX., 1880.]

LIV. 1871—*Establishment of the Alabama Fish Commission.*—The Alabama Commission was organized in 1871 by the appointment as Commissioners of Charles S. G. Doster, Robert Tyler and D. R. Hundley. [Report of the Commissioners to encourage fish culture: I., 1872; II., * * *.]

LV. 1871—*Discovery of the American Method of Dry Impregnation.*—The American method of dry impregnation was discovered and practiced by Mr. C. G. Atkins in 1871. [MILNER: l. c., p. 541.]

LVI. 1871—*Invention of the Atkins Hatching Tray.*—The device of providing the hatching troughs with trays placed at a distance from the bottom, first used by Mr. C. G. Atkins in 1871, was regarded by fishculturists as a decided advance. [ATKINS: Report U. S. F. C., II., p. 238.]

LVII. 1871—*Transportation of Fish Across the American Continent.*—In 1871 young shad were successfully transported from the Hudson River to the Sacramento River, California. [MILNER: Rep. U. S. F. C., II., p. 544.]

LVIII. 1871—*Introduction of Shad into California.*—See LVII. above.

FISHCULTURE AT THE BERLIN EXHIBITION.

WE have received the official report of the International Fishery Exhibition at Berlin in 1880 on Fischeulture.*

It is prepared by Messrs. Max von dem Borne, H. Haack and K. Michaelis, and is in octavo form, uniform with the other reports, which are as follows:

II. The Sea Fisheries; by Dr. M. Lindeman. III. The Fresh Water Fisheries, by Dr. A. Metzger, with an account of the Pearl Fishery, by Dr. H. Nitsche. VI. Fishery Products; by Dr. H. Dohrn. V. The Scientific Portion; by J. Asmus, Dr. O. Hermes, Dr. P. Magnus, Dr. E. von Martens, Dr. E. Thorner and Dr. L. Wittmack.

The fish eultural report contains 84 pages, printed on good paper and in clear roman type. It opens with the exhibit of fisheulture in Germany, and describes the different forms of apparatus shown and gives figures of egg-transporting devices. "It says: In relation to other portions of the International Fishery Exhibition, which were so rich, in fact bountifully supplied with riches, this portion would have been quite weak but for America, which here, as in other departments, had a strong display. This is more singular when we consider that in Germany there is so much attention paid to fisheulture and there are so many establishments for the purpose."

Austria and Hungary come next with a short account, and are followed by Switzerland, Holland and Italy. As the report includes the exhibits of artificially bred fish of different ages, in alcohol, Russia has considerable space in it because the exhibit of fisheulture from that land was largely composed of these. Sweden is given six pages, while Norway and Denmark are summed up in half a one each. The United States has twelve pages, with cuts of different apparatus for hatching the salmonide and shad, a sectional view of the "Fish Hawk," with buckets and cones in position, and one of Winans device for feeding fry in glass cones. The fishways are treated of separately.

In the appendix Herr von dem Borne describes the angling apparatus shown by the different countries, and figures some of the more important. Many American dealers whose stock was in the general collection of the National Museum, and so not entered for competition, come in for a description of their rods, reels and lines.

*Amtliche Berichte uber die Internationale Fischerei—Avstellung zu Berlin, 1880. I. Fischzucht, von M. von dem Borne, H. Haack, K. Michaelis. Im Anhange: Die Angelfischerei, von M. V. D. Borne, mit 39 in den text gedruckten holzschnitten. Berlin, von Paul Parey, 1881.

REPORT OF THE COLORADO COMMISSION.

THE report of the Colorado Fish Commission for 1879–80 takes up the question of violations of the fish law, in unlawful killing by explosives, the emptying of sawdust into streams, etc. This is a common cause of complaint in our free country, where the "Great American Trout Hog" supposes all fish to belong to himself, and never, by any accident, considers that the community have any rights at all in them. As this very lax opinon as to the rights of the people is so common in all parts, we would have been surprised not to find it in Colorado.

The Commissioner went to Washington in 1879 to receive a lot of German carp, and returned with 357, which were distributed between twenty-six persons, ranging from Fort Collins on the north to Cucharas on the south. A shipment of 50,000 whitefish eggs and 1,000 brook-trout eggs was expected from Hon. E. D. Potter, Toledo, O., in January, and arrangements were made with the Denver Water Company to hatch the former, and with Col. De La Vergne to care for the latter, the State having as yet no hatchery.

The report for 1880 shows that 221 more carp were received in June of that year. The complaints of violations of the law continue, and in speaking of the use of giant powder the report says: "There is no excuse, no palliating circumstances for the use of explosives for the purpose of killing fish. One prominent citizen of Lake County will doubtless agree with me that it is a rather unfortunate, if not disreputable, business for him to be engaged in, and that the missing hand will ever be a sad reminder to him of giant cartridges attempted to be used in violation of a just law."

The carp have grown finely, and Col. De La Vergne writes under date of Nov. 18, 1880, as follows: "I transferred my carp to their feeding ground about May 20, last. They then measured 1½ to 2½ inches. July 26, some measured 7 inches." In September they measured 9½ inches, and were plump.

Colorado is making progress in fish culture, but the Commission needs help from the State to build a hatchery, which we hope will be cheerfully given.

CONNECTICUT OYSTER BEDS.—A recent law of Connecticut gives the Commissioners of Fisheries control of the oyster beds and other shell fisheries. Section 1 of the new law provides that: "The State shall exercise exclusive jurisdiction and control over all shell fisheries which are located in that area of the State which is within that part of Long Island Sound and its tributaries bounded westerly and southerly by the State of New York, easterly by the State of Rhode Island, and northerly by a line following the coasts of the State at high water which shall cross all its bays, rivers, creeks and inlets at such places nearest Long Island Sound as are within and between points on opposite shores, from one of which objects and what is done on the opposite shore can be reasonably discerned with the naked eye, or could be discerned but for intervening islands. And all shell fisheries not within said area shall be and remain within the jurisdiction and control of the towns in which they are located under the same laws and regulations, and through the same selectmen and oyster committees as heretofore. If a difference shall arise between any town and the commissioners as hereinafter provided for, as to the boundary line between said town and the area so to be mapped, said town, by its selectmen, may bring its petition to the Superior Court for the county within which said town is situated to determine said boundary line, and said Court, upon reasonable notice to the parties, shall hear said parties, and appoint a committee to ascertain the facts in such case and report the same to said Court, and said Court shall thereupon make such order as may be proper in the premises."

THE FIRST AMERICAN FISHCULTURIST.—Bedford, O., May 28.—*Editor Forest and Stream:* May I ask for a little space in your excellent paper, and when I say excellent, I mean what I say. Prof. G. Brown Goode, in his second article in your paper on the History of Fish Culture, as published in the last number of FOREST AND STREAM, does my dead friend, the late Prof. Ackley, and myself great injustice. A historian should not only tell the truth, but the whole truth. I had supposed Dr. Bachman's claims to priority in artificial fish culture were dead and buried. The Professor says Dr. Bachman's results were published in 1855, those of Dr. Garlick in 1857, in the *Ohio Farmer*, thus giving the priority to Dr. Bachman by not telling the whole truth. It is true that my experiments were published in the *Ohio Farmer*, as stated by Prof. Goode. But the first publication was made in a scientific paper, edited by Prof. Hamilton Smith. The paper had a wide circulation among scientific men, and was known as the "Annals of Science." My experiments were made in 1853, and I read a paper before the Cleveland Academy of Natural Sciences, at a meeting held February 4, 1854, detailing my experiments, which were immediately published in the "Annals of Science" and other Cleveland papers. For facts see the published proceedings of the Cleveland Academy of Natural Sciences.—T. GARLICK.

CARP CULTURE IN OHIO—Cincinnati, Ohio, May 19.—It will be remembered that last fall Prof. S. F. Baird, U. S. Commissioner of Fisheries, etc., sent several lots of German carp to the State of Ohio for distribution. Some of these fish came into the possession of Messrs. Mulert and Muth, of Cincinnati, who have built several ponds near Mt. Healthy, Hamilton County, Ohio, with the view of going into carp culture as a business. Monday, May 16, the first young scale-carp made their appearance, followed on the next day by some young mirror-carp. The young carp are now, at the age of two and three days, one-half to one inch in length, and already show the peculiar marks of their tribe. Stating the above as a success of carp-culture in Ohio, the experiment has succeeded far beyond the most sanguine expectations in regard to them. The winter has been an unusually severe one, and yet the fish stood the cold remarkably well, and the young are hatched in the middle of May. In Germany the time of hatching is about the middle of July, so that gives two months in favor of this climate, even with a severe winter. In addition, when it is remembered that we have a month's advantage in the fall weather, three months in favor of Ohio must be counted.—HUGO MULERTT.

THE McDONALD FISHWAY.—After tedious delays, resulting from engineering difficulties which required time and skill to overcome, the large fishway on the James River, to which we have before referred, is finished, and the water was to have been turned on last week. Although the season is far gone for shad, there are still fish enough in the river to make a fair test. If successful, it will be a grand triumph, for the shad are shy of entering fishways. We have no doubt that they can go up this form of way if they will enter it. The McDonald fishway is constructed on an entirely new principle, and we have faith in its being the long looked-for fishway.

The greatest nourishing tonic, appetizer, strengthener and curitive on earth. Hop Bitters.

The Kennel.

FIXTURES.

September 1, at Pittsburgh, Pa. Close of entries Pennsylvania Field Trials. First Annual Derby. I. R. Stayton, Secretary, Pittsburgh, Pa.

September at St. Louis, Mo. St. Louis Kennel Club Third Annual Bench Show. Charles Lincoln, Superintendent.

October 1 at New York City. Close of entries Eastern Field Trials. Trials commence on Thanksgiving Day. Jacob Pentz, Secretary, P. O. Box 224, New York City.

November 1 to 6, Louisiana State Field Trials. Edward Odell, New Orleans, La.

November, at Grand Junction, Tenn., National American Kennel Club's Field Trials. Jos. H. Dew, Secretary, Columbia, Tenn.

MANUFACTURING A PEDIGREE.

IT is seldom that such a barefaced attempt to manufacture a pedigree has been made as came under the writer's notice last week. Becoming interested in the matter, as I was once the owner of the dam from which it was claimed the puppy came, and from which the effort was made to create the pedigree, I have taken the pains to follow up the clews given me, and without mentioning names shall give an account of the whole affair as an illustration of the ways that are dark and tricks that are vain of some dog men.

During a late fly-fishing trip to Pennsylvania I was asked by a friend of an acquaintance I was visiting if I know anything of a litter of puppies out of a bitch Jilt by Carlowitz. Having once owned a bitch out of Orphina, by Pedigree, by that name, I at once surmised she was the same I had given to a Dr. ——, of Philadelphia, who, in turn, had given her to a Mr. ——, of Coatesville, Pa., who shortly afterward bred her to Carlowitz. I at once set my opinion to my friend, and remarked that if he had such a dog it would be a valuable one, for Orphina, the dam of Jilt, was half Laverack, and, being bred to Pedigree, Jilt would be three-quarters bred, and her puppies by Carlowitz would be very nearly pure bred setters of that blood. He replied that he had been presented with a dog with this pedigree declared for him by the donor, and the printed record to this effect had been sent with the animal. I was much pleased that my friend should own so promising a dog, but without expressing my doubts promised that I would make further inquiries regarding him when I returned to Philadelphia.

On my arrival I wrote to the gentleman to whom Dr. —— had presented the bitch Jilt, and asked him how many puppies she had had by Carlowitz, and what had become of them. His answer described nothing like the puppy given my friend, besides he stated that the bitch had been dead two years, and therefore I saw that it was impossible for the animal in question to be hers, for he would be a year old only the coming May. With this letter in my pocket I at once sought the party who had given the dog to my friend and stated that I wanted some information regarding it. As he could, or would, not give me any additional points, I asked him for the address of the last owner of Jilt that I might write to him for particulars. He told me that Mr. ——, of Coatesville, had sold Jilt, but when he had returned from Europe, whither he had gone six weeks ago, he would procure the information I demanded. All this time I had in my pocket the letter from the gentleman "who had sailed for Europe six weeks ago," and the epistle (written in this country) not twenty-four hours old.

As this is the second dog whose pedigree has been purposely falsified by the party in question it is hoped this warning may have the effect that is intended. HOMO.

Philadelphia, May 28.

MEASUREMENTS OF FIRST PRIZE WINNERS.

IN issue of May 19 we gave the age, weight and measurements of the pointers Rush, Rue, Rhona, Princess, Water Lily and Rapp, and of the setters Spark, Petrel II. and Chief, first prize winners at the late Westminster Kennel Club Show, held in this city. Subjoined will be found the same data of other blue-ribbon dogs:

DASH.

Mr. Chas. T. Brownell's black and tan setter dog Dash, winner in open black and tan setter class for dogs, age 5 years, weight 60 lbs. Height at shoulder 25½ in., length from nose to set on of tail 44in., length of tail 18in., girth of chest 29½ in., girth of loin 23 in., girth of head 19½ in., girth of forearm 6 in., length of head from occiput to tip of nose, 10½ in., girth of muzzle midway between eyes and tip of nose 10½ in., length from corner of eye to end of nose 4¼ in., length from elbow to top of shoulders, 13¾ in., length of ear, 8 in.

May 15, 1881.

LADY GORDON.

Mr. Garrett Roach's champion black and tan setter bitch Lady Gordon, winner in champion black and tan setter class for bitches: Age 4 years, weight 60 lbs, height at shoulder 22½inches, length from nose to set on of tail 37 in., length of tail 15 in., girth of chest 28½ in., girth of loin 22½ in., girth of head 18 in., girth of forearm 11in, length of head from occiput to tip of nose 9¾in, girth of muzzle midway between eyes and tip of nose 9in, length from corner of eye to end of nose 4½in, length from elbow to top of shoulders, 12¾in, length of ears when extended (measurement taken across the head) 18in.—*May 28, 1881.*

SPOT.

Mr. B. F. Wilson's English setter dog Spot which was winner in Native English Setter Class for dogs, age, three and one-half years; weight, forty-nine pounds; height at shoulder, twenty

three and one-half inches; length from nose to set on of tail thirty-inches; length of tail, thirteen inches; girth of chest, twenty-nine and one-half inches; girth of loin, twenty-one inches; girth of head, seventeen and one-half inches; girth of forearm, seven and one-half inches; length of head from occiput to tip of nose, nine inches; girth of muzzle midway between eyes and tip of nose, nine and one-half inches; length from corner of eye to end of nose, four inches; length from elbows to top of shoulders, twelve inches; length of ears when extended (measurement taken across the head), sixteen and one-half inches.—*May 26, 1881.*

NEBRASKA BENCH SHOW.—In our last issue we gave the full list of entries at this show, and the awards distributed by the judges. We now publish an interesting report of the show for which we are indebted to one of our regular correspondents.

The fourth annual bench show of sporting dogs was held at Lincoln, Nebraska, under the auspices of the State Sportsmen's Association, May 17, 18, 19 and 20, 1881.

The show of dogs was more noticeable in quality than in numbers. Fifty or more hunting dogs were exhibited, while only about half that number were entered for competition for prizes

The red Irish setters largely predominated in numbers, and next came the pointers. Of the English setters only two were entered for competition, these being Mr. Johnston's (Omaha, Neb.) Fleet II., by Belton out of Floss, and W. T. Irwin's (Topeka, Kas.) Major, by E. D. Thompson's Shot out of a field trial dam owned by J. P. Usher, Jr., of Lawrence, Kas., name not known. Fleet II. showed best on the bench, and walked away with first prize. This was no doubt correct.

In the open class for pointers there were five entries. The most finely bred ones being W. T Irwin's Rock II., by Harries Rock out of Nell, in the dog class, 14 months old—and in the class for bitches Lt. Webster's liver and white Grace. The others could be contented with second place, where the judges have rightfully placed them, as will be seen by the appended list of prize winners. Of the red Irish setters there was but one entry in the champion class for dogs, and two entries for bitches. The former, Tim, by Race out of Red Kit. He is a very large, deep-chested dog, blood-red in color; he is owned by J. D Jones, of Omaha, but is now in the stud at the Rockwood kennels, at Lincoln, Nebraska, C. H. Buford & Co., proprietors. Tim is a little over two years old. He took first prize in the open class last year, and is fairly entitled to the favor shown him by the judges this year, although he had no competitor.

In the champion class for red Irish bitches the two contestants have come together before, two years ago, at Omaha, when Draco (Miller, of Creston, Iowa) and Gen. E. Estabrook, of Omaha judged them Nora, now 3 years and 8 days old, was bred by Gen. R B. Livingston, of Piattsmouth, out of his Mona by Brian both from the celebrated kennel of J. M. Niall, Killaloe Island, and raised and owned by B. E. B. Kennedy, of Omaha. Nora has taken two first premiums in the open class, and received first in champion class this year. Her competitor, J. C. McBride's Topsey, was her half-sister, by Brian out of McCracken's Nell, she by Scott Rodman's Dash. Topsey is a finely bred bitch, and although twice beaten by her half-sister, need not lower her flag to any bitch outside of the family. She is now in the Rockwood kennel and is to be bred to Tim.

In the open class for red Irish setter dogs there were several entries, but only two dogs in this class are entitled to special mention. The first is Hamlet, bred by Dennis Reidy, Esq., Castleland Kennel, County of Kerry, Ireland, whelped October, 1879, and imported in 1880. He is medium sized, well proportioned and deep red in color, and shows strong indications of being highly bred. His pedigree has not been received, but will be forwarded to his owner, C. H. Buford, soon. Hamlet received first on merit, and deservedly so. His competitor, S. C. Elliott's High out of Topsey by McCracken's Shot, is a fine deep red young dog, and in company with a majority of dogs would score first.

In the open class for Irish setter bitches there were a number of entries, all prime; but C. H. Buford's Mamie by G. W. Holdridge's Shot out of Juno, imported by Mr. Osborne, and C. H. Buford's Nellie by Holdridge's Shot out of McBride's Topsey took first and second premiums in the class named.

[In class 21 Livingston's Irish setter dog puppy Tim received second, not Line, as printed; no second prize was awarded in class 22 for Irish setter bitch puppies; and in class 29 for greyhounds C. H. Buford's Split got first.]

CONDITIONING DOGS FOR SUMMER SHOOTING.—If those who intend to try the woodcock shooting this July would remember the old saying that, "an ounce of prevention is worth a pound of cure," they would not only be acting humanely to their dogs, but would fit them before the season opens to stand in some degree the heat of the swamps. In doing this they will be repaid by securing better sport, and run less chance of seeing their dogs overcome with heat or stagger into fits All dogs before the shooting seasons, and especially in the summer, should be given regular exercise in the cool of the mornings and evenings. Their flesh should be reduced by placing them on a cooling diet, there being nothing better than boiled rice and Indian meal in equal quantities mixed with a little vegetable matter. Giving meat in large quantities is to be avoided, and plenty of fresh, pure water should always be at hand. To insure good sport all dogs should be fitted for the field as race horses are for the turf. There is nothing better at this season to insure good health than the following treatment: Give several days before taking the dogs out a teaspoonful of sulphur at night, followed in the morning by a dose of sulphate of magnesia (Epsom salts) varying from a dessert to a tablespoonful. Perhaps the best way to administer this mild cathartic is to dissolve it in a little water and pour it down the animal's throat omiting all food until an hour or two after Later in the day when the medicine has taken effect, the usual exercise can be given. Care should, however, be taken when administering the sulphur that the dog should not be exposed to the wet.

Once in the swamps remember to locate the water pools on your beat, and at intervals leave the cover and refresh your dogs with a swim. If the water-courses are not of sufficient depth, then sop up the water with your hands and continually wet their heads and necks. The evenings and mornings are the proper time for work, and a shady spot in some opening where the air has a chance to circulate should be the resting place at noon.

ARE THERE TWO CHAMPION ELCHOS?—Claremont, N. H. May 28, 1881.—*Editor Forest and Stream:* I notice in your issue of May 26 Mr. Osborn's explanation of pedigree of that Irish pup, yet the letter of his Washington friend says nothing of champion Elcho, though Mr. Osborn's letter calls pup as by that dog. However, I can see how he might have been led "of all sad words of tongue and pen, the saddest are those, 'it might have been'" mislead into prefixing the title champion to the Elcho, so as to clinch the idea that champion Elcho was the sire, and so make a more ready sale. As for that Washington letter, the gentleman that wrote it was rather vague in his expressions in regard to the "little dog by the celebrated dog Elcho, etc.," and his importation by a Capt. Right Reeves, of Maryland. There is, I think, a screw loose somewhere, and I will tell you why. At the last New York show a gentleman came to me—a stranger—and asked me if champion Elcho had ever served a bitch called Highland Lass, that some one, I don't remember who, had tried to sell him a pup out of Highland Lass by champion Elcho. I asked him where Highland Lass was owned, and he said, "I am confident Washington." I told him no such bitch had visited Elcho, and he left. When I saw Mr. Osborn's advertisement it recalled the conversation at New York, and so I thought it best to find out about this Highland Lass-champion Elcho breeding. In order that there shall be no more confounding of names, will Mr. Osborn kindly favor us, through your columns, with name of his friend in Washington, and will that friend also favor us with full particulars of Highland Lass and the celebrated dog Elcho, imported by Col Reeves, of Maryland. For if there is another celebrated imported red setter called Elcho it is well for us to know it, so as to avoid all mistakes in the future like Mr. Osborn's. OWNER OF ELCHO.

A BRACE OF LEONBERG DOGS.—The steamer *Vandalia* from Hamburg, reached here on May 23, having on board two Leonberg dogs for the Rev. Chas. F. Kelly, of Towanda, Penn. They were shipped by Herr T. A. Verkruzen, and consigned to Mr. Goldsmith, forwarding agent, of this city. The present owner will call the dog and bitch Marco and Mina, the latter being a slight change from Minka, her former name. Neither of the dogs are fully grown, being only a little over one year old, as it is not until they attain the age of three years that they reach their full size. At present the dog measures 30 inches at shoulder, and the bitch 27 inches. We give the above notice not only as a matter of news but we think it is timely here to express our opinion regarding this gigantic mongrel. Unquestionably the dog is one of many breeds, with little but his great size to recommend him. Mr. Vero Shaw, in writing of the Leonberg, says, "This variety of German dog, or rather commixture of many varieties which has been produced in Germany, has undoubtedly received more attention from the press than its merits entitle it to." No doubt Mr. S. took for his text when saying this the articles which appeared in the *Live Stock Journal* in 1878, which were answered very much to the point by Herr Von Schmiedeburg; editor of the German sporting papers. *Der Hund* and *Der Waidmann*, who plainly denounced the Leonbergs as humbugs. Mr. Shaw is, however, careful to say that he introduces the Leonberg into his book more as a warning to purchasers than from any desire to land the breed, and it may be interesting to know that the Berghund, or mountain dog of Germany, several of which were shown in the miscellaneous class at the late show, is a breed which was fabricated in opposition to the Leonberg.

GILTRAP'S FARM.—*Editor Forest and Stream:* Notice in one of your contemporaries the following: "Frank—Mr. Charles S. Lincoln, Warren, Mass., has bought of Mr. J. J. Giltrap, England, the celebrated Irish red setter dog Frank, the winner of 2d prize, Birmingham, and V. H. C., Alexandra Palace, 1880. He will arrive in season to be exhibited at the New York Bench Show." I have now before me the catalogue of the show, from which I have taken the following Extract: "Class 47, No. 515—Charles S. Lincoln, Waaren, Mass., Frank, red, winner of 2d Birmingham and other prizes; full pedigree; $2,500." I beg that you will allow me to contradict the foregoing statements. I am the owner of Frank; he was not exhibited at the New York show; he is still in my possession, and never was in America. As I never had any communication from Mr. Lincoln or any other gentleman in America in reference to the sale of Frank, I presume Mr. Lincoln must have been imposed upon, and as some of your readers may meet with a similar fate, I think it right to mention that I have not parted with any of my four prize Irish red setters, viz.: Garryowen (K. C. S. B. 8,262), Lady Palmerston (K. C. S. B 10,328), Frank (K. C. S. B. 10,302), Mary Machree (K. C. S. B. 10,330), or Cora. The only Irish red setter bred by me that has left my kennels for America is Noreen (by Garryowen-Cora), winner of 1st prize Dublin and New York, now the property of Dr. William Jarvis, of Claremont, N. H. JAMES J. GILTRAP.

Whitehall House, Durgan Terrace, Dublin, Ireland, May 14.

SLIPS.—Mr. A. H. Moore, of Philadelphia, writes us that the celebrated English setter and field trial winner Darkie, whose picture we published in our issue of April 21, came over in the steamship Bothnia, which arrived in this port last week. The Louisiana State Field Trials will commence on November 26; the prize list is being made up, and it will appear at an early date .....Mr. Charles Lincoln writes us that he has been appointed superintendent for the St. Louis Bench Show, which is to be held on the Fair Grounds at St. Louis, Mo., October 4, 5, 6 and 7. The show this year promises to be the best ever held in the "Muddy" State. .... Mr. J. J. Harrigan, the proprietor of the *Pacific Life*, has been presented by Mr. J. J. Murphy with a splendid greyhound puppy, by California Boy out of Beauty .... It is said more good dogs have been seen in San Francisco since the show than ever before. Perhaps the "Slopers" are getting their eyes open,.....The New York Dog Pound opened yesterday for the season. Its sanitary condition last year was far in advance of several of the kennels in this neighborhood. .....The deadlock between the two factions in the Eastern Field Trials Club still continues. The gentlemen members are afraid to propose their friends for fear of the blackball, and other element dare not put up their pals, fearing a just retaliation....

IMPORTED FOXHOUNDS.—A pack of English foxhounds, nineteen in number, has just arrived in Philadelphia via Boston. They have been carefully selected from the best English strains for a Philadelphia gentleman whose name I do not mention, as he wishes to avoid publicity. As the steamers running to this port from England will not take animals, the dogs had to be shipped to Boston and from thence reshipped to Philadelphia. They are all ear-docked, and will be at once taken to the home of the owner in Montgomery county, just beyond the city line, and will figure conspicuously at the fall meetings of the Hare and Hound Club. We are quite interested to know how these English hounds will work in our rough and wooded country, and are sure they will find trailing Reynard in Delaware and Montgomery counties, Pa., differs from a hunt in their native country where most of the chase nowadays is in full view. The importation, however, is a move in the right direction, for the intermingling of the blood with our natives will greatly benefit, and we opine the offspring of these British bitches may companion dogs sent over will learn a woodland hunt as our own Yankee dogs have.—HOBO.

STOLEN.—*Harlem, N. Y., May 27.*—Since claiming the name of Rowdy Boy through the columns of your valuable paper for my bull terrier dog, I have had the misfortune to lose him. On Tuesday last, the 24th inst., Rowdy strayed out in the front of my home, and was stolen. I regret this very much, as my dog was very much attached to me and I to him. Brave as a lion, yet gentle enough to be fondled by little children, he had become a favorite not only with all of us, but was a great pet with the neighbors. I have offered a reward through the columns of the local papers here in Harlem, but without any result. I am now going to put a detective on the case, and shall make an example of the miscreble rascal if caught. Like a drowning man grasping at a straw, I write this letter to you, hoping that some of the readers of y ur paper may run across Rowdy and return him to his bereaved and disconsolate master. The dog was a brindle and white, evenly marked on the head, ears cut close, and weighs about 25 lbs.

WM. H. R. DUBOIS.

44 West 125th st., New York City.

EASTERN FIELD TRIALS CLUB.—*New York, May 24, 188 . Forest and Stream Publishing Company,* GENTLEMEN: Your kind offer of a cup as one of the prizes to be competed for at the next running meeting of this club was duly announced at its last business meeting, as also your request that the same be given to the best amateur handler. The offer was accepted, and the thanks of the club ordered to be transmitted you, which please consider accomplished by this note of acknowledgment.

At the suggestion of Mr. Donner, the cup is to be added to the prizes in the all-aged stakes, in accordance to your expressed wishes, to be awarded the best amateur handler in that stakes.

JACOB PENTZ, Secretary.

THE COCKER STANDARD.—Franklin, N. Y., May 30.—*Editor Forest and Stream:* Noticing in late FOREST AND STREAM the secretary of Cocker club organization committee's false and personal attack upon me, and realizing the unpleasantness of publishing all replies to attacks of this nature, will you state in next FOREST AND STREAM that those who are interested in this case and wish to see my reply to it in circular form can get the said reply by applying to me for it with stamp for postage?—M. P. MCKOON.

SPANIELS IN THE FIELD.—Now that the time has almost approached for disappearing into the swamps for woodcock let us hear a little about our friends the spaniels in the field. What with the Cocker Club, the bench show, the standard and late importations, there surely must be some one who intends to put them to a practical use. We will go a day's journey to shoot over a good, well-trained brace. Let us hear from our friends on this subject.

THE BELL IN THE COVER.—Blasphemy is not absolutely necessary to make a man intelligible to his dog, but there was an old-time custom that disturbed the quiet of the beat fully as much, that was working a dog in cover with a bell. Even to-day in certain sections we still hear its tinkling sound, which is the open sesame to the conviction that some one is "out a-hunting" with a wife ranging uncontrollable dog that may or may not be staunch on his point. The method is by no means a sure one to fill the bag, for no range can be swept clean by unsystematic beating.—BELL.

A CUR-TAILED TALE.—In the classic shades of Long Island City there is a little black short-haired dog that came from Germany. He has no tail, never had a tail, was born without a tail, hasn't any place for a tail, and will never have a tail (except the one I am now giving you). He is the illustrious parent of seven promising pups three of which have nice long tails, and the remaining four have nary a tail. It is a sad tail you get from them, but true. Any one can see him and his, by addressing me in your care.—S. S., *Long Island City.*

Cases similar to that quoted above have from time to time appeared in the FOREST AND STREAM. The late Mr. W. M. Tileston, former associate editor of the journal, owned a litter of short-tailed setter puppies born of parents whose tails had been docked. Although we but seldom hear of such cases, yet there is nothing remarkable or improbable about the tail unfolded by our Long Island correspondent. We clip the following from the London *Field:*

"At the end of 1879 I bred a litter of wire-haired fox terrier pups; they were by a son of a well-known winner of many prizes, out of an Alexandra Palace prize winner; there were six dogs and one bitch. One of the dogs was born without a vestige of a tail, and was destroyed. I disposed of all the dogs, but kept the bitch to breed from. She was three times exhibited and twice V. H. C. at good shows. Her first litter was born while she was suffering from distemper, and the pups all died About a fortnight ago she brought forth her second litter (three bitches and one dog), and one of the bitches was born entirely tailless. The pups are by a son of a winner of over fifty cups and prizes. In each case the rump was perfectly rounded off and covered with hair, no stump or stump being visible. Would not these facts lead one to suppose that in course of time, by selection, one might succeed in breeding tailless terriers?—ROUGH JACKET.

"[There can be no doubt about the possibilty of this result, if you go on selecting tailless puppies.—ED.]"

LOST.—On Sunday, May 22, from the kennels of Mr. Edmund Orgill, 1096 Dean street, Brooklyn, N. Y., a lemon and white pointer bitch, about three years old. Twenty-five dollars will be paid for her return to the above address.

KENNEL NOTES.

**** Breeders and owners of dogs are invited to send memoranda of names claimed, bred, whelps, sales, etc., for insertion in this column. We make no charge for the publication of such notes; but request in each case the notice be made up in accordance with our form, that the name of both owner and dog be written legibly, or printed, and that the strain to which the animal belongs be distinctly stated.*

NAMES CLAIMED.

Croxteth II.—Mr. A. E. Godeffroy, Guymard, N. Y., claims the name of Croxteth II for liver and white pointer puppy, whelped April 7, by Croxteth out of Peg.

Countess—Mr. A. E. Godeffroy, Guymard, N. Y., claims the name of Countess for liver and white pointer puppy, whelped April 7, by Croxteth out of Peg.

Raissa—Mr. Elliott Smith, New York city, claims the name of Raissa for lemon and white pointer bitch puppy by Sensation out of Mr. Luke White's Grace, whelped Feb. 28, 1881.

Gilderoy—Mr. Geo. C. Marsh, Sycamore, Ill., claims the name of Gilderoy for his lemon Belton Llewellyn setter puppy, whelped March 4, 1881, by Druid out of Princess Draco (Rob Roy-Livy).

Nelson—Mr. Thos. Anson, Bay View, Wis., claims the name of Nelson for pointer dog puppy by Henry Clay (Bow-Queen) out of Dream (Sleaford-Waddell's Fan).

Correction—In last issue, under this heading, the name of Mr. S. Leonard Abbott, Jr., appeared as Mr. S. Leonard *Albert*, Jr. We take pleasure in correcting the mistake.

Bob White, Commodore, and Minnie Warren.—Dr. H. B. Wygant, Peekskill, N. Y., claims the names of Bob White for lemon and white cocker dog puppy, Commodore for liver and white cocker dog puppy, and Minnie Warren for liver and white cocker bitch puppy, the trio by Music out of Fly.

BRED.

Lady Gordon-Bob—Mr. Garrett Roach's (New York city) champion black and tan setter bitch Lady Gordon to Mr. A. H. Moore's champion Bob.

Princess Belle-Count Noble—The Mohawk Kennels, Chatham, Ont., have bred Princess Belle (Pilkington's Rums-Dodge's Rose) to Mr. D. C. Cameron's Count Noble (Count Wind'em-Nora).

Charlotte Queen-Rake—Mr. L. W. Fenner's (Charlotte, N. C.,) lemon and white setter bitch Charlotte Queen, by Scout (Rock-Kirby) out of Andrew's Anne Boleyn (Leicester-Kirby) to Mr. Bergundthal's Rake.

Beezy-Chief—Mr. Pentz's (Hempstead, L. I.) red Irish setter bitch Beezy to Mr. Max Wenzel's Chief.

WHELPS.

Black Bess—Dr. I. S. Niven's (London, Ont.) black cocker spaniel Black Bess whelped May 22, eight puppies, seven dogs and one bitch, by Bobb II.

Jessie—Mr. G. W. Campbell's (Carter Creek, Tenn.) setter bitch Fannie whelped May 21, seven puppies, five dogs and two bitches, by Joe, Jr.; color, three red dogs, two white dogs and two bitches.

Juno—Mr. J. E. Dicht's (Beverly, N. J.) liver, white and tan Gordon setter bitch Juno whelped May 17, eight puppies, four dogs and four bitches, by Mr. W. H. Hamilton's imported Gordon setter dog Norna.

Fly—Mr. O. France's (Caldwell, N. J.) imported collie bitch Fly whelped April 9, four puppies, two dogs and two bitches, by Lindsey's Rex (Cora—Nell) 1st N. Y. 1880.

Fany—A. Galloway's (Linden, N. J.) imported collie bitch Fany whelped April 13, seven puppies, six dogs and one bitch, by Lindsay's Rex, 1st N. Y., 1880.

Nellie—F. Bliss Walker's (Elmira, N. Y.) foxhound bitch Nellie whelped May 27, nine puppies, five dogs and four bitches (name of sire omitted in notice).

SALES

Rags—Mr. Gard. G. Hammond, New London, Conn., has sold to Mr. George Mixter, of Boston, Mass., the Chesapeake Bay dog Rags, by Mr Curtis' Foam out of owner's Ruth.

Minnie—Mr. Elliott Smith, New York city, has purchased of Mr. C. DuBois Wagstaff the champion pointer bitch Minnie, by Sensation out of Whiskey.

Sensation-Grace Whelps—Mr. Elliott Smith, of New York city, has purchased of Mr. Luke Smith, of Bridgeport, Conn., a lemon and white pointer bitch puppy by Sensation out of White's Grace.

Music-Fly Whelps—Dr. H. B. Wygant, Peekskill, N. Y., has sold to Dr. F. H. Mason, same place, a liver and white cocker spaniel dog puppy, and to Mr. Wm. Du phy, same place, a liver and white bitch puppy, both being by Music out of Fly.

KENNEL MANAGEMENT.

C. F. Z., Washington, D. C.—The gland was inflamed, the result of pressure from straining against the collar. Time will probably put him all right.

C. H. B., Allentown, Pa.—During the intense cold weather the tear glands of my puppy drove out. Do you think the spring weather will make it good or worse? Ans. Bathe every day with warm water for five minutes' time and pleasant weather will probably bring about a cure.

W. D. B., New York City.—My bull terrier's eyes are weak and slightly inflamed on the inside at times. I have used zinc and water, but it does not seem to have any effect. The dog is about 18 months old. Ans Probably the dog has too much meat. Give him less. Plenty exercise and a few purges of sulphate of magnesia, administered in the morning, will soon bring his eyes all right.

J. K., Pa.—My beagle has a lump on her head between the skin and skull about the size of a small marble, like a wen or cancer. Ans. Any surgeon can cut it out, if necessary.

H. L. Z., New York.—Mastiff bitches as a rule do not breed up to a long age, and generally give up from six to eight years old. We do not know an instance of a bitch having bred at the age pointers and terriers get to.

J. J. D., Boston, Mass.—We have sent you pedigree of Fanny Belle of the East, now owned by Mr. P. B. Baughan, Providence, R. I

Rifle and Trap Shooting.

RANGE AND GALLERY.

BOSTON, May 28.—Better weather conditions never presented themselves to riflemen than to-day, but only a small number took advantage of the opportunity to make large scores. On the arrival of the early train the wind dial indicated northeast, with hardly force enough to disturb the red signal flags. The light was nearly perfect. The sun was obscured just enough to prevent any approach of the dreaded mirage. The spectators were numerous, several carriages being upon the grounds, the occupants watching the sport eagerly at all the ranges. These conditions lasted until after one o'clock, when an entire change occurred, the wind became south, the clouds had disappeared and the sun shone in all its glory with an intense heat. These conditions remained until far close of the contest.

BRIDGEPORT, Ct., May 27.—The regular shoot of the Bridgeport Rifle Club to-day had fair weather most of the time, excepting about 30 minutes when we were visited by a shower, wind blowing fresh across the range; 7 shots in all matches.

200 yds., 26 entries A C White, 33; Geo Quitmeyer, 32; S H Hubbard, 29; D E Marsh, 32; H. Nichols, 31; F M Beers, 25.

200 yds. Silverware Match, 27 entries—Geo Quitmeyer, 32; D E Marsh, 30; John Kienzy, 40; S V Nichols, 28; A C White, 32; P S Bassett, 30; F W Barber, 29; H Nichols, 23.

200 yds. Record, Special Target—A C White, 32; D E Marsh, 24; Henry Nichols, 24; J Kinzie, 18; Geo Quitmeyer, 28; S V Nichols, 24; F M Beers, 19.

500 yds. Aneid and Afloat Rifle, first 10 shots—S H Hubbard, 50; M L Reynolds, 45; D N Congar, 49; S G Kingman, 43.

500 yds. Sharps rifle Match, cartoon target, 10 shots—S H Hubbard, 59; S W Peck, 56; W Malory, 46; D N Congar, 58; S V Nichols, 48; S G Kingman, 45.

500 yds. Carton, Record Badge, 7 shots—D N Congar, 36; S H Hubbard, 35; S G Kingman, 41; M L Reynolds, 36; F M Beers, 32.

200 yds. Military Rifle, 7 shots—S H Hubbard, 39; S W Peck, 32; S V Nichols, 24; D N Congar, 33; M L Reynolds, 31.

THE LEECH CUP.—The 7th annual contest for the trophy representing the individual championship of America at long range took place at Creedmoor on Monday last. This trophy was presented to the club by Major John Bodine, Quartermaster-General of the Irish long-range team which visited this country during that year. It is a large silver cup, and there is a fac simile of one of the famous towers of ancient Erin in relief on its lid, forming a handle to the cover. Under the conditions prescribed by the donor, the trophy is to be shot for annually. It is open to all native-born citizens of the United States, and has therefore been dubbed the "Know-nothing" trophy. All members of the Amateur Rifle Club, regardless of their nationality, are, however, eligible to compete in the match. The name of the winner in each year, and his score, is inscribed on the cup. The record is as follows: 1875, Col. John Bodine, 205; 1876, Col. H. A. Gildersleeve, 204; 1877, Major H. S. Jewell, 213; 1878, Frank Hyde, 206; 1879, J. S. Sumner, of Boston, 215; 1880, C. E. Lamb, 218. The veteran long-range rifleman, Leonard Geiger, of Hudson, N. Y., was on the ground, but his eyesight has become impaired from constant shooting during the past decade, and he was compelled to be content with "spotting" shots for his old companions. Among the competitors were Messrs. Morris and Rockwell, of Boston, who came on for the express purpose of competing for the cup. At 11:30 o'clock the match was begun with twenty-two entries. The weather was hot, but a stiff breeze blew down the range during the day from the rear of the firing-point toward the targets. The conditions of the match were as follows: Distances, 500, 900 and 1,000 yards; 15 shots at each range. The range at 800 yards was covered at 1 o'clock P. M., and a half hour was taken for luncheon, during which the traps of the competitors were removed back to the firing-point at 900 yards. The match was finished at 4.15 o'clock, and the cup was transferred from Mr. Lamb to President Bruce, who made the handsome score of 217 out of a possible 225 points. Following are the leading scores:

	800 yds.	900 yds.	1,000 yds.	Total.
L C Bruce	73	72	70	217
W M Farrow	72	74	68	214
Dr S P G Dudley	73	74	64	211
H P Rockwell	73	65	69	207
H Fisher	73	68	65	206
William Gornish	75	68	63	206
W W De Forrest	74	70	62	206
F H Holton	69	67	69	205
I L Allen	69	72	74	205
L Webber	70	66	67	203
Col John Bodine	73	67	63	203
R Bathbone	71	63	67	201
J W Todd	68	70	61	199
G L Morse	72	65	60	197
N D Wash	64	68	59	191
Dr S Babershaw	71	61	56	188
D F Davids	69	70	58	187
C E Overbaugh	64	58	55	177

Col. J. P. Clark, W. H. Brown, J. P. Waters and A. B. Hodgman withdrew.

JUNE PROGRAMME AT CREEDMOOR.—Secretary Donaldson has issued the programme for the matches during the present month at Creedmoor, providing the following contests: 8th, Remington Gold match, ninth competition; 900 and 1000 yards; rounds, 20 at each distance; position, any.

9th, Off-Hand individual match; professionals only handicapped; first competition; open to everybody; 200 and 300 yards; fifteen shots at each; any rifle; military rifles to receive two points allowance at 200 yards and four points at 300 yards.

10th, 11th and 23d; first competition the Three Distance match; professionals only handicapped; open to everybody; 100, 200 and 300 yards; seven shots each distance; any rifle and position; two entries allowed, but only the highest score to count; winners to be determined by aggregate of scores made at two out of the three competitions; twenty-four cash prizes; total, $100.

16th, Ballard Rifle match; seventeenth competition; open to all comers; winners to be handicapped one point for each time won; 100 and 200 yards; position standing; any rifle; rounds, seven at each distance; no cleaning allowed between either shots or distances; the rifle to be won three times (not necessarily consecutive), before becoming personal property, but any competitor making a full score (35 points) at each distance at any one competition to become the final winner. The We Will match; eleventh competition; open only to members of the National Guard of any State; 200 and 600 yards; position at 200 yards, standing; at 600 yards, any with head toward the target; seven shots at each distance; weapon, the authorized military rifle in use by the State of which the competitor is a member; prize to become property of competitor winning it three times. The Winchester Rifle match; sixth competition; at the running deer target; distance, 100 yards.

25th, The Champion Marksman's Badge match; first competition; open all day; no handicaps; open to all members of the N. G. S. N. Y.; 200 and 500 yards; five shots at each; Remington rifle N. Y. State model; position, for infantry, standing at 200 yards; any, with head to the target, at 500 yards; competitors allowed two entries in each competition, but only the highest score to take a prize.

29th, Off-Hand Team match; no handicaps; open to teams of four men each from any civil, military or naval organization; 200 and 500 yards; fifteen shots at each; any rifle; teams using all military rifles to receive an allowance of ten points at each distance.

AMATEUR RIFLE CLUB.—The matches for June are as follows: June 3.—Extra Long Range match; 48 shots; 1000 yards.

June 15.—Second Championship match; 15 shots; 800, 900, and 1000 yards.

June 22.—Bronze Medal Mid-Range match; 30 shots; 700 yards.

June 22.—Season match; 20 shots; 1000 yards.

June 29.—Third Championship match; 15 shots; 800, 900 and 1000 yards.

NEW YORK RIFLE GALLERY.—For the week ending May 28.—At 30 yds., Creedmoor target reduced to the distance; 3 scores, possible 150, the 3 scores added:

P G Fenning	149	J G Joiner	144
J H Brown	148	C Judson	144
E Bennett	148	J N Marghaler	143
H Oehl	147	W H Reed	141
M L Riggs	144		

E. B.

ALBANY, May 27.—Winchester match, set apart for the military men and under the usual military conditions. However, they have never taken any interest in it, and the competitors are composed mainly of small-bore men who use a military for diversion. Yesterday but two military men entered the match. The scores were as follows:

	200 yards.	500 yards.
J I Miles, S M	4 5 4 4 4—21	5 4 5 5 4—23—44
A Thorne, S M	4 4 4 4 3—19	5 5 5 3 4—22—41
A Carpenter, S M	3 5 4 5 3—20	3 4 4 5 4—20—40
G H Charles, Sal S	4 5 4 4 4—21	2 3 5 5 5—19—40
Wm E Fitch, S M	4 4 3 3 4—18	5 4 4 4 3—20—38
Wm T Miles, S M	4 3 4 4 3—18	5 4 3 3 5—20—38
C G Cheever, R M	4 4 3 3 4—18	4 3 3 4 4—18—36
Theo Mosher, S M	3 2 3 4 3—15	0 4 3 5 2—14—29

200 yards, subscription match:

James I Miles, S M	44555—23	C G Cheever, R M	45444—21
S Baldwin, Bal S	44554—22	O Dexter, S S	45444—21
Theodore Mosher, Bal S	45454—22	Wm T Miles, Bal S	45444—21
Wm E Fitch, Bal S	54544—22	A Thorne, S M	44444—20
H R Sanders, Bal S	44445—21	A Carpenter, S M	34444—19
P Tobin, Sal S	44544—21	J Donegar, Wes S	54342—18
G H Charles, Sal S	44544—21		

Thirty duplicate entries were made. Next Thursday the John Hodge match and the 500-yard life membership will be on the programme.

THE STOCKTON RIFLE-RANGE ASSOCIATION, of Camden, has issued its programme of matches for the ensuing month as follows: Saturday, June 4—Sharps match for military rifles; open to all comers; distance, 200 yards; position, standing; 10 shots; weapon, any rifle, without cleaning; prize, a Sharps military rifle. Wednesday, June 8—Mid-range match; distance, 500 yards; any position; other conditions similar to the preceding match; prize, a Ballard rifle. Saturday, June 11—Short-range military match, open to the rank and file of the New Jersey National Guard; weapons, Springfield rifles; 10 shots, off-hand; seven prizes, consisting of various quantities of cartridges, and the Champion Marksman's badge; match, open to the First Infantry, Pennsylvania National Guard; distance, 200 and 500 yards; five shots at each range; weapons, Springfield rifles; prize, a gold badge. Wednesday, June 15—Short-range match, open to all comers; distances, 100 and 200 yards; seven shots, off-hand, at each range; no cleaning; prize, a Remington short-range rifle. Saturday, June 18—"Second" gold match, open to all comers; distances, 100 and 200 yards; 10 shots at each range, off-hand; four money prizes of $50, $25, $15 and $10, respectively, and second contest for the Sharps military rifle. Wednesday, June 22—Remington match, open to all comers; distance, 200 yards; 10 shots, off-hand; prize, a Remington breechloader rifle. Saturday, June 25—Champion Marksman's Badge match, open to the Second brigade, New Jersey National Guard, on conditions similar to those in the match previously mentioned, and second competition for the gold prize. Wednesday, June 29—Second short-range match for a Remington short-range rifle.

MILWAUKEE, Wis., May 24.—The rifle contest between the Milwaukee, Geo. H. Thomas, of Chicago, and Minneapolis Rifle Clubs to-day, was an exciting and spirited affair. At 8:30 the representatives of the three clubs and their friends took a special train for the range at Lake Park Manor Bissaert Leech, Captain of the Irish long-range team which visited this country during that year. It is a large silver cup, and there is a fac simile of one of the famous towers of ancient Erin in relief on its lid, forming a handle to the cover. Under the conditions prescribed by the donor, the trophy is to be shot for annually. It is open to all native-born citizens of the United States, and has therefore been dubbed the "Know-nothing" trophy. All members of the Amateur Rifle Club, regardless of their nationality, are, however, eligible to compete in the match. The name of the winner in each year, and his score, is inscribed on the cup. The record is as follows: 1875, Col. John Bodine, 205; 1876, Col. H. A. Gildersleeve, 204; 1877, Major H. S. Jewell, 213; 1878, Frank Hyde, 206; 1879, J. S. Sumner, of Boston, 215; 1880, C. E. Lamb, 218. The veteran long-range rifleman, Leonard Geiger, of Hudson, N. Y., was on the ground, but his eyesight has become impaired from constant shooting during the past decade, and he was compelled to be content with "spotting" shots for his old companions. Among the competitors were Messrs. Morris and Rockwell, of Boston, who came on for the express purpose of competing for the cup. At 11:30 o'clock the match was begun with twenty-two entries. The weather was hot, but a stiff breeze blew down the range during the day from the rear of the firing-point toward the targets. The conditions of the match were as follows: Distances, 500, 900 and 1,000 yards; 15 shots at each range. The range at 800 yards was covered at 1 o'clock P. M., and a half hour was taken for luncheon, during which the traps of the competitors were removed back to the firing-point at 900 yards. The match was finished at 4.15 o'clock, and the cup was transferred from Mr. Lamb to President Bruce, who made the handsome score of 217 out of a possible 225 points. Following are the leading scores:

Milwaukee Team.

	800 yds.	900 yds.	1000 yds.	Total.
J C Wells	75	69	71	215
John Johnston	73	69	64	206
H Drake	73	67	63	203
E D Bangs	71	63	65	198
G C Markham	73	68	58	199
H P Yale	66	70	60	196
	429	406	381	1,216

Minneapolis Team.

D N Hoblet	73	68	67	208
C Y Skinner	71	67	62	200
M Maudin	66	69	62	179
Ole Quaine	71	69	55	195
J H Haukinson	65	70	59	174

	398	406	349	1,155

Chicago Team.

E R Hubbard	71	73	68	212
M Tyrrell	74	65	71	210
J A Shaffer	73	72	60	205
C M Bill	68	67	59	174
D B Freeman	59	58	50	162
J O Hobbs	57	55	48	160
	381	385	356	1,122

At a meeting held at the Kirby House in the evening there was a large attendance. The following clubs were represented: Geo. H. Thomas, Chicago; Minneapolis Club; Orion, Racine; Sheboygan Club; Lake Side, Lake View, Ill., and the Milwaukee club. C. M. Skinner, of the Minneapolis club, presided, and Col. Lon. H. Drury officiated as secretary. It was resolved to proceed to organization by nominating a president, vice-president, secretary and treasurer. The committee on nomination consisted of E. R. Hubbard, of the Thomas Club; John Johnston, Milwaukee; J. B. Till, Lake Side; A. F. Elliott, Minneapolis; W. S. Humphrey, Sheboygan. They nominated the following gentlemen, and they were elected: President, C. M. Skinner, of Minneapolis; Vice-President, E. W. Hincks, of Milwaukee; Corresponding Secretary and Treasurer, L. H. Drury, Chicago; Recording Secretary, H. L. Chenowth, Chicago. The officers of the association were appointed a committee to prepare a set of rules and regulations to govern the association. U. A. Burt, U. S. A., John McConnell and W. S. Humphrey were appointed as additional members of the committee.

NEW ORLEANS, May 15.—The second contest between battalion teams for the first Denver prize took place this afternoon at the New Orleans Rifle Club Park. The score was as follows:

	200 yards.	500 yards.
Dudley Selph	4 4 4 4 4—20	5 4 4 5 4—22—42
Manton	5 3 4 4 4—21	3 5 4 4 5—21—42
Ward	4 5 4 3 4—20	3 3 4 4 3—17—37
G W Charlton	4 4 5 5 4—20	3 4 3 4 5—17—37
Sporl	4 4 3 5 4—19	5 2 5 3 2—17—36
Bradford	3 3 3 3 4—16	3 4 4 3 2—15—31
Miller	4 3 3 4 4—18	3 2 3 2 4—14—32

Continental Guards.		
Knight	5 5 4 4 3—21	4 5 4 5 3—21—42
Henry	5 5 4 4 4—20	4 3 4 4 4—18—38
Doolittle	4 0 3 4 4—16	4 6 3 4 5—21—37
Pierce	3 4 4 3 3—16	3 4 4 3 4—17—33
Howe	3 4 3 3 3—16	2 3 3 4 3—15—31
McCall	3 2 4 2 3—15	4 0 0 5 3—12—27
Maltby	5 3 0 3 3—14	2 0 0 5 4—11—25
Franklin	4 4 3 4 4—19	0 0 3 0 0— 3—22—255

NEW ORLEANS, La. May 22.—Owing to the competitive drill of the last three days and presence of some of the visiting military in town, the attendance at the park was very slim, only six entries being made. Selph was ruled out, owing to his late arrival, according to the rule. The following are the scores:

	500 yards.	200 yards.	100 yards.	Total.
Gschwind	17	22	21	60
Sporl	17	21	20	58
Henry	17	19	22	58
Charlton	17	19	22	58
Sgchind	12	20	22	54
Hauswald	13	16	20	49

To day on the grounds of the New Orleans Gun Club there was a bat shooting match, handicap from 18 to 26 yards rise, 10 double rises, three prizes being offered. For this event there were twenty-two contestants, among whom were most of our noted amateur shots of the city. The match was a most interesting one throughout.

THE camp at Wimbledon will open on the 9th prox., and the fortnight's shooting on the 11th.

THE TRAP.

NEBRASKA TOURNAMENT.

THE shooting tournament held at Lincoln, Nebraska, under the management of the Lincoln Sportsman's Club, May 17, 18, 19 and 20, was well attended, although the weather was cold, raw and rainy during the first two days. The following are the official scores made the first, second and third days. Our reporter was not able to get scores of last day's shoot. Ten glass balls; distance, 18 yards; 1ree for all. Following is the score:

Brucker	1110111111—9	Den	1000111111—7
Arbuthnot	1111101110—8	Kauffman	1111000111—7
Farmele	1011111111—9	Sinclair	1111101111—9
Hughes	0120101011—6	Browning	1011010111—7
Woods	1011110111—8	Berg	0001010001—3
McCarthy	1111110111—9	Jones	0111010110—6
Hathaway	1001111011—7	Leeder	1111001011—7
Johnson	0101111011—7	Bracey	1001111011—7
Petty	1111111111—10	Collins	0001000011—3
Robertson	1111111111—10	Spriggs	1111110111—9
Hallett	0110111110—7	Denham	0111101111—8
Egan	1111010010—6	Carpenter	1101000010—4
Bray	1101011101—7	Beltzer	0001010111—5
Still	1111101001—7	Page	1111111110—9
Shellenberger	1011101111—8	Brown	0101111110—7
Barney	0100011011—5	Baum	0111111110—8
Peet	1111111110—9	Irwin	1111111111—10
Dunham	1111111111—10	Henton	1111001111—8
Babcock	0000111001—4	Millis	1110111111—9

Referees—Messrs. McDonald, Shields and Rogers. Messrs. Robertson, Dunham, Petty and Irwin divided. Mills won second money on a tie with Farmelee. Peet broke five balls straight and won third place. Bray and Johnson shot for fourth prize; won by the former, who broke five balls.

Contest No 2, 10 balls at 18 yards, resulted as follows:

Babcock	0100101010—4	Bray	1011101110—7
Leeder	1101111111—9	Johnson	1101001010—6
Shellenberger	1110111111—9	Spriggs	1101111001—7
Petty	1111111111—10	Hallett	1111111110—9
McCartney	1011101101—7	McKee	1111101101—8
Farmelee	1101110111—8	Still	1110111110—8
Henton	1001111001—7	Budd	1111101110—8
Mills	1111111111—10	Hastings	1111111111—10
Robertson	1111111110—9	Arbuthnot	1101110110—7
Hathaway	1100111101—7	Beltzer	0011111111—8
Hughes	1001110101—6	Denham	1111110111—9
Shields	1110111111—9	Bracey	0011111011—7
Jones	1111010000—6	Collins	0111011110—7
Kauffman	1101111111—9	Baum	1111011110—8
Woods	1111111111—10	Hostetter	0011110110—6
Browning	1111111110—9	McBride	1111111111—10
Barney	1011110001—6	Brown	1111001000—5
Peet	1111111011—9	Page	1100111011—7
Sheldon	1101111111—9	Irwin	0111111111—9

Referees—Messrs. McDonald and Tomson. Ties: First, J.W. Petty; second, divided by Shellenberger and Robertson; third, J. E. Baum; fourth, Daniel Bray.

Second Day.—The rain of the night before did not greatly interfere with the sport. The first contest was for the prize silver cup, 15 single birds, at 21 yards rise. This cup was won last year by the Lincoln Club. It was won to-day by the Omaha Sportsmen's Club.

Omaha Sportsmen's Club.

Mills	111111011—9	Hathaway	1111111111—10
Hughes	1111111110—10	Petty	1111001111— 8—37

Lincoln Sportsmen's Club.

Smith	11110—4	Bracey	01111*—3
Carpenter	11001—3	Robertson	00111—3
Bray	10011—3	Hughes	01001—2
Brucker	11101—4	Dunham	01101—3
Collins	10011—3	Lyle	01111—4
Barney	01001—2	Logan	10010—2
Egan	10011—3	Arbuthnot	11111—5
Tucker	01111—4	Denham	01010—2
Sheldon	01111—4	Irwin	10011—3
Hostetter	11110—4		

* Dropped dead out of bounds.

First prize was divided among Petty, Page and Hallett; second, S. A. Tucker; third, S. M. Shellenberger; fourth, Geo. Jones. The prizes were $50, $60, $40 and $20. A sweepstakes purse was then shot for with the following result: First money divided among Petty, Irwin, Jones and S. B. Hathaway; second, Tucker; third, divided between Bond and Hastings; fourth, Geo. Dunham.

Third Day.—Three double birds at eighteen yards, canvas hunting boat as first prize:

Mathewson	11	11	11—6	Sheldon	11	01 01—4
Harley	00	10	11—3	Browning	10	11 11—5
McBride	11	11	11—6	Kauffman	10	11 11—5
Babcock	11	01	01—4	Bond	00	00 00—1
Shellenberger	11	10	10—4	Bray	11	11 11—6
Hathaway, S B	10	11	11—6	Carpenter	10	00 00—1
Farmalee	10	11	11—5	Brown	00	10 10—2
Petty	11	11	11—6	Hughes	10	11 11—5
Baum, J E	00	11	11—5	Kennedy	10	11 11—5
Hallett	00	11	11—4	Johnson	01	11 00—3
Elliott	11	01	11—5	Mills	1*	11 11—5
Woods	10	11	11—5	Brock	11	11 11—6
Beltzer	10	11	11—5	Hathaway, H D	10	10 01—3
McClay	10	10	11—4	Dunham	10	11 01—4
Lyle	11	11	00—4	Denham	10	11 01—5
Arbuthnot	00	11	00—2	Leeder	10	11 10—4
Logan	10	10	01—3			

The first prize was won by Petty, the second was divided between J. B. Hathaway and Browning, the third between Schellenberger and Leeder, Logan received the fourth, and the fifth was divided between Arbuthnot and Brown.

Team shooting: 10 glass balls, 18 yards:

McBride	1000101111— 7	Sheldon	0001101101— 5—12
Summers	1110111110— 8	Den	1111011111— 9—17
Shellenberger	0010001111— 6	Shellenberger	1111011111—10—16
Harley	1101100101— 6	Baum, J E	0111100110— 6—12
Farmalee	1110101110— 7	Hughes	1111010011— 7—14

Parmelee	0211110—5	Peet	1111111—6
Hathaway, H. D	1111101—6	Leeder	0111011—5
Smith	0110011—4	Still	1100011—4
Woods	1111111—7	Kelley	0011111—6
Belzer	1111111—7	Arnusbuurt	1101000—3
Browning	1110 11—6	Brucker	0011000—2
Baum, J. E	1101101—5	Curry	1011011—5
Petty	1111111—7	Mence	1000000—1
Mills	1111111—7	Carpenter	1111100—5
Shellenberger	1111111—7	Lyle	1111100—5
King	1010001—3	Dunham	1111011—6
Page	1111111—6	Brock	1011111—6
Sheiden	1111011—6	Denham	1111111—6
Bray	0011110—4	Den	1100011—4

S. B. Hathaway won the first prize. The other ties will be shot off this morning. Match between Mr. Irwin, of Topeka, Kan., and Mr. Tucker, of West Meriden, Conn., fifteen birds, from five ground traps, according to English rules. Both gentlemen killed thirteen out of fifteen birds, and began shooting off the tie. Mr. Irwin killed four consecutive birds; the fifth was hit, but fell out of bounds and was lost. Mr. Tucker killed five birds in succession. Mr. Tucker was therefore the winner. This contest was close and interesting. A feature of it was the retrieving of the birds by Mr. Irwin's dog.

PITTSBURG SHOOTING.

PITTSBURG, Pa., May 27.

To-day has been unusually interesting to our sportsmen, the occasion being the regular semi-annual contest of the Allegheny County Sportsmen's Association. The event has been looked forward to anxiously for several reasons, but most of all, because this association has a larger number of crack shots than can be found in any other association of the size in this State. The day was all that could be desired, and the birds were an exceptionally strong lot. The meeting took place at Bridgeville on the Chartiers Valley Rail Road, about 11 Miles from the city. Twenty-six members answered the roll call and made the following excellent scores; distance 29 yards; Haws' trap, use of both barrels:

Ed Armstrong	1011111111011111—12	A B Nevin	1111011111111111—13
J Richards	1110 01111 00—10	H C Nevin	1011010111111100—9
W S Bell	1011 1011111—9	D M Marsh	1111111011111—14
E F Smith	1111111111111—13	T J Keenan	1110111111111111—15
James Dean	1101 0011011—8	Register	1111111111111—14
E J Donner	1011101011011—8	Wm McGee	0110011011111101—8
Giessenkamp	1111011101011—10	E Taggart	0101010010111—9
J Hicks	1101010 1111—8	S Bishop	1111111011011—11
C M Hostetter	1111111111111—14	Dr C H Voight	1111111111011011—12
Dr J B Johnson	1011 0011011101—7	J L Ward	1011101011111010—9
C B Lovett	1111111111110—13	L S Hamilton	1011111111101001—11
J Lovett	1111111111111—14	W S Woods	1111111111101001—11
McCracken	1111101011010—11	A Wilson	0100000101001—4

The tie was then shot off, Mr. Martin missing his second and Mr. Hostetter his fifth bird. The result of the shooting off of this tie was as follows, the distance being thirty-one yards:

Register	1111111111—1	Hostetter	1110
Martin	0000000000—0	Lovett	1111111111110

Mr. Register was declared winner of the Hague cup. It was won last year by Mr. C. B. Lovett. There was a tie between Messrs. C. B. Lovett and A. B. Nevin for the second prize, and it was not shot off owing to the fact that there were not birds enough. The second prize is a fine souvenir silver cup lined with gold. After this match was decided, the second event of the day was a 50 glass balls from rotating trap, of which the following is the score:

S S Dorion	36	D M Martin	36
Florence Brown	34	Collins	10
Clark	34	Work	10
C M Hostetter	29	W S Bell	29
G A Giessenkamp	37	J W Thorp	31
J L Ward	33	W J McCracken	31
J Register	39	J W Michaels	15
D Johnson	5	Dr Johnson	11
Dr. Voigt	15		

The first prize, a handsome silver cup, went to Mr. Bell, and the second, also a cup, to Mr. Register, as he won in shooting off his tie with Mr. Hostetter, as the score shows:

Register	1111—5	Hostetter	11110—

The judges were Mr. T. J Keenan and Mr McMunn, the referee was Mr. Seager, and the scorers Mr Bishop and Mr John Thorp.

The six gentlemen who made the highest scores in the pigeon match will compose the team and alternates for the State match at Meadville on June 7 for the state cup. This elegant trophy was won last year at New Brighton by the Allegheny team by a score of 93 out of 100. The team has yet to be composed of three, and they will be selected at the meeting of the club before the match. The gentlemen having the best scores were: Messrs. Register, Bell, J. Lovett, Martin, Hostetter and A B Nevin. The team last year was the Lovett brothers, Bell, J P Donaldson, Hostetter, with Martin, Donnell and Thompson as alternates Mr. Bell and Mr. Register, who won the first prizes yesterday, each used the Wesley Richards hammerless guns.—R. F. DEXTER.

CAPITAL CITY GUN CLUB, Washington, D. C., May 26.—A match between two teams of this club, chosen and captained by Messrs. Eldridge and Stoddard, respectively, was shot on Saturday afternoon on the club grounds at Eagle Park. Twenty balls per man, from Card's rotary trap, screened; twenty yards rise; best total to win. As shown below, the team captained by Mr. Eldridge won by fourteen balls. Messrs Hasbrouck and Parker are new members of the club, the latter never having sook before. The score was as follows:

W W Eldridge, Captain	11111 11111 01101 11111—18
E L Mills	01111 11111 11111 11111—17
Harry King	11111 11111 11111 11001—19

MISSOURI STATE TOURNAMENT.—Louis, May 2.—The programme for the annual tournament of the Missouri State Association to be held here, May 23 and continue six days, has been arranged. An effort will be made to secure Capt. Bogardus to manage the interests of the shoot during the week. Birds have been secured.—J. W. M.

Yachting and Canoeing.

THE SEASON OPENS.

FAVORED with a moderate breeze and a tolerably clear sky, Decoration Day in New York proved just the weather for the light-draft fleet, manned by an assorted crew of landsmen in best city togs, from silk stockings and low-quartered shoes up to stovepipes of vendorabe respectability, mixed with a small sprinkling of amateur sailors in the way of owners and old "stand-bys." Although the season has witnessed a very material reduction in the number of large yachts hailing from New York, owing to the sale of so many craft to the East and the building of but half a dozen boats to take the place of thirty odd gone, a very fair muster of ships in their best points and new appointments was made for the annual opening sail down the Bay and return. We are not among those whose hearts are turned at the sight of a score or so of yachts, and have to nearly lie to cuicken an enjoyable and successful sail to the fleet, the turnout was very far from what ought to have been the case in a city having the wealth and suburbs of New York. It is safe to say that four or five times as many yachts got under way in Boston waters, though they averaged less in tonnage, and what New York lacks in numbers may be considered in part made up on the score of size. Contemporaries may indulge in puffery of the home fleet to their hearts' content, but we think a truthful statement of the case is more to the interests of the sport than sensational glorification, the main object of which is to fill up space. The most notable feature worth recording, barring the general spick-span new appearance of fresh paint and clean canvas, is the growing popularity of double head sail for sloops, thus virtually giving in adherence to the principles of the cutter rig. For this we believe FOREST AND STREAM may justly take the credit, having been the first and only champion of double head sail in opposition to the single jib. Indeed, so universal has the modification of the sloop become in this respect that we think a few years more will see the single jib abandoned altogether in single-stickers, except perhaps for the smallest class of cabin boat, though even many of these evince a tendency to follow the fashion set by their larger sisters. When two years ago this question of handiness of sail was first brought into these columns we had hardly a single follower, the usual stale objections of "our summer weather" were trotted time and again and double head sail was regarded as only a "theoretical" chimera of FOREST AND STREAM, and no literary scrap of Bohemian of Lagoons, who took their lack of experience for "practical" knowledge. It has taken only a year or two of trial, however, to convince the majority that this journal was right after all, and the decoration day sail showed our yawlrig and cutter made a very fair half of the sloops under way. Housing topmasts, forty ones at that, have likewise displaced the stumpes spiked to the masthead, which were formerly the rule, until the latter have become so scarce as to excite comment as old-fashioned, and no flatlass yacht is seen of late years in the spik spank longer. Having fought unceasingly for the latter we rejoice should go up and down with the topsail and has no more business aloft when not required for sail than a spinaker boom has over the side when on the wind, we note with gratification the rapid conversion of the fleet to our ideas. Moreover, we are glad to note that seamanship is improving with time and that FOREST AND STREAM is eminently practical in all it advocates, with perhaps the reservation that it is always a little ahead of the times. Since the fall of last season we have had occasion to observe the new ships and those recently repaired, giving thereby a more effective sail and less weight aloft, while the very latest wrinkle was exhibited by Caprice coming out as a full fledged yawl. She did very well under that rig in spite of the report of the Fleet Surgeon, which set Caprice's mizzen down as a failure, because forsooth she was passed by sloops twice her size and by yachts which always had outsailed her even with a big mainsail boom. But concerning the yawl more anon. It is enough at present to observe that the new ships and those recently repaired, giving thereby a more effective sail and less weight aloft, while the very latest wrinkle was exhibited by Caprice coming out as a full fledged yawl. She did very well under that rig in spite of the report of the Fleet Surgeon, which set Caprice's mizzen down as a failure, because forsooth she was passed by sloops twice her size and by yachts which always had outsailed her even with a big mainsail boom. It is enough at present to observe that the new ships and those recently repaired, giving thereby a more effective sail and less weight aloft, while the very latest wrinkle was exhibited by Capr

guide book of Lake George with maps, will be forwarded to those needing minute information.

Mr. Marvin Truesdell, Hillview P. O., Lake George, N. Y., will erect a booth in the Canoe Camp, and will serve meals at 37 cents each. He will furnish straw for bedding at a reasonable price. Canoeists are requested to bring their tents and blankets.

Upon arriving at the canoe islands canoeists will please report to Mr. Charles A. Cressy, Supt. of Camps, who will assign them their camping grounds.

Regatta Committee. { EUGAN SWAIN, CHARLES F. GARDINER, NATHANIEL H. BISHOP.

Persons desiring to unite themselves with the American Canoe Association can obtain a copy of the Constitution, by-laws and instructions by application by addressing the Secretary. None but *amateurs* can become members. When canoes are used for the purpose of earning money, or for racing for purses, their owners will be considered professionals, and are ineligible to membership in the American Canoe Association. The initiation fee and first annual due ($2.00) should be sent in a registered letter. The first number of the "Canoe Pilot" will be issued in December of the present year. The first annual Association Book, with a list of members, canoes, etc., will be published in the course of a few weeks. Applicants for admission will expect the issue of this work by sending in their membership fees at an early day. More than one hundred members have been enrolled in the Association within the last eight months.

NATHANIEL H. BISHOP, Secretary of A. C. A.

Lake George, Warren Co., New York.

CANOEING IN NEW YORK.

IT is strange why New York has not taken the lead in canoeing, considering population, wealth and unsurpassed facilities of every kind. The paramount institution of this fascinating, clean and interesting sport, the New York Canoe Club, has hardly flourished as it ought, nor has it succeeded in propagating a love for the pastime, which would have redounded to its own strength and reputation. While in the West, and even the East, have been advancing with rapid strides, New York to-day can hardly muster a score of active canoeists—men who really swing the blades and are not content with simply figuring in print on the club books. The Minneapolis, Detroit, Hartford, Cincinnati and other young organizations already equal the older one in point of numbers, and lead it by long odds in enthusiasm and active life. This is not likely to remain so, at least not if we can help matters with our pen. The New York C. C. has now commodious quarters, is free from debt and should be far more popular than the meagre display of boats in its house would seem to indicate. A whole week often passes and not a vestige of life is to be seen about the club house; for aught any one knows there are no owners. Once in a great while a solitary individual with a downcast look wanders in and gets a few hours afloat, then slinks back like a sinner guilty of some heinous crime. It cannot be expected that every one belonging to the club will consider himself an appointed missionary, with the assigned duty of converting every one he meets to his pet hobby in the way of sport, but the members of the N. Y. C. C. enough who have the matter at heart to the extent of giving time and trouble to praiseworthy efforts, and to them the club must look for a brighter future. Nothing can be accomplished without work and a little of that is just what canoeing in this region seems to require. No better location than Staten Island could have been selected for headquarters. It is accessible by ferry every half-hour, comparatively free from tides inshore, protected against all but northerly gales, affords the best basis from which to start short cruises, and is itself a field likely to be profitable to fresh converts to the paddle if efforts were made to bring in the straggling sheep to the fold. We hear that a new pier and float are to be built from the house to the beach, something which needs to be consummated at once to render the quarters of practical benefit to boat-owners. In the meantime the officers should do more than talk and hope if they wish to see tangible results before the winter comes along and again delays everything for another year. Sister clubs, we are glad to see, are springing up and doing well, but, taken altogether, New York has fallen behind lamentably and needs new blood, new boats and all the time and work that can be spared. Brooklyn should have a club, so should Jersey City, Bay Ridge, Bayonne, Yonkers and suburban towns generally. Any person is a likely candidate, for it requires only $50 or $100 for boat and outfit and, with the masses to draw upon for recruits, there is no reason why our vision of a score of clubs in this neighborhood, each counting a fleet of fifty boats or more, should not come true in a very few years from now. In the meantime we announce with pleasure the successful establishment of the Knickerbocker C. C. with a new club house at the foot of Eighteenth street, Hudson River. The officers of the club are wide awake and their earnestness insures prosperity in the future. R. J. Wilkins is Commodore, Arthur Bretano, Vice-Com., and Simon Bretano is Secretary. The club mustered for a cruise on Decoration Day and will attend the Lake George meet in August in a body.

YACHTING NEWS.

☞ *The Southern Yacht Club offers* $1,500 *if a single Northern racing yacht will sail.*

QUESTION OF TYPE.—The type of yacht most prominent is so much the result of measurement by length that we are glad to see the clubs owning small boats making a move to follow the lead of the large clubs in either abandoning such a faulty rule or else setting limits to its ill effects by prohibiting more than a certain area of sail. We do not necessarily approve of such limitation as the best way out of the difficulty, as we would prefer to see the root of the evil—measurement by length—dealt with rather than one of its natural effects. Still as a step in the right direction, the limitation set to sail by the Pennsylvania Y. C. is deserving of approval. Of such importance is this limitation deemed that the club has incorporated this feature in its charter, as follows:

"This certifies that we, the undersigned, citizens of Philadelphia, desiring to associate ourselves for social and recreative purposes, do make and acknowledge this certificate.

"First.—The name or title by which the club shall be known is the Pennsylvania Yacht Club, of Philadelphia.

"Second.—The particular business and object of this club is to encourage the building of yachts, termed tonnish-class tuck-ups and to limit the sails to a size that can be safely carried by the same, thereby doing away with over-canvasing, which has been the chief object of Delaware River yachting. Yachts not to measure more than 15 feet 2 inches in length, 4 feet 6 inches beam and 15 inches in depth amidships. Sails shall not measure more than 44 feet 8 inches around the bolt rope before being stamped, and shall be allowed to stretch no more than 18 inches thereafter, making 56 feet of bolt rope.

"Third.—To encourage social recreation in yachting and the cultivation of a friendly and brotherly feeling among the members of the club.

"Fourth.—The principal rooms and place of business of this club shall be in the city of Philadelphia and the State of Pennsylvania.

"Fifth.—The number of trustees to manage the business of the club shall be five and their place of residence in the city of Philadelphia, Penn.

"Signed—Oscar F. Kern, George Hardman, Charles Meyner, Herman Bassett, George Bosler, Jesse Vandegrift, Walter Gilbert, Enos L. Seeds, Frank Shaw, William Hardman, Jr., Harvey T. Weber, Frank Klusenback, Leslie Wood.

A RETROSPECT.—Now that everything is plain sailing with the proposed America Cup Match, a retrospect showing which journal took the right tack from the outset is instructive. When the challenge was first mooted in these columns weeks ahead of contemporaries, all sorts of objections were raised, culminating finally in a piece of grotesque shoddyism published in a contemporary which turned up its parvenu nose at the idea of a "joint stock racing machine" to sail on upstart little club as as the R. of Q. Y. C. having the effrontery to challenge the New York Y. C. without any more ado. It was even proposed to ignore the matter entirely; but now soon contemporaries were compelled to put about and sing a very different tune is now on record. This, we believe, was effected through this journal, the only one free enough from local prejudice to demand for the Canadians the full recognition to which the deed of trust entitled them, and from which the New York Y. C. could not escape under any pretences without relinquishing their claims as trustees of the Cup. We are therefore glad to know that everything is now smooth sailing, and that our views of the question have prevailed. How absolutely devoid of reason the senseless clamor raised against the Atlanta really was is shown by the fact that to meet that unsound the flag officers of the home club propose to build a thorough racing machine, and a "joint stock" one at that. We propose to continue in our course and see to it that the foreign yacht receives fair play from the press and the public, as she is certain to receive at the hands of the New York Y. C.

A FLEET OF CUTTERS.—Contemporaries still living in antidiluvian ideas will be "thoroughly astonished" by the continually-growing fleet of cutters, in spite of their stale cant of "our smooth waters," "our shoal waters," etc. The most notable thing is that the new accessions to the entire fleet are to the order of gentlemen who have owned the smartest light drafts in America. The testimony of one and all, however, is against their boats for anything but harbor sailing, and they ought to know, for they have had all the chances for observation necessary among both cutters and sloops and, in spite of their natural predilection being in favor of the sloop, have gone over to the other side and have learned by experience to agree with FOREST AND STREAM that cutters of fair beam are the most satisfactory yachts for all-round work. Mr. A. Cary Smith is designing a new one 40 ft. long, two are now building in Greenpoint and two more will be announced next winter. Before long our contemporaries will "talk cutter," just about the time when the sloops are no longer the fashion, say five or ten years after this journal first gave prominence to the whole question of type.

MEASUREMENT ABROAD.—Many English yacht clubs are adopting Mr. Kemp's proposed rule (length square multiplied by beam and divided by twelve hundred) on their own responsibility. The Yacht Racing Association has also called another meeting, at which it is likely some definite date next year will be set when the new rule is to go in force. The Evolution is opening the eyes even of the dullest, and Messrs Watson & Co. are beginning to think a change deserving of a little more "critical examination" on their part, as the present rule simply threatens to wipe out their profession of yacht designing, no talent beyond addition being needed to build one yacht longer than another.

LIVADIA.—A paper read before the Institution of Naval Architects, London, at their last meeting, establishes the fact that the Imperial Russian yacht Livadia is a success economically and otherwise. Then comes the St. Petersburg correspondent of the London *Times* and says it is no such thing. The damage attributed to striking wreckage was really due to "pounding;" that the Russians are disgusted with her; the Czar won't step aboard of her; she is to be laid up to rot with the circular ironclads, and that the authorities already contemplate building a steamer of the usual type to take her place.

A MISGIVE.—So far as an opportunity has been afforded for judging, the yawl rig on the Caprice is pronounced a decided success. We even hear that she is faster than as a sloop, but whether or no, that she is extremely handy, the mizzen taking care of itself and no one noticing, in actual practice, any complication of gear. Those who have sailed in her are delighted with the change, and we already hear of many contemplating the adoption of the rig. Let the small schooners down East shift to the yawl if they want a fast, handy rig for racing or for cruising. The world is moving.

NEW BOOKS.—We have received a little volume entitled "Furydice Among the Pirates, by the Author of "One More Unfortunate." The story is an account of a cruise in a sloop from Montreal to Lake Champlain. It is well-written and, if without stirring incident or technical detail, will serve to incite others not only to go yachting, but to give the public the benefit of their experiences as well. We are also in receipt of Lloyd's Yacht Register for 1881, which will be reviewed at greater length. Readers are in the meantime referred to the advertising columns.

FAST BOATS.—Mr. Thos. Clapham, of Roslyn, L. I., recently sent two yachts of his own model South. We hear that in the regular Savannah spring regatta, May 19, they both did remarkably well, the Zinga beating everything and the Jule coming in a good third. These boats are 24½ ft. long, 10 ft. beam and 3 ft. deep and have long doors and a sharp knuckle at the bilge, the timbers being of straight stuff. He has orders in hand for other boats of the same kind, including one from England.

INTER-STATE REGATTA.—The enterprising yachtsmen of New Orleans have gone so far as to offer $1,500 if a single Northern yacht can be induced to sail on Lake Ponchartrain, and they furthermore offer to make a special match for $1,000 a side on a subsequent day with the stranger. But we fear to no purpose, the "open boat" interests in New York are next to dead.

CHICAGO'S FLEET.—Chicago is gradually acquiring a very respectable fleet of yachts. When once the fever takes a good hold in the West the sport will grow with lightning rapidity. Chicago now owns the large schooners, Idler, Viking and the Countess of Dufferin, of America Cup fame. These, with the large craft of the Royal Canadian, ought to be productive of some international racing.

MARBLEHEAD REGATTA.—The open regatta off Marblehead June 15 promises to draw a large list of entries. From the circular before us we judge the arrangements to be perfect and the management in the hands of competent yachtsmen. Entries should be made to Wm. Bridger, Marblehead, or to Frank H. Brown, 23 Doane St., Boston, who will furnish information also.

FOR SALE.—Attention is called to the advertising columns where yachts and canoes are frequently offered for sale or wanted.

Answers to Correspondents.

☞ NO NOTICE TAKEN OF ANONYMOUS COMMUNICATIONS.

W. S.—For names of reliable guides in the Adirondacks write to Chas. J. Greenough, Ausable Forks, New York, of whom see notice in last issue, p. 330. You can arrange so that members of the party can leave at any time. Map of the Adirondacks $1.

E. S., Smithport, Pa.—I have a bet that brook trout have been taken in the waters of Pennsylvania which have weighed over two pounds: Am I correct? Ans. Yes. They have been taken above that weight although we do not know what the weight of the largest trout ever taken in Pennsylvania waters was. Perhaps some of our readers will give the weights.

FOR MOOSEHEAD, 7 P. M.

Excursion Lists will be ready about June 1.

LUCIUS TUTTLE, GEN. PASS. AGT.
Boston, May 12, 1881.

"THE FISHING LINE."

TAKE THE
Grand Rapids & Indiana R. R.
THE ONLY ROUTE TO THE
Trout, Grayling & Black Bass Fisheries,
AND THE
FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the
Grand Traverse Region.
and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections.

The hotel accommodations are excellent, and will be largely increased in time for the season of 1881 by new buildings and additions.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 180 pages sent free. Time Cards, Folders and further information, address

A. B. LEET, Gen'l Pass'r Agent,
Grand Rapids, Mich.

Fishing Season at Rangeley Lakes Again Open.

Hotels and Routes for Sportsmen.

TO SPORTSMEN:

The Pennsylvania R. R. Co.,

Respectfully invite attention to the
SUPERIOR FACILITIES
afforded by their lines for reaching most of the TROUTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

THE LINES OF
Pennsylvania Railroad Company
also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principle cities to KANE, RENOVA, BRADFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for

Trout Fishing, Wing Shooting, and Still Hunting.

Also, to

TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN; and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

L. P. FARMER, Gen'l Pass. Agent.
FRANK THOMSON, Gen'l Manager. feb17-tf

Chesapeake & Ohio R'y.

THE ROUTE of the SPORTSMAN and ANGLER TO THE BEST HUNTING AND FISHING GROUNDS OF VIRGINIA AND WEST VIRGINIA,

Comprising those of Central and Piedmont Virginia Blue Ridge Mountains, Valley of Virginia, Alleghany Mountains, Greenbrier and New Rivers, Kanawha Valley, and including in their varieties of game and fish, deer, bear, wild turkeys, wild duck, grouse, quail, snipe, woodcock, mountain trout, bass, pike, pickerel, etc.

Guns, fishing tackle and one dog for each sportsman carried free.

The Route of the Tourist,

through the most beautiful and picturesque scenery of the Virginia Mountains to the White Sulphur Springs and other famous summer resorts.

The C. & O. R'y is reached by rail at Huntingdon, W. Va., from the West, Northwest and Southwest; at Charlottesville, Va., from the North and East, and at Richmond, Va., from the South.

The completion of the Peninsular Extension in the summer of 1881 affords

THE ONLY ALL RAIL ROUTE TO THE "YORKTOWN CENTENNIAL,"

and establishes a continuous rail line, via Richmond, Va., and Huntington, W. Va., between the mouth of Chesapeake Bay and the Pacific Ocean.

CONWAY R. HOWARD,
G. P. & T. A., Richmond, Va.

Old Dominion Line.

THE STEAMERS of this Line reach some of the finest waterfowl and upland shooting sections in the country. Connecting direct for Chincoteague, Cobb's Island, and points on the Peninsula, City Point, James River, Currituck, Florida and the mountainous country of Virginia, Tennessee, etc. Norfolk steamers sail Tuesday, Thursday, and Saturday. Lowes, Del., Monday and Thursday at 3 P. M. Full information given at office, 127 Greenwich Street, New York.

Bromfield House, Boston.

EUROPEAN PLAN.
MESSENGER, Proprietor.

TIM POND TROUT FISHING.

The boarding camps at this resort will be in readiness for sportsmen May 20. The abundance and quality of trout, the improvements in camps and boats, the facilities for reaching this pond and the beauty of lake and mountain scenery makes this one of the most desirable resorts in Northern Maine. The proprietor, Kennedy Smith, will give his personal attention to the wants of his guests. The railroads will sell tickets for round trip to Smith's farm in Enstis, and buckboard teams will be ready to haul passengers and baggage from farm to camp at reasonable rates. Board and use of boat one dollar per day. Address KENNEDY SMITH, Eustis, Maine.

SUMMER RESORT.

ON SHINNECOCK BAY, LONG ISLAND

Having added largely to my house I am prepared to take two or three families for the summer. Surf and still water bathing, also good snipe shooting. Good boats and guides ready at all times. Plenty of sea food cooked in best manner.

References—J. B. Shepherd, 691 Broadway, New York. Wm Butcher, 320 Broadway, New York.

Hornbeam Rods A SPECIALTY.

W. HUNTINGTON,
WILTON, CONN.

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly-fishing. Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON as above.

THREAD-WOUND, LONG-RANGE

SHOT CARTRIDGE CASES

For muzzle and breech-loading, cylindrical and choke-bore shot-guns. Made to open just short of 50, 70 and 90 yards, giving close pattern and great penetration. 10 and 12 gauge. Send for circular.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 1lb canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 1lb and 5lb canisters and 6¼ and 12½lb kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern, will be found well adapted for glass ball and pigeon shooting. Made of two sizes, only No. 7 and No. 8, No. 7 being the coarsest. Packed in 6¼lb kegs and 1lb canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 1lb canisters and 6¼ lb kegs.

Dupont's Rifle Fg. "Sea Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ⅛lb, 1lb and 5lb canisters, 6¼, 12½ and 25lb kegs. Fg coarse, FFFg. fine.

Dupont's Sporting, Mining, Shipping and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

F. L. KNEELAND, 87 Beaver St, N. Y.

N. B.—Use none but DUPONT'S Fg. or FFg. for long-range rifle shooting.

A Skin of Beauty is a Joy Forever.

DR. T FELIX GOURAUD'S

Oriental Cream or Magical Beautifier

Removes Tans, Pimples, Moth-Patches and Blemish on Beauty. It has stood the test of thirty years, and is so harmless we taste it to be sure the preparation is properly made. Accept no counterfeit of similar name. The distinguished Dr. L. A. Sayre said to a lady of the *haut ton* (a patient):—"*As you ladies will use them, I recommend "Gouraud's Cream" as the least harmful of all the Skin preparations.*" Also Poudre Subtile removes superfluous hair without injury to the skin.

MME. M. B. T. GOURAUD, Sole Prop., 48 Bond St., N. Y.

For sale by all Druggists and Fancy Goods Dealers throughout the United States, Canadas and Europe. Also found in New York City at R. H. Macy & Co., Stern Bros., Ehrich & Co., I. Bloom & Bro., and other Fancy Goods Dealers. Beware of base imitations which are abroad. We offer $1,000 Reward for the arrest and proof of any one selling the same.

BRADFORD & ANTHONY,

374 Washington Street, Boston, Mass.,

Importers of English Fish Hooks, English Reels, Swivels, Silver Fishing Gimp, Artificial Baits, Spanish Silkworm Gut, Calcutta and Japan Bamboo Poles.

Sole selling agents for United States Fish Hook Works.

Sole selling agents for the Fishing Lines bearing the Trade Mark "Best Quality Hand-Laid Linen and Silk Lines," which received Centennial Medal for "strength and care taken in manufacture."

Sole selling agents for the Patent Adjustable Floats and Sinkers.

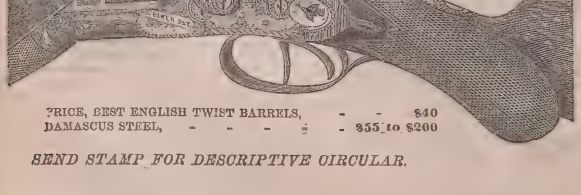
Sole selling agents for Braided Fishing Lines. Trade mark, GLOBE.

Sole selling agents for Enamelled Waterproof Braided Fishing Lines. Trade mark, a silver medal.

Selling agents for the best manufactured Jointed Fishing Rods.

Selling agents for the best Trade List, Brass, Nickel Plated and Rubber Fishing Reels.

Selling agents for Skinner's, Buel's, McHarg's and Mann's Trolling Baits.

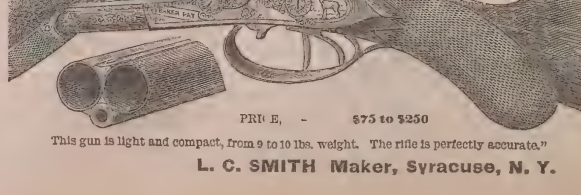


Selling agents for Union Web Hammocks.

$66 a week in your own town. Terms and $5 outfit free. Address H. HALLETT & CO., Portland, Maine.

The Baker Guns.

OUR DOUBLE GUN.



The Best Gun made for DURABILITY —AND— SHOOTING QUALITIES

PRICE, BEST ENGLISH TWIST BARRELS, - - $40
DAMASCUS STEEL, - - - - - $55 to $200

SEND STAMP FOR DESCRIPTIVE CIRCULAR.

OUR NEW MODEL THREEBARREL GUN.

PRICE, - $75 to $250

This gun is light and compact, from 9 to 10 lbs. weight. The rifle is perfectly accurate."

TO CORRESPONDENTS.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen.

Communications upon the subjects to which its pages are devoted are invited from every part of the country.

Anonymous communications will not be regarded. No correspondent's name will be published except with his consent.

The Editors cannot be held responsible for the views of correspondents.

All communications of whatever nature should be addressed to the Forest and Stream Publishing Company, Nos. 39 and 40 Park Row, New York.

FOREST AND STREAM.

Thursday, June 9.

FROM our valued correspondent, Gen. E. W. Rice, of Arizona we learn that the miners and stockmen of Catalina, in that Territory, have combined to suppress the vandalism of the tramps and vagabonds, and with these outlaws they put the scoundrels who shoot the sitting quail and the pregnant doe. A committee of the citizens announce through the press that they mean to protect their property, and they also demand a vigorous enforcement of the game laws. It is evidence of a healthy public sentiment when game butchers are classed where they belong—with tramps and vandals. By this movement, which we take much pleasure in recording, the people of Catalina, Arizona, have shown themselves to have a higher appreciation of decency in respect to the capture of breeding game than can be claimed by many apathetic communities of the older States. On the eastern side of the Rocky Mountains the citizens of Catalina might without difficulty find numerous benighted regions in which is ample room for home missionary effort.

THE HUNTING CARS of the Pullman Palace Car Company have become so popular that the demand for them far exceeds the supply. Last season the applications for these cars were more numerous than ever before, and we presume that for the coming fall the effort to secure them will be equally great. We understand that the Davy Crockett and Izaak Walton have been thoroughly overhauled and renovated since last season, so that they will now be more comfortable than ever.

DIRECT COMMUNICATION between all the standard dealers in sportsmen's goods and purchasers of the same goods is established by means of our advertising columns. The pages devoted to this kind of information are well worth careful reading; everything that the sportsman needs can be obtained by communicating with the firms there represented.

THE ROBIN'S ISLAND CLUB.

THE little island, which has acquired prominence as the scene of the Eastern Field Trials, has just passed into the possession of a club of twenty New York gentlemen, which is styled the Robin's Island Club. The officers of the club are: President, Wm. R Kendall; Vice-President, Dr. J. Fleet Speir; Secretary and Treasurer, Abrm. B. Baylis, Jr. It is proposed to keep the preserve well stocked and cared for.

The new club have acquired a most desirable piece of property. Robin's Island, of which a map was published in our issue of December 2, 1880, divides Great Peconic Bay from the little Peconic Bay and lies in the middle of the entrance to the former. The island lies nearly north by west and south by east and is a mile and three-quarters long, but a large portion of this length is due to the narrow sand spits which extend to the northward and southward from the main body of the island. It is of moderate height and grassy, being destitute of trees, but stunted scrub oak thickets cover the crowns of the hills that rise from the centre of the island and extend to the southward. From the water the island shows steep faces from ten to forty feet high on all sides save to the northward. The soil is sandy as a general thing, but there are several clay pits toward the northwestern shore. The extent is said to be about 500 acres, seventy-five of which are under cultivation. The vegetation is rank, and the rolling hills to the north remind one of those near Reedy Pond on Montauk Point. Salt water grass and bay-berry bushes, with a deal of nasty briers, form the principal cover and make it a hard place for youngsters to run, indeed, a strong lusty dog finds his work cut out for him to make any kind of speed. But there is a large portion of the island to the westward where dogs can be speeded on the rolling hills and where they can be seen at all times.

It was generally understood that the Eastern Field Trials Club were intending to purchase the island for their annual trials. The change of ownership will not, however, we presume, interfere with the successful running of the trials. On this point Dr. Speir writes to us: "Being myself the originator of the club I have kept constantly before the members the interests of the 'Eastern Field Trials,' and I think I can safely say that every courtesy will be extended to them. Anything I can do to advance the interests of the Field Trials I shall do with the greatest pleasure."

A CANOE VOYAGE OF GEOGRAPHICAL STUDY AND SCIENTIFIC RESEARCH.

TWO gentlemen, members of the American Canoe Association and of the Lake George Canoe Club, will start from Lake George at the close of the August meeting, for a canoe voyage of some twelve thousand miles. They will go down Lake George to old Fort Ticonderoga, through the neck of Lake Champlain to Whitehall, thence through the Champlain Canal to Troy, following the Erie Canal to Buffalo, thence Lake Erie to city of Erie, and thence via canal to Allegheny River to Pittsburg. From the latter city they will follow the Ohio river to its junction with the Mississippi at Cairo. They will go down the big river as far as Point Breeze or Turnbull's Island, then taking Atchafalaya Bayou will follow it into bay of same name on Gulf of Mexico.

Up to this point the trip has been simply a passage. Now the genuine work will commence. The coast of this part of the Gulf is comparatively unknown. Cote Blanche Bay, Vermillion Bay, the Mermenton River and lake of same name will receive some attention. Calcassien Lake and River visited, they will paddle to Sabine Pass, through the pass to Sabine Lake. The Sabine River will be explored as far as time will allow, and then away for Galveston, Texas. The bays and watercourses here are so well known that nothing but a passing glance will be given them. Below Galveston comes West Bay, San Louis Pass, and then some forty miles of open coast. A short portage will take them into Matagorda Bay, when they will have a clear inland route to Point Isabel at the mouth of the Rio Grande River. From the latter point there will be an uninterrupted opportunity to study, not from books, but from nature herself. The route from this out abounds in interest to the student—rare birds, unknown plants, beautiful shells, specimens of coral, many-hued flowers, and a thousand and one things to see, admire and study. Following along the coast to Gulf of Campeche, and around to Uxmal River—ascending this river about fifty miles will bring them near to the famous Uxmal ruins, which were probably ruins before the Pyramids were built—around Cape Catoche, past the Island of Cozumel and into the Bay of Honduras. Visiting the principal of the Bay Islands, they will now go on again, around Cape Cameron, past Segovia River, through that wonderful collection of coral reefs and keys that belt the Mosquito Coast. San Juan de Nicaragua is passed, and Chagres is looked over; Carthagena and Point Gallinas are passed, and then comes a perfect network of islands, coral reefs, etc., etc., as far as the Island of Trinidad. Here the voyagers will bid farewell to the continent for awhile, and follow up the chain of the Caribbee Islands as far as Havana, Cuba, when they will strike off across the Gulf Stream to the Florida reefs, and home by the Atlantic coast, expecting to reach their starting point some time in August, 1882. The entire voyage will be made in a double canoe, 16 feet long, 32 inches beam, 14 inches deep. There is no standpoint from which to observe nature so favorable as the cockpit of a canoe, and these gentlemen are disposed to test this fact to the utmost. While on the trip they will be entirely dependent on their own exertions, and the voyage from start to finish will be made by canoe alone. There will be, probably, a large and enthusiastic gathering of canoeists to wish them *bon voyage* at the start, and a larger one to welcome them home in 1883.

NO LIFE IN METEORITES.

AN account is now going the rounds of the daily papers to the effect that traces of organic life have been found in meteorites, and that hence the other members of the solar system are inhabited by living beings. The following extract from the London *Telegraph* gives the substance of the supposed discovery, and we quote it as follows:—

Two interesting problems, which have long perplexed the scientific world, appear to have been at last definitely solved by the eminent geologist, Dr. Hahn. These questions are, first, whether or not celestial bodies, other than the earth, belonging to our solar system, are inhabited by animate beings; and, secondly, whether the meteoric stones from time to time cast upon the surface of this globe emanate from incandescent comets or from volcanic planets. That they at no time formed a part of the earth itself has been conclusively demonstrated. Dr. Hahn has recently completed a series of investigations upon some of the huge meteoric stones that fell from the skies in Hungary during the summer of 1866. Thin laminæ of these mysterious bodies, subjected to examination under a powerful microscope, have been found to contain coralline and spongeous formations, and to reveal unmistakable traces of the lower forms of vegetation. All the organisms, animal and vegetable, discovered by Dr. Hahn in the delicate stone shavings he has thus dealt with indicate the condition of their parent world to be one of what is technically termed "primary formation." But the presence of water in that world is proved by the fact that the tiny petrified creatures revealed by the magic of the lens, one and all, belong to the so-called subaqueous classes of animals. They could not, therefore, have possibly existed in comets, at least if the assumption be correct that these are in a state of active combustion.

This supposed discovery, about which such a pother has been raised, is no discovery at all, and the work of Dr. Hahn merely shows how utterly he has misconceived the character of the material which he has studied. The plates of his volume are beautiful, but they only serve to illustrate the mineralogical nature of the material What he has supposed to represent coralline and spongiform organisms are in fact only concretionary forms which the common minerals of meteorites often take These forms are well understood by mineralogists, have long since been described and are to be seen in nearly all the stony meteorites.

While we know that there are other worlds than ours, and while it is possible that they may support life in some form or other, there is, we believe, as yet no evidence whatever that this is the case.

Somewhat on the same level with this meteorite story is the one recently published by a San Francisco paper with regard to the enormous magnifying power of a large telescope in California. It was said that when the telescope was directed toward the planet Mars, the whole topography of one face of that orb could be distinctly seen. Rivers, seas, lakes and forests were plainly distinguishable, even cultivated fields were known by their shape and color, rectangular ob-

jects were supposed to be buildings, and certain small moving bodies were undoubtedly the inhabitants of the distant planet engaged in the pursuit of their daily avocations.

All of which was good.

THE AMERICAN ASSOCIATION MEETING.

THE thirtieth meeting of the American Association for the Advancement of Science will be held at Cincinnati, Ohio, commencing at 10 o'clock A. M. on Wednesday, August 17. Great efforts are being made by the Local Committee to insure the success of the meeting and, from present appearances, it seems probable that this will be one of the largest and most important scientific meetings ever held in the West. The general programme for the week has not yet been announced, but is in process of preparation and, when completed, will, after having been approved by the Standing Committee, be made public.

The headquarters of the Association will be at the Music Hall, where members are requested to register as soon as possible after their arrival. The hotel headquarters will be at the Grand Hotel, on Fourth street. The offices of the Local Committee and of the Permanent Secretary will be at the Music Hall, where also the general meetings and those of the sections, sub-sections and committees will be held. The special arrangements made and to be made with hotels, railroads, etc., will be announced later.

At the Boston meeting several changes in the Constitution were proposed, which will come up for action at Cincinnati, the object of the changes being the reorganization of the sections, and also to extend the scope of the association. Should these changes be adopted the association will embrace eight sections of equal standing, each presided over by a vice-president, and having its own secretary and sectional committee. The following is the division proposed and upon which final action will be taken at Cincinnati:

Sec. A.—Physics. Sec. B.—Astronomy and Pure Mathematics. Sec. C.—Chemistry, including its applications to Agriculture and the Arts. Sec. D.—Mechanical Science. Sec. E.—Geology and Geography. Sec. F.—Biology. Sec. G.—Anthropology. Sec. H.—Economic Science and Statistics. Also I.—A Permanent Subsection of Microscopy, which shall elect its own officers and be responsible directly the Standing Committee.

Several excursions will be arranged for by the local committee, and will be announced on their circular. Special excursions will be arranged for the Anthropological Section to "Fort Ancient," Madisonville, and other places of interest.

All communications relating to the local arrangements for the meeting should be made to the local Secretaries at Cincinnati, while all matters relating to membership and to the presentation of papers will be attended to by the permanent Secretary.

The following is a list of the officers of the Cincinnati meeting:

President—G. J. Brush, of New Haven, Conn.

Vice-President, Section A.—A. M. Mayer, of Hoboken, N. J.

Vice-President, Section B.—[Dr. Engelmann was elected but has resigned, as he is in Europe.]

Chairman of Permanent Subsection of Chemistry—William Ripley Nichols, of Boston, Mass.

Chairman of Permanent Subsection of Microscopy—A. B. Hervey, of Taunton, Mass.

Chairman of Permanent Subsection of Anthropology—Garrick Mallery, of Washington, D. C.

Chairman of Permanent Subsection of Entomology—John G. Morris, of Baltimore, Md.

Permanent Secretary—F. W. Putnam, of Cambridge, Mass.

General Secretary—C. V. Riley, of Washington, D. C.

Secretary of Section A—John Trowbridge, of Cambridge, Mass.

Secretary of Section B—William Saunders, of London, Ontario.

Secretary of Permanent Subsection of Chemistry—H. W. Wiley, of Lafayette, Ind.

Secretary of Permanent Subsection of Microscopy—S. P. Sharples, of Boston, Mass.

Secretary of Permanent Subsection of Anthropology—J. G. Henderson, of Winchester, Ill.

Secretary of Permanent Subsection of Entomology—B. Pickman Mann, of Cambridge, Mass.

Treasurer—William S. Vaux, of Philadelphia, Pa.

THE JUNE MEETING of the Coney Island Jockey Club promises to be a very interesting one, and the list of events for the nine days racing offers unusual attractions All the prominent stables are well represented in the list of entries published, and there is every indication that the June meeting of 1881 will be a memorable one in the annals of racing at Coney Island. One of the most interesting of all the races to be run at Coney Island this year is that for the Great Long Island Stakes, four mile heats, to be run at the last day of the fall meeting of the club. It is a sweepstakes for all ages, $250 each starter, with $5,000 added; $3,500 to the first, $1,000 to the second, and $500 to the third. To this is added the Woodlawn Vase, to become the property of the subscriber winning the race two years in succession. Entries to close September 1.

CONEY ISLAND.

THE delegates from the different Sportsmen's clubs will be welcomed to Coney Island by a poem of greeting, entitled "Field Sports," written by Mr. Wm. E. MacMasters, of the Albany *Argus* and the Philadelphia *Press*.

Papers on topics within the scope of the State Association have been promised; and it is proposed that these shall be read and discussed at the evening sessions of the convention. A paper by Gaston Fay has the suggestive title, "What Shall We Do About It?"

In response to some inquiries received concerning the feature of the week's programme, the FOREST AND STREAM suggests that the amount of time devoted to such matters will depend wholly upon the choice of the members assembled. We know that the President of the Association has secured the promise of a number of essays, which will serve as the groundwork of conference if anybody wants to confer.

Those members of the New York Association for the Protection of Fish and Game who resented the suggestion in these columns a year ago that that body was at present misnamed, will have an ample opportunity at Coney Island to make good the Association's claim to being a "game and fish protective organization." It is to be hoped that the public may be set right on this point. We shall see what we shall see.

Whatever may be done, if anything, beyond the pigeon-shooting and other contests, the Coney Island meeting of the New York sportsmen will be a memorable one. The whole entertainment will be on a scale never attempted before, and a most beautiful souvenir of the event has been prepared by the indefatigable executive of the society, Mr. Abel Crook, in the shape of an illustrated hand book. This will be a volume, of the current monthly magazine size, of one hundred and fifty pages, and handsomely illustrated. The engraved antique title-page is a real work of art, and the frontispiece—well, that is art, too, in its way, being none other than the famous "Shot 'Em on de Wing," which is loaned for the occasion by the Harpers. The contents of the book will comprise an elaborate history of the State Association, which has been prepared by Mr. Crook, together with the records of the prize winners in previous years; a history of the Long Island Association; an illustrated sketch of Coney Island, past and present; the programme of the meeting; the well-known *Punch* cartoon, "They Will Fly Into It Sometimes," and the cards of the prize donors. Taken altogether the book will reflect credit upon the Long Island clubs and upon those who have been most concerned in its preparation.

The prizes, which are to be contested for, are now on exhibition in the show-windows of the Brooklyn Furniture Company, Nos. 559-565 Fulton street, Brooklyn. The window was arranged under the supervision of Mr. C. W. Wingert, of the prize committee, and the tasteful manner in which it was done reflects great credit on that gentleman. The display surpasses anything of the kind ever seen before, and guns, fishing-rods, silver cups, gold watches, medals, etc., are there in profusion. The prizes on exhibition, Tuesday night, were those secured by the clubs of the western district, although the Washington Gun Club have obtained a number of prizes that have not yet been delivered. The street in the vicinity of the window was thronged with people, all trying to get a glimpse at the gorgeous display, and it is well worth a day's journey to see the exhibition. For the benefit of the delegates coming to the convention, excursion trains will be run on the Erie and New York Central railroads.

THE NEW YORK FISH COMMISSION.—The Governor has signed the appropriation bill giving the Commission $15,000. He vetoed the bill last year, and it was feared that he would do so again. The press of the State has generally urged the necessity of the appropriation. There was great danger of losing the results of the labor of former years at the State hatchery and of making a break in the series of hatchings of shad and other fish. Governor Cornell is a close economist, but he has probably learned that it is not economy to withhold the appropriation from the Fish Commission. The Commissioners have agreed to expend one-third of this year's appropriation on the fisheries of Long Island, which have been sadly neglected. The salt water fisheries have never received the slightest attention from the Commission, and they are worth more than all the rest of the fisheries of the State. It is a matter for rejoicing that our economical Governor has had his eyes opened to what are the true interests of the people in this important matter of food supply.

UNSUCCESSFUL SHIPMENT OF CARP EGGS.—In our last we recorded the arrival of Mr. Geo. Eckhardt, Jr., from Germany, for the purpose of studying American fish culture. Mr. Eckhardt attempted to bring over 100,000 eggs of the leather carp to Prof. Baird. They were packed in the refrigerating boxes which Mr. Mather successfully sent white-fish eggs to Germany in last fall, but on opening them in Washington they were all dead and covered with fungus. Dr. Hessel is of the opinion that they cannot stand a temperature as low as the refrigerator gives. We incline to this opinion also, as the eggs of summer spawning fish do not seem to bear what those of the winter spawners will thrive under.

GUN GROUNDS NEAR NEW YORK.—The Jersey City Heights Gun Club have leased a tract of land, of which they propose to make commodious club grounds. The location is within twenty minutes of the New York Post Office, and as the Club propose to arrange for the accommodation of outside individuals and clubs the new grounds will prove a very decided acquisition to the gunners of this city. It will be just the place to run out to try a new gun, to test one's skill with the glass balls, and to repair for an afternoon's target shooting. The grounds will be opened within a short time, when further particulars will be given in these columns.

METALLIC CARTRIDGES.—We are informed by Messrs. Hartley and Graham, of this city, that Judge Lowell, of the United States Circuit Court, has rendered a decision in the case of the Union Metallic Cartridge Company, of Bridgeport, against the United States Cartridge Company, of Lowell, Gen. B. F. Butler, President, on the Allen Header Patent, sustaining the patent on every point. This suit was commenced in 1874 and covers one of the most important principles in the manufacture of metallic ammunition. It is used by the principal cartridge manufacturers in this country and Europe, and by most of the Governments.

THE bill known as the Armstrong Bill having passed at Albany, and been signed by the Governor, is now a part of the game law of this state. We publish its most important provisions to-day, and will supplement them with the remainder next week. Whatever merits or defects this new law may be thought to have, one thing about it, at least, gives satisfaction; that is the conspicuous absence of any thing like the "refrigerator amendments" which the market-men of this city attempted to foist upon us.

FISHERIES EXHIBITION FOR SCOTLAND.—The English Exhibition at Norwich has been a grand success, and it is now proposed to hold one at Edinburgh, in April, 1883. This is one of the most important points in Great Britain to hold such an exhibition. The Scotch herring fisheries are of the greatest value, and the whole fishing interest of Scotland centres in Edinburgh.

THE members of the Michigan Sportsmen's Association are rejoicing over the adoption of the game bill which they prepared, and for the passage of which they have been working. The new law is, therefore, the result of their concerted, systematic and persistent effort.

THE PRIZES in the coming New York State shoot aggregate $12,000. In solid worth they have never been equaled by those of any other shooting in this country. Coney Island may some day become the Monaco of America

THE PLAN of the Middlesex, Conn., GAME Association, as detailed in our issue of May 26, is recommended to the attention of sportsmen who are about to organize game protective associations.

THE name of *Scribner's Monthly* is to be changed to *The Century*. The magazine has over a hundred thousand paying readers now; with its new name may it have another hundred thousand.

SOME further particulars of the Gaston Club are given in our game columns.

GOLDEN OPINIONS.

WE give a very few—say one in ten thousand—of the opinions, more or less approving, eulogistic and encouraging, which come in the FOREST AND STREAM'S mail, from all the four quarters of this Yankee nation, and some also from Queen Victoria's Dominion across the line. However gratifying it might be to our personal vanity to publish all the flattering letters we receive, such a task would involve too great a tax upon our space, and we must, therefore, content ourselves with the following. We are assured that the regular weekly issue of this journal is its own best voucher. If we may believe the kind words of old and new friends it is now universally conceded that in the successive volumes of the FOREST AND STREAM *is contained the best sportsmen's literature ever furnished by any publication in the world.* Read what is said of the paper:

BETTER THAN EVER BEFORE.

The title page and index of Vol. XV. came as bright as a dollar, and fully as valuable. I have every number of the FOREST AND STREAM and the ROD AND GUN in all their changes ever published, and prize them highly, but would consider them comparatively valueless without the index. I think FOREST AND STREAM better to day than ever before.—E. S. HOLMES (Grand Rapids, Mich.)

MARKED SUCCESS—STEADY IMPROVEMENT.

I have introduced the FOREST AND STREAM in many localities throughout the United States and the Canadian Dominion, with the object of assisting by my mite (or might) the establishment of a sportsman's paper of higher tone than previously published on this continent, and hope that its financial success has proved commensurate with the marked success and steady improvement in other respects.—EVERETT SMITH (Portland, Me.)

A SINGLE DEPARTMENT WORTH THE PRICE.

I have been a constant reader for the past four years, and esteem your journal very highly. The original articles in Natural History are alone worth many times the price to all true sportsmen who haunt forest and stream for instruction and recreation rather than to "kill, burn and destroy."—J. T. C. (Victoria, Ont.)

BETTER EVERY YEAR.

I have taken the FOREST AND STREAM for some time; have become very much attached to it, and think it grows better every year.—D. S. (Lebanon, N. H.)

ADVERTISERS HEAR FROM IT.

We are receiving very flattering results from our advertisement in your paper, in fact we should have written you before but for the great number of answers we have had to write in regard to the boats.—HUNT & Co. (Chagrin Falls, O.)

IS DOING MAGNIFICENT SERVICE.

The FOREST AND STREAM is doing magnificent service for sportsmen and the public generally. It is courageous in defence of prac-

tical things and ideas, and its fidelity is as conspicuous as its wisdom. It is *the* sportsman's—not sporting—paper of America; one that every family can read with profit, for it is ably edited, clean, interesting and educating. It is one of the best of natural history teachers to be found. Every one of its several departments is complete in every respect, and each is edited by a gentleman who has made its subject a life-study.—*Syracuse, N. Y., Journal, May 18, 1881.*

A FIRST-CLASS JOURNAL.

The card of FOREST AND STREAM in our advertising columns should attract the attention of all sportsmen who want to read for 1881 a first-class journal devoted specially to the subjects connected with the sports of the "Rod and Gun." We have read it for years, and can speak of its merits understandingly.—*Germantown Telegraph, Jan. 12, 1881.*

DEMANDS PATRONAGE OF BEST SPORTSMEN.

I recognize in FOREST AND STREAM a journal worthy of and demanding the liberal patronage of the highest and truest type of American sportsmanship.—H. B. RONEY, late Secretary Michigan Sportsmen's Association.

IT IS THE PAPER.

I have now taken the FOREST AND STREAM seven years. Every week I look forward with pleasure to the day on which the mail shall bring me my paper. Although passionately fond of hunting, yet I get very little time for indulge in this sport, and as the next best thing I like to read in your paper about the experiences of sportsmen, and keep myself posted on sporting matters. I regard the FOREST AND STREAM as *the paper* for American sportsmen.—W. M. D. (North Cambridge, Mass.)

NO PAPER CAN TAKE ITS PLACE.

There is no paper published which can take the place of the FOREST AND STREAM in the estimation of gentlemen who have the time and talent to enjoy the sport of the field, the forest and the stream. Besides the matters pertaining directly to these sports, there is a vast fund of information valuable to all gentlemen, whether addicted to out-of-door recreations or obliged to pass their lives in sedentary occupations. Time spent in reading this paper is well spent, and no one who reads and reflects will fail to be profited thereby.—*Bay City, Mich., Tribune, March 4, 1881.*

FLOODS OF ANSWERS TO "ADS."

I am going to let my "Ad." stand in FOREST AND STREAM. I often get a letter with the card cut out, showing it to be an old paper, perhaps a year or more old, so I know that it pays to keep at them all the time in season and out. I have received 385 letters in three weeks. Last mail brought me twenty-five in a bunch.—J. H. RUSHTON, Canton, N. Y.

HAD TO HIRE AN EXTRA CLERK.

I have had to hire a clerk who was kept busy with answering letters received through my advertisement in FOREST AND STREAM. —HENRY PIETCRASS, Greenpoint, N. Y.

A REASONABLE INFERENCE.

The FOREST AND STREAM must have a very large and honorable body of subscribers, I should judge from the result of a little advertisement which I inserted in that paper at so trifling a cost a short time since. But this is certainly no more than it deserves judging from the large amount of valuable and interesting information contained in its pages.—G. T. C., Buffalo, N. Y.

HAS COME TO THE FRONT.

It comes as a welcome visitor to our table, and every time has something in it both instructive and entertaining. Since Fred. Mather took charge of its "fishing columns" it has come to the front.—W. D. T., Chicago, Ill.

ITS INFLUENCE HEALTHFUL.

Although only twenty woodcock seasons have passed over my head I take an ardent interest in field sports. I am indebted to your instructive and well-doing paper for the greater part of the inspiration I feel for manly sport. If more young men took your valuable paper instead of whiling away their time on some worthless publication they would be wiser and better in the end.—B. A. M. (Austin, Minn.)

THE FOCUS OF SPORTSMANLIKE SENTIMENT.

I appreciate the FOREST AND STREAM. I believe you every week focus the sportsmanlike sentiment of the country, and in turn radiate the same out to the ends of our land. You are doing a good work in a manly way. *Macte virtute.* I read every paper through, advertisements and all; and I like the whole thing, even to the tint of the cover.—W. W. T., Jr. (Portland, Me.)

KENNEL ADVERTISEMENTS TELL.

My advertisement in the FOREST AND STREAM was well placed. I received correspondence from Maine to Texas.—J. F. J. (Haverhill, Mass.)

GIVES PROMINENCE TO REAL SPORT.

Please renew my subscription for one year. I find little time to shoot, but make up in part such lack of a good time in the field by reading your paper, which I am happy to see gives increasing prominence to matters of real sport with rod and gun.—L.

BEHOLD HOW GREAT A FLAME A LITTLE FIRE KINDLETH.

Please insert inclosed advertisement in some seldom looked at corner of your paper, as I have really suffered before by the many responses to my former advertisements. I keep an accurate kennel account, and was looking over it the other day to see how much it cost me to sell dogs through advertising in the FOREST AND STREAM, and I found that it cost me about ten cents for each dog sold. Could I have filled my orders received through your paper this cost would have been reduced to about five cents per dog. We would be suspicious of a commission merchant who should offer such low terms, but we have full faith yet in the FOREST AND STREAM. All my orders, save a few from local parties, were through the FOREST AND STREAM.—N. ELMORE (Granby, Conn., June 6, 1881).

GAME IN KENTUCKY.

MILL SPRINGS, Ky., May 25.

GAME came through the winter apparently as little reduced, numerically, as after a season as remarkable for its mildness as was the past for its severity. Probably due in a great measure to the fact that there was almost no shooting by sportsmen as a polar temperature nipped the early hunter in the midst of his preparations. Turkeys, partridges and especially squirrels are abundant. Quail are by no means annual tenants of the mountain small farms, but this spring there is scarcely a grain patch without its pair. Red foxes are multiplying alarmingly since the repeal of the scalp law, and the audacity of their open day raids on poultry yards keeps many good dames in a state of nervous solicitude about their darling ducklings and goslings. The hares are unfortunately too wily for reynard, or have become infected with the emigration mania and sought prosperity in localities convenient to pea and cabbage crops, upon which their regular forays are becoming a nuisance, exasperating gardeners of even Joblike forbearance. Hawks are very numerous, and sagaciously hold off until either one has fallen asleep on guard or the shotgun has been returned to its corner, when the hubbub amongst the old guineas and chickens informs you that another Methodistic tidbit has been unfeelingly snatched away in the "bloom of youth."

Attracted to the door a few mornings since by the "racket" of crows, martens and bluebirds, I discovered that they were harassing a huge hawk, and catching up my rifle I rushed to the fray. Before I got in range his enemies routed him, and as he flew over the yard I gave him a salute which he acknowledged by dropping almost at my feet a full grown squirrel, which bore only the marks of his talons. It proved a savory addition to a dish of broiled beefsteak at dinner.

KENTUCKIAN.

The Sportsman Tourist.

NOTES OF AN ANGLER IN THE NORTH.

BY FAIRCHILD, JR.—PART SECOND.

FOREST BIRDS.

THE silence and solitude of the great northern forests is rarely broken by the blithesome song or presence of birds, yet in the trackless wilds of the far interior I have made the acquaintance of several rare and interesting species by habits of close observation. They are an unobtrusive family, as their predilection for the deep forests attests, and not much inclined to court the society of man, though there is one noteworthy exception to this rule, as I shall presently show. So full are they of the immensity and grandeur of these sombre old woods, that it has imparted to them a sober, quiet thoughtfulness, a joyous peal of light-hearted melody being rarely heard—not that they are gloomy or morose, but only earnest, intense, finding life something more precious than an idle holiday to be spent in frivolity. They no doubt also feel a quiet thankfulness in their escape from the manifold dangers that encompass their less thoughtful brothers of the field from the predatory attacks of hawks, crows, reptiles and man. The latter, by the way, ceases to be a foe of the small feathered race as soon as he is beyond the pale of civilization; the former rarely extend their journeyings beyond it.

There is a little dun-colored bird that has a call that sounds precisely like the thud of an axe in a log. The imitation is so exact that I have several times diverged from my course to find out who was encamped near by, to be suddenly recalled to a knowledge of the chopper by hearing the sound repeated in another direction as my shy little feathered friend flew off at my approach. There is still another little inhabitant of the forests, not in good repute, however, with old bushmen, as its presence and short, querulous k-a-t-e is said by them to be followed by a storm. It defies the severest cold of the long Arctic winter. It is called the red-bellied nuthatch (*Sitta canadensis*).

The snowy owl—the great northern hunter as it is aptly named—the barred owl and the cinereous owl are to-day only stragglers into the depths of the forests, adventurous travelers, though their forefathers were dwellers therein. Their change of habitat has been brought about by the greater abundance of food to be procured upon the outskirts of the settlements or the barren lands. The northern hare, upon which the snowy owl and the cinereous largely subsist, has multiplied ten-fold within the boundaries of civilization, as has also the ruffed grouse. The barred owl is said to have the curious habit of burying its body in the soft snow, the large head conspicuous by a pair of bright black eyes only appearing above the surface, forming a grotesque sight.

At rare intervals I have had my camp intruded upon by one or the other of these owls, who, having satisfied its traveler's curiosity, uttered its blood-curdling, sleep-destroying cry, would betake itself again into the quiet shades of night.

Twice in mid-winter I have seen a pair of ravens circling high in air over the frozen lake. At times, uttering their hoarse croaks, they appeared the embodiment of loneliness. What could have tempted them from the sea-coast to the far interior I know not.

The woodpecker family is about the most fully represented one throughout the forest region, the most conspicuous, both for its size and rich markings, being *P. pileatus*. It is by no means common, though widely distributed. The woodpeckers play an important part in nature's economy. By their perforations in the trunks of dead trees they hasten their decay and fall. Four species winter in Canada, but during the prevalence of severe cold they entirely disappear; a slight thaw, and they are again actively at work. I have been led to think from this that they might hibernate for short periods.

The exception to the shyness of the forest birds to which I previously alluded is the Canada jay, alias whiskey jack, moose bird, etc. It is about the size of the blue jay, but unlike its congener, its plumage is of a dull, leaden color, and its song a soft continuous warble. I have never camped in the wilderness winter or summer that I have not had a visit from a pair of these singular birds. Fearless of man, they would take up their quarters on the nearest twig to the fire and watch their opportunity to steal whatever was left unwatched a moment. Growing bolder each day we remained, they would alight at our feet and scramble and quarrel for the tidbits thrown to them and otherwise cut up such queer sober antics as to constantly excite my risibles. It is said to breed in midwinter, but if such is the case the male must relieve the female upon the nest, as the germ in the eggs would perish upon the least exposure to the intense cold. I am rather incredulous about this, as I am about the stories that are told concerning its ability to capture fish in the water like a kingfisher.

The aquatic are a numerously represented family throughout the lake region where they breed, and in the early fall the angler, while fishing, obtains many a chance to bag a few ducks to add to his bill of fare.

THE RED SQUIRREL.

If there is a sedateness and sobriety on the part of the forest birds, the levity and volubility of this little denizen of the coniferous forests enlivens the general gloom. Summer and winter it is equally cheerful and active. While its favorite haunts are in the deepest recesses and solitudes of the wilderness, it is becoming a frequent visitor and resident of the settlements. The Indians of the lower provinces have a very pretty little legend about the red squirrel. According to this the squirrel was once upon a time a very large and ferocious animal much feared by the people, but the good Manitou, desirous of conferring a mark of esteem upon one of the old men of the tribe, asked him what it was he most desired. The reply was, "To have this mighty squirrel made smaller." The Great Spirit at once granted the request, and the old man going forth spread out his arms and commanded the squirrel to become smaller, and immediately it was reduced to its present size. This is the reason assigned by the natives for its querulousness upon the sight of man, its old enemy.

This little chatterbox is given to migrating occasionally, and if in the course of its journeyings it comes to a lake or a river it takes to the water unhesitatingly and appears as much at home in it as its first cousin the muskrat. In the coniferous woods the red squirrel lays by no provision for the winter, but depends upon the cones to furnish it with a sufficiency to carry it through the long months of snow and ice.

COUREURS DE BOIS.

To such lamentable straits were the Canadian *noblesse* reduced, about the middle of the seventeenth century, by their improvidence and the frequent depredations of the marauding savages, that their younger children went half-naked, while their wives and daughters were compelled to work in the fields. The sons of these mendicant *seigneurs*, with more energy, perhaps, than their sires, but with the same disinclination for honest labor in the fields, banded together in small parties and struck out into the wilderness to trade with the Indians for beaver skins or to trap them on their own account. I have a suspicion that a too close ecclesiastical supervision, and frequent penance for the freaks of young blood, may have hastened their departure, but upon this point the records are silent. In vain did the Governor proclaim their proceedings illegal and threaten outlawry against them; equally vain the threats of excommunication thundered after them by the Jesuit fathers and the Recolleto; the taste of the freedom and license of the camp-fire was far more potent, and defections from the ranks of the younger men in the colony still continued until it was estimated that over eight hundred of them was engaged in the "nefarious" pursuit of the beaver. Animated by a spirit of adventure, they penetrated the great unknown wilderness from the shores of the St. Lawrence to the Hudson's Bay. Many of them contracted alliances with the dusky maidens of the forests and acquired considerable influence in the councils of the tribes from which they took their squaws, and in time became almost as savage.

Once a year it was their custom to repair to one of the French towns. Francis Parkman thus describes the return of a party of these gentry from their rovings.

"Montreal was their harboring place, and they conducted themselves much like the crew of a man-of-war paid off after a long cruise. As long as their beaver skins lasted they set no bound to their license. The new-comers were bedizened with a strange mixture of French and Indian finery, while some of them, with instincts more thoroughly savage, stalked about the streets as naked as a Potawattamie or Sioux. Drinking and gambling filled the day and night. When at last sober, they sought absolution from the priests and once more disappeared within the shades of the forest."

After the conquest of Canada the Hudson's Bay Company sprang into vigorous being, and the *Coureurs de bois* at once found their alloted place in their service. Of late years the Company has dispensed with the services of many of these forest rangers, who have returned to the villages of their birth, and, marrying, have settled down on a bush farm upon the edge of that wilderness they love so well. The domestic ties are not sufficiently strong to wean them from their first love. Old Jean Le Blanc is a good example of his race. When the frosts of autumn have tinged the mountains with a thousand dazzling hues Jean becomes uneasy and restless. At all hours of the day he may be observed at the corner of his little log house, that commands a view of the forests, blowing thick clouds of smoke from his short, black pipe, and taking observations. Some fine morning he is seen entering the edge of the bush, old flintlock under his arm, snowshoes slung over his shoulders, together with his small pack of traps and other necessaries. What becomes of him afterward no one knows; but early in spring he reappears smelling strongly of smoke and drawing behind him a very heavily laden traineau, the proceeds of his winter work, the skins of the caribou and moose that have fallen before old flintlock; and the pelts of beavers, minks and martins to his traps.

Jean is a good trapper, a poor shot; he is full of the lore of the bush, but ignorant of everything else; superstitious as the Indians among whom he has so long dwelt, and as full of omens, but considers himself a good Catholic; cheerful and as light-hearted as a schoolboy, he is envious of no man.

[TO BE CONTINUED.]

THE LAND OF THE SIOUX.

THE first day of October, Dr. C—— and myself boarded a C. and N. W. train bound for the far Northwest. As we glided along over the smooth steel rails and began to realize that the noise and smoke of the great city of Chicago was rapidly fading from view, what a quiet, grateful sense of relief stole over us, for had we not a month before us, a month we could devoteto buffalo, deer, antelope, geese, ducks and—rest! We almost felt that a score of years had fallen from our heads, and that we were "boys again." I often wonder if only those fortunate individuals imbued with a great love for nature's solitudes and handiwork ever enjoy this delicious feeling, if not they miss one of the keenest and most subtle of life's fleeting joys.

We had in view the game fields contiguous to the N. P. R. Like all lovers of the rod and gun we were desirous of finding a sportsman's paradise, and where were we more likely to find it than in "the land of the Sioux?" We made brief stops at St. Paul and Minneapolis, but long enough to meet several gentlemen fond of like pursuits, among whom was the evergenial Charles Hallock. Mr. Footner, the obliging superintendent of the N. P. Ex. Co., we found anxious to do all in his power to assist us, and as he is very expert with the implements used by sportsmen he knows how to do it. We can say for the whole management of the N. P. that they are generous and obliging to the sporting fraternity, in strong contrast to some Eastern railroad officials I could mention. After leaving St. Paul our first stop was at Perham, about the centre of the "park region" of Minnesota, so called from its farcical resemblance to our city parks. Here is a vast country, several hundreds of miles in length on the south, reaching into Northern Iowa, and northwardly far toward Manitoba. It consists of a high, undulating prairie, diversified by thousands of lakes of clear and limpid water, frequently so near to each other as to hardly admit of a roadway between them. Scattering oaks dot the surface of the land, with here and there a beautiful grove. The ground is covered with luxuriant grass, set off with hundreds of varieties of prairie flowers. It is perhaps needless to say that these lakes are stocked with apparently inexhaustible quantities of black bass, muskalonge, pike, pickerel and the various smaller fishes indigenous to this latitude. Otter Tail Lake, one of the largest, contains, in addition, whitefish. In many of these lakes wild rice is found in abundance. Otter Tail county is said to contain over nine hundred lakes, most of them nameless.

Here we luxuriated on the most delicate and gamiest of fish, and the plumpest of mallards and teal. The sharp-tailed grouse are also quite common. Deer are occasionally found, but withal we cannot say that we found it the paradise of which we had so forcibly dreamed, for "there is no rose without its thorn." We found a very sharp thorn in our guide; he knew too much. His superabundant knowledge

seemed to be as conspicuous as his dislike for hard work. How many of us have fallen into the hands of his counterpart! So when the great October snow storm struck us, eighteen miles from the nearest railroad station, we were obliged to depend on our own resources to extricate ourselves. It took us a week to do it.

To lovers of the rod and gun this region offers many attractions. The canoeist, or parties with light boats, can traverse this entire system of lakes finding royal sport, with picturesque and ever-varying scenery.

Its altitude averages about two thousand feet above the sea, its climate healthful and invigorating. A few pioneer settlers are found here and there.

Our next halting-place was at Fargo, the thriving young metropolis of the valley of the Red river of the North. This busy little city is already the centre of a large trade. It lies in the eastern edge of Dakota, and furnishes supplies for the wheat growing interests so rapidly developing in Northern Dakota But as our business is with the buffalo, deer and antelope of the vast plains beyond, we take the train for the far West

After leaving Fargo, the lakes and watercourses begin to show a strong solution of alkali. Geese and ducks by thousands could be seen rising from them, as the noise of the train startled them from their feeding grounds. Geese seem to delight in alkaline waters. I have seen them in thousands feeding in the shallow alkali lakes among the mountains of Wyoming and Montana, even as early as the month of August.

After a few days spent in the vicinity of Crystal Springs, which seem to be the headquarters of the Northern Pacific for wild geese, we went on to Bismark. This place, at present, is on the border. Beyond, the vast limitless plains stretch out, uninhabited and almost unknown to the white man. Within a few months it was not healthy for a white man to show himself out of sight of the railroad line. Much of this territory seems to be identical in character with the rich lands of Eastern Dakota. About two hundred miles west of Bismark we reach the bad lands. Here the scene changes. Vegetation almost ceases. The little Missouri flows through them in a northerly direction. Here could be seen antelope in thousands, gracefully bounding away from the approaching locomotive. Here, too, is the last resort of the buffalo, and following them like a Nemesis are the white and copper-colored butchers who, unless soon restrained, will exterminate them. Cannot and will not Congress, before it is too late, take means to put a stop to this reckless carnage, or must this noble animal become extinct?

Doubtless another season will see hundreds of sportsmen taking advantage of the completion of the N. P. to the Yellowstone to take a trip to that wonderful game resort. The head waters of the numerous streams that contribute to the formation of the Yellowstone still abound in a great variety of large game. In the autumn of 1878, in a somewhat extensive trip over this region, I saw herds of elk daily quietly grazing in the valleys and on the mountain sides. Antelope were rarely out of sight. Grizzly, cinnamon and black bears were frequently met with—mountain lion and mountain sheep occasionally. This region seems now to be the last great game preserve of the continent. The streams are full of trout, and it is in reality a sportsman's paradise. But our month had expired. We had no time left to visit the far-famed Yellowstone, so we have gone back to business, and must defer this pleasant trip till another season.

Chicago, January 7, 1881. H. L. STORY.

CATCHING WILD HORSES IN TEXAS.

SOME TIME since as we were returning from a hunting expedition on the plains of Texas toward evening, we came upon a wagon trail, and as we were by no means certain of our locality we concluded to follow it.

Going but a short distance we came to a ranch, and riding up we found the owner at home, and to our surprise an acquaintance, a Mr. Woods, whom we had met in Fort Griffin a few weeks before.

He gave us a hearty welcome, and as there was plenty of room outside the house if not in, we accepted his invitation and went into camp near his wood pile, that being about all the accommodation we wanted.

Staking out our ponies, and making a rousing fire, supper was soon ready, and as we had a good one, I invited Mr. Woods to join us and take a cup of coffee with us.

After supper was over, the table-cloth—I mean the rubber blanket—shaken out, our plates wiped off with a piece of flour sack, the frying-pan turned upside-down to keep the dogs from eating the grease out of it, and a large armful of wood thrown on the fire—for there was nothing mean about my man in making a fire when he did not have to cut or carry the wood—we were ready for a chat.

Our host filled his pipe, and after a few puffs proceeded to give us an account of his capturing a herd of wild horses a short time before. As I was interested in it, I thought some of the readers of FOREST AND STREAM might like to hear of it.

Mr. Woods had noticed several times during the winter a small herd of horses, feeding not far from the ranch, and determined to try and capture them.

From his account of their habits it would seem that they always feed on a certain range, and that if driven they will go to the extreme end of it, then make a circuit and return to about the place they started from.

In the early spring, when the grass is short and consequently the ponies are poor and weak, is the time selected, as during the summer it would be almost impossible to ride them down.

The first preparation necessary being the building of a strong corral, he selected a place in a thick grove, on a trail leading to a water-hole; here he built his corral, leaving an opening where the trail entered, which he closed with a strong gate. The entrance he made V shaped, running out for forty yards on either side of the trail a strong fence of brush and stakes. Concealing all as much as possible he was ready to begin the drive.

This preparation took three days, with the help of two men.

They then selected four of their best horses. Packing a few days' rations and a little corn on one of them, they started out in search of the herd.

They sighted them about noon, five or six miles from the corral. Halting, Mr. Woods mounted his best horse. Putting a few quarts of corn into one of his saddle pockets, with a few days' rations of bread in the other, and filling his canteen with water, he was ready for a long ride.

He directed his men to camp where they were, and have their horses saddled by daylight ready to relieve him, as he expected to pass about that time.

The herd had all this time been quietly feeding about a mile off.

As Mr. Woods rode toward them they started off on a run; keeping after them, they ran a mile or two, then came to a walk and allowed him to ride within a quarter of a mile of them, when they again started off on a run, he keeping after them as before, never allowing them to get out of his sight.

They kept on a run all the afternoon until toward evening, when they came to a walk, seeming to think it was no use trying to get away from the strange horse that was always following them. He did not press them, keeping about a quarter of a mile behind, but giving them no time to stop and feed, feeding his own horse a little corn as he went along out of his saddle pocket.

Toward night the herd went to water, but Mr. Woods gave them no time to drink much, although allowing his own horse to drink all he wished.

The night was clear, with a moon, so there was no trouble in keeping them in sight.

By this time the herd seemed very much inclined to stop, and would allow Mr. Woods to ride within a few hundred yards before they would move on. He kept after them until toward morning, when it became cloudy and dark, so that he lost sight of them; he therefore stopped, unsaddled and fed his horse, ate some supper, and, wrapping himself in his blanket, was soon sleeping.

When he awoke the sun was shining brightly, and on looking around he saw the herd feeding only a short distance away.

Saddling his horse, he was soon after them.

They started off on a brisk gallop, but Woods kept up, and they soon got tired and came to walk.

He kept them on the go as before, always keeping within a few hundred yards of them, and giving them no time to feed, but feeding his horse with a little corn as he rode along.

Toward noon they were approaching the place where his men should be to relieve him, they having made a turn in the night, and were now on their way back toward where they had been started from.

Woods kept a sharp look-out but could see no one, so he kept on all day.

By night he could ride within a few yards, and they had not indulged in a run for some time; he was very tired but kept on, still hoping his men would come to his relief, but no help appeared, and toward morning his horse gave out and he had to give up the chase. Taking the saddle and bridle off he turned his horse loose, thinking there was no danger of his going away, ate his last ration, rolled himself in his blanket and went to sleep.

He woke at daylight, and looking around for his horse found he had gone off. He was certainly in rather a bad fix: but determined not to lose all his labor, he threw his blanket on a bush to mark the place where he had left his saddle; he started after the herd on foot; they were lying down only a short distance off, and as he came up started off on a run, but only kept it up for a short distance, then came back to a walk, so that there was no trouble in keeping up with them.

About eight o'clock Woods saw his men coming toward him with a horse; they had been out looking for him during the night, but seeing nothing of him went back to camp.

In the morning they found his horse near camp, so knew he could not be far off, and started with a fresh one to find him.

Mr. Woods thought that the ponies were so nearly exhausted that they could now pen them. Sending a man out on each side of the herd and bringing up the rear himself, they drove them slowly toward the corral, which was only five or six miles off.

They worked them slowly toward the trail which led to the corral, and when they struck it they started off in a canter, making for the water; the men kept after them and they trotted along, following the trail between the wings, without seeming to notice them, right into the pen. Mr. Woods kept close behind, and closed the gate after them.

He had the herd now safe, and after a short time more of fasting for them, they were tame enough to handle with safety. They then lassoed them, and hobbling securely turned them out to feed.

Toward night they were driven to the ranch, and they found they had fifteen good ponies besides two mules; the mules were branded U. S., and had evidently been abandoned by some government expedition on the plains; they were the wildest and hardest to handle of the herd.

In about two weeks Woods had most of the ponies broken to ride, that is, broken in a Texas sense. Some were very fine, and he sold most of them for a good price. The mules he broke for himself, and they turned out a very poor pair.

H.

WINOUS POINT CLUB.

IN nine cases out of ten, a long anticipated and impatiently expected week over decoys and behind blinds turns out like a precocious child with a big head; wonders are predicted of it, but, alas! it too frequently shrivels up and dies of water on the brain. Ducks don't fly, weather too warm and wind not favorable often wreck our fairest visions; and after three or four hours behind the best blind, with all his good nature frozen out, one readily realizes that weather and wind have much to do with successful duck-shooting, amply confirming poor Joe Long's oft-repeated advice, "Who are wise and would make the biggest bags must freely consult Old Probs and their own barometer."

With this experience and advice we started on receipt of a letter from "El-Liv-Ves" (the man who never smiles), which Finnegan triumphantly showed us, with the sententious remark, "That's the stuff," and were soon gliding along the Lake Shore Railway from Buffalo toward Sandusky.

The Bay of Sandusky has an extent of over 30,000 acres of marsh, which furnishes feeding ground in the fall and spring for millions of ducks and geese. Wild celery grows in the greatest abundance, and here the canvas-backs flock in great numbers. Twenty-six years ago a few old sportsmen of Cleveland, appreciating the immense advantages of such a locality, purchased and otherwise obtained control of over 5,000 acres of marsh and meadow, and at Winous Point, on Mud Creek, an affluent of the bay, erected their modest shanty. From this nucleus has grown the elegant and comfortable buildings of the Winous Point Club, limited to thirty members, now owning and leasing over 13,000 acres of the finest duck, snipe and quail ground in the West, and valued at over $100,000.

Barring the incident of a smash on the Lake Shore at Nottingham, that lost the lives of the engineer and fireman and destroyed $25,000 worth of railroad property, we arrived at Cleveland in due course, spending the night in the hospitable house of one of its oldest citizens. We took the early train on the following morning, and with the addition of another old Nimrod to our party, we arrived at Port Clinton at ten o'clock.

The kindly phiz of George met us at the depot, and after seeing our impedimenta stored for a sled transfer over the mud roads to the Club House, Finnegan, Sore and the writer started by the new route for the Point. How many times Mike lost his overshoes, how many dams Finnegan scaled and rested on with the plaintive inquiry, "How long, oh, how long?" and how straight Sore guided us through mud, slush and water, to the big, warm, comfortable lounging room of the Winous, and its old fashioned fireplace filled with four logs, I'll not now narrate Suffice it to say we reached there at last, and were amply repaid for the weary trip by one of George's best dinners

The club has two large substantial buildings containing some thirty sleeping rooms, with the necessary addition for kitchen, dining-room, laundry, etc. Adjoining the house is the tank house and boat house, in the former of which are the necessary counters and benches for loading, cleaning, etc., with tanks or lockers for each member, and in the latter over 40 duck boats of various models, including the Rushton, Osgood, Barnegat, Racine and others. Here also is an army of decoys, from the little blue bill to the big goose, all ready for their deceptive occupation. Along the south front of the house is a wide veranda flanked by a beautiful lawn, with a 40 ft. flagstaff, at the topmast of which flies the club flag, always signalling occupancy of the house. It is very seldom that the flag is not fluttering in the breeze.

On the right, as you enter the club lounging room, is a black walnut and glass case of ample dimensions, containing a large number of beautifully set up specimens of water fowl, all killed by members of the club—ducks, teal geese, swans, brant, quail, woodcock, snipe, eagles and hawks. A particularly beautiful specimen, a swan killed by Mr. Cross, is much admired. On the south side of the room is the library and a rack for guns. The club has a superintendent, the omnipresent and indomitable George, and four keepers, who patrol the grounds during the season, and woe to the luckless duckerbeat who is caught poaching. What George would do with such a one is best told by the Earl of Dunraven's game-keeper on being questioned in court as to his disposition of any one caught red handed: "Phat wud I du? I'll kill him and ate him."

Such a spot and its accessions may well be called a sportsman's paradise, and so we found it.

After a good old-fashioned game of whist and a well-spread supper and night cap we retired early with visions of ducks innumerable.

Breakfasting early, Finnegan, Bob and the writer started for Teal Pond, but finding the wind unfavorable we set up our blinds on the point. The wind blew a gale from the northwest all day, and the birds were akin to lightning bolts in their flight, scarcely noticing our decoys; still our bag of canvasbacks, teal, widgeons and redheads was fair, and we returned well satisfied.

It is no exaggeration to say that from almost any point on the bay could have been seen thousands of mallards, widgeons, canvasbacks, whistlers and teal, while occasionally our eyes were blessed and our fingers tingled by the sight of a string of old honkers.

The register of birds kept each season by the club members for many years shows an enormous number killed. Butterballs and coots are not counted. To the credit of the club be it said that mallard shooting is prohibited in the spring.

Unfortunately for the writer a telegram rudely dispelled his hopes of a week's vacation, and he was reluctantly compelled to bid good-bye to Winous Point and its hospitalities in the midst of his enjoyment. Another season and your correspondent may be enabled to discourse more eloquently of the varied attractions of the "Winous." EN GARDE.

Natural History.

THE FISH MORTALITY IN THE GULF OF MEXICO.

THE following report into the causes of the recent terrible mortality among the fishes of the Florida coast has been made by Mr. Ernest Ingersoll to Professor Baird and will appear in the proceedings of the United States National Museum. Owing to the impossibility of procuring samples of the supposed poisoned water for analysis no definite conclusion as to the cause of the destruction of the fishes of the Gulf has been reached. The report is as follows:

Pursuant to your verbal suggestion, I made it an object, during my recent cruise down the western coast of Florida in the service of the Superintendent of the Census, to inquire into the so called "poisoned water" which was supposed to have caused the remarkable mortality among the sea-fishes that occurred in the autumn of 1880. I am sorry to be able to give so meagre an account of the matter as follows, but must beg excuses on the plea that I was too late to see any actual destruction, since the cause had wholly disappeared previous to my arrival there, and also from the fact that I was unable to carry out my intention of going to Key West, where most of the fishermen live who suffered injury, and who could perhaps have furnished additional information.

It appears that this misfortune is not a new experience in the eastern part of the Gulf of Mexico. One of the oldest residents on the Floridan coast, Mr. Benjamin Curry, of Manatee, told me, what others confirmed, that as far back as 1844 a wide-spread destruction of all sorts of salt-water animal life occurred, apparently due to causes precisely similar to those which produced the lately noticed desolation. Again, in 1854, the fishes suffered all along the southern shore, and have done so at intervals since to a less degree, until in 1878 an excessive fatality spread among them, which was wider in the extent of its damaging effects and probably more destructive in point of number of victims than the later visitation of 1880. Even the cooler half of 1879 was not exempt from some appearance of the plague.

In regard to some of the manifestations of this deadly influence in the sea during 1878, Mr. John Brady, Jr., an intelligent captain, told me that the time of year was January, and that the "poisoned water," to which universal belief credits the death of the fishes, could easily be distinguished from the clear blue of the pure surrounding element. This discolored water appeared in long patches or "streaks," sometimes 100 yards wide, drifting lengthwise with the flow

of the tide. The earliest indication of it was the floating up of vast quantities of dead sponges—chiefly "loggerheads." All those seen by Mr. Brady were less than forty miles north of Key West, in what is known as "The Bay," nor has anything of the sort been seen at any time outside (*i. e.*, southward or eastward) of the Florida Reefs; but it was soon discovered that all the hitherto profitable sponging grounds lying off the coast as far north nearly as Cedar Keys, and particularly off the Anclotes, had been ruined. These grounds are only now beginning to show signs of reproductiveness in sponges. At the same time, many portions of this area—for example, Sarasota Bay—seem not to have been affected, sufficiently at least to cause the death of swimming fishes to any great extent. In the case of the sponges, only a few of other species than the loggerhead would be seen floating; but when they were hooked into, all were found dead, though still clinging to the bottom. When a sponge dies naturally it gradually becomes white at its base, through the loss of its sarcodal matter, but all these were observed to have turned black. The abandonment of these sponging grounds from the Reefs to Cedar Keys, during the three or four years following this attack, entails a loss which it is hard to estimate, because partially compensated in the increased price of the article in the market due to its consequent scarcity, and because at all times the product there is an uncertain quantity; but I hazard the opinion that $100,000 would not repair the damage to this business interest alone. Had it not been for the fortunate discovery just at that time of the sponge-tracts off Rock Island, northward of the Suwanee River, almost a famine in this article would have ensued.

Concerning the attack of 1880 I am able to say more. It began suddenly, and immediately followed the terrible hurricane which is known as the "August gale," the fish and all other ocean life suddenly dying in hordes all along the southern (eastern) shore of Tampa Bay, on Egmont Key, at its mouth, which was the most northern point, and thence southward as far as Shark River, in Whitewater Bay, on the coast. Thence fatal localities were to be found in the currents that set southward through the Bahia Honda Passage, through the Northwest Passage beyond Key West, and even out in the neighborhood of the far isolated Tortugas.

Everywhere throughout this whole extent of coast, except in the mouths of the rivers and in the shallow bayous, all the forms of sea-life died as though stricken with a plague fatal alike to all, and were drifted upon the beaches in long windrows so dense that near human habitations men were obliged to unite in burying them to prevent a pestilential stench, or to haul them away by wagon-loads to be prepared for manure, as was done in some cases. Not only were swimming fishes destroyed, but sponges, crabs (I saw upon the beaches thousands of horseshoe-crabs laden with their chains of undischarged eggs), and great numbers of mollusks. The oysters at the mouth of Manatee River and in Tampa were spoiled (in imagination if not in fact!), and the excellent clams of Sarasota Bay became weak, tasteless, and of a repulsive green hue at their edges. A graphic account has been given me in a letter received from Mr Charles Moore, Jr., keeper of the lighthouse on Egmont Key, at the entrance of Tampa Bay, the original of which I transmit herewith. This point witnessed the height of the calamity, and as Mr. Moore was present during the whole season, his account of facts is valuable. Mr. Moore writes:

"EGMONT KEY, FLA., February 20, 1881.

"SIR: As I promised to give you all the information about the fish dying at this station, I will do so to the best of my ability. The first dead fish we saw was on Sunday, October 17, as the tide came in. There were thousands of small fish floating on the water, most of them quite dead. I saw only one kind the first day; they were small fish, four or five inches long; the Key West smackmen called them "brim." They were new fish to me. The next day other kinds were dying all along the shore; the pompano was about the next to give in, and by the 25th October nearly all kinds of fish that inhabit these waters were dying, except the ray family. I don't remember of ever seeing any stinger or whipper ray, or the devil-fish, as we call the largest ones of the ray family. From the 25th of October to the 10th of November was the worst time; during that time the stench was so bad that it was impossible to go on the beach. I sent my family to Manatee, and the assistant keeper and myself shut ourselves up in our rooms and kept burning tar, coffee, sulphur, rags, etc., night and day in order to stand it. It was warm, damp, and calm weather. They continued to die for about six weeks; they kept getting less every day. I counted seventy sharks within 80 yards, all small; I never saw a shark over four feet long dead. The cow-fish and eels were about the last to die. In regard to the cause of their dying, I have made up my mind it was caused by the fresh water, as there were immense quanties of fresh water coming down the bay, and the water here was nearly fresh on the surface, while the water underneath was perfectly salt. Now, if the fresh water could have passed off into the Gulf without being disturbed by winds, it would have naturally spread out thinner and thinner as it would have rolled on toward the Gulf Stream, and once it got there, then there would have been no trouble. But on the 7th of October we had a heavy gale from the southwest, and it continued to blow from the south and west until the 11th of October, and a very heavy sea running at the mouth of the bay, and it *churned* the fresh and salt water all up together, and the strong southerly winds set this mixed water back and kept it here for several days. I noticed, a few days before the fish commenced to die, a peculiar smell on the water, something like the smell of bilge-water, and the color of the water was a dirty green, mixed with small sediment. I noticed the fish while they were dying, when they first came in shoal water; they would act crazy, dart around in every direction, but in a short time would give up and float ashore. On examming them I found their gills all glued together with a slimy substance and of a whitish color,* and in a short time the gills would turn green and the fish bloat very large. I cannot make any correct statement as to the number that died, but thousands of barrels floated up on this island. There are no fish dying now; all we catch are fat and nice. I should have written to you before, but I have been very busy. I've had a new duty to perform, taking the tide every half hour. Any information I can give you at any time I will be happy to do so.

"My address is: Braidentown, Manatee County, Florida.

"Very respectfully, CHARLES MOORE,

"*Keeper of Egmont Light-House.*"

Along this region of the Florida coast are several establishments or "factories" devoted to the catching and salting of fish, chiefly the mullet and its roe, and to the making of superphosphates. All of these were obliged to suspend operations, and their winter's work has been ruined, or at least all the profits are gone. One gentleman told me of a single definite loss he had thus suffered of $800.

To this part of the coast, also, comes a large fleet of smacks and "smackees" every winter to catch fish for the Key West and Havana markets, principally the latter. These smacks found that, as before, the brownish, discolored water, "thick and glutinous" (as one described it), which seemed the cause of the mischief, lay in streaks drifting with the tide. The small fishes that swam into one of these patches (which had a vertical thickness apparently coextensive with the depth of the sea at that place) seemed unable to get out before they were stupefied, and died as though by suffocation. Even the large carnivorous swimmers, like the sharks and porpoises, often suffered the same fate, though frequently they would have strength to turn back and flounder out. In the pure element, between the deadly streaks, fish were as abundant as ever at the distance from the coast where the smacks operated, and their wells were often filled with promptness; but it was found that it was impossible, even by going straight out to the Tortugas, to run the gantlet of the poisoned water floating between there and Cape Sable, since if once it was encountered, and entered the well, a very few minutes sufficed to bring about the death of every fin of the cargo. I have a few notes, culled from the Key West journals, which show that a loss of nearly $10,000 resulted from only four or five such misfortunes. The consequence was that for some weeks the fishing throughout all that part of the Gulf had to be wholly abandoned, involving the idleness of a large number of vessels and their crews.

Seeking an explanation of the phenomenon, I everywhere asked what was the local theory to account for the matter, and was almost always told with confidence that it was due to an overflow of the swamps and the pouring into the Gulf of bodies of fresh water poisoned by a decoction of noxious "acids," etc., leeched from the roots which had been soaking for years in the pent-up floods—a theory which I fail to find supported by such facts as I have been able to learn.

Those who do put faith in the sufficiency of this explanation, point out that the winter of 1877-78 was unusually wet, and that this last fall saw more rain falling in South Florida than ever before in the recollection of the people there. This is probably true, and it may be, as asserted, that the years heretofore when the fish have died have been those noted for their excessive rainfall, but I have not compared meteorological records. It is no doubt true also that if a sea-fish should be plunged into water saturated with the tannin derived from decomposing roots and stems of palmetto, oak, sumach, etc., which do abound in the Everglades, he would find it eminently unhealthy. But further than this the hypothesis will not hold. It requires us to believe that the overflow of a small surface of swamp-land shall so tincture the wide area of the Gulf as to destroy its healthfulness through several weeks, while the tides are ceaselessly swinging back and forth, and rapid currents continuously replace the water of every part with new and send the old elsewhere. This is preposterous. Moreover, provided it was true of the Manatee River (as is claimed), or of the Caloosahatchie further south, why should it not be equally true of the Atlantic coast, where there is the same or greater drainage, yet no such trouble known; or of the Withlacoochee, Suwanee and a dozen other streams draining swamps like the Ofeekinofee, in whose tangled recesses grow plants as noxious as those further south, yet whose discharging currents do no harm to the fishes? Moreover, in the Manatee River itself no fish were killed over the free range of the tides, though daily breasting the swamp overflow.

Some, discarding any theory of the decoction of poison from plants as an explanation, will tell you that the excess of rainwater discharged by the rivers so freshened the surf as to cause the death of all shore-swimming fishes. This, as near as I can make it out, is Mr. Moore's explanation of the mortality at Egmont Key.

In a few confined spots, where fishes could not escape at will, this might now and then cause a death, but it is notorious that the fishes of the Gulf coast make little or no distinction between salt and fresh water. Alligators swim to the outermost keys, and the best sheepshead caught are those far up the Caloosahatchie, where the stream is always sweet, while the porpoise and shark chase the mullet away in toward the head of the bayous, or until the river-channel gets too shallow for them to swim further. A little fresh water, or a good deal, more or less, would receive no attention whatever from a Floridan fish. The Mississippi has been deluging the Gulf with a well-nigh Amazonian volume of water, fresh not only, but thick and nasty, yet no one supposes the fishes off the delta are obliged to stay in its murky flood unless they choose, or, if they do, that they suffer by it, except to the palate of the epicure.

But a more cogent argument, from facts perhaps overlooked heretofore, exists against any theory which seeks to explain the destruction of marine life inside the Florida reefs by any landward agency. This is that it was in all cases the dwellers on the bottom that perished first, while the surface-leaders were the last to be affected, and, as a rule, escaped altogether. (Until 1880, I was told, no mullets were ever known to be killed.) It was the death of sponges, conchs, sea-anemones, crawling horseshoe-crabs, of toad-fish, cow-fish, skates, and the like, which keep close down on the bottom, that first apprised the fishermen of the presence of their dreaded and mysterious enemy. Next came the bodies of red-fish, groupers, pompanos, and other deep swimmers, and last of all a few mullets and sharks. Fresh water, tinctured with tannin or untinctured, would not effect this. It would float on the surface, having a lesser density. If it exerted a noxious influence it would be the surface-life that would first succumb, the bottom-life longest escape. But quite the reverse has been the case, and this, with other appearances, leads to the conclusion that the "poison" springs from the bottom of the sea, or is formed in its waters.

The only way to account for this is by supposing that eruptions of volcanic gases may have taken place through the bottom of the sea along a line stretching from Tampa Bay to the Tortugas, and through the western half of the Florida Keys. Inquiring as well as I could whether there had been any evidences of plutonic action in that region within a few years, I heard a tradition that about the holidays of 1877-78 an earthquake shock had been felt on the west coast. I have had no opportunity as yet to verify this, but it is a well-known fact that just previous to the hurricane of last August, so well remembered by all the people of Florida West, as a time of almost unparalled destruction of shipping and height of tidal waves, a shock of earthquake was felt throughout the whole southwestern end of the peninsula. It did considerable damage in the city of Key West, and was so alarming at Tampa that several persons ran in fright from their houses. Immediately after it began the sudden destruction of fish I have described.

Whether the physical shock of such an occurrence, touching the fish and creepers on the bottom, would do them harm, or whether the subsequent patches of "poisoned water" owed their discoloration and undoubted deleterious properties to being saturated with sulphurous or carbonic acid gases derived from subterranean vents, I cannot presume to decide. But if the last supposition had been proved true, or shall be at some future time, would it not be a rational and sufficient explanation of the death of the fishes, sponges and their kin, whenever they came in contact with the discolored water alluded to?

Analysis of the suspected water would have done more to solve the question, probably, than anything else can do, and it is a matter of continued regret that I could not obtain specimens of it for that purpose. After the end of September, however, the evil diminished, and by Christmas all of the harmful water had disappeared from the Gulf.

Regretting that I could not have done more to get at the truth of the matter, in essaying which I was offered every aid by the citizens of Florida, but continually impeded by bad weather and other untoward circumstances, I beg to submit this little that I have learned, and I have the honor to be,

Very respectfully yours, ERNEST INGERSOLL.

PROFESSOR SPENCER F. BAIRD,
United States Commissioner of Fish and Fisheries, Washington, D. C.

*I failed to find any other instance in which this thickening or begumming of the gills had been observed. The deadfish were elsewhere reported as healthy in appearance, and in one case, at least, were eaten without harm, or even indigestion occurring.—E. I.

SPRING NOTES FROM NOVA SCOTIA.

AS it may prove interesting to some of your readers to compare dates concerning the leafing and flowering of trees and plants, arrival of migratory birds, etc., I have much pleasure in forwarding the following "notes," which, if acceptable, can be supplemented by others.

Willow (*Salix*). Of this genus we have several species, but, unfortunately, owing to the difficulty of identifying them, I am unable to give more than a general account. The earliest to blossom here is an osier, which appears to suit itself to moderately dry ground as well as moist. Its silky catkins appear generally about April 20, but in early seasons, like that of 1876, I have known them to put out as early as March 18. The catkins of the different species of willow are called "pussies" by the children of this province. In England I well recollect when a child we used to call them "goslings," each denoting its downy coating as somewhat like the animals in question. They generally leaf about the last week in May.

Alder (*Alnus viridis*, DC.). Catkins generally appear about the first week in May, but I have observed them (1876) as early as April 14. This year (1881) I noticed them first on May 1. This shrub—or trees it might be called in some parts of the province, especially in the Stewiacke Valley, Colchester County—attains a height of fifteen or twenty feet, and six inches in diameter of trunk, is extremely common everywhere in moist situations. It usually puts forth leaves about the second week in May. The wood is very brittle, and in clayey land no shrub is more easily grubbed up than the alder. The downy woodpecker (*Picus pubescens*) loves to inspect the lower parts of the alder trunks, where from the many holes pierced in the bark it evidently finds the larvæ of some insect suited to its taste. From this peculiarity no doubt the unscientific countryman calls it "sap-sucker."

Sweet Fern (*Comptonia asplenifolia*, Ait.). Bears catkins about the last of April. It is an extremely common shrub on the rich sandy loam of Kings County, and is generally supposed to denote good soil. It leafs the last week in May.

Wild Gooseberry (*Ribes*). I am not quite certain as to the species, but I take it to be *cynosbati*. It is very regular in leafing, generally the first week in May. The fruit is ripe about the second week in July.

Red Maple (*Acer rubrum*, L.). Usually flowers about May 10, and sheds them a week or ten days later. In full leaf about May 30.

Aspen (*Populus tremuloides*, Mich.). In flower last week of April, and leafs about May 20. It is called by the countrymen "popple-wood," and is held in high esteem for wharf logs, and for all purposes in salt water, as it is not attacked by the *Teredo* or other marine worms.

Balsam Poplar (*P. balsamifera*, L.). Leafs about the last week in May and flowers about same time, giving out its characteristic strong perfume, which is carried by the wind for some distance. It is called here "Balm of Gilead."

Dandelion (*Taraxacum Dens-leonis*, Derf.). The flowering time of this well-known plant varies much. The earliest date I have recorded (1865) was on May 2, and the latest about the middle of that month.

Common Frog (*Rana fontinalis*). The earliest croak of this species I have registered was (1865) on April 6, and the first spawn observed that season was April 10. We usually hear the first croak almost invariably on a wet or damp evening, about the middle of April. This season (1881) I heard it for the first time on April 17, and saw abundance of spawn in ponds on May 1. I have observed the tadpoles in ponds (1867) as early as April 10.

Common Snake (*Coluber sirtalis*). Usually appears about the second week in May, but sometimes earlier, according to the season.

Green Snake (*C. vernalis*). Generally appears about the same time.

Robin (*Turdus migratorius*). Several stay with us all winter, but the migratory flocks arrive about the end of the first week in March. It usually commences to sing about the first week of April, and the first song is almost invariably heard in the evening. The first song I have recorded was on March 26, 1862.

Song Sparrow (*P. melodia*). Generally makes its first appearance about the middle of March and treats us to the first bird song of the season.

Black Fly (*Simulium molestum*). This terrible plague to all anglers appears about the second week in May. They do not seem to attack the plain flesh of the hands or face, but always make for the roots of the hair of the head. I first observed this habit while lying on a woolly carriage rug, which they appeared to alight on eagerly and searched at the roots of the fibre for flesh, but when they came to where my hands lay upon the rug they instantly departed. Cows may be seen in pastures near the forest literally covered with these creatures trying to force their way down to the roots of the hair. J. MATTHEW JONES.

Fern Lodge, Waterville, Nova Scotia, May 30.

FROM SING SING, N. Y., May 29—*Editor Forest and Stream:*

May 5—Saw first Baltimore oriole (*Icterus baltimore*).

May 7—Saw bobolink (*Dolichonyx oryzivorus*).

May 11—Found red-shouldered hawk's (*Buteo lineatus*) nest containing one egg, large embryo; also, phœbe's (*Sayornis fuscus*) nest, two eggs, and golden-winged woodpecker's (*Colaptes auratus*) nest containing five fresh eggs.

May 15—Found chipping sparrow's (*Spizella socialis*) nest, egg.

May 16—Saw ruby-throated humming bird (*Trochilus colubris*).

May 20—Found blue bird's (*Sialia sialis*) nest, one egg; also, yellow billed cuckoo's (*Coccyzus americanus*) nest, three eggs, large embryos, and yellow-breasted chat's (*Icteria virens*) nest, four fresh eggs.

May 21—Found yellow warbler's (*Dendræca æstiva*) nest containing three eggs.

May 22—Found two nests of yellow-breasted chat, each containing four fresh eggs, and wood thrush's (*Turdus mustelinus*) nest, four fresh eggs; also cat bird's (*Mimus carolinensis*) nest, four fresh eggs, and house wren's (*Troglodytes ædon*) nest, three fresh eggs; also, blue bird's nest, one egg. Same day, found blue bird's nest with large young ones and saw young blue birds that could fly.

May 25—Saw pair white-eyed vireos (*Vireo noveboracensis*) building nest. Saw pair least flycatchers (*Empidonax minimus*) building nest. P. D.

A MOTHER'S COURAGE.—This would be a good season of the year for those gentlemen who delight in treeing ruffed grouse to take their curs in the woods to practice the art of getting the birds into the trees, in order that their worthy masters may get resting shots. At least I would wish them so to do if they might be fortunate enough to meet with as determined a mother bird as I did this morning. The curs might learn a lesson. Having occasion to go some distance into the mountains to look after some foxes, I took along two terriers—a fox and Dandie Dinmont—both well known for their pugnacious qualities. After finding the fox den, and unearthing them with the help of the dogs, I turned homeward, and came suddenly upon a hen ruffed grouse, with at least twenty chicks. The dogs were at heel, but at once rushed on the bird, who sounded the danger for the young, and to call the male bird. I have seen a game hen defend herself against a large hawk. I have seen one particular game hen on more than one occasion kill a Norway rat of good size, that attempted to take an egg or a chick, but for fury and determination I never saw anything to equal the efforts of this female ruffed grouse. Never for the space of a moment of thought did she cease from a most determined assault until the dogs beat a retreat to heel. The male bird was scarcely less determined, but there was not the same kind of "do or die" bravery shown as with the mother bird.

This may be very common, but I record it as my first experience of the kind, and I know very well that no cur, however good at getting birds into the tree in the shooting season, could have withstood the attack of this morning, which adventure led me to write this article, wondering how honorable gentlemen reason within themselves to justify their honorable (?) way of bagging ruffed grouse.—BRISKSHOT.

May 30, 1881.

STRANGE CRABS OF MAURITIUS.—The following interesting account of some peculiar crabs appears in a recent issue of *Nature:* Two crabs of most extraordinary habits are described. Both belong to the family *Polydectine*. The crabs of this family have their front claws armed with large teeth. Latreille, who first named the crab *Polydectes cupulifer*, remarked that a gummy substance was always to be found at the ends of the claws of this species, and Dana described the animal as always having something spongy in its hands. Dr. Mobius has discovered the remarkable fact that these things held in the two claws of the crab are in reality living sea-anemones. These sea-anemones are attached to the immovable joint of each claw, while the teeth of the movable joint of the claw are kept buried deep into the flesh of the sea anemones, and thus hold them fast, although each anemone can easily be pulled away from its position with the forceps in specimens preserved in spirits. The mouth of the sea-anemone is always turned away from the crab. The same curious combination exists in the case of another species of the same family but of a different genus, *Melia tessellata*, which also inhabits Mauritius. A figure is given of this crab with its pair of Actinias, named by Mobius *Actinia prehensa*, with fully expanded tentacles, held out one in each hand. Mobius gives the following account of the matter: "I collected about fifty male and female specimens of *Melia tessellata*, all of these held in each claw an *Actinia prehensa*. The recurved hooks of the inner margins of the claw joints of the crab are particularly well adapted to hold the Actinias fast. I never succeeded in dragging the living Actinias out without injuring them. If I left the fragments of them when pulled out lying in the vessel in which the Melia was, the crab collected them again into its clutch in a short time. If I cut the Actinias in pieces with the scissors, I found them all again in the claws of the crab after a few hours. It is very probable that the Actinias aid the crab in catching its prey by means of their thread cells, and that the Actinias, on the other hand, gain by being carried from place to place by the crab, and thus brought into contact with more animals which can serve as food to them, than they would if stationary. This is a very interesting case of commensalism."

HOW A PARTRIDGE LEAVES HER NEST—Rockland, Me., May 30.—On the 13th of this month I received a line from a friend in the country, saying, if I would ride out, he would show me a partridge nest with nine eggs in it. So the next day myself and partner rode out, found my friend, who guided us—three men and two dogs—to the nest. We went carefully as we neared the nest, and got within about twenty feet, when she went off like a shot into the air, flying high and far. After admiring the nest and eggs a moment, we left, not forgetting to pronounce our blessing upon it as we walked away.

My friend informed me that he had found another, with twelve eggs in it, and, pointing to a house a mile and a half away, said the boys there would show us the nest. So, wishing to see all there were, and also to give the thing a fair trial, we went to the house and found the boys (three of them) at work in the field. We gave them a dime apiece to show us the nest. This time our forces were somewhat augmented, and consisted of two men, three boys and two dogs, and we approached to within about twelve feet of the nest, going very carefully. We saw the hen on the nest plainly for a half minute, and then she glided off and ran—not feigning lameness, but sneaked off—and as there was not much underbrush she was in sight for three rods. I have heard of another, and I intend to visit it to-morrow. If I do I will report.—JAMES WIGHT.

IS IT A HYBRID?—Natchez, Miss., May 26—*Editor Forest and Stream:* I have just seen what to me was quite a curiosity. It is a cross between an ordinary dunghill cock and a guinea-hen. The mongrel is now about two years old, is somewhat larger than an ordinary chicken, has the head and neck of the chicken (minus the comb and gills), with the plumage of a guinea-fowl. It has the graceful and easy carriage of the guinea, with the cluck or cackle of either or both at will. The guinea-hen, after receiving the attentions of the cock, and the usual season of incubation, hatched six of these little curiosities, but they succeeded in rearing only this one. Please let me know if you have ever heard of a similar case. Where could a curiosity of this kind be sold, and what price do you think could be obtained?—
S. M. D.

We have never known of a case quite similar to the one here reported, and if there is no mistake in the matter it is a very interesting one. We have no idea of the value of such a specimen.

A CURIOUSLY MARKED BUFFALO—Carroll, Missouri River—*Editor Forest and Stream:* This winter the Indian trader, Jos. Kipp, bought a buffalo robe so peculiarly marked that I think it deserves notice in your columns. All the "old-timers," men who have lived among the buffalo all their lives, say they never saw anything so remarkable.

The animal, a large cow, was killed in the vicinity of the Black Butte by a Blackfoot medicine man, and it was only by offering several rifles, blankets, etc., etc., that Mr. Kipp could induce him to part with the robe. The long, shaggy hair on the head and part way on the back is pure white, and a perfectly white border a foot deep extends along the edge away behind the fore shoulders. The tail is also white. Yellow buffalo, called "white cows," are often killed. But never in the history of Montana Indian trading has anything been seen like this. As I said before, the white is a pure white and perfectly regular in place and outline. It would well be worth $200 to any museum, which is Mr. Kipp's valuation of it.—APPRECIATE.

STILL THEY CHIME.—Lynn, Mass., May 27.—Three weeks ago to-day while out a few miles west of the city for the purpose of giving my hound a run after being chained up all the week, I was standing on a large boulder looking down through the thick second growth of pine and hard wood, trying to make out what the hound was baying so fiercely about. I espied, lying on the topmost branches of a small pine, what appeared to be a snake of some species. He was seven feet from the ground, and appeared to be taking a sun siesta. Calling my two chums to the spot we decided to interview his snakeship. Whereupon I immediately saluted him with a charge of No. 10 shot, which brought him to his senses and the ground at the same instant. At least this is my conclusion, as "a wise head keeps a still tongue," and he did not even enlighten us as to how he attained his elevated position, or for what purpose he went there, but on receiving my challenge let go and dropped. On closer inspection it proved to be a black snake, and by actual measurement 43 inches in length.
HORACE L. MAYO.

THE AMERICAN JOURNAL OF SCIENCE.—The April number of this excellent magazine contained a number of articles of great value. Among those more or less directly interesting to our readers is a review of Professor O. C. Marsh's Monograph on the Odontornithes, by Geo. Bird Grinnell; Elements in Orographic Displacement, by W. J. McGee; The Basin of the Gulf of Mexico, by J. E. Hilgard; Geology of Florida, with a map, E. A. Smith; Channel Filling in Upper Devonian Shales, by H. S. Williams; New Order of Extinct Jurassic Reptiles (*Coelurii*), Discovery of a Fossil Bird in the Jurassic of Wyoming, and Note on American Pterodactyls—the last three by Professor O. C. Marsh.

WILD HAWK EAT CROW?—Philadelphia, Pa.—A sporting friend of mine in Delaware, who saw the item in FOREST AND STREAM relating to that question, told me, a few weeks ago, that during our severe winter he saw a strange "muss" out in the field on the snow, and went out to investigate. He said that when he got near it the *gray* thing picked up the *black* thing and held it in his beak and looked at him, then dropped it and flew off. On going up he found the hawk had been feasting on a starved crow.—DIDYMUS.

OSTRICH EGG OMELET.—The female African ostrich at the Philadelphia Zoo, has begun to lay. One huge egg was sent to Uncle John Krider to blow. Being freshly laid, he saved the contents, and has been reporting on ostrich egg omelet to-day, and pronounces it "good, not a bit strong."—HOMO.

Game Bag and Gun.

HABITS OF DEER AND HOW TO HUNT THEM.

FAIRMOUNT, Walden's Ridge, Tenn., March 2.

I HAVE killed game of all varieties that we have in this State, such as deer, bears, etc.; also have hunted somewhat in the West. For twenty years or more I have hunted deer in the Cumberland mountains, and I think I can give you some information as to the different ways of hunting and the habits of deer.

In this part of the State we hunt deer in the Cumberland mountain and its spurs. Walden's Ridge is one of the Cumberland spurs. Mountains many miles in length and from twelve to twenty miles in width, only partially settled, leave a vast extent of wilderness, where are found a great many deer and a few black bears. There are many deep gorges and rough places that afford secret hiding-places for deer and bears to raise their young. The country is well watered and well timbered, and affords an abundance of mast for the deer to feed upon. In many places it is almost level for several miles. Thickets of undergrowth, covered with grapevines, are often found. So it will be impossible for the deer to become extinct in this country from still hunting or hounding.

The mode of hounding or driving deer here is as follows: Deer have certain runs, generally upon the dividing ridges and through the swags of ridges. Standers are placed on these runs and the driver takes his dogs, from two to a dozen or more, and generally drives against the wind, which is the way deer, especially old bucks, always run.

The deer hunter that understands his business, in taking a stand to wait for the driver to drive out the deer, always takes his position against a tree, fronting the way he expects the deer to come. In standing for deer you should never get behind anything, for the deer is almost certain to see you move, and then he will change his direction. Driving does not run deer out of the country. You may drive in certain localities one day and run deer several miles away from their range, and in three or four days you will find the same deer back in the same locality.

Still hunting is another mode, and that is to walk about slowly through the woods and watch for deer. The best time for still hunting is in running time, in the months of October and November, after the does are with fawn and are running and hiding from the bucks. When you see a doe running through the woods, go and take your position in shooting distance of where she passed, and keep a sharp lookout the way she came, and often, in a very few minutes, you will see a buck coming, tracking her. Let him come up near enough for you to get a fair shot, bleat or whistle at him and he will stop. If you are a marksman, then you will have venison. On some runs I have known three large bucks to be killed in less than two hours. Still hunting in the months of October and November is the most successful way of hunting. Sportsmen that are good rifle shots are the most successful still hunting. Shotguns will do for driving, but rifles are the best to use in still hunting.

Slow-tracking deer with a dog is another very successful way of hunting. The dog, from a small puppy, must be trained. A half-hound is generally preferred. A cross of a hound and cur or bulldog is best, as the hound gives the acute scent and the bulldog or cur the speed and bravery to take hold when he comes in contact with a crippled deer. The dog is trained to follow the track by scent in a slow walk, and you follow the dog ten or twenty feet behind, and keep a sharp lookout for the deer. When the dog has a strong scent of the deer you can discern it by the precaution he uses, and when he sees them he stops and waits for you to shoot, and at the fire of the gun he does not break and run, but waits to see what you want done. If you have crippled the deer, hiss him on, and if it be badly crippled he will catch it and kill it, and you wait on the track where he started from when you hissed him, and he will return and take you to the dead deer. This is the most successful way of hunting, and by it you can find out more about the habits of the deer than from any other mode of hunting.

Deer feed on mast, such as chestnuts, chinkapins, acorns, moss, twigs, buds, etc., but not much if any grass.

I have seen a great many deer dressed, but I have never, in this climate, seen a spear of grass in their food. They like peas, corn and other kinds of grain. In the winter they sometimes eat wheat and oats in their green state, but I do not think wild deer in this climate ever eat grass. Tame deer will eat anything.

After running time, deer, especially old bucks, go to the rough woods and stay until they shed their horns, which is in the months of February and March. Then they come out on highlands and into the flat woods. Young deer and does are not so particular. They roam about at all seasons.

The does have their fawn in the month of June, in thick underbrush, near water.

The bucks, after their horns come out and are full grown, begin to harden them the first of July. They make their beds upon the high hilltops, lie with their bodies in the shade and with their heads exposed to the sun. They feed at night when the moon shines, but when the nights are dark they feed early and late in the daytime.

Deer go to water once a day between the hours of twelve and two o'clock. Between those hours they feed a little and then return to their bed-grounds. In the month of August the bucks begin to rub their horns. They generally rub on a soft-barked bush, such as a small pine, and by first frost, which comes from the 10th to the 20th of October, their horns are hard and they begin to run.

The most deer are killed by men who live on the mountains, not for market, in particular, but for the meat.

The people here would not favor a law prohibiting the hounding of deer. We have a game law in this State, but it is not strictly enforced, as it should be.

In this section of country we have quite a variety of game, such as turkeys, pheasants, quail, rabbits, squirrels, coons, opossums, wildcats, and red and gray foxes in abundance. Chattanooga is our nearest city of any importance, fifteen miles from the hunting grounds mentioned. The mountains are well watered, both soft and mineral waters, and are very healthful. The soil is good for fruits and vegetables. It would be a good sheep country, but very little attention is paid to sheep raising. A great many cattle are grazed upon these mountains, and some make it very profitable.
THE WHOOPER.

THE GASTON CLUB.

SOUTH GASTON, N. C.

Editor Forest and Stream:

In reply to the many inquiries from Maine to Texas received in response to your publication of my proposition to establish a hunting and sporting club at Gaston, I think it best to give through your paper more particularly the advantages which the locality offers.

The hotel is a very conveniently arranged house, and contains some twenty-three rooms, all with fireplaces. The ground floor is divided into large and capacious rooms, one of which can be used for cooking purposes. The second story is composed of bedrooms. The third story has a very large ballroom, with several fireplaces in it, and is so arranged with folding-doors as to make, when not used as such, three or four bedrooms. The hotel is on the north bank of the Roanoke, and immediately adjoining the extensive low lands of Dr. E. N. Wilkins and Mr. W. E. Brodnax. On the south side of the Roanoke is the South Gaston depot, post office and express office. The town of North Gaston is a place of the past, and exists now only in memory.

In reply to the special inquiries of a gentleman from Pennsylvania I will state seriatim; First—Gaston is on the north bank of the Roanoke. Second—The Roanoke is not navigable above Weldon and below Clarksville, Va., for any other class of boats than batteaux; but there is a deep sheet of water at Gaston some three miles long and half a mile wide, with but little current—not more than that of the Hudson or Susquehanna. Third and fourth—With the exception of the Roanoke bottom lands the adjacent country is hilly and well adapted to the usual Southern products. The Roanoke bottom lands are extremely productive, and rarely sell for less than $20 per acre. Fifth—I think as much as 10,000 acres in one body can be purchased for agricultural purposes and as a game preserve. Sixth—The winters are generally mild and subject only to the variations of a temperate climate. From the 10th of October to the 10th of August immediately following no part of the United States is more healthy. During the months of August and September we have occasional malarial diseases, which, by-the-bye, rarely require the attention of a physician. We

never have malignant fevers, endemical or epidemic. The game in this section consist of deer, foxes, coons, opossums, etc., of the fur class, and turkeys, geese, ducks, partridges, etc., of the feathered. While they are not over-abundant, as in some of the northwestern States, they are sufficiently so to make the sport interesting.

The location is specially convenient. Richmond, Petersburg, Norfolk and Baltimore are in easy reach, and their respective markets can be used daily. I ought not to omit Wilmington and Charleston. They are quite in reach, and fresh tropical fruits are always obtainable. But this is not a matter of much importance to the sportsman and huntsman, privations and the uncertainty of success add zest to the sport, and are of high importance in keeping it alive.

Apart from all this, the location is specially adapted to residents of a rigorous northern climate. The hotel is so conveniently arranged as to admit of each member of the club bringing his family and enjoying as much privacy as at home. The family of every member will be regarded as honorary guests and be entitled to the special consideration and attention of every member.

It will be proper, in view of present indications, to enlarge the number of members. Forty would be just two to each room, while fifty would only comfortably fill them. The sectional number of members, I think, need not be insisted upon. Northern gentlemen will be most benefited, and as such, I think it just to give them preponderance in club organizations. The FOREST AND STREAM of April 28 gives a pretty correct idea of the club's design. On that point no additional explanation is necessary. It may not be amiss to add, the club property will not exceed that attached to the Gaston Hotel without the special authority of the club hereafter in council determined. It is not proposed by me to purchase 10,000 or 15,000 acres of valuable land as a game preserve, more especially when the club will have that privilege over a vaster extent of country by courtesy.

THOS. GOODE TUCKER.

A DUCK SHOOT ON THE WABASH.

IF memory leads me not astray, it was in the early April of '78 that a jovial companion and friend, Sam. K., and myself found ourselves comfortably domiciled in neighboring farm houses located one-half mile apart, and distant some sixteen miles north of the thriving little city of Terre Haute, Indiana. The attraction which had caused us to leave home and to ride forty miles over the worst and muddiest of roads was the reply about the ducks, "Come on, there are millions of them." What sportsman ever undertook a trip of like character that did not load himself down with superfluous ammunition and stores? True, it is well to be fully supplied, but imagination is a monster, and article after article must be added to satisfy his cravings. Let me suggest that to take the fewest things one can possibly get along with is undoubtedly the best plan. We were told that we could not go amiss, as the river had lately overflowed the low bottom lands and had filled the many bayous, the canal and the old river bed with water, all of which swarmed with ducks and a goodly number of geese drawn there by the excellent feeding ground formed by the overflow.

The next morning, after a hasty breakfast, we made an early meet at the place agreed upon. A short walk of perhaps half an hour and we were nearing a slough or pond, the outer edge of which had been overgrown with weeds, the dead stalks of which obstructed the view. Sam was in the lead when uprose, right in his front, several ducks, and simultaneously with their rising came the terrific roar of his ten-gauge, which echoed and re-echoed in the still morning air, when the air was full of myriads of ducks flying in every direction. Here we agreed upon a system of operations which was as follows: One was to station himself under cover of a blind at this place, while the other was to visit all the ponds within reach, get all the shots he could, and drive the ducks as best he could toward the blind. Hardly had our plan been put into operation before the shooting became interesting. They came in pairs, by the dozen and by hundreds. Notwithstanding the numerous misses, and the piercing nor'wester, accompanied occasionally by a shower of heavy meteors, our bag was not light, as the day advanced and the ducks ceased to fly. About noon we visited a wet prairie or piece of swamp land where we found the snipe were even more plentiful than the ducks. While walking through the wet prairie there would rise, from right under our feet perhaps, a solitary snipe, and immediately another and another, until from above in every direction came the plaintive cry of the scared birds.

As the shades of evening closed around us we were making our way across neighboring wheat fields toward our respective stopping places. Sam, who was slightly in advance and ever on the lookout for anything in the shape of game, came suddenly to a stop and asked if I did not hear a turkey gobble up in the woods among the brake, distant about half a mile. Being answered in the negative, he said that he was certain that he was not mistaken, and that he was going to visit the place from which the sound proceeded, and immediately started, leaving me to wend my way homeward. I had hardly reached the place at which I was stopping when I was saluted by the report of his tell-tale ten-gauge. He had reached the hills, and procuring the leaf of a plant locally known as "lamb's tongue," he made a call or two, and was answered by a turkey which soon made his appearance, at about seventy-five yards, and fell a victim to man's devices.

Cloverdale, Ind., LA BELLE.

THE INFAMY OF THE CAT LAID BARE.

I SUSPECT the erroneous statements in regard to Mr. Whittington's cat have put the whole civilized world in a very unfortunate position as regards the animal. That nightly marauder is actually permitted to live in fine people's houses and practice his destructive instincts on the beautiful little feathered warblers which seek to make our homes so delightful with their presence. The cruel cat is vigilant, and mourning among the innocents follows his trail. The number of bright, beautiful birds one barbaric cat destroys in a single season is something awful to contemplate. He ceases not his destructive vocation night nor day, but is ever alert, haunting and watching the unsuspecting mother bird, ruthlessly tearing her from the little family, and devouring her, while they are left to perish. So the shady, verdant lawn is deprived of its brightest and most pleasing ornaments.

If every good farmer's wife only knew how often the wicked cat is to blame for what the hawk is charged with—the mysterious disappearance of so many of her little pet chickens—I doubt not but this prolific race would meet a well-merited check, if not a total extinction. How many poor invalids with sensitive nerves have had the sleep they so much needed tortured from them by the nocturnal contentions of these wandering spirits, whose midnight wranglings are fit for diabolic emblems, and produce thoughts not easily composed even in the minds of the most placid and healthful brains. Worse than all, whole broods of beautiful quail are destroyed by the cat during his lengthened perambulations. Half-starved bevies, which seek the friendly precincts of the farm-house for protection and food during the merciless storms and colds of winter, are annihilated by the treacherous brute.

So, too, with the more gentle feline monster, which has really been domesticated, sleeps on mats or on soft cushioned chairs, his light floating hair, wafted by every passing draft into the cooking viands, rendering most disgusting the best efforts of the innocent cook.

In fact, the civilized world would be rid of many grievous annoyances to which it now submits if the whole feline race were a thing of the past; a few mouse traps would do vastly more good than all the cats in christendom. The barbaric age has passed, and let the cats go with it.

I would advise all philanthropists and well-wishers of our race, whenever it is possible, always to buy cats, and while removing them to some better place, as you approach a rock, seize the animal firmly by the hind-legs, and with a quick, violent motion describe a circle, with the head of the cat on the outer line, letting the rock hold a point in the circle. To make the operation a complete success repeat the process three or four times during the minute.

When the mellow autumn tempts you, and with dog and after gun you visit the friendly well to rest and cool yourself the heated tramp, see if there are any cats in range; if so, kindly inquire if your neighbor would like the nuisance abated. If he assents, change your shell for one of the extras usually carried for hawks. Hold point-blank and at short range, for the tenacity of a cat's life is only equaled by its meanness and uselessness. B.

PHILADELPHIA NOTES.

THE English foxhounds, nineteen in number, that lately arrived in our city, were imported by Mr. Ed. Waln, Jr., of Chestnut Mill, a great lover of thoroughbred horses and a member of the Hare and Hound Club, of Germantown. Ten couple of these finely bred hounds were purchased by Mr. Waln, but he was unfortunate in losing one on the passage over. Besides this pack, in the neighborhood of Philadelphia we have that of the Rose Tree Hunt, whose dogs have won many prizes at bench shows; the Schaffer pack at West Chester, and one at Paoli. A taste for the exhilarating sport of fox hunting is rapidly increasing in Philadelphia and neighboring counties, and during the coming autumn many meets will be held. Reynard is by no means scarce in Delaware, Chester and Montgomery counties; but the trouble has always been that the rocky nature of the country offers too many hiding places, which his foxship at once occupies and from which he cannot be dislodged. This and the great amount of woodland render it advisable to use hounds of good voice, for it is seldom that the dogs are seen in our hunts. These English dogs used to much open country will be puzzled, be assured; and we doubt not at first our Yankee hounds will discount them.

The writer learns that bass fishing began in earnest at Columbia, Pa., many fish being taken; few, however, were large.

Our sportsmen of Philadelphia do not seem to have taken advantage of the unusual flights of shore birds that have made their appearance all along the New Jersey coast near our city. Brownbacks, robin breast and bullhead plover are very plenty and seem to have come all at once. This argues that they will likewise leave in a body.

Messrs. Schrieber & Sons, animal photographers, have started for Baltimore to take the group of Percheron stallions and mares lately imported by Mr. W. T. Walters, of that city. This gentleman has just brought over seven stallions and thirteen mares of this grand breed of horses. Among the lot is one perfectly black—a great rarity. The French Government is endeavoring to breed them black for its cavalry and artillery services; the present colors, white and light grey, being too conspicuous. Messrs. Schrieber & Sons say they will make a grand picture.

The kennel of these latter-named gentlemen should be visited by all sportsmen who wish reliable field dogs. Their animals are yearly worked on game, and the kennel situated right on our snipe ground is within five minutes' run of the meadows.—HOMO.

THE NEW YORK GAME LAW.

The People of the State of New York, represented in Senate and Assembly, do enact as follows:

SECTION 1. Section one of chapter 534 of the laws of 1879, entitled, "An act for the preservation of moose, wild deer, birds, fish and other game," is hereby amended so as to read as follows:

Sec. 1. No person shall kill or chase any wild deer in any part of the State, save only during the months of August, September, October and November in any year. Nor shall any person during the night time have in possession upon any of the waters of this State, except during said months, any jack or other device used in floating. No person, corporation, association or company shall sell, expose for sale, transport or have in [his or her*] possession in this State, after the same has been killed, any wild deer or fresh venison, save only during the months of August, September, October and November. No person shall, at any time in this State, kill any fawn during the time when it is in its spotted coat, or have in [his or her] possession the carcass or skin of any such fawn after the same shall have been killed. No person shall, in any part of this State, set any trap, spring-gun or other device at any artificial salt-lick or other place for the purpose of trapping or [and] killing wild deer. It shall not be lawful to pursue deer with dogs in any county of this State, except from the fifteenth day of August to the first day of November. It shall not be lawful to pursue deer with dogs in the county of St. Lawrence or Warren at any time. It shall be lawful for any person to shoot or kill any dog while in actual pursuit of any deer in violation of the provisions of this act. It shall not be lawful for any person to kill, or cause to be killed, any wild deer in the counties of Warren, Suffolk and Queens at any time within five years from the passage of this act. Any person offending against any of the preceding provisions of this section shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of fifty dollars for each wild deer or fawn so killed or pursued or trapped, and for every spring-gun so set, or wild deer or fawn skin or fresh venison, or jack or other device used in floating, had in [his or her] possession, and may be proceeded against therefor in any county of the State in which the offence was committed, or in which the offender or prosecutor may reside, or in any adjoining county.

Sec. 2. Section four of said act is hereby amended so as to read as follows: 4. No person shall kill, or expose for sale, or have in [his or her] possession after the same has been killed, any wild duck, goose [or] brant, coot, rail, snipe, plover, or gallinule commonly called water-chicken [in any of the waters of this State] between the first day of May and the first day of September, except in the waters of Long Island, in which waters, none of said birds shall be killed between the first day of May and the first day of October, except rail, snipe, plover and gallinule commonly called water-chicken. Any person violating the provisions of this section shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of twenty-five dollars for each and every [wild duck, goose or brant] such bird killed or had in [his] possession. And any person who shall at any time kill any of said birds between sunset and daylight, or pursue or fire at any of said birds with the aid of any light or lantern, shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of fifty dollars for each offense against this provision. And any person found between sunset and sunrise on the water with a gun and lantern in the act of attempting to pursue, fire at or kill any such birds, shall be deemed guilty of a violation of this section.

Sec. 3. Section six of said act is hereby amended so as to read as follows: 6. No person shall use any floating battery, machine or other device, whereby the gunner is concealed, for the purpose of killing any wild fowl, or shoot out of any such floating battery, machine or device, at any wild goose, brant or duck, in any of the waters of this state, or use any decoy or construct any bough-house at a greater distance than twenty rods from the shore, for the purpose of shooting at or killing any such birds. Any person violating any of the provisions of this section shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of fifty dollars for each offense. But nothing in this section shall apply to the waters of the Great South bay west of Smith's point, or to the waters of Peconic bay, or Shinnecock bay, or Lake Ontario, or the river St. Lawrence, or the Hudson river below Albany, or to Long Island sound and the bays adjacent thereto west of Crane Neck.

Sec. 4. Section seven of said act is hereby amended so as to read as follows: 7. No person shall sail for any wild fowl, or shoot at any wild goose, brant or duck from any vessel propelled by steam or sails, or from any [other] structure attached to the same, in any of the waters of this State except Long Island sound, outside of the headlands of the several bays thereof, Lake Ontario and the Hudson river below Nyack. Any person violating any of the provisions of this section shall be deemed guilty of a misdemeanor, and in addition shall be liable to a penalty of fifty dollars. But nothing in this section shall be construed to permit shooting at wild fowl from any vessel propelled by steam in the waters or bays of Long Island sound.

Sec. 5. Section nine of said act is hereby amended so as to read as follows: 9 No person shall kill, or expose for sale, or have in [his or her] possession, after the same has been killed, any woodcock between the first day of January and the first day of July, in the counties of Queens and Suffolk, and between the first day of January and the first day of September in the counties of Oneida, Fulton, Hamilton, Ulster, Orange and Sullivan [and Herkimer], and in other parts of the State between the first day of January and the first day of August in each year, except as hereinafter provided. It shall not be lawful for any person to kill, or expose for sale, or have in [his or her] possession, after the same has been killed, any black or gray squirrel, between the first day of February and the first day of August in each year. Any person violating any of the provisions of this section shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of twenty-five dollars for each bird or animal so killed or had in possession.

Sec. 6. Section ten of the said act is hereby amended to read as follows: 10. No person shall kill, or expose for sale, or have in [his or her] possession after the same has been killed, any ruffed groose, commonly called partridge, or pinnated grouse, commonly called prairie chicken, between the first day of December [January] and the first day of September, except as hereinafter provided. Any person violating any of the provisions of this section shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of twenty-five dollars for each bird so killed or had in possession.

Sec. 7. Section eleven of said act is hereby amended so as to read as follows: Sec. 11. No person shall, at any time or place within this State, take or kill any ruffed grouse, commonly called partridge, or any pinnated grouse, commonly called prairie chicken, or any spruce grouse, commonly called Canada partridge, or any quail, with any net, trap or snare, or set any such net, trap or snare for the purpose of taking or killing any of such birds; nor shall any person [wilfully] sell or expose for sale, or have in [his or her] possession any of the said birds after the same shall have been so taken or killed. Any person violating any of the provisions of this section shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of ten dollars for each bird so taken or [and] killed or had in [his] possession. And it shall be lawful for any person to take or destroy any such nets, traps or snares, whenever found set.

Sec. 8. Section eighteen of said act is hereby amended so as to read as follows: Sec. 18. No person shall at any time catch any speckled trout with any device save that of angling, with hook and line held in the hands, or attached to a rod held in the hands, except in waters which are wholly private, and only then by permission of the owner thereof; nor shall any person set or draw any net or seine of any description, or use any set-line in any lake, pond or stream inhabited by brook trout, or have on the shores [thereon] thereof any net, seine, set-line or other unlawful device for the taking of fish, except as above provided. [And no person shall at any time, or in any way, catch any speckled trout or salmon trout through the ice.] And no person shall at any time or in any manner catch, or attempt to catch through the ice, any fish in any waters inhabited by speckled or salmon trout, except in waters wholly private, and except in Otsego Lake during the months of February and March [prior to the first day of April]. Any person who shall offend against any of the provisions of this section shall be deemed guilty of a misdemeanor, and in

*Phrases in brackets denote the former reading.

addition thereto shall be liable to a penalty of twenty-five dollars for each offense, and all nets, seines and other devices forbidden to be used by this section are hereby declared to be contraband, and any person finding the same in any place where they are forbidden to be used is authorized to destroy such contraband articles, and no action for damages shall lie against him for such destruction.

Sec 9. Section nineteen of said act is hereby amended so as to read as follows: Sec. 19. No person shall catch, kill, or expose for sale, or have in [his or her] possession after the same has been caught or killed, any speckled trout, save only from the first day of April to the first day of September. Any person who shall at any time catch or take any California speckled or salmon trout, from any of the waters of this State, less than five inches in length, shall immediately place such trout back in the waters from which it was taken, and shall use due care not to kill or injure the same. No person shall at any time take or catch any speckled salmon or California trout from any of the waters of this State for the purpose of stocking a private or a public pond or stream, and no California trout shall be taken, caught or killed in any of the waters of this State in any way, except only between the fifteenth day of May and the first day of September following, and it shall be unlawful to take speckled trout by any device from any stream within the towns of Denning, Hardenburgh, Olive, Shandaken or Wawarsing in the county of Ulster, for the purpose of sale. Any person violating any of the provisions of this section shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of twenty-five dollars for each trout so caught, killed, exposed for sale or had in possession.

Sec. 10. Section twenty of said act is hereby amended so as to read as follows: Sec. 20. No person shall catch, kill, or expose for sale, or have in [his or her] possession, after the same has been caught or killed, any salmon trout or lake trout caught in any of the inland lakes of this State, in the months of October, November, December, January, February and March, and in Lake George the additional month of April. Any person violating any of the provisions of this section shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of ten dollars for each fish so caugh, killed, exposed for sale or had in possession.

THE MICHIGAN GAME LAW.

THE new game law of Michigan reads as follows:

SEC. 1. *The People of the State of Michigan enact*, That no person or persons shall pursue, or hunt, or kill any * * * (deer), save only in the Upper Peninsula from the 15th day of August to the 15th day of November, and in the Lower Peninsula * * * * (from the 1st day of October to the 1st day of December, inclusive) * * * * * in each year, or kill * * * * (at any time any deer when it is in its red coat, or any fawn when it is in its spotted coat, or have in his possession the skin of such deer or fawn, in the red or spotted coat, and the having in possession of the skin of such deer or fawn shall be *prima facie* evidence of such illegal killing. No person shall, at any time, kill or capture any deer in the waters of any of the streams, ponds or lakes, within the jurisdiction of this State, or kill or capture any deer by means of any pit, pit-fall or trap. No person shall) kill or destroy, by any means whatever, or attempt to take or destroy, any wild turkey at any time * * * (except in the months of * * October, November and December, of each year, or kill or destroy by any means whatever any woodcock * * except between the 1st day of August in each year, and the 1st day of January next following,) or any * * * partridge or ruffed grouse, or any wood duck, teal duck, mallard duck or gray duck, save only from the 1st day of September in each year to the 1st day of January next following, or any (wild) water fowl, except between the 1st day of May and the 1st day of September of each year, or kill or attempt to kill any wild duck or wild goose after sundown at any season of the year. (The taking, carrying or sending, by any means whatever, into or through any county of this State, any of the game or animals which have been killed or captured contrary to the provisions of this section, or the hides of such animals shall be illegal, and is declared to be an offence against the provisions of this act, in any county in or through which such game, animals or hides may be taken, and such offense may be punished as provided in section six of the act hereby amended.)

SEC. 2. No person shall kill or destroy, or attempt to kill or destroy, any (colin) or quail, sometimes called Virginia partridge, save only during the months of * * * November and December of each year, * * * * (nor kill, nor attempt to kill, any pinnated grouse or prairie chicken, before September 1, 1882, and thereafter only in the months of September and October in each year.)

SEC. 4. No person or persons shall at any time kill, or attempt to kill, any wild duck or other wild fowl with or by means of a swivel or punt gun, or rob or destroy the nests of any wild duck, or wild goose (or brant), or in any manner kill or molest the same, * * (at night, nor at any time, on their nesting places).

SEC. 5. No person or persons shall sell, or expose for sale, or have in possession for the purpose of selling, or exposing for sale, any of the kinds or species of birds or animals protected by this act, after the expiration of * * * (eight) days next succeeding the times limited and prescribed for the killing of any such birds or animals: Provided, however, That it shall be lawful to expose for sale and to sell any live quail, for the purpose of preserving the same alive through the winter. And it shall also be lawful for any person to take alive, on his own premises, at any time and in any manner, any wild turkey for the sole purpose of domestication, or for scientific or breeding purposes; and possession and transportation alive of such wild fowl so taken on one's own premises, may be had for any such purpose: Provided, That in any prosecution for violation of any of the provisions of this act, the person claiming the benefit of this section shall prove on the hearing, or trial that in good faith he so took alive such wild fowl or fowls for one of the purposes specified in this section, and if prosecuted for transporting them, that he is in good faith transporting them alive for such purpose, and it shall not be necessary for the prosecution to aver or prove that the taking alive or transporting alive of any such wild fowl or fowls was not done for domestication or for scientific or for breeding purposes.

SEC. 6. Any person or persons violating any of the foregoing provisions of this act shall be deemed guilty of a misdemeanor, and shall likewise be liable to a penalty of fifty dollars for each offense, and shall, on conviction thereof, stand committed to the common jail of the county until such penalty is paid: Provided, That such imprisonment shall not exceed thirty days.

SEC. 7. Any person who shall at any time, within this State, kill any robin, night-hawk, whip-poor-will, finch, thrush, lark, sparrow, cherry bird, swallow, yellow bird, blue bird, brown thrasher, wren, martin, oriole, woodpecker, bobolink or any song bird, or rob the nests of such birds (shall be deemed guilty of a misdemeanor, and on conviction thereof shall be fined five dollars for each bird so killed, and for each nest so robbed, or confined in the county jail for ten days, or both such fine and imprisonment in the discretion of the court).

SEC. 8. That any railroad, express company or other common carriers, or any of their agents and servants, or other persons, having any of the above named birds or animals in their possession for transportation, or shall transport the same after the expiration of * * (five) days next succeeding the time limited and prescribed for the killing of such birds and animals, shall be punished by fine not less than ten dollars, nor more than one hundred dollars: Provided, That such penalty shall not apply to the transportation of live quail, which are to be kept alive throughout the winter, or to the transportation of such birds or animals *in transitu* through this State, from other States, where it is lawful to kill such birds or animals at the time of such transportation.

SEC. 12. All prosecutions under the provisions of this act shall be commenced within * * * (one year) from the time such offense was committed.

GAME NOTES.

Bucksport, Maine, May 26.—Woodcock returned early and are quite plenty for spring. They are already out with their young. Grouse have had a favorable winter, and well protected by law and interested wardens. They have come out this spring more plenty than for years, and as if in return for their protection they went early to work piling up their eggs. Some of them at least seem over zealous in their attempt to propagate. I found one old hen the 21st of this month trying hard to cover fifteen eggs that she had reared. When I came upon her she strutted off as if she were proud of her egg-piling ability. We are looking forward to our autumn season of shooting with pleasure and expectation.—M. S. B.

Vincentown, N. J., May 29.—This month of May brings forth the shrill call of Bob White in greater numbers than was at first anticipated. Rabbits are more numerous than ever; the farmers say they never saw so many young ones before. On Friday last a neighbor's cat brought in a young blue-breasted millbird, about half-grown, and in full plumage. The cat caught it in the snipe meadows, which are ten miles from the millbird meadows. Is not this a rare occurrence?

We are anticipating good woodcock shooting in July. Owing to the game law last year we had no woodcock shooting at all, as there were none at all here in September, but there were a great many here during the month of July and part of August.—J. W. H.

Tennessee, Savannah, May 20.—This spring squirrels have made their appearance in unusually large numbers, and a corresponding butchery has been carried on. On Wednesday I obtained the scores of five men. The first man was out shooting light hours and bagged 30. The second and third, shooting together all day, killed 47. The fourth and fifth, two boys hunting one-half day, brought in 37. The total number butchered foots up 114, giving an average of 22 4-5ths to each gun. Besides the squirrels killed, many quail are shot on the fences by pikes out squirrel shooting. It is hardly necessary to say that unless this kind of thing is stopped, there will soon be no game left to shoot.—WILL.

THIEVES NEED WATCHING.—So do many disreputable "cusses" who profess to be sportsmen. A year or two ago I was invited by a gentleman in a certain part of New York to be "on hand" on the first day of the season, and he would take me to a place where he had seen several fine coveys of quail, time after time, so he *knew* they were there. Of course I was on hand and with a fine dog, but the only covey to be found in all that region consisted of one half-grown bird. Several parties were out and scoured the country thoroughly to no purpose; the thieves had been there in time to secure the spoils, and the farmers paid no attention to them.

One of this "Hog Island" class of sportsmen, whose name I will not give unless I hear from him again in the same way, lives in Elizabeth, N. J. Two or three years ago he sneaked off to Monmouth Junction a day or two in advance of decent men, and secured about 40 woodcock.

This way of "taking Tempus by the front hair" may be *smart*, but if he had been kicked out of the woods and then fined for every bird, all honorable sportsmen would have been glad to hear of it.—DIDYMUS.

MEASURING GUN STOCKS.—Messrs Clark & Snelder, of Baltimore, Md., publish an instructive pamphlet descriptive of the Snelder gun, and containing many useful hints for all purchasers of firearms. This firm makes a specialty of altering muzzle loaders to breech-loaders, and have successfully treated in this way many scores of guns. The accompanying cut, which we take from their pamphlet, illustrates the manner of determining the desired crook and length of gun-stock. Lay a straight edge along the rib, as shown in the cut, extending to the butt of the stock; measure at points 1 to 2, 3 to 4 for the crook, and from the front trigger to the butt for the length.

NEAR Ralph's Hotel, on Chateaugay Lake, in the Adirondacks, the other day, a deer, chased by hounds, and panting and exhausted, came down from the woods and plunged into the lake near the hotel. Two boats were manned and pursuit was made. The deer was soon overtaken, and was so exhausted that he submitted without much of a struggle, and was taken by the ear and towed to the shore. After gaining his feet, resting for a moment, and surveying the surroundings, he pricked up his ears and bounded away. The party was organized by Mr. J. C. Pitman, the clerk of the hotel.

"HAUNTS OF THE RUFFED GROUSE."—Ashfield, June 1.—*Editor Forest and Stream:* Is it possible that the compositor that "set up" my last article on ruffed grouse was himself slightly "set up" at the tin? On receiving the issue of May 26, and glancing over the article, a few minor mistakes, slightly affecting the sense of the paragraphs in which they occurred, were passed over as unavoidable. But when he made me accuse King Umbellus of cannibalistic tendencies, making "a bountiful meal off a handful of bird," and then a few lines below spells Umbellus with an *r* and an *a*, then I knew that something was surely "hup." Nothing short of sunstroke, being out late of nights, or incipient insanity, aided by an extremely lively inventive faculty, could have tortured my chirography into that shape. —RUFFED GROUSE.

JUST A TASTE OF HIS DESERTS.—Last Sunday, William Hall, of Brooklyn, E. D., went into the country with a cage to trap birds. After he had trapped a bobolink and several yellow birds, Constable King took him into custody and locked him up in Newtown. Yesterday Justice McKenna fined him $25, and being unable to pay he was sent to jail for twenty days.

ADIRONDACK DEER BITCHES.—It is reported by parties who have been fishing in the St. Regis district, that deer are being killed in large numbers on the 16 mile level of the St. Regis and in the ponds in that vicinity. We commend these men to the care of the State game constables.

MR. GWYNNE PRICE'S little book on "The Gun and How to Use It," contains much matter of interest to pigeon trap-shooters, among whom, we understand, it has had a favorable reception.

MIGRATORY QUAIL IN QUEBEC.—Quebec, June 3.—Grand Chief Jahourenche (Paul Picard) reports having seen on Sunday morning last, in the neighborhood of his house, St. Lorette, nine of the quail which Colonel Rhodes set at liberty in that vicinity last year.

THE LYMAN SIGHT is standing the test of trial; we hear favorable reports of it. See the advertisement elsewhere, and send to Mr. Lyman for an illustrated circular.

THE DAVENPORT BALL TRAP combines the various contrivances for double, single, rotary and stationary trap shooting. It is advertised in another column.

MESSRS WRIGHT AND DITSON, of Boston, publish an illustrated catalogue of lawn tennis, archery, cricket, baseball, football and other goods. The firm are widely known and their goods are in demand. See the advertisement of the house elsewhere.

Holibird Shooting Suits. Upthegrove & McClellan, Valparaiso, Ind.

Sea and River Fishing.

FISH IN SEASON IN JUNE.

FRESH WATER.

Brook Trout, *Salvelinus fontinalis.*	*Stizostethium americanum, S. griseum*, etc.
Rainbow Trout, *salmo iridea.*	Yellow Perch, *Perca flavitilis.*
Dolly Varden Trout, *Salvelinus malma.*	Striped Bass, *Roccus lineatus.*
Grayling, *Thymallus tricolor* and *T. montanus.*	White Bass, *Roccus chrysops.*
Black Bass, *Micropterus salmoides* and *M. pallidus.*	Rock Bass, *Ambloplites.* (Two species).
Pickerel, *Esox reticulatus.*	War-mouth, *Chænobrytus gulosus.*
Pike or Pickerel, *Esox lucius.*	Crappie, *Pomoxys nigromaculatus.*
Pike-perch (wall-eyed pike)	Bachelor, *Pomoxys annularis.*
	Chub, *Semotilus corporalis.*

SALT WATER.

Sea Bass, *Centropristis atrarius.*	Pollock, *Pollachius carbonarius.*
Striped Bass, *Roccus lineatus.*	Tautog or Blackfish, *Tautoga onitis.*
White Perch, *Morone americana.*	Weakfish or Squetague, *Cynoscyon regalis*
Bluefish or Taylor, *Pomatomus saltatrix*	
Scup or Porgie *Stenotomus argyrops.*	

For though of all field sports the motive and origin is to kill for the table, and not to kill for the sake of killing, still the spot to be derived from them lies in the excitement of pursuit and difficulty of capture, not in the number or value of the game. Wanton butchery of useless brutes and greedy pot hunting are the Scylla and Charybdis between which the true sportsman, and he only, steers intermediate. It is the wariness, the subtlety and caution of the salmon, rendering it necessary to use materials of the slendcrest and most delicate nature, and to apply them with the utmost nicety, which makes the triumph over him so far more enthralling to the real fisherman than that over the pickerel or mascalonge of equal weight, whose greater voracity and inferior intellect permit the use of a gimp hook-length and a silken or flaxen line instead of the rine gut, tinctured to the very color of the water, and the casting line of almost invisible minuteness.—FRANK FORESTER.

OUR FIRST FISH OF THE SEASON.

TIRED of office duty, at one o'clock I lay aside its cares, seize rod and tackle, and hie for Green Moore's lake, that is embowered in the shade of giant water oaks, two miles from town. It is a bright, beautiful, propitious day. The warm sunshine falls in unclouded glory, while from the genial south gentle zephyrs wing their flight to toy with the young and tender leaves, and merrily stoop to kiss the young flowers and steal their sweet fragrance.

A pleasant, leisurely stroll, serenaded on our way by Bob White's musical call and the soft music of the mocking bird, I find myself at the lake and under the protecting shades of its noble trees. Here we prepare our lines, impale on our barbed steel the squirming worms, cast in, disturbing the quiet waters that sleep in smiles for a moment, until the hook with its seductive bait rests on the sandy bottom.

Knowing the wily perch would not begin their evening meal and take bait until the evening shadows began to fall along the lake, I rest my pole upon a friendly limb and stretch myself in inglorious ease under the shade, and had begun to doze, when I heard my pole jerked from the limb into the water. Got it in hand, but not in time to hook the piratical fish who, in stealing the bait, came near taking the pole. Baited the pole and waited results. In a moment's time something seizes it and dashes away into deep water. I pull, the thief is caught, and away he flies as swift as arrow "from Tartar's bow." After a desperate fight, a two-pound chub is landed.

Put our hook back and try for another, but nothing disturbs the alluring bait. The wished-for hour at last arrives. I gather up pole and bait, step in a batteau, and speed away to a large maple tree near the middle of the lake, under whose friendly shade the red-breasted perch are feeding.

Our line is cast into the clear water. The hook sinks slowly to the bottom. Eagerly our eyes watch the floating motionless upon the quiet waters. A few moments pass, and to our great joy we see the float slowly skim along the surface and suddenly disappear under the limpid water. A gentle pull, and our prey is hooked. Now comes the tug of war, for our red-breasts are gallant fighters and our tackle light. Down he goes to the bottom, and we yield him in his swift career the whole length of line. Back—almost to the very surface—he flies, and then in rapid circles wide he fights out the battle for life, and yields himself a prey to cruel man's dominion.

Nine more of his beautiful race, after gallantly fighting for their lives, are ours, and we are happy. By this time it is too dark to see our float, and we desist and return home satisfied with our evening's sport. O. G. GUALEY.

Bainbridge, Ga

THE FLY-CASTING TOURNAMENT.

IN our next issue we will publish the rules which will govern the fly casting the 23d of this month at the Tournament of the New York State Sportsman's Association at Coney Island. We will also print the record of all previous castings, with the distance cast by each competitor, and would request any person having information on this subject to correspond with us. Mr. Abel Crook, the President of the Association, has gathered much information in addition to the prize list published, which he will furnish us.

A prize has been offered by Mr. W. B. Hopson, of the Sea World of a gold-mounted split bamboo salmon rod, made by H. L. Leonard, 16 feet in length and weighing 27 ounces, worth $75. It is to be given to the person making the longest cast in any class in single handed fly-casting, and will be given in addition to any other prize won. This is the only case in which a contestant may be permitted to receive two prizes in this tournament of fly-casting. The interest in it is increasing, and general satisfaction is expressed at the number of prizes and their arrangement, and a good number of entries are promised.

The bass-casting, Cuttyhunk style, is attracting attention, it being the first time that such a contest has been held. Now we will see what distances can be cast in this style, and have something besides fabulous stories of enormous casts. If you can cast, bring down your rod and try your skill in this most beautiful of arts.

BASS THAT REFUSE THE FLY.

WILLIS, TEXAS.

I AM not satisfied yet. I did think that when I got my new "Stranahan canvass boat," and my rod, and my flies, and other tackle complete, together with sundry other baits natural and artificial, bobs of deer-tail and the like, that I would completely "slay and eat" the villainous bass, but "nary time," and now is the "winter of my discontent." I am bothered. I can stand disappointment as well as any man, when it is necessary, or only occasional, but when it becomes chronic I get fretted. I believe the fish in the South have been so accustomed to rough, old fogy and free-nigger methods, that it is impossible to ever school them to any thing genteel or delicate, at least until the present generations of fishes have passed into the frying-pan, and a new school reared up.

Last week my friend Thompson and I got our sporting wagon ready, hitched in the ponies, filled the vehicle full of everything on earth that a camper-out could wish for, took big rifles and little rifles, reed poles and pointed rods, all kinds of tackle and a minnow seine. We took along everything. We camped two nights at "Crystal Creek," 16 miles from town. I tried the flies first. I was crazy to witness a bass rise to a fly. I prevailed on Thompson to take some sun-perch with crickets, so as to be certain of a meal for dinner. I stole away to a splendid pool, some sixty feet long and 20 wide, with a fallen log across the middle. I crept up behind a bush and looked in. The water was clear, but too deep to see the bottom. I carefully rigged up my new rod with a braided silk line. I then selected a royal coachman for a leader and a La Belle for the dropper (I believe that is the word). I then drew off about three feet more of the line than the length of the rod. All ready, I made my cast—my first cast with an artificial fly—my maiden cast, you understand. I trembled for safety, not for my own, but for the delicate rod. I trembled because I expected something fearful was about to turn up. I always tremble under emotional excitement. The two flies settled beautifully on the water, causing but little splash or ripple. I waited the result until the waves began to subside, when I saw two fine bass rising to the flies. One was a two year old and the other three. They were beauties, however, and as they ascended slowly toward the flies with their bodies curved or bowed in a menacing manner, I expected every moment to see the flies disappear in their jaws, but—but they didn't take 'em. They came up to within three inches of the flies and took a good look, turned their tails and swam slowly and sensibly away, and leaving the world to darkness (disappointment) and to me. And left me to understand that I was the biggest fool of the three. I cast to them again but to no use. Couldn't fool *them*. Then I cast near the log, when a fine bass swam immediately behind the flies, until within three or four inches of them, then turned and swam away. I then cast beyond the log, and drew the flies along toward me, when I saw a fine 2-pounder slowly following the flies. I merely kept the flies in motion to prevent their discovering the fraud, but this one like the rest turned with big disgust and swam slowly away. I then cast toward another part of the pool, when a fine one arose and did just as the others had done. I quit that pool and went to another, and my efforts met with like results. So I just wound up my tackle and went to camp, and all the time lamenting that I ever read a word about fly-fishing for bass. I went then and got Thompson, and we drew the minnow seine and took a few minnows. I went to the same pool and tried with the minnow with little or no better success, although they took the minnow better than the fly. We then went to some splendid lakes some five miles below, said to be the best in the country for bass. We entered the canvas boat, and I tried the flies to my satisfaction. I tried different flies, but nary strike did I get. I then laid the rod aside and took my long cane or reed pole that I had arranged with reel-seat and guide. I fixed on that a deer-tail bob and tried that. I had several splendid strikes, and all large bass from two to four pounders, but from some cause I failed to hook them, only taking three in all. But I found the deer-tail bob to surpass any fly that I had to provoke a strike. The flies would raise them, but that was all—the bass would not take them. We took some minnows from the river with seine, but the bass would not take them—the bob being the most effective lure we had, nor did they go for that much. The only causes that I can attribute to this apathy on the part of the fish, one is that the moon is just on the full and the nights are light all night, rendering the fish sluggish and dull all the next day, as I have mentioned in some former papers. Or, that the fish are in their spawning season, and decline food in consequence. Something wrong, that's all. I would like if my handsome friend Dr. Henshall would rise and explain.

I shall not say much, however, until I get a hold on the Doctor's "Book of the Bass." He has shown me how to make the bass rise to the fly, but he has not shown me how to make him take hold of it. Did you ever think of that before? It is easy enough to lead a horse to water, but I defy the world to make him drink. I hid from the fish; they did not see me at all. I let the flies stop sometimes, and at others kept them moving, but nothing that I could do would induce them to seize them.

The weather was all one could ask. The water was in prime condition, and nothing else could I attribute their not biting except the "wrong time of the moon."

I have not quite despaired, however; I shall try them again and oft. The worst I hate in the whole matter is about my big expectations. The more one expects the greater the fall, when disappointment does come. I don't like to be snubbed by country lads and fogies. My only solace now is in the Doctor's book. When I get it I am going off by myself and take it all in *veritatim et literatim*. Probably he will tell me how to compel the bass to take my fly after I have got him within three inches of it; and if he does I am going to make another break for them; but until then, I shall lie on my oars and wait the inflowing tide. C. L. J.

BASS FISHING IN KENTUCKY.

MILL SPRINGS, KY., May 25.

WINTER persisted in lolling so long in the lap of spring that angling without overshoes, great coat and yarn mits was per force put off till last of April, and but little sport has been indulged in, as the few spring-like days were but preliminary to a skip from a frigid temperature to one of such unprecedented torridity that the average angler concluded it the overture to the grand Cataclysm as per Mother Shipton's programme for '81. 'Twas thought that that comet had certainly "set the sun afire." Bushwhackers are seining all the streams in as absolute disregard of the fish law as if no such existed. One fellow, while seining at night, was snake bitten, and there was some hopes that the venom of that reptile would guarantee him a through trip without change of cars, including ferriage at Styx, but a weekly outlook for a complimentary obituary in the country paper is yet unrewarded. Better luck to the snake next time.

During the short enjoyable spell "Uncle Joe" Taylor, a native pioneer, seventy-three years of age, came over to go fishing with me, "just to see me catch 'em with a reel," he said.

Uncle Joe never misses a fall deer and turkey hunt, and, living near a river has always set great store by his trot lines. Having never seen a reel in use, he wanted proof of the extravagant praises he had heard of that style of fishing, and I rejoice to report that our trip has resulted in the old man's equipping himself with an approved angler's outfit and cheerfully transferring his trots to Aunt Mat for clothes-lines. As transporting minnows over eight miles of mountain bridle-paths is not so comfortable as leading a three-pound black bass into a landing net, it may gratify some brother to learn that we put our minnows into a gallon jug two-thirds full of fresh spring water—balanced with a stone in a meal sack, as we hadn't enough to demand two jugs—and on arrival, at noon, found every minnow alive.

Fishing below a mill-dam in the swift water, pike-perch and black bass were taken rapidly; and when Uncle Joe had the pleasure of putting a bridle-rein through the under-jaw of an eight and one quarter pound pike-perch which a slatherer led into the landing net with a six ounce, eight feet Japanese rod and No. 2 Meek reel, his reconstruction was complete, for the ecstasies of rod and reel angling were established.

As soon as practicable I shall accompany Uncle Joe to his favorite fishing resorts, and hope there will be some in our catch that deserve to go on record. By the way, the old sportsman is responsible for the following, which I believe as if I had seen it:

On one of his trotting excursions, while amusing himself by tossing chips and pebbles on the water to see the black bass dart for them, a water-snake glided into the water and was immediately tackled by a big bass which heroically endeavored to dine off snake, but finally gave it up, the snake wriggling into hiding badly worsted by the protracted struggle. KENTUCKIAN.

TROUTING IN CANADA.—Trout fishing has so far been unusually good here in the Eastern townships this season. Hopps pond has yielded up some three-pounders, and yet retains its largest. In company with the veteran snow shoer, Mr. W. L. Maltby, the writer recently visited Lake Nick and Coons pond, where we basketed some fine *Salmo fontinalis* and for a change we went to Browne lake and killed a quantity (all we could carry) of pike and small-mouthed black bass. One of the bass kicked the beam at 4½ lbs. I have just returned with a party of sportsmen from Averill, Vt., where we had good sport in Big and Little Averill lakes and Little Leach pond. The largest of our trout taken there weighed 1 lb. and 16 oz. If these lakes were properly protected they would afford fine sport for the trout fisher. A French Canuck has built a steam saw mill on the shore of Big Averill and is depositing his sawdust in the lake. This, with sweeping the spawning beds with nets, will soon clean out the trout. Where are the Vermont Fish Wardens? STANSTEAD.

Eastern Townships, Canada.

BASS AND TROUT IN CONNECTICUT—Putnam, Conn., May 30.—The first black bass this season were taken by A. M. Wood, of Dayville, an expert with the fly. He took about a dozen a few days since at Alexander's Lake, a fine sheet of water some four miles south of this place. When the proper time arrives, and bass are off the spawn beds, there are a few "old salts" here in Putnam who drive up to Webster Pond, which lies just over our line in Massachussets, and they have such a taking way with the bass, that the fishermen up there look sad when they see the quantities of fish taken to Connecticut. But there is no end to bass fishing in Webster Pond; it is literally alive with them. This county used to be the best in this State for trout-fishing, but now there are but very few to be had. There are so many fishermen that the streams are kept pretty clear of fish. Something must be done toward restocking our streams, and more attention paid to the laws, or our trout-fishing will soon play out.—E. T. W.

PENNSYLVANIA TROUT.—In your issue of June 2, I notice an item asking for information in regard to trout weighing over two pounds caught in Pennsylvania waters.

Last year Mr Ben. H. Mulfold, of Montrose, caught, in Carm ll's Lake, this county, a brook trout weighing 3 lbs. 7 oz. This spring, His Honor J. B. McCollum, of Montrose, caught a trout which weighed 2 lbs. 8 oz., in the above-named lake. In the same lake Mr. W. W. McCain, of this place, caught a trout weighing 2 lbs. 6 oz. The same gentleman caught a brook trout in Bowman's creek, Wyoming county, two years ago, weighing 2 lbs. 4 oz. I have just returned from Bowman's creek, where I spent a few days angling in that well-known stream. My host, Mr. Wm. Culver, told us that he caught a trout, last year, weighing 3 lbs. 1 oz. If this does not settle the point, your Smithport correspondent can address any of the parties named and get the facts at first hand.

Rush, Susquehanna Co., Pa. J. W. G.

TENNESSEE, Savannah, May 30.—The new fish law seems already to be exerting a salutary influence in this vicinity. The net fishermen have suspended operations, and persons living near the head waters of the creeks, report that the shooting and gigging, formerly so largely practiced, has been stopped altogether since the publication of the law. Public sentiment seems to be largely in sympathy with the law, and I hope that after awhile something may be done toward protecting the game. There is a law in force in some of the counties, but does not apply to the whole State.—WILL.

A CALIFORNIA RESORT.—Soda Springs, Siskiyou county, Cal., May 23.—Your correspondent, "B. W.," will find this the place he is looking for. It is twelve miles from the foot of Mount Shasta, twenty miles from Mct loud River, on the headwaters of the Sacramento River. Good trout fishing is within rifle shot of the house. Horses and guides always on hand, with full outfit for camping. Plenty of deer, there being five licks within three miles of the hotel. No better salmon fishing in any of the waters of Canada than here during the months of July and August.—G. C.

NORWICH FISHERIES EXHIBITION.—Messrs. S. Allcock & Co., of the Standard Works, Redditch, have been awarded a gold medal and a special diploma by the jurors at this exhibition for sea and river fish hooks, swivels, etc., and for improvements and inventions of the same. This is the only good medal for sea and river fish hooks awarded at this exhibition.—*London Chronicle.*

SHAD IN THE DELAWARE.—Philadelphia, May 30.—The shad getting season on the Delaware River below Pennsgrove is nearly over. The market boat has made its last trip. She has carried to Philadelphia, since the opening of the season, 232,000 shad. The freight and commission on the shad amounted to $15,000. Very little is left for the fishermen—scarcely wages. The shore fisheries further up the river will probably cease operations the present week.—HOMO.

HINTS FROM ANGLERS.—I read in your issue of June 2, "Hints from an Old Angler." He recommends cotton gloves. Silk is far preferable, especially if the butt is, as it should be, unwound at the grasp, for a fly rod. Then he omits the small bottle with ground glass stopper for spirits of ammonia, a perfect antidote to the poison of the black flies, punkies and mosquito bites.—H.

INFORMATION WANTED.—Brooklyn, N. Y.—Will G. H. W., of Oceanic, N. J., please inform a fellow fisherman, who is about to spend his vacation at Red Bank, in what parts of the Shrewsbury River good bass and weak fishing can be obtained? Also, if the latter part of this month will be late enough, and oblige J. L. C.?

RALPH'S, Lyon Mountain, N. Y.—Salmon-fishing has been good for the past three weeks, and now speckled trout are taking both fly and bait, and a full basket is the rule. Several parties from New York and Albany are here now, all charmed with the place.

Hop Bitters have more patience than Job, curing thousands of patients daily.

Fish Culture.

THE FIRST AMERICAN FISHCULTURIST.

I AM very much surprised that the wording of my statement in the Epoch paper should be unsatisfactory to Dr. Garlick. It was my intention to credit him with the introduction of fish culture into the United States, and, having the paragraph in question before my eyes, I am of the opinion that I succeeded in wording it so that it gives to Dr. Garlick the honor which he so well deserves. I feel much grieved that Dr. Garlick has not appreciated my intentions in the matter. If he will refer to my remarks at the close of the discussion Epoch I., in which the rival claims of Jacobi and Dom Pinchon are discussed, and to which allusion is made in the paragraph upon Epoch XX., he will see that I place Dr. Bachman's shadowy claim upon a par with the equally shadowy one of Dom Pinchon, while by implication at least Jacobi, "the father of fish culture," is compared with Dr. Garlick, who, in my opinion, should be styled "the father of fish culture in America." I shall be pleased to hear of any publications of Dr. Garlick prior to 1857. I made diligent search, and, as the members of the Educational Association will remember, read this part of my paper very slowly, hoping to call out criticism and emendation. Before the final publication of the paper of "Epochs of the History of Fish Culture" I shall be glad to make such changes as shall make it just to all. I can assure you that criticisms will be very welcome. At the same time, as a historian I cannot pass by the fact that Dr. Bachman has put forth certain claims—claims which since the recent successful experiments in transporting fish eggs in a partially dried state cannot now be ignored with as much reason as they might have been a twelvemonth ago. G. BROWN GOODE.

REPORT OF THE CALIFORNIA COMMISSION.

THE report of the Commissioners of Fisheries of this State for 1880 opens with the statement that 2,000,000 fry of the quinnat salmon which have been hatched and turned into the tributaries of the Sacramento are producing their legitimate results. Greater numbers are now taken than before. In 1872 and '73 they were scarcer than ever on account of the destruction of spawning beds in previous years by mining operations. Since then, thanks to artificial culture, they have increased. The catch in the Sacramento for the last six years is as follows for the years ending August 1, 1875, 5,098,781 lbs.; 1876, 5,511,428 lbs.; 1877, 6,493,563 lbs.; 1878, 6,520,768 lbs.; 1879, 4,432,250 lbs.; 1880, 10,887,400 lbs. This shows a steady gain year by year up to 1879, when there is a falling off, which is more than made up for the next season. This falling off is only apparent on paper, the cause being a strike among the fishermen and no fishing in consequence for three weeks.

The report shows much good work on the part of the Commissioners. Mr. Horace D. Dunn reports on the state of the salmon fisheries, their laws and violations by canners and others, as well as on the views of the canners regarding the laws. Of the shad they say they can be found at all seasons of the year in San Francisco markets. This fish did not exist on the Pacific coast until placed there, and they now sell regularly at 25 cents per pound. Whitefish, *Coregonus*, were also introduced and are occasionally taken in the lakes. The seventy-four catfish imported from the Raritan River, N. J., in 1874, have increased until they are common from Del Norte to San Diego, and are plentiful in market. Black bass have also thriven in their new home. Striped bass were introduced in 1879, and a few have been caught. The lobsters and eels have

been heard from, but none taken, although the former are expected to be found in market this summer. These importations show that California has a wide-awake Fish Commission, which proposes to have some of the good fishes which the East enjoys, as well as to increase their own valuable ones.

Mr. W. N. Lockington furnishes a valuable and voluminous appendix on the edible fishes of the Pacific coast of the United States.

GILL-NETS IN THE COD FISHERY.

[Bulletin of the United States Fish Commission, 1881. Gill-nets in the cod fishery: A description of the Norwegian cod-nets, with directions for their use, and a history of their introduction into the United States. By Capt. J. W. Collins.]

CAPT. COLLINS has here given a little pamplet of sixteen pages and twelve plates which is of great practical value. The cod have been taken with lines and the question of bait has been a most important one. These lines have either been single or in "trawls" which are lines buoyed near the surface from which other lines depend. This bait question has been an expensive one to the fishermen both in money and time. Smacks have lost weeks of fishing through the spoiling of the herring taken out for bait and it occurred to Prof. Baird some time ago that the gill-net in use by the Norwegians might be profitably introduced upon our coast. Last year Capt. Collins, attached to the Commission, was sent with the party to the Berlin Fishery Exhibition to study all methods of fishing and sent home instructions how to use them. Prof. Baird had imported one in 1878, at Gloucester, but it was in winter and on the shore grounds, and was not a success owing to the fact that the net was too frail for the large cod which frequent our coast. Last winter the nets were tried in Ipswich Bay, north of Cape Ann, in thirty fathoms, with success. This is a most important matter, commercially, and may be ranked as another victory scored by the Fish Commission. If bait is abandoned and gill-nets substituted our coast fishermen will be saved thousands of dollars now expended for bait, and fish can be sent to market at a lower price.

LAND-LOCKED SALMON IN CONNECTICUT.

THE following letter from Dr. Hudson, of the Connecticut Fish Commission, proves that the whitnish can live in other waters than those of Maine. He writes under date of Hartford, Conn., May 21:

Editor Forest and Stream: I received last evening a fine specimen of a land-locked salmon just captured in Snipsic Lake, in Rockville in this State. It measured twenty-two inches in length and weighed 3 lbs. 14 ozs. It was presented by Messrs. E. J. Henry, T. Newcomb and Geo. Talcott, gentlemen who are largely interested in fish culture. The young fry of this species were first planted in this lake in 1875. WM. M. HUDSON.

WHAT SHALL WE STOCK WITH?—Webster, Mass.—As one of a committee chosen by the Rod and Gun Club of this town to investigate the following, I respectfully ask for the following information: There is a lake here of 1,370 acres containing pickerel, pouts, suckers, perch, eels, sunfish, dace and shiners. Some six or seven years ago the town spent $250 to stock it with black bass, which have increased wonderfully, but at the same time are spoiling all other fishing and threaten to eat up anything not bigger than themselves. Besides, they are hard to catch, and in the late summer were reported to be full of worms. We want different and better fishing. The lake has clear water from five small brooks and numerous springs, gravely and rocky bottom, with many sandy shores, and several cypress and meadow swamps, covering, perhaps, together, 50 acres; depth anywhere to 50 feet, perhaps 12 feet on average. One side is bordered by woods, the other by farms—a splendid lake generally; the outlet drives a cotton mill.

Now our idea is to stock it with lake trout (land-locked salmon) and German carp. I know something about the latter from my Vaterland, and wish you to answer these questions:

1. Do you approve of this?
2. Can we get lake trout fry of the Massachusetts Fish Commission, or where else?
3. Where (what place) and what address?
4. When should we put in fry, and should this be repeated for several years in succession?
5. How much will this fry cost?
6. Where can we get carp fry?
7. When should this be put in the lake?
8. How much will carp fry cost?
9. Would you advise stocking with fry or full grown fish?

I wish to add that our means are limited, and that all expenses would have to be raised by subscriptions of the Rod and Gun Club and other public spirited citizens.

Trusting that the above request will not be intruding too much on your valuable time, and that we will be favored with a reply.—C. GERBER, JR.

We should prefer black bass fishing to that of the fishes you name. The bass may be difficult to take because they have so much food. If hungry they are easily taken. If they have so much food they are thriving, and may reduce it so that you can readily capture them. In this case time will remedy your evils. We fear that it is too cold for carp in your lake, as you describe it as a spring lake. Rocky bottom is not good for carp, as the latter are mainly vegetarians, and bed in the mud in winter. Lake trout and land locked salmon are two different fish, and either might do well in the lake of 1,370 acres if there are gravel spawning beds. We prefer bass fishing to that for lake trout. We will, however, answer your questions as follows: 1. This is answered above. 2. Write to them. Their addresses are: Theodore Lyman, Brookline; E. A. Brackett, Winchester; Asa French, Boston. Land-locked salmon may be obtained from Mr. Chas. G. Atkins, Bucksport, Me. The New York Commission may have lake trout. Write to Hon. R. B. Roosevelt, 76 Chambers street, New York, or E. G. Blackford, Fulton Market, New York. Better try your State Commission first. 3. Answered above. Write James Annin, Jr., Caledonia, N. Y. 4. In the winter, but write now. Yes; keep it up for three or four years or more. 5. We can't say. 6. Write to Professor S. F. Baird, Smithsonian Institution, Washington, D. C. 7. When you get them, in the fall. 8. Transportation from New York, only. 9. Stock with fry.

DISTRIBUTION OF CARP.—No carp will be sent out from Washington before September or October on account of the work of the Fish Commission with shad and other fish requiring the working force in the field. Mr. Hessel, Superintendent of the National Carp Ponds, reports that the carp hatched this season are of marvelous size, some of them measuring three to four inches in length at two weeks old. These are the scaleless or leather carp. It is evident that our waters or climate stimulates the carp to grow beyond its measure in its native land. It is well to send in applications for the fry now, and have them placed on file to be filled in turn. Address applications to Prof. S. T. Baird, Washington, D. C., who will furnish blanks to be filled out, stating size and character of the waters for which the fish are required, together with other information.

AT WHAT AGE DO CARP SPAWN?—Rixford, Fla., May 27.—My carp continue to thrive splendidly, but I see no signs of their spawning as yet. I have examined all the works and communications on the subject that I can find, but no one tells at what age they spawn. Do tell me if you can. Mine are two years old in June.—GEO. C. RIXFORD.

We think they often spawn at two years old. It is not too late for them to spawn this year. Perhaps Dr. Hessel will tell us how this is.

SALMON IN SOUTH CAROLINA.—The Columbia *Register* tells us that the Hon. A. P. Aldrich, of Barnwell, S. C., has written a letter to Commissioner Butler, informing him that Mr. Whaley, who has a mill on the Edisto River, about six miles from Blackville, last week set his fish-traps for red-horse, but was surprised and pleased when he took out several salmon as long as a man's hand. Mr. Whaley did not do what many would have done—fry them, but put them back in the river. In January, 1879, 5,000 California salmon spawn were put in the Edisto, and in December, 1880, 20,000 more were put there. This is certainly encouraging to the Commissioner.

THE IOWA FISHWAY LAW.—Le Roy, Minn.—How is it about that fishway law in the State of Iowa? I have been told by residents of the said State that we could not compel them to put them in; that a case had been tried at Des Moines, and the mill owners came off victorious; that the law was unconstitutional. If so, why is it that other States are pressing the same kind of laws?—V. A. NAILS.

Two cases to compel the putting in of fishways have been tried in the lower Courts of Iowa, and in one case the Court decided the law constitutional and in the other case the reverse. We expect the last case to go to the higher Courts to determine the question of constitutionality.

BLACK SPANIELS.

CONTINUED FROM PAGE 319.

[Reprinted from Vero Shaw's "Book of the Dog," furnished to the FOREST AND STREAM by the author, through the courtesy of Cassell, Petter, Galpin & Co., publishers, No. 739 Broadway, New York.]

"I LIKE to see my puppies grow like cucumbers, without a check, until they are over six months old. I often leave home for two or more days together, and on my return have exclaimed—How these puppies grow! When they have been neglected during my absence I should always discover it on my return, and, on inquiry, generally found their feeding had not been properly attended to. And now I will say a few words on feeding: As soon as my puppies can lap milk they are supplied with it twice a day, at milking-time, from a herd of goats kept by me for the purpose. Never give cow's milk, without you want your puppies to grow backward, have pot bellies, and be filled with worms. Years ago I used to lose 75 per cent. of the puppies I bred through this very cause; now I rarely see one like it. As soon as the puppies can swallow solid food they are supplied with two meals a day—oatmeal, Indian meal, boiled with sheep's heads and scraps from the butcher's, and once a day with raw flesh. 'What! raw flesh?' said one of these clever writers to me one day, 'you will kill the lot of them.' I only laughed at him, as my experience has taught me different—it is their natural food. I have it chopped into mincemeat first, until they get their teeth developed, when it is given in larger pieces and quantities. When they arrive at the age of six or eight months they are fed almost entirely on it when it can be procured, and I ask any of your readers who have seen my dogs if ever they saw dogs shown in better condition, with coats always like satin. Well, friends, I will give you a piece of advice, and let the cat out of the bag—the condition of my dogs is all due to raw flesh. Go and feed likewise, but don't overdo it. Feed at first with great caution if your dogs have not been accustomed to it, and then give them a certain quantity, not so much as they will eat; oh dear, no, you would make a pretty mess of them. Practice would soon teach you the proper quantity, which depends on the size and age of your dogs.

"Cleanliness I insist on. Every morning the kennels are all cleaned out, clean sawdust laid down on the floor, clean straw supplied for the benches, and any sickly puppies removed to the hospital; kennels once a month lime-washed with hot lime in which a little carbolic acid has been added. When dry, they have a daily run in an orchard of nearly two acres in extent. I rarely ever see deformed legs in my puppies; they are never chained until their bones are properly developed, and then only for training purposes, as they have large, roomy, well-ventilated kennels and sheds to run in should the weather be unfavorable for their out-door exercise. I seldom have any of my dogs washed, it is not necessary if they are regularly brushed with a dandy-brush.

"I always try to keep my puppies in the highest condition possible, never allow them to get thin and poor, so as to be prepared to meet that fatal malady—distemper. If visited with it when in condition above described, nine cases out of ten they will pull through it if properly nursed. Another piece of advice to your readers, and I have done, 'Be prepared.'"

With reference to the breeding of the black spaniel from Sussex, which is alluded to by Mr. Jacobs, we may remark that the dog he used, though a good specimen of the latter breed, and a very successful dog too, had a bar sinister in his pedigree which might have in some degree influenced his stock. The dog to which we refer, and of whom Mr. Jacobs made much use, was the liver colored Bachelor, who was by Buckingham, late Mat, out of Peggie, by Babb out of Ruby, by Chance out of Pop, a black bitch by Joblin's Rags out of Floss. This, we think, may in some degree save the reputation of the Sussex spaniel as regards his pretensions to purity of blood.

The illustration we give herewith of Mr. Thomas Jacobs' famous Kaffir, and is a remarkably truthful representation of that excellent dog. Kaffir was unfortunately somewhat nervous when Mr. Barber was sketching him, and consequently there was a considerable difficulty in making him stand in the orthodox position. Mr. Barber therefore elected to draw him as he was, and hence the admirable likeness of the dog. Kaffir was bred in 1879 by his owner, Mr. Thomas Jacobs, of Worlborough House, Newton Abbot, and is by the Sussex spaniel Bachelor, out of Smutty, by Lad o' Beverley out of Lass o' York; Bachelor by champion Buckingham out of Peggie. Amongst other triumphs Kaffir was first and cup for the best spaniel shown at Birmingham in 1880.

In the face of the description given by Mr. Jacobs, it would be a work of supererogation on our part if we were to attempt to describe the points of this breed more fully; we therefore merely append a

MOTTO FOR THE NEW YORK DOG CATCHERS.—"It takes a thief to catch a"—dog.

THE COCKER STANDARD.

Editor Forest and Stream:

As a member of the committee appointed to frame a standard for the American Cocker Club, I feel called upon to reply to several of Mr. Watson's remarks in issue of May 26, of your paper. He complains: "The Committee dilly-dallied along, thus preventing a standard being perfected for the late New York Show." All this is true, and I used every effort in my power to bring about prompt action, but neither the President nor Secretary called a meeting, and of course the balance of the Committee were powerless to act. Then when a meeting was called, at which it was impossible for some of the Committee to be present, he complains because they saw fit to give authority to Mr. McKeon to present the standard which had been so kindly written out by Mr. Kirk embodying his views and those of myself, which I knew of, and I think had been submitted to Mr. Cummings with instruction to Mr. McKeon to present that standard if in accordance with his views, and register our votes for it, as we believed it to be as near correct in all the main points as could be perfected from the very best authorities, giving no preference to any breed or kennel in existence. I am of the opinion now if the standard as sent to Mr. McKeon signed by Mr. Kirk and myself, was submitted to the cocker breeders of the club, it would to-day meet with their approval in all the main points, and if the Secretary, in whose hands that standard was left, will return it to me, keeping a copy if he desires, I shall be obliged. Mr. Watson puts great stress on the point that Mr. McKeon and his three proxies ruled the roost. I had always supposed a majority of a committee should control, but as their views and his differed it seems it would have suited him better to have had the minority rule. But Mr. McKeon is said to have presented the standard in a very appropriate manner, arguing point by point in a very convincing way, thus securing its adoption. I consider this greatly to his credit, it being his desire of having a standard that should give satisfaction to the club—consequently stating good reasons for adopting it as it was, when he really had the power by aid of his proxies to present it, more to adopting and defeat the votes of a majority of the Committee for it—after the adoption of the standard by the Committee. I consider it the standard for the American Cocker Club until such time as a meeting of the club shall be duly called by the Secretary to ratify or reject it. I hardly believe that but few members of the club have ever been advised what the standard presented and adopted by the Committee was. If I am correctly informed, there has been quite an effort made to have a standard for cockers by which field spaniels could also be judged. The imported black field spaniel seems to play a prominent part in this. If any cocker breeder can accept a standard for cockers with long heads, long bodies, short, stout legs, eyes, the color of coat, etc., I certainly shall not object, but unless more convincing authorities than I know of are presented I cannot, and rather than belong to a Cocker Club whose aim should be harmony and the improvements of those rare little beauties, it seems instead to begin with a quarrel among its members. I would kindly ask the Secretary to erase my name from the list of the club members. I desire to thank the club members for the honor they saw fit to bestow upon me as a member of the Committee to form a standard. Having performed my duty conscientiously without fear or favor for any, I hope the ill-feeling that seems to have arisen may subside, and the Club be a grand success, so that in coming years the cocker may be as well-known as the Llewellyn setter at the present time.

Chicago, Ill., May 31, 1881. J. H. WHITMAN.

HOW TO NURSE SICK DOGS.

I.—BY A. J. SEWELL, M.R.C.V.S.

THE successful treatment of our canine friends in severe cases of illness is one of those subjects which are too often neglected. And yet if dog owners truly value the lives of their dumb companions every possible care should be taken of them. The diseases which affect the dog are numerous, and it is not only in cases of severe and dangerous diseases that treatment is necessary, but also in cases of skin diseases. In these complaints much depends on the daily food supplied to affected animals, if we are to insure a successful and speedy termination of the affection. However scientific and proper the doctoring may be, if it is not aided by good and careful nursing the veterinary surgeon's skill is all lost.

A person requires a large amount of patience to be a good nurse, for a harsh word to a dog badly affected with distemper will sometimes induce fits, and these, once established, more often than not prove fatal.

It is my purpose to draw attention to the general management of sick dogs, and then direct special attention to the nursing of dogs affected with specific diseases, such as distemper, jaundice, etc., etc.

I have been frequently requested to visit dogs affected with distemper, and on arrival have found the patient chained to a kennel containing no straw or other litter, and in a state of misery with stones. With such treatment dogs are often the subject of inflammation of the lungs, the result of exposure, besides being affected with distemper. When a dog is noticed to be ill, it should (if with other dogs) be removed to a room or kennel-house where it will be alone. He may not only affect others, but they will annoy and tease him, and so interfere with the patient making progress. The hospital should be warm (not hot) and well ventilated, free from all draughts, and the thermometer be kept as near as possible at 55 deg. Fahrenheit. A basket or box should be supplied for the dog to lie in. The bottom should be covered with straw or hay—the former is best, as dogs lying on hay for any length of time, as a rule, become infested with fleas. Besides, as straw is cheaper, it may be changed daily, which is essential, as it adds to the comfort and cleanliness of the patient. A large pipkin or pot of cold water should be placed within easy reach of the dog, and ought to be changed twice a day to insure its being fresh and cold. There are some cases where cold water is injurious, but these will be mentioned hereafter. All evacuations from the patient should be immediately removed, and a little disinfectant fluid (as Condy's) be sprinkled about. I mention this fluid particularly because it is very effectual in removing offensive odors, and at the same time it has no smell, or very little, of itself. The sick dog should be kept quiet, and by no means exercised. I have often witnessed a fatal relapse in distemper, the result of a few minutes' exercise.

I have known persons—when a dog has had a prolonged attack of illness, and become rather offensive—put him in a bath and wash. On no account should this be done, as it is most dangerous, more especially in the case of long-coated dogs, as these are very difficult to dry thoroughly. If left at all damp, the animals are sure to become chilled, and the disease is aggravated.

A dog when ill—say from distemper—should not be even brushed or groomed, as it excites and disturbs him and increases the weakness, which is always great in this disease.

To have their proper and desired effects medicines should be given regularly and at stated times, and not, as some persons do, to give a double one because they forgot one. I have known this to be done repeatedly, and wish to warn owners of its fatal consequences. The medicine should be given quietly and without disturbing the dog, if possible. One person, as a rule, is sufficient to give it, if a little tact is manifested. If it be liquid medicine it is best given out of a small vial, one which will hold about an ounce. In administering medicine the person should stand in front of the dog, and with the left hand the muzzle of the animal should be held, the head slightly elevated, and the teeth kept nearly closed. The bottle containing the potion should be held in the right hand, and the neck of it placed within the lips on the left side of the face, between the teeth and cheek. Thus small quantities should be poured into the mouth, and on no account should a second quantity be given until the first has been swallowed. Some dogs are rather obstinate in taking medicine, and hold it in the mouth some seconds before swallowing. Under these circumstances

many people pinch the throat with the idea of inducing the dog to swallow. This act is dangerous, as it often makes the patient cough, and, with the fluid in the throat, sometimes choke from drawing it into the windpipe. All that is necessary, in most cases, is a little patience to keep the dog's head elevated, and he will soon swallow. In very obstinate cases the end of the nose may be pinched, which soon compels the dog to perform the act of deglutition.

To give a pill or bolus the upper part of the muzzle should be grasped and the lips pressed between the teeth. This forces the mouth open, and it remains so, because the dog is afraid of biting himself. The head should then be elevated, and the pill or bolus dropped into the back of the mouth. The mouth must then be immediately closed and held until the dog has swallowed.—*Live Stock Journal.*

ARE THERE TWO CHAMPION ELCHOS?—Claremont, N. H., June 3, 1881.—*Editor Forest and Stream:* Permit me to correct a few errors—the result of my rather illegible chirography—that appear in my brief note, published in your issue of June 2, this moment at hand. It should have read, "For of all sad words of tongue or pen, the saddest are *these*," it might have been;" and *misled* instead of mislead; and the gentleman *who* wrote, instead of that wrote. Also I asked him where Highland Lass was owned, and he said, I am confident, "Washington." I will furthermore say in this note that Mr. Osborn's personal explanation seemed all right, and I sincerely hope now through his friend in Washington we may hear more fully of this other famous Elcho, his breeding, from what kennel imported, and when, where and how he gained his celebrity. I had believed that I owned the only champion Irish setter Elcho in the world, and the dog recognized as such the world over, but if mistaken am willing to be forgiven. To be sure there is an Elcho II. imported, but not by Col. Reeves, of Maryland, and so he can't be the one; and there is an Elcho III., but his being bred in this country shuts him out. Both these are celebrated dogs, and both sons of champion Elcho, and there is, too, a puppy owned in Washington called Elcho IV., also a son of champion Elcho. But about this other celebrated Elcho I am sure there are many besides the writer who would like to hear. OWNER OF ELCHO.

Editor Forest and Stream: I see by your last issue that Dr. Jarvis, the owner of Elcho, is not satisfied with the explanation given by me in your previous issue as to the pedigree of a red Irish pup advertised for sale by me in your valuable paper. Dr. Jarvis now makes the assertion that the word *Celebrated* was twisted into the word *Champion* to make a more ready sale for the pup. This accusation is neither gentlemanly nor just, as either word would have applied to his dog. The expression "champion" was used without my knowing at that time that there were two Elchos, or who imported the one owned by Dr. Jarvis, and as for making a more ready sale for the pup by calling him an Elcho dog is nonsense, as Elcho or his get are at a discount in this part of the country. The pedigree was advertised with the dog, as I never sell a dog unless I can give his pedigree. He also says that there is a screw loose somewhere, and gives his reasons as follows:

At the last New York show a gentleman came to me—a stranger—and asked me if champion Elcho had ever served a bitch called Highland Lass, that some one, I don't remember who, had tried to sell him a pup out of Highland Lass by champion Elcho. I asked him where Highland Lass was owned, and he said, "I am confident Washington." I told him no such bitch had visited Elcho, and he left.

Now, the truth of the matter is this: Being at the dog show on Thursday, the week of the show, I became acquainted with Mr. W. N. Callender, the owner of Rory O'More, and in conversation with him made the remark that I had an Irish pup out of Highland Lass by Elcho, and that I would like to meet Dr. Jarvis as I wanted to know the full pedigree of the pup, etc. He (Mr. Callender) very kindly endeavored to find Dr. Jarvis for me, but was unable to do so. Later, as I was leaving the hall to take the train for New Haven, I heard a man say to some one, "Here is Jarvis, now." Turning, I saw three gentlemen talking together, and I stepped up to one of them and asked him if his name was Jarvis. He replied that it was. I then asked him if Elcho had served Highland Lass. He said that he had not. I thanked him and went out.

The pup had been advertised before I saw Dr. Jarvis, and I did not say that some one had tried to sell me a pup or that I wanted to sell the pup. As soon as I arrived home I looked for the letter I sent you last week, and read the same as I expected, that the pup was out of Lass by Elcho. I intended to sift the matter to the bottom at once, but was taken very sick and remained so for two weeks. When I was able to return to business I was so busy that I forgot the whole circumstance until I was reminded of it by having my attention called to the first communication from Dr. Jarvis in the FOREST AND STREAM, to which I took pains to answer as soon as possible. I have since refused to sell the pup at any price. I will send you the names of the owners of Elcho and Highland Lass, imported by Col. Reeves, as soon as I can get them from the gentleman who presented the puppy to me, and then Dr. Jarvis can pursue his investigations as far as he chooses. As for myself, I shall take no further notice of the affair, as I consider that I have done all that I can to rectify any mistake which may have occurred through my advertisement, but through no intentional error on my part.—G. EDWARD OSBORN.

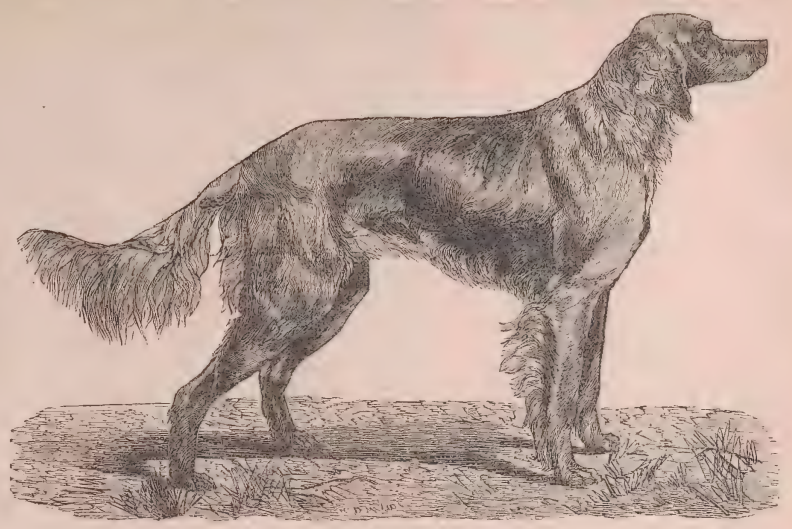
New Haven, Conn., June 6, 1881.

ELCHO NOT DEFEATED.—Claremont, N. H., June 6, 1881.—*Editor Forest and Stream:* Permit me, through your columns, to inform the American correspondent of the *English Stock Keeper* that he got things a little mixed in his report of the New York show of 1881 in regard to Irish setters. If he will think again he will, I feel sure, remember that champion Elcho did not compete in champion class, and was not beaten at the show; that he only competed for best Irish stock dog prize, which he won; also was one of the winning Irish kennel; that he had not only "the honor of being sire of the winning puppies," but that the winner in champion dog class was a son of his; that the winner of second prize in open dog class was a son of his; that the winner of the only *v. h. c.* in same class was a son of his; that the winner of second prize in open bitch class was a daughter of his; that the winner of the only *v. h. c.* in same class was a daughter of his, and that the winner of this latter *v. h. c.* was also one of the brace winners of the special cup offered for "best brace of Irish setters in open classes regardless of sex." That is how the New York Show of 1881 went so far as Elcho and his sons and daughters were concerned, and I trust that the *English Stock Keeper* will correct its correspondent's statements after knowing the facts as above stated.—MONT CLARE.

BRUSH II. AND BLACKIE II.—*Editor Forest and Stream:* In your issue of May 12 there appeared an article signed "Dido," wherein he seeks to cast a slur on our late importation of Brush II. and Blackie II. In the first place, let us say that his allegation in reference to Brush and Rhea being the best brace of black spaniels in England, in his remarks thereon, is only a little dust thrown in the eyes of some who, perhaps, may be influenced in favor of his own importation. He says, to begin with, that "Rhea has been dead nearly a year, and good little bitch though she was, it is many a long day since she might have been considered the best in England. She won a great number of prizes in her younger days, but had retired from the show arena some years ago, and indeed, was eventually killed on account of her great age." Now we ask what does this statement mean but a disposition to do injustice to one of the very best black cocker bitches in England?—one that had gained seventy-eight first prizes on the show bench, and was only ten years old when she died, which happened only a few months ago. Does "Dido" attempt to show that there has been a better one? Again he says: "Neither has Brush been considered the best dog in England since Kaffir and Zulu came out last June," and adds that "Mr. Easten sold Brush about the time that Kaffir beat him," which he considers a very wise proceeding on his part, as "his (Brush's) day was past."

Now, the truth is, Mr. Easton writes us, that neither Kaffir nor any of Mr. Jacob's dogs ever did beat Brush during all the time he owned him. The last time he exhibited Brush was at the Crystal Palace show last June, and Mr. Jacob's string was there, and among them Kaffir and Zulu; and they all came behind Brush, he taking first prize. This does not look as though he was not considered the best dog in England since Kaffir and Zulu came out. Mr. Easten furthermore adds that he "was offered a long price for Brush there and sold him, since which he has been exhibited in bad condition and wretched form, and has been beaten solely on account of his owner's inattention to preparing him for a sharp competition. Brush has won over seventy prizes, and was selected from all his competitors by "Stonehenge" as the correct and perfect type of a dog to illustrate his chapter on Spaniels in his book of "The Dogs of the British Islands." No man will have the temerity to deny that "Stonehenge" is not our greatest living authority on the standard of dogs in our bench shows, and his standard is considered by all sportsmen as the very embodiment of perfection in this direction.

"Dido" further says, "Bean and Blackie are not champions." We claim they are. In the same breath he says he has "no desire to detract from the merits of Mr. Cummings' importations, as they are both of very choice blood, Brush especially." Benedict has more of Brush's and Rhea's blood in his veins than Bean's, and Benedict belongs to "Dido." We know all about Kaffir's dam being by Rolf (sire of Brush). "Dido" is as unfair to others as he is unjust to himself, when the truth is, the color of poor Kaffir is denied him, which "Dido" so much boasts of and which he has given to a Sussex spaniel. Kaffir owes his honors largely to the Rolf (black) cross, while Bachelor is a liver colored Sussex spaniel and a prize winner in that class, and one of the last old England afforded of the breed, notwithstanding he is dead, and not of old age either.—C. B. CUMMINGS & SON.



[We trust our esteemed correspondent, who has assumed the name of the illustrious Queen, will not drive us to commit harikari by continuing a correspondence which has too much of the odor of advertisement, and is decidedly out of place in these particular columns.]

ANOTHER LAVERACK IN AMERICA.—In our issue of April 21 we published a list of the pure Laverack setters in America, at the same time stating that we would be glad to publish the data concerning those not included in said list. Unfortunately, the list was printed without the supervision of our kennel editor, and several omissions occurred which have since been corrected. We are now reminded, upon turning over the files of February, 1880, that there is still another to be added to the list, the property of the Montview Kennel Club. On February 8, the Inman steamer, City of Chester, brought over two little sisters of Mr. Goodsell's Don Juan, from the celebrated kennels of Mr. H. F. Grant, Bank House, Newport, Isle of Wight, England. These bitches were Blue Queen and Blue Princess, by Tam o' Shanter (Rock-Rum) out of La Reine (Blue-Prince-Cora), whelped August, 1879, color white and black. Blue Princess has died since, but Blue Queen is still living, and has been described by Mr. Dow as bearing a striking likeness to Countess.

SLIPS.—Mr. J. R. Whitman, Chicago, Ill., has just received from England a cocker spaniel puppy five months old, liver and white, and he has also ordered from Skidmore an Irish water spaniel bitch as good as can be found.... We are prevented from answering several communications this week on account of the patent hieroglyphical signatures at the bottom of the letters. We also frequently receive other letters from which the address, place and State are omitted. These, of course, are never answered.... The measurements of Mr. A. H Moore's first prize winners will appear at an early date. Those sent us went astray in the mails.... It is said that three dogs went mad in Oceanville, L. I., last week, and bit several horses and cows.... It is believed that many of the licensed dog-catchers in this city depend for their living more upon the valuable dogs which they seize and sell without taking to the pound than upon the fees for dogs seized under the ordinance and impounded.... Dr. Jarvis will send us the measurements of his superb bitch Norcen as soon as she gets in shape; she has just become the mother of thirteen puppies.... Mr. Edward Odell, of New Orleans, has kindly sent us a photograph of an India ink sketch of his lemon and white setter dog Roscoe. Bets have been made that Roscoe will win first in the All-aged stakes in the coming field trials in Louisiana.

WITH THE BULLDOGS.—The Bulldog Club, of London, England, held their Seventh Grand Show of bulldogs at Aldridge's, London, on the 12th and 13th of May. Seventy-nine dogs were entered, and the quality was of the highest. The general arrangements were excellent, and there was no grumbling at the awards. In the champion class for the club's gold medal only two entries appeared in the catalogue, viz., Monarch and Smasher, and the honor went to Monarch. He is a grand big brindle dog, owned by Mr. D. S. Oliver, and was bred by Mr. J. W. Berrie, well known as an enthusiastic lover of the breed. To be eligible for the champion class a dog must have gained three first prizes under club rules. During the two days these dogs were the centre of attraction, and for my part I thought the sight of them well repaid me for my voyage across the sea. I noticed that white was the prevailing color, but I saw some very handsome dark brindles. Such a collection of short noses, fine tails and undershung jaws could not be seen elsewhere, and bulldogs being of a quiet nature, there was a total absence of the usual barking and howling so distracting to visitors to ordinary dog shows. The dogs were fed upon Spratt's biscuits. After the show a sale by auction was held, and many of the dogs were bought in at high figures. I purchased the dog Hero, winner of second at Brussels last year, and got him safely to Quebec, after a rough passage. Bull dog stock appears "booming" in England, if the prices asked and paid is anything to judge by. I saw old Sal o' Shoreditch, the dam, I believe, of your Boston Bonny Boy. She was in poor condition, and only exceeded in getting second in her class.

St. Leonard, Prov. of Quebec, June 2. HEMLOCK.

RED IRISH SETTER MEG.

The property of Mr. Benj. F. Clark, Manchester, N. H. Bred by Dr. Wm. Jarvis, Claremont, N. H.; born April 20, 1879; is by Elcho out of Rose, winner of 1st prize in Puppy class at New York show in 1880 and 2d prize in Open class New York show, 1881. She was trained by Mr. Samuel Scranton, Olneyville, R. I., and is thoroughly broken on grouse, quail and woodcock.

A MEMBER OF THE LIFE SAVING CORPS.—*New York, May 31, 1881.*—An incident occurred at the Westminster Kennel Club's grounds at Babylon, L. I., last Thursday, an account whereof I think worthy of insertion in your columns. My little Skye terrier bitch, Wasp, is a great swimmer and frequently follows the Superintendent about as he rows over the lake adjoining the Club grounds. She did so on Thursday last, accompanied by Mr. F. O. De Luze's spaniel, Sankey. After swimming some time, Wasp gave a little cry as if in fear and sank to the bottom, probably having been taken with a cramp. Sankey heard the yelp, and turned toward where she had disappeared and swam over the spot several times whining meanwhile. Presently he dived, came up again, and dived a second time. This was repeated six or seven times till finally he found her at the bottom and brought her up, swam with her to the shore, and had drawn her quite out of the water before the Superintendent reached him. He seemed delighted with his success, rushing about and uttering joyful yelps. Wasp was nearly drowned, and it required active measures, rolling, rubbing, etc., to restore her.

I think Sankey's intelligence and persistence wonderful. The story I give as I had it from John Read, the Superintendent of the W. K. C., who was an eye witness of the performance. The water was, I believe, between five and six feet in depth.

MEMBER W. K. CLUB.

BINGO.—The *Sun* tells this story of a New York engine-house dog: "For six years he had held a responsible position in the Fire Department. It was his habit to lie directly in front of the engine in the engine-house, and when an alarm sounded he dashed out in front of the house and ran around in a circle, barking furiously. Every truckman in lower New York knew what that meant, and the street was cleared in an incredibly short time. Then Bingo ran ahead of the engine and cleared the way for blocks in advance until the fire was reached, when he lay down quietly till all was over. Then he trotted home with the air of a dog that had done his duty. One day he had been running ahead with the engine, but discovered that the tender was behind time. He ran back and found it blocked at Pearl and Fulton streets. It was while he was clearing the trucks away that he unluckily allowed his sense of the exigency to overcome his respect for the person of a nervous gentleman, in his zeal biting the man's hand, who thereupon went to Justice Murray and secured an order to have the dog killed. Bingo was martyred in the East River, and his stuffed form now holds a place of honor in the engine-house of company No. 32, in John street."

SINGULAR FREAK OF A SHEEPDOG.—A correspondent writes to *Land and Water*—"One of Sir George Wombell's Yorkshire tenants reports a remarkable occurrence from the locality of Newburghe Park. A sheepdog belonging to this person a short while ago presented her owner with five puppies. Shortly after the puppies were discovered the mother was seen acting in a mysterious manner in the vicinity of an old oak tree in the neighborhood. As this conduct was repeated, an examination of the tree, which was a hollow one, was made. Inside the trunk were found a vixen fox and five cubs. The vulps were left in the lair, but next morning, on the place again being examined, all the lot had disappeared, and shortly afterward one of the cubs was found apparently quite at home with the puppies of the kennel. Whether the sheepdog had carried off the cub to her own offspring with the intention of appropriating the rest of the vixen's progeny in the dam's absence, and whether the vixen, finding one of her cubs minus, sought safer quarters or not, is a matter for the curious to settle.

A LIE ABOUT A DOG.—A shepherd dog on the farm of Thomas Hain, at Seeleyville, Ill., has been creating a furore in that neighborhood during the entire past winter. He has been seen repeatedly to drag a large piece of bark up a steep hill back of the farmhouse, where a thick crust had formed, then deliberately seat himself on it and slide to the bottom of the hill. Many people have witnessed this strange freak of the dog, and after coasting down the hill several times the dog would carry the bark sled to a place of safety until he needed it again.—*Stolen from a California Exchange.*

THE GIRONDIN DISINFECTANT.—This compound has long had an enviable reputation as being one of the best deodorizers and disinfectants known for use about kennels and stable. We learn that Mr. James Meyer, Jr., the proprietor of the articles for this country, has recently organized a joint stock company for its manufacture. The Girondin is strongly recommended by the leading medical authorities of this city and of the country, and will no doubt have a large sale.

SIRIUS in *The Stock Keeper* says: "I wish some American gentlemen could be induced to bring dogs of their own breeding over here for competition; my opinion is our exhibitors and competitors at field trials would have to look to their laurels, and stand a strong chance of losing a leaf or two."

KENNEL NOTES.

*** Breeders and owners of dogs are invited to send memoranda of names claimed, bred, whelps, sales, etc., for insertion in this column. We make no charge for the publication of such notes; but request in each case the notice be made up in accordance with our form, that the name of both owner and dog be written legibly, or printed, and that the strain to which the animal belongs be distinctly stated.*

NAMES CLAIMED.

Lary—Mr. M. S. Buker, Bucksport, Maine, claims the name of Lary for red Irish setter puppy by Mr. Everett Smith's Cale out of owner's Nell.

Bolah—Mr. M. S. Buker, Bucksport, Maine, claims the name of Bulah for red Irish setter puppy by Mr. Everett Smith's Cale out of owner's Nell.

Fritz—Mr. Dwight Wilson, Fall River, Mass., claims the name of Fritz for setter dog puppy by Blue Dan out of Flake.

Ned H.—Mr. Robert Haigh, Pawtucket, R. I., claims the name of Ned H. for setter dog puppy by Blue Dan out of Flake.

Lassie Jean—Mr. John J. Scanlan, Fall River, Mass., claims the name of Lassie Jean for a liver, white and tan setter dog puppy, whelped December 5, 1880, by Blue Dan out of Flake.

Jess, aluso—Hitch, Pa., June 1, 1881.—In your issue of FOREST AND STREAM, May 26, I claimed the names of Jess and Juno for my dog and bitch foxhound puppies, and omitted to give the sire's name, which I now desire to do. They were sired by Mr. Low's dog Sport. Apologizing for the omission.—Geo. W. Thorner.

Ben—Mr. S. Adcrry, Colusa, Cal., claims the name of Ben for dog puppy whelped March 8, 1881, by Sam out of Fanny. (Breed not named).

BRED.

Nell-Sensation—Mr. Joseph Lewis' (Apollo, Pa.) lemon and white pointer bitch Nell to Sensation, May 1-31.

Nell-Joe—Mr. John Fawcett's lemon and white pointer bitch Nell to same owner's Joe, May 2.

Juno-Joe—Mr. John Fawcett's red Irish setter bitch Juno to his Irish setter dog Joe, May 2.

Pearl-Cole—Mr. Andrew J. Ward's (Boston, Mass.) Llewellin setter bitch Flirt (Rock-Starlight) to Mr. Frank B. Fay's champion Llewellin setter Cole (Leicester-Rose) May 21.

Spot-Plato—Mr. J. G. Norton's (Ashland, N. H.) part beagle Spot to Mr. N. Elmore's Flute, June 1.

Lou-Guess—Mr. Sewell's (New York city) cocker spaniel bitch Lou to same owner's Guess.

Tilly-Chief—Mr. G. Hill's (Hudson, N. Y.) red Irish setter bitch Tilly to Mr. Max Wenzell's Chief, May 28. Tilly is of the Plunket stock.

Feather-Brag—The Riverside Cocker Spaniel Kennel's (Claremont, N. H.) feather to the black cocker spaniel Brag, May 27.

Gracie-Brag—The Riverside Cocker Spaniel Kennel's (Claremont, N. H.) Gracie (Snip-Juliette) to the black cocker spaniel Brag, winner of 1st and special New York 1881, May 29.

Fannie P.-Brag—The Riverside Cocker Spaniel Kennel's (Claremont, N. H.) Fanny P. to Brag, June 1.

Sally-Charlie—Mr. G. F. Wilson's cocker bitch Sally to Riverside Cocker Spaniel Kennel's liver and white cocker spaniel Charlie, May 30.

Fly-Parts—Mr. C. E. Lewis' (Suspension Bridge, N. Y.) English setter bitch Fly (champion Drake-Luna) to Mr. L. H. Smith's champion Parts, May 20, 1881.

WHELPS.

Polly—Westminster Kennel Club's lemon and white pointer bitch Polly (champion Shot-Sensation) whelped May 21, eight dogs and three bitches (six whelps now living) by Sensation.

Queen—Mr. John Fawcett's (McKeesport, Pa.) dashshund bitch Queen whelped May 7, seven puppies, five dogs and two bitches by same owner's Joker.

Belle—Mr. J. Hodge's beagle bitch Bell whelped May 10, four dogs and two bitches, by Mr. John Fawcett's dog Jim.

Lovely—Mr. John Fawcett's beagle bitch Lovely whelped May 20, two dogs and three bitches, by owner's Jim.

Nereis—Mr. Wm. Jarvis' (Claremont, N. H.) red Irish setter bitch Nereis whelped June 1, thirteen puppies, nine dogs and four bitches, one bitch since dead, by champion Richo.

Joe—Mr. Max Wenzel's (Hoboken, N. J.) red Irish setter bitch Doe has whelped twelve puppies, by owner's Chief.

Fannie—Mr. John McAulich's (Corning, N. Y.) liver cocker spaniel Fannie whelped May 27, eight puppies, six dogs and two bitches, by Mr. John Pennello's Barney.

Megon—Mr. Eugene Powers' (Cortland, N. Y.) black and white spaniel bitch whelped June 3, nine puppies, four dogs and five bitches, by Wildan.

SALES.

Jack.—Mr. M. S. Buker, Bucksport, Maine, has sold to Capt. Green, Bangor, Me., his orange and white English setter dog Jack.

Cale-Nell Whelps—Mr. M. S. Buker, Bucksport, Maine, has sold to Mr. Everett Smith, Portland, Maine, a brace of red Irish setter dog puppies by Cale out of Nell.

Cale-Nell Whelps—Mr. M. S. Buker, Bucksport, Maine, has sold to Mr. Moses Parker, Skowhegan, Maine, a brace of red Irish setter puppies by Cale out of Nell.

Cale-Nell Whelp—Mr. M. S. Buker, Bucksport, Maine, has sold to Mr. A. Burnham, Belfast, Maine, a red Irish setter dog puppy by Cale out of Nell.

Lugie No. 1.—Mr. Colin Cameron, Brickerville, Pa., has sold to Mr. M. W. Stickney the beagle dog Lugie No. 1 (Knight's Sport-Beauty).

Brag, Hornellsville, N. Y., May 28, 1881.—I sold my black cocker spaniel dog, Brag, to Orange and White English setter dog Jack.—Mr. M. S. Buker, Bucksport, Maine, May 24, for $200. All orders for services should now be addressed as above. I believe this to be the highest price ever paid for a native cocker. As some of your readers may wish to know his measurements, I send them: Taken March 24, when he was less than a year old. Length from nose to end of tail, 39 in.; length of tail, 6 in.; height, 15 in.; height at elbow, 8½ in.; girth of chest, 24 in.; girth nose half way to eye, 9 in.; girth of skull, 15 in.; weight, 26 lbs.

J. OTIS FELLOWS.

Diana—Mr. Eugene Powers, Cortland, N. Y., has sold to Mr. J. Bland, of Singhing, the black and white cocker bitch Diana, by Wildair out of owner's Megon.

Blue Dan-Flake Whelp—Mr. John J. Scanlan, Fall River, Mass., has sold to N. D. Hathaway, M. D., Middleboro, Mass., a setter dog puppy, black, and white ticked with tan marking over eyes, whelped December 5, 1880, by Blue Dan (Dash III.-Opal) out of owner's Flake (Druid-Swell).

Blue Dan-Flake Whelps—Mr. William Hawkins, Fall River, Mass., has bought of Mr. John S. Scanlan, same place, a black and white ticked setter dog puppy with tan markings and a black and white ticked setter bitch puppy, whelped Dec. 5, 1880, by Blue Dan out of Flake.

Blue Dan-Flake Whelp.—Mr. John J. Scanlan, Fall River, Mass, has sold to Mr. Dwight Wilson, same place, a black and white ticked setter dog puppy, whelped Dec. 5, 1880, by Blue Dan out of Flake.

Blue Dan-Flake Whelp—Mr. John J. Scanlan, Fall River, Mass., has sold to Mr. Robert Haigh, Pawtucket, R. I., a lemon and white setter dog puppy, whelped Dec. 5, 1880, by Blue Dan out of Flake.

Lock-Kenoza Kit Whelp—Mr. J. Frank Johns, Haverhill, Mass., has sold to Mr. Thomas Campbell a Gordon setter dog puppy by Lock out of Kenoza Kit.

PRESENTATION.

Cale-Nell Whelp—Mr. M. S. Buker, Bucksport, Maine, has presented Mr. W. W. Castle, Belfast, Maine, a red Irish setter bitch puppy by Mr. Everett Smith's Cale out of Nell.

IMPORTED.

Hero—Mr. Hammersley, of St. Leonard, Province of Quebec, purchased at the show of the Bulldog Club, held on the 18th of last May, in London, the bulldog Hero, and arrived with him safely at Quebec on the 30th. Hero is a white dog, with brindle head, and gained 2d prize (gold medal) at the dog show held at Brussels, July, 1880.

DEATH.

Lass o' Blythe—Westminster Kennel Club lost on May 26 the Bedlington terrier bitch Lass o' Blythe (Piper-Nancy Lee).

KENNEL MANAGEMENT.

159 J. H. L. Camillus, N. Y.—My Gordon setter puppy, two months old, has two cutches on the under side of his neck, each about the size of a large egg. I have been using turpentine on them in hopes of causing them to disappear, but the bunches seem to increase in size instead of diminishing. If the bunches cannot be removed, will they injure the puppy for hunting when he arrives at the proper age? Ans Bathe the swellings with hot water several times a day and keep the puppy warm and comfortable. The swollen glands will probably go down in a few weeks if there is no constitutional disease.

151 A. C. T., Cleveland, O.—1. Boiled rice and Indian meal, mixed half and half, is good, sound, cooking food for the hot weather. Table scraps, such as bread, vegetables, meat, etc., are most excellent. All growing dogs need plenty of good stimulating food, and should be fed three times a day. 2. Meat will not injure a dog's scent if given with other food in proper quantities. 3. Your query regarding "the rim around your dog's eyes" is too indefinite. 4. Hutchinson's Dog Breaking. We can furnish it. Price, $3.75.

152 J. M. K., Washington, D. C.—I have a Scotch terrier bitch about eight months old; she is in heat; do you think the pups would be any good? 2. My terrier dog runs his teeth into his hind quarters two weeks. I have tried sulphur and lard, and tried carbolic acid and glycerine. Please let me know what to do for him? Ans. 1. Your bitch is entirely too young to breed to. Wait until she is six months older. 2. As you do not state age of your setter dog it is impossible to give exact directions, but if you follow the treatment recommended by H. G, page 115, in issue of March 10, you cannot go far wrong.

153 F. L. H., Hamilton, Ont.—My black cocker spaniel has been troubled all winter with what I think is rheumatism, crying out when touched, but since the warm weather set in he has been very much better, and has recovered his spirits, but I notice that the disease has left him very weak, especially in his hind quarters, and he moves one leg stiffly, more like a horse with the string halt. Besides this, he seems to feel the heat a good deal, and tires out very easily. What would you recommend me to do? Ans. I should like to get him in good working order before the Fall shooting begins. Any suggestions will be thankfully received. Ans. Give small doses of sal rochelle each day. Plenty of exercise in good dry weather and proper feeding are probably pre-requisites to health. The salts can be given in the morning with water an hour or more before feeding.

154 A. C. L.—Norwich, N. Y.—My pointer dog, four years old, was taken sick a month or more ago; eyes run badly; white thick matter in corners; coughing quite frequent, and a stringy white froth oozing from the corners of his mouth; appetite poor; flesh rapidly; finally diarrhœa set in; very weak in hind parts; would go sideways when walking. He is now much better, owing to your treatment, and gaining flesh, but is covered with what we call lice; perhaps they are dog fleas; I don't know which. He still seems weak through his hips. Should he be allowed to eat fresh meat. Ans. The lice are the result of his low condition. Take means to get rid of them and get his skin in a healthy state. A little fresh meat each day will do him good. The sole cure for lice is the following ration: Take flowers of sulphur, 2 lbs., unslacked lime, 1 lb.; water, 1 gallon. Slake the lime in the water, stir in the sulphur, and boil down to one gallon; let it stand till cold, pour off the clear liquid, and make the quantity to five quarts with cold water. If the coat and skin be thoroughly saturated with it it will kill or cure in a few minutes, all that will be left of the vermin will be shriveled carcasses. The dog should then be washed with soap and warm water and thoroughly combed and brushed till he is perfectly dry. Reduce the lotion by adding water for young dogs and those with delicate skins.

155 M. CLAIR, New York City.—My setter pup has a bad swelling of the throat and dry cough, also an eruption on the skin, which she has aggravated by her scratching till it is a mass of sores. I have been giving her sulphur and light feed, but she does not improve. Is it distemper? Ans. Your puppy is probably having distemper, with mange. She should be kept secluded and carefully treated for both ailments. We have so often published the proper treatment for mange in puppies that we must refer you to issue of March 10, which gives on page 115 directions to W. B. G. Please do you may follow, omitting the Fowler's solution of arsenic. Should your puppy have the distemper, write the symptoms more fully and we will answer promptly. In the meantime we advise quinine (one grain) three times a day. Keep the puppy in a dry, airy, sunny piece of fresh air, and give good nutritious broth which is readily swallowed.

Quiet nerves and Balmy Sleep in Hop Bitters, for sleepless Ladies and Invalids.

Rifle and Trap Shooting.

RANGE AND GALLERY.

SMALL CALIBRE RIFLE.—Clarion, Pa., May 26.—In your issue of May 12 I noticed a communication signed "F. J. S." inquiring in regard to a small-bore rifle. I have four rifles—one .22 cal., one 32 cal., and two 44 cal. For small game and general shooting I prefer the .22 cal. My .22 cal. is an Allen. I was out some time ago and had a fine time with me and shot and killed a "fly-up-the creek" at a distance of 135 yards off-hand, off the top of a black oak tree, the body not being much larger than that of a robin. I have frequently when out put up just a common paint's button at a distance of 200 yards, and hit the button five times out of six. To prove the above I herewith inclose sample. Mr K. and I were out fishing, Tuesday, 24th, and had the gun with us. When coming home he proposed to shoot for the cigars, so you see he was compelled to set them up, as we only had one shot apiece. —F. M. A.

THE NORFOLK RIFLE ASSOCIATION was organized a short time since with a good list of members, the following officers being elected: W. R. Owen, Pres; Wm. H Cleveland, Vice-Pres; Geo. E. Titus, Secretary and Treasurer. A good 200-yard range has been selected and is being fitted up. The Club will soon begin to shoot, first matches with some of the younger clubs. The first practice was had Decoration Day, when the following scores were made.

W H Cleveland	4554444443—39	C F Stewart	3334433344—36
L Burgin	2334443344—37	E S Bugglton	4444444243—35
W E Freer	4434443343—37	F A Jewel	4444344404—35
M G Furlong	4544333344—37		G. FRANCIS.

WALNUT HILL, Boston, May 30.—But six riflemen competed to day. The scores made were shot under rather unfavorable weather conditions, the wind blowing erratically from the southwest. The best records are appended. Handicap March, 200 yards:

H B Farley	4455545545—43		4545455544—43
R Davis	5544554544—45	John Borden	4345554444 42
A Law	4444444443—39	W Gardner	4444444443—39

NEW ORLEANS, La., May 29.—There was a bat shooting match to-day at the gun club grounds at Frogmoor with twenty-four contestants, ten double rises, handicap 18 to 26 yards. The prizes were won by the following named gentlemen by the scores stated: First prize by L. P. Chaudel, 26 yards, who scored 14 out of 20 bats. Second prize, A. Loret, 26 yards, who killed 11 out of 20 bats, and killed 4 in shooting off ties. Third prize by Dr. Pangloss, 26 yards, with a score of 11 out of 20. Fourth prize by Mr. Druels, who scored 9, and in shooting off ties on 9 killed 1 straight and won. There was a second match at five double rises for a handsome stuff. It was won by Dr. Pangloss, who killed 8 out of his 10 bats, and followed it up by dropping three straight in a shoot off.

MAMMOTH RIFLE GALLERY.—The following are the prize winners in the matches for May:

All Comers' Rifle Match.

H W Marsh	33	38	39 39 39—193

Amateur Rifle Match.

E Wilder	37	37	37 37 38—196
S Fogg	30	36	36 37 37—192

G Hastings.....35 35 36 36 37—179
D F Holder.....35 35 35 36 37—178

Amateur Pistol Match.

C Edwards	55	56	62—173

D F Holder.....55 57 58—170

Experts' Pistol Match.

J J Dunne	77	71	80—240
J Ames	75	76	80—231

J H Williams.....75 75 78—228

The following are the pistol matches for June: Match 1 will be the experts' pistol match, in which there are three cash prizes, $5, $3, $2; also off-red $25 for a clean score of eight consecutive bullseye Match No. 2 will be the amateur pistol match, open to all shooters pitcher and salver. Conditions, any 22 cal. pistol, rounds 5, possible 50; three scores to win or a possible 238; position off-hand, range 60 ft. The following are the new rifle matches for June: No. 1 will be the all comers' rifle match, in which there are $25 offered for a clean score of ten consecutive bullseyes. Match No. 2 will be the amateur rifle match for an elegant silver badge and three cash prizes of $4, $3, $2. Conditions, any .22 cal. rifle, 5-pounds pull, rounds 1, possible 50, five scores to win or a possible 250, position off-hand; range 150 ft.

BOSTON, June 1.—The third competition in the Victory long-range match was shot at Walnut Hill to-day, eight riflemen competing. The wind, blowing from between 2 and 4 o'clock, proved very fickle, and but five men were able to finish their scores. Their record is appended:

William Gerrish.

NEW YORK RIFLE GALLERY.—Weekly practice of the Knickerbocker Club:

J H Brown	50	M Harington	47
E Bennett	50	D Miller	47
H Oehl	50	W H Reed, Jr	47
F G Fenning	49	C Hitchman	46
J N Merganthaler	49	Dr Toal	46
C Judson	49	Col Litenee d	45
C Edgar	48	H J Gallary	45
M L Riggs	48	A Grecbh	44
G Joiner	48	H H Nels n	43
T G Dolan	47	C H Hawthorne	43

The shooting for the week at 35 yards, ring target, three scores to possible 750, stood:

E Bennett	244	222	217—683
J H Brown	219	214	224—657
M L Riggs	209	203	229—641
H Oehl	210	213	215—638

J F Merganthaler 203 213 215—630
C Edgar 206 184 184—574
W C Langdon 141 132 121—417

ALBANY, N. Y., June 2.—Ninth competition in the John Wedge match at Rensselaerwyck. The day was fine and the scores exceptionally good. Capt. William E. Fitch won the competition for the second time; 200 yards:

Wm E Fitch, Bal S										5	4	5	3	4—41
A Carpenter, S M										4	4	3	4	4—39
G H Charles, Bal S										4	5	4	4	4—41
James I Miles, Bal S										4	3	5	4	4—40

NATIONAL RIFLE ASSOCIATION.—The following gentlemen have been elected life members of the National Rifle Association, on motion of E. A. Buck, Esq.; Gen. B. H. Bristow, Gen. Horace Porter, Henry L. Horton, John D. Prince, Jas. Whitely, Benj. F. Carver, Frank Work, Fred. H. Gould, Chas. W. Griswold, S. Foster Dewey, T. Henry French, Chas. Delmonico, Henry N. Smith, Walter S. Neilson, Wm. F. Shaffer, J. B. Houston. A. H. Wester, the assistant secretary of the N. R. A., is making great efforts to increase the membership of that organization. He offers to give, 1st, a solid gold regimental badge of extra weight and finish to that active member (officer or enlisted man) of the National Guard of this State (excepting the 7th and 23d regiments) who, by July 5, at 6 o'clock P. M., shall have caused the greatest number of persons to become annual members of the National Rifle Association, at the usual rate of $2 per man, for the year 1881. 2d. A solid gold Seventh Regiment Badge to that member of the Seventh Regiment, N. Y., as above. 3d. A solid gold Twenty-third Regiment Badge to that member of the 23d Regiment of Brooklyn, as above. 4th. A revolver and box of cartridges, value $10, to be given as above to that civilian (not a member of any regular military organization). The rivalry is already very strong especially in the civilian class.

BRIDGEPORT, Conn., June 1.—A match at 200 yards, 15 shots each, between a team of the Yale College Rifle Club and a team of the Bridgeport Rifle Club occurred to-day. The Bridgeporters were the winners by the following score: Bridgeport—Geo. Quitmyer, 41; D. E. Marsh, 64; H. Nichols, 63; A. C. White, 61; E. V. Latham, 59; total, 312. Yale—Tichuor, 64; Hitchings, 63; McChesney, 64; Hubbard 60; Durand 43; total, 304.

THE TRAP.

EATON, N. Y., June 1.—The Eaton Sportsmen's Club was organized in December last with the following officers: President, L. C. Huber; Vice-President, F. E. Short; Treasurer, A. E. Richardson; Secretary, J. B. Tuckerman. The president of the club presented a badge to be shot for twelve times during the year. At the fourth shoot, held Decoration Day, C. S. Ormsby won by the following score; Cord's rotating trap, Bogardus rules; Richardson handicapped 3 yards and Tuckerman 6 yards:

Taber	5	Short	6
Richardson	3	Morse	3
W Taber	2	Tuckerman	4
W Morse	6	Ormsby	10
G Richardson	1	Morton	4
Curtis	5	EIGHT-GAUGE.	

GLASS BALLS IN PASTURES.—Is there any danger to cattle in pasturing them in a lot where glass ball shooting has been practiced? Did you ever know of a case where they have been injured?—W. B. I.

WOODSIDE, Long Island, June 1.—Monthly handicap shoot of the Greenpoint Shooting Club for one badge; 7 birds each, use of both barrels allowed. As a rule the birds were easy flyers.

Muntz, 23 yds	1011111—6	Allen, 23 yds	1111110—6
Stone, 24 yds	1111111—7	Bullwinkle, 24 yds	1111111—7
Kroger, 23 yds	1110111—6	Eberhardt, 23 yds	1111111—7
Weblota, 23 yds	1111111—7	Terrett, 26 yds	1111111—7
Krumbeck, 23 yds	1011111—6	Sims, 23 yds	1111011—6
Evers, 21 yds	0101101—3	Chevallier, 21 yds	1111211—6

Stone, Terrett and Bullwinkle tied again on three at 27 yards and 30 yards; Bullwinkle and Terrett again at 34 yards, Terrett winning second shoot off at 33 yards.

WEBSTER, Mass.—The Rod and Gun Club had a prize shoot on Memorial Day at Union Point. The first match was at 11 balls each, Cards ordinary trap; A. Bowditch, of Oxford, 9 balls; H. Butterfield, 5; T. Bigelow, 8; V. Conant, 8; H. Bates, 8; E. Smith, 8; C. Powers, 7; E. Rich, of Oxford, 6; R. Todd, 5; L. Davis, 5; C. Gerber, 5; W. Tanner, 8; W. Haven, 2; A. Klebart, 1. The ties of eight divided.

In the second match, 10 balls each, sides were chosen and this is the score:

T Bigelow	8	C Powers	7
E Smith	8	H Bates	10
V Conant	6	R Todd	8
W Haven	4	L Davis	6
C Gerber	2—29	H Klabart	1—33

BROOKFIELD, Mass., May 30.—Holden's trap, 18 yards rise, 20 balls each: A. Shephard, 19; H. D. Mathewson, 16; Josiah Hobbs, 16; J. P. Crosby, 14; H. Herriden, 13; C. Varney, 12; C. H. Gibbs, 10; S. F. Moulton, 9; H. P. Gerald, 9; S. Whittemore, 9; H. L. Butterworth, 5; E. W. Twichell, 4.

AUDUBON GUN CLUB, Brooklyn, May 31.—Match at glass balls: Cards ordinary traps, 18 yards, club rules:

Capt E H Blackwell	1101011011—7	Capt J H Herring	1101111011—7
Robt Allen	0010010010—3	L B Field	1111111101—9
Fred Scharfenberg	0.00100100—3	F X Gehrling	1001000103—5
Henry Eger	0000011110—4	Samuel Knight	0010000 0 0—1
Total	14	Total	20

BRIDGEPORT vs. SPRINGFIELD.—Hampton Park, Springfield, May 24.—Match at glass balls, Card traps, Bogardus rules, 50 balls each man. Springfield Team: G. W. Simmonds, 42; H. Nichols, 41—total 83. Springfield Team: G. W. Wiemi, 42; J. Harrison, 32—total 74.

NEW PALTZ, N. Y., June 2.—Match at 18 yards rise, 15 balls; Card's rotary trap, screened.

Frazer	01101 11011 01101—10	Evans	01011 01001 11110— 9

H. E. A.

BROOKLYN GUN CLUB.—Concluding match for the prize clock and diamond pin. State Association rules, plunge traps, 10 birds each, 21 yards rise; ties—first 15 yards, subsequent ties 21 yards; the prizes to be awarded to the competitor making the best average in the four shoots. For the first shoot there were many entries:

W Wilson.....11111 11111—10 S H Appel.....10011 11011— 8
H Rhodes.....11111 10111— 9 Dr Steele.....11111 11111—10
G H Creed.....01111 11111— 9 G W Tait.....10100 11100— 6
A Eddy.....01111 11111— 9

The second match made in the series were: H Funson 8S, G H Creed 38, S H Appel 34, Dr Steele 32, W Wesley 28, A Eddy 26, G W Tait 19, J C Munn 16. Funson won the tie for first, Appel took second.

BROOKLYN, June 4.—Second regular monthly shoot of the Long Island Forester club at glass balls for the club badge:

C W Field.....111 1 1111—8 Hawks.....01111 01110— 7
Thorpe.....0 0 01 0 1 1—3 Edwards.....11111 11111—10
Banks.....1 0 0 0 1 0 1 0—3

Sweepstakes at five balls:

Banks.....1 1 0 0—2 Thorpe.....11010—3
C W Field.....01110—3

Match for the ball:

Banks.....010 11111—7 Thorpe.....11 1 10101—5
Hawks.....00 0 1110—4

SYRACUSE, N. Y., May 30.—The shooting season at Lakeside Park, under the management of A. C. Luther and Edward Lodder, continued to-day when several well-known gentlemen of the city engaged in a pleasure shoot at the park and the following scores were obtained at 5 balls each:

G N Crouse, Capt.....0 George Larned.....5
F Denulson.....4 C Hedfield.....0
B Forces.....0 C E Crouse.....1—10
J S Fredericks, Capt.....1 W Larned.....2
L Denison.....3 Abbott.....1
Smith.....1 1 C Denison.....0— 8

After the first match the teams were re-chosen and the result of the shooting was as follows:

L Denison, Capt.....1 G N Crouse.....1
Smith.....2 T J Abbott.....2
W Larned.....1 C Denison.....0— 8
F Denison, Capt.....4 G E Crouse.....1
G Hedfield.....1 B Forbes.....0
C T Redfield.....3 J S Fredericks.....1—10

PORTLAND, Oregon, May 13.—Wednesday last the members of the Rod and Gun club met to-day to contest for the medal. Quite a large number visited the grounds and considerable interest was manifested. Edward Church, the youngest member of the club, came off winner; 20 birds:

Abell.....18 Daley.....17
Berger.....18 Howe.....16
Bolley.....15 Hudson.....16
Bybee.....18 Hughes.....12
Chapman.....17 Spencer.....14
Church.....14 Struble.....0
Clark.....15 Whaley.....12
Curry.....16 Zan.....12

The tie were then shot off, resulting:

Abell.....1 0 Church.....11111—5
Berger.....10 1 Spencer.....11110—4

At the recent annual meeting of the Portland Long Range Rifle Association the following officers were elected: President and Treasurer, H. F. Hudson; Vice-president, W. J. Reilly; Secretary, J. Williams. Board of Directors, W. J. Reilly in place of A. A. Cohn, re-ring. The fourth Saturday of each month was named as the regular shooting day of the association.

VICKSBURG, Miss., June 1.—Pigeon match, 19 single birds, privilege of both barrels, 21 yards rise, 19 yards boundary. The birds were fresh and average good flyers. Nearly all scored were killed with first barrels. The scores made were very good considering it was the first trap shooting for five of the shooters. Quite a number of spectators were present, including a number of young ladies. The shoot was for prizes offered by the Vicksburg merchants

Fred F Mylies.....1111111111—10 Ed H Haworth.....1010111111— 8
T G Dabney.....1 1110011 — 9 Dan Searles.....1110101111— 8
N Wedig.....1111101111— 9 Jno Polk.....1111111110— 9
B B Myles.....1111110110— 8 Jno B Mattingly.....1111110000— 6

Ominous clouds prevented the shooting off of ties.

VICKSBURG, Miss., May 23.—Pigeon and ball match, 19th inst.; 14 birds and 20 balls to each shooter. Pigeons, 21 yards rise, single birds, both barrels except F. Myles, who shot only one barrel; 10 yards boundary. Balls, 20 yards, sprung from a screened rotary trap, one ball. The birds were in the coop only a few hours, and were strong flyers. The following are the scores:

	Pigeons.	Balls.
Fred Myles	0101111010—8	11110 01010 00101—12
M E Taylor	1111011111—12	00011 11101 01110—14
B B Myles	1111111011—13	11011 11111 11111—18
N Wedig	0111101111—10	01111 00011 11111—14
Geo H Dorsey	0111011111 0 0—8	1 1111 10101 10011 01101—14

LAUREL, Md., May 31.—A match was shot here on Decoration Day, in connection with the festivities attending the *fete champetre*, gotten up by the St. Phillip's P. E. Church of this place, and was attended by several crack shots from Washington and Baltimore. Three prizes were offered—a silver cake basket and bouquet holder rendered as first prize, a silver card receiver as second prize, and a silver goblet as third prize. The conditions were 20 smoke target balls for each contestant, from a Card rotary trap, screened, 20 yards rise. Messrs. E. L. Mills and W. W. Eldridge, of Washington, and Capt. Russell, of Baltimore, tied on 19 each for first prize. In shooting off the tie Mr. Mills won, with five straight, Mr. Russell missing his second ball, and Mr. Eldridge his fifth. Messrs. Wm. Wagner and F. H. Case, of Washington, tied with 18 balls for second prize, Mr. Wagner winning on five straight, Mr. Case missing his second. Messrs. Jas. P. Saffold and N. Jensen, of Washington, tied on 17 each for third prize, which was won by Mr. Saffold, he breaking five straight and Mr. Jensen missing his fourth ball. After the shooting was concluded, Hon. Barnes Compton, State Treasurer of Maryland, proposed the ladies, accompanied by a neat speech, complimentary to the contestants and in praise of the management of the day's festivities, where all had enjoyed themselves so well. May the *fete champetre* be repeated is the wish of many of those who attended. CONFESTANT.

A NEW SPOON OAR.—"Forbes' Patent Ball and Socket Row Lock and Curved Oar" is the name of a new style oar that has recently made its appearance. It is meeting with great favor among professional oarsmen and boating men generally, and as its merits become better known is destined to become the leading oar of the country, both for pleasure boats and racing sculls. As its name implies, the row lock is made on the ball and socket principle, securely fastened to the oar, which is crooked downward toward the handles sufficiently to bring the line of draft directly on a line with the handle, the oar lock and the hand of the oar. It is made of the best second-growth Hickory wood, handsomely finished but not varnished, is very light, and so constructed that it will stand an immense strain. They are made from six to ten feet in length, and with two different styles of oar locks—the feathering and non-feathering—the former being adapted for racing and skilled oarsmen, while the latter is intended more for common row boats. They range in price from four to five dollars a pair, according to length, including oar locks. A. G. Spalding & Bros., of the Stadium street, Chicago, are the sole manufacturers of this oar. Attention is called to their advertisement on another page.—*Idler.*

Yachting and Canoeing.

FIXTURES.

June 9.—New Jersey Y. C. Annual regatta.
June 10.—Eastern Y. C. Opening cruise.
June 11.—Delaware River open regatta.
June 14.—San Francisco Y. C. Cruise to Martinez.

June 16.—New York Y. C. Annual regatta.
June 16.—Boston Y. C. Annual regata.
June 17.—Lynn Y. C. Spring regatta.
June 17.—Marblehead open regatta.

NOT A "SKIN GAME."

THE false position in which the New York Y. C. has been placed by the spurious "news" published in a contemporary becomes more evident every day. The *Toronto Globe*, for example, takes it for granted that the challenge of the Atlanta will be met by a different yacht for every race and denounces such an intention as a "skin game." But for the bad character given the club by a superficial and sensational journal of this city, no such suppost sou would ever have occurred to the canadians, though in the light of the fraudulent interviews reported with "prominent members" one can hardly blame the *Globe* for suspecting sharp practice. The New York Y. C., however, neither authorized nor indorsed the libels upon its fair name, and should not be held responsible for the idle vaporings of a journal which evidently pays more attention to its column-beats than to its original rather than truthful. The club has acted throughout with fairness and liberality and in the most honorable and sportsmanlike manner, nor did we ever expect it to do otherwise. The challenge was no sooner received than an immediate and straightforward answer was sent in acceptance. Only *one* yacht will be sailed against the Canadian. The New York Y. C. is composed of gentlemen and there need be no fear of sharp practice or loaded dice, as one might infer from our city contemporary's insinuations, as "original" as they are devoid of foundation in fact.

We can also deny the story started by it that the sloop to be built by the flag officers of the N. Y. Y. C. will be a racing machine. She is to be thoroughly well built of custom; and sailing fitted and furnished like any yacht of her size. In model she will resemble the Arrow, though with modified quarters. For the half-column account of the new sloop and the intentions of the flag officers our contemporary drew upon its imagination. It knows absolutely nothing about the sloop. An attempt to palm off such a manifest deception upon the public as "news" will be met with the proper exposure in this journal every time. We believe common honesty to be one of the ingredients to "news;" the yachting public is sufficiently intelligent to insist upon and that while appreciating enterprise they will resent imposition.

SOUTHERN YACHT CLUB.

THE first Corinthian match of this club for the year was sailed on May 24, owing to unfavorable weather only 2 yachts started in the first class and two in the third. Albertine was sailed by Alex. Brewster, Cydnus by Saml. Gautier and Ruby by J. B. McConnell. The Phantom was in charge of Joe McNeil. They were started at 2h. 10m. 45s. Phantom and Cydnus being quickest away to a S. S. W wind. Albertine passed around the club mark with a lead of three minutes, Cydnus, Ruby and Phantom following in close order. At the next mark, Ruby went into second place. Cydnus carried away her throat and lost three minutes for repairs, then her peak gave way and she was passed one down by the ruby. On the run back to the start Albertine increased her lead, and Phantom went down to a puff, and loosing her way capsized her sand bags to windward and followed after them her self. The sloop Zoe went to her rescue, Albertine sailing over the race going in with a lead of three of the first round. The wind freshened to all they wanted and Cydnus again parried her gear, but on the second round she overp wered the little Ruby and went ahead only to break down again and round up once more to report off on the harbor bars. On the home run Albertine and Phantom passed the finishing line, the only finishers were entered to anchor and tied down a reef. The third round was Indian file between Albertine and Ruby, each sailing in her class, the former in 2h. 25m. 26s., the latter in 2h. 3m. 5.s. The Albertine's time is considered fast, being only 9m. 2is. slower than the fastest made over the course in the memorable professional race of May 1st year, when Albertine beat Lady Emma, Jennie Lind, Black-and-Tan and Startle. The judges were C. T. Beauregard, W. B. Parker and Gen. J. Glyn, Jr.

The next Corinthian race was set down for June 9, open to second and fourth class. No boats appearing in the former a special built between the cabin yachts Zoe, E. J. O'Brien, and Linwood, Com. A. A. Maginnis, was agreed upon. In the fourth class three boats—Gipsy, Juniata and May—came to the line, sailed resectively by S. Gautier, Alex. Brewster and J. McNeil. After an hours delay for wind a breeze came out from the west and the two big ones got away at 3h. 46m. 10s. with booms over the quarter and jib topsails drawing well. The small boats made a fair start at 3h. 56m. 55s., May being the first to get away. At the first stake Zoe and Juniata had taken the lead, but at the second mark Gipsy, by soon having a work to windward, had gone into second place, and the Linwood, for want of enough wind, brought up the rear. The same order was kept all through, with exception of the cabin yacht Zoe gradually dropping astern, for there was hardly wind enough for the big ones. The match finished without further incident, Gipsy at 7h. 6m. 8s., Juniata at 7h. 14m. 3s., May at 7h. 15m. 07s., Zoe at 7h. 18m. 33s. and Linwood at 7h. 56m. 49s. The prize in fourth class, a silver cup, goes to Gipsy and a private purse to Zoe among the cabin yachts.

NOT A RACING MACHINE.

Editor Forest and Stream:

A contemporary of yours, which claims to give accurate and original yachting news, and has made itself very busy trying to create a sensation concerning the fact that our New York yacht club has determined to challenge, on behalf of Capt. Cuthbert, for the America Cup, has succeeded in making itself supremely ridiculous. It commenced with the fatal mistake of calling in question the standing of our club, in a social sense, under the thin guise of an imaginary conversation with a "prominent member" of the New York Y. C., but the prompt acceptance of the challenge by the holders of the Cup has rebuked the attempted snubbing and covered it with confusion. In the same left-handed way it objected to Cuthbert's new craft as a mere "joint stock racing machine," but authoritative confirmation of the negation as to the ownership showed how little it really knew of the matter concerning which it prated so confidently. And now, to complete its discomfiture it turns out that the challenged, and not the challenger, is to be represented by a racing machine, for the new joint-stock sloop which is to be built to the order of the flag officers of the N. Y. Y. C. proves faster than the Mischief *et al.*, and holds to gether long enough to sail a series of three races. I can assure your pretentious, babbling contemporary that Cuthbert's sloop is not a yacht, as he asserts, but on the contrary, is very heavy in her scantling and will not only have all the necessary ceiling and bulkheads, but will be in every way capable of encountering the roughest weather. You may judge of this from the fact that her frames are of white oak 6 in. by 7 in., spaced 2 ft. 3 in. from centre to centre, and her planking is also of oak, 2¼ in. thick, while her keelsons are very heavy, being 6x8 in. and 6x6 in. So far, scarcely a word of truth has been spoken on this subject by this self-styled "authority" on yachting matters, and the wild romances have crowded on amusement here and served to render the journal in question ridiculous. But probably it will continue as it has begun, regardless of the fact that it is furnishing food for laughter to those who are better informed.

The *Forest and Stream* originating with the *Herald*, in Eleventh furnishing the model and Sawyer the canvas, you disposed of in your last issue in a manner which has earned the thanks of the public at large. Yachtsmen here appreciate your kindness—but then they always find in FOREST AND STREAM fair treatment, in sportsmanlike view of the subject discussed, and no ungenerous attack upon or unfounded assertions concerning strangers, merely because they choose to exercise a right which they, in common with the rest of the world, have been invited to exercise.

Work on the Atlanta has been progressing slowly of late, as Cuthbert has had a large amount of other work on hand. He has built a steamer of 70 ft. keel, which is now nearly finished; has repaired the Surprise, of Trenton; is rebuilding the Dauntless from the keel up to the sheer strake and giving her an overhanging stern, with new frames throughout, making her practically a new craft; has the Katie Gray on the ways for repairs; has done other odd jobs and has in hand a contract for a yacht 35 ft. keel, of ft. beam and 4 ft. draft of water. All this, combined with a scarcity of hands, has delayed operations on the big sloop.

The Kathleen, one of Cuthbert's fastest ten-tonners, has gone to Montreal, having been purchased there, but retains her place among our fleet, her owner being a member of the R. C. Y. C. She was challenged on behalf of the Gracie before her departure for a flag which she had twice won and would have held had she won again, but the challenge was not accepted, and the Gracie now holds the flag in consequence. PORT TACK.

Belleville, Ont., May 30.

CANOEING IN NEW YORK.

Editor Forest and Stream: Whether the paragraph on "Canoeing in New York" in your last issue is editorial or contributed I do not know, but the extraordinary statement with which it begins seems to call for some comment. "What's the matter," you say, "why New York has not taken the lead in canoeing." Now, if New York has not taken the lead, I would much like to know who has. If there are younger and more enthusiastic clubs now in various parts of the country I am glad of it, but where were they when the New York C. C. was alone in its obscurity holding regattas only to be laughed at, writing books and editorials and letters, making long cruises, and striving, apparently in vain, for long years to arouse a general interest in this most manly and fascinating recreation? If now that these years of quiet work have borne fruit in a popular waking up on the subject of canoeing, New York—by which I naturally mean the New York C. C.—is to be calmly ignored, it does not seem to me quite right that FOREST AND STREAM should be the one to begin the ignoring business by signing that it (the N. Y. C. C.) has not "succeeded in propagating a love for the pastime." *Si monumentum quæris circumspice.* If you would see what New York canoeists have done look around you. There are the Jersey City and Knickerbocker Canoe Clubs in New York waters. The latter of these you characterize as a wide-awake and energetic organization, and I happen to know personally in support of your judgment that on Decoration Day it turned out with four canoes, and paddled up to Fort Lee and back. All this, however, does not justify the general assertion that now and then a solitary N. Y. C. C man stealthily visits the staten Island Club house, gets a few hours abaft and slinks back like a sinner guilty of some heinous crime." No doubt your informant described things as he found them at the time of his visit, but if he were a regular sailer he would find them very different. If I were to infer that the Knickerbocker Club is in a lifeless condition because I have been to their house (where, by the way, they are kindly permitting me to keep my boat at present) three or four times, and seen only a solitary member, I should think my inference a fair one. New York—and now I mean all the New York clubs—will give a good account of themselves during the coming season. Let all rivalries be generous, and the Brotherhood of the Blade will prosper as it deserves. CHAS. LEDYARD NORTON.

New York, June 6.

FOREST AND STREAM certainly will be the last journal to overlook the patriotic efforts of members of the N. Y. C. C. It is aware that the original introduction and propagation of the sport is due almost entirely to the hard work of half a dozen enthusiastic members of that club to whom the whole literally owes a debt of gratitude not to be forgotten. FOREST AND STREAM also was aware that his esteemed correspondent was one of the most intelligent among the hard men in spreading knowledge and a proper appreciation among the masses. Moreover, the credit of designing and bringing out the most successful and popular type of canoe yet devised, the "shadow," belongs to Commodore Chas. Alden, who is so long and worthily conducted as the club's chief officer. Our remarks were not directed against the N. Y. C. C. so much as against the lack-luster of the general public of this and neighboring cities in failing to respond to the propaganda as quickly and as widely as it should be cited, and as the men of the Bay and West have done. While giving the first club in America full credit for what it has accomplished, the fact remains that week in, week out, the active members of the club may be counted on one's fingers, a state of affairs not likely to exist from this on now that there is the club house, and which our remarks were intended to ameliorate, so that in the march of a widening popularity the part at club should lose none of its former influence nor the prominent lead it once possessed. The N. Y. C. C. has done much for the introduction of the sport, more than any other, but that is no reason why it should now lie on its paddle or rest content with inertly drifting with the tides of time. Fortunately, as our correspondent's letter shows, there is still life in the club of a vigorous sort, which, with the infusion of new blood, ought to make the double-decker a more lively craft along our shores, and the small urchin will no longer hail "say, boss, what kind of a racket do you call that?"

CRUISING IN SAN FRANCISCO BAY.

Editor Forest and Stream:

Both the San Francisco and Pacific Yacht Clubs sailed for Vallejo on Saturday, May 14, the Pacific fleet leaving Front st. wharf at 1 P. M., and the San Francisco at 2 P. M. Although the squadron sails were independent ones, as most of the yachts belong to both clubs, a joint affair was made of the cruise down the following day. The yachts got under way at 2 P. M. from Commodore Hamilton's Frolic from Front st. wharf. The run up was a pleasant one, the schooner Nellie arriving first of the Pacifics, and the Consuelo first of the San Franciscos, at Vallejo.

The Consuelo and Chispa started close together, but the Consuelo beat her a few lengths only. The next A. M. was passed in friendly visits to the different yachts and talking generally as to the probable winner of the back race to the city, it being between the Nellie, Aggie, Consuelo, Chi-pa, Annie and O'Connor. The general opinion was that the Aggie would carry off the honors. The yachts at Mare Island were Frolic, Emerald, Consuelo, Chispa, Aggie, Arabine, Ariel, Nellie, Annie, Clara, Mollie, Lively, Emerald, Gazelle, Myrtle and Thetis. In fact these Vallejo cruises are only made races of by a few of the enthusiasts, the rest preferring to take their ease.

The start for the city was made at about 2 P. M. The Consuelo and Frolic where the last to pass the line, the latter bringing up the rear, the wind was light in Pablo Bay and the way of calling, lagging Point Pedro and the Islands (Sisters) in one tack from Mare Island light. The Consuelo grounded at Pedro Point, but was got off sharply. The fleet looked very handsome beating to windward, each one doing her level best, the Nellie and Chispa got abreast of Point at 4 30 P. M., with the first one to tack; the Aggie at 4 P. M., and the Chispa last. At Southampton shoal the latter ran out or a strong breeze into a dead calm. She lay there till the Aggie, a mile astern, came up with the same distance. All the yachts began to gather, when all got set a signal that she had lost or broken her board. After half an hour of this calm the Chispa got out her sweeps, while the Aggie put a boat ahead to worry the yachts, and to point them to a breeze ahead. A strong breeze in the distance and all hands home bounding, the Chispa getting in at 6:30 P. M., and the Aggie about five minutes latter with her staysail set in the strong breeze across.

The sail is convinced many that the Aggie can give no greater allowance to either Connor, Chispa, Nellie or Consuelo. She is powerful and fast, but cannot give much time to any of those mentioned.

A. W. C.

ANOTHER YARN SPOILED.

MR. R. S. BELL, the efficient Secretary of the Bay of Quinte Y. C., the honesty of whose intentions was recently called into question by the sensation mongers of a contemporary, compels the journal to take back its clumsy accusation. The explanation from Mr. Bell was hardly necessary, except, perhaps, in deference to his connection with a matter of public interest. The accusation against him was as stupid in conception and as unwarranted by facts as the charges vulgarity brought against the club he worthily represents.

YACHTING NEWS.

QUESTION OF TYPE.—Here is some sound sense on the question of model, which we take from *A field and A float*. It applies with full force to yachting about New York:

"The Baltic and Mediterranean seas seem to be natural and homelike training grounds for the English yachtsman. Four and five tonners map out their thousands of miles in these waters and always end at home. There is hardly a seaport in the known world that an Englishman has not stuck his yacht's nose into. And see the time they make in one little sea-skipping wonder-voyaging their 200 to 300 miles per diem and averaging their 175 to 200 miles!

"Recently a gentleman with a few friends left England for a trip around the world in a ten-tonner and she was lately reported in the South Pacific, having doubled Cape Horn successfully and all hands free from barnacles, as well as the little ship.

"The reader must not think these little pig on these trips as some of our fool-hardy folks cross the ocean in an 18-foot skiff for the monetary of the thing. They are wealthy and men of culture, accustomed to the good things of life, and when they start out on the broad ocean in their wee things they are almost as comfortable as in their parlors at home. The fact is, a thorough English yachtsman is always at home.

"Mr. Kunhardt, of FOREST AND STREAM, has recently made the drawings of a two-tonner adapted to our own waters, a one or two-

man cruiser. He has given his little boat sufficient beam and cut tailed her depth from the English extreme. She is, in fact, as near perfection as it is possible to make her, both in shape and rig.

"The owner of one of our inland 50-foot flyers, proposing to witness the regatta in New York this season, was a good deal exercised as to the practicability of going outside. We simply make the contrast and leave our readers to draw their own conclusions.

"We are favorable to the Herreshoff boats for light draft and small displacement for inland sailing and for speed. The wide "spread-out" cannot be beaten in her own water. But many long for other climes and a slight bey ond the every-day vision of the naked eye; or, as a friend of ours has it, a look from the back door of a farmhouse located on a creek.

"England's great navy sprung from yachtsmen, encouraged and protected by the Government. A fresh water sailor is very well in his place; salt him a little, and you will count your fish over night for the morning meal, and he is all the better for it.

"As it has been seen, small yachts can be made capable of oceangoing at a trifling more expense than on a lumber. There is no good reason why our yachtsmen should not have a smell now and then of the briny and a shake up on the old ocean. The hope of a little adventure beyond the confines of land-locked waters will cause them to venture off on the wide expanse, where the horizon is only seen setting down on the sea. Our Eastern friends, alive to this kind of sailing, go to sea in their small boats, well-adapted craft with an added complacency as a school-boy would paddle his scow over a pond after hours."

COLUMBIA YACHT CLUB.—The officers of the club are: Commodore, R. P. H. Abell; Vice-Com., G. S. Innis; Measurer, A. J. Kelleher; Treasurer, J. P. Wiegman; Regatta Committee, R. P. H. Abell, J. A. Weaver, G. W. Thomson, E. Weber and G. H. Heap. The clubhouse is at the foot of Eighty-sixth street, Hudson river, and their P. O. address is Box 2000, N. Y. The programme for the season is an extensive one, as follows: The annual club regatta will be sailed June 15 at 10:30 A. M., over a course from the club-house to Yonkers and return; Class B to literally only and return. Classification: Class A, sailing yachts; Class B, open yachts under 25 feet; Class C, open yachts over 20 feet; Class D, open yachts 20 feet and under. Time allowance, 1½ minutes per foot. Prizes will be on exhibition before the regatta. First Union regatta.—A large, handsome silver cup, to be known as the "Commodore's Cup," will be presented to the winner in a race open to all comers over 25 feet and under 25 feet on Tuesday, July 12, 1881, at 10:30 A. M., to be sailed over the Columbia Yacht club's triangular course, of Eighty-sixth street. A similar cup, to be known as the "Vice-Commodore's Cup," will be presented to the winner in a race open to all comers, 20 feet and under, on the same day and at the same time. Second Union regatta.—A large, handsome cup, to be known as the "President's cup," will be presented to the winner in a race open to all comers, under 25 feet in length and catrigged, on Wednesday, July 13, 1881, at 10:30 A. M., to be sailed over the Columbia Yacht Club's triangular course, off Eighty-sixth street. Third Union regatta.—For an elegant combination filling ice pitcher, tray and goblet, complete, presented by the Wilcox Silver Co., of No. 6 Maiden Lane, to the open Class B, sloop, catboat or sharpie, sailing for under the auspices of the Columbia yacht Club on Tuesday, September 13, 1881, at 10:30 A. M., over the club's triangular course and open to all cat-rigged yachts under 25 feet in length. Rules for the Union Regattas.—Entries close 3 hours previous to the time of the first boat of starting. Numb ers will be furnished on payment of $1 (U. Y. C.'s yachts free) and all yachts must have numbers in sight. Yachts will be remeasured if required by the judges. Time allowance, 1½ minutes per foot. No restriction as to crew, but no more required. No man allowed to leave a yacht during the race. Booming out or taking in ballast not allowed. Judges' decision on all points shall be final. Flying start. All ready to cross the line at 10 A. M. or within ten minutes thereafter. A yacht crossing after the expiration of the ten minutes will be timed as having crossed at the expiration of the ten minutes. Guns—First, to get ready; interval of five minutes; second, to start. All turning points or stake-boats to be left on the port hand. A yacht fouling a buoy, buoy or flag used as a turning point may be disqualified by the judges. All protests must be made in writing and made within one hour after the regatta. Race must be made within eight hours. Where required, the Columbia Yacht Club's regulations will govern. Any information not given, and which is desired, will be furnished on application to the chairman of the Regatta Committee, Mr. R. P. H. Abell, P. O. Box 2,070, New York.

HUDSON RIVER YACHT CLUB.—The ninth annual match was sailed June 6. Two yachts, the Hudson and Edith, came to the start besides a number of open boats. Of these two rolled over, but the rest managed to keep "right side up with care" in the puffy northeast wind. Hudson carried away her topmast before the race, and later on her bowsprit, so that she did not finish. The Edith had a proper proceeding to the Hour either did not know the rule of the Road or did not choose to observe it. It is about time open-boat sailors recognized something more in yacht racing than tossing sandbags and foolhardy "carrying on." The race was sailed from the club-house, foot of Seventy-fourth street, to Yonkers and home; for the catboats to a mark on Spuyten Duyvil and return. There was a lee going tide and head wind, so that some real work was shown on the way up by all hands. The wind, however, soon died away, and the incoming flood made the run home slow business. Neither of the yachts finished. Among the open boats, Clara S., 24 ft., J. Stigler, won in class A, beating St. Elmo and Irene; they, unless corrected, being 7h. 39m. 58s. In class B, Thomas, 22 ft., A. L. Kregmeyer, won in 7h. 39m. 41s., leading the Annie L., Idle Hour and Mollie B. In class D, Beach, Class D, catboats, from 18 to 20 ft., did not finish, and among the little shavers of Class E the race went to Molly McCarty, 15 ft. 9 in., J. McCarty, in 6h. 31m. 58s., beating the Little Dean

FALSE STANDARDS.—The case current given to popular opinion concerning model by deriving measurement rules is well illustrated by a laudatory paragraph in the London *Truth* of the new cutter Buttercup. This ten-tonner is extremely narrow, being 43.7 ft. long and 7.2 ft. beam, the narrowest cutter afloat next to Evonia. She has won all the matches she entered this spring for the simple reason that she is a quarter to a half as large again as her contestants, though tonning only the same by the rid iculous Y. R. A. rule. Consequently the general public, not conversant with the value of size, lays Buttercup's success to the credit of her model. Such is indeed the popular belief that long and narrow yachts are the fastest designs, just the same as we in America are deceived by the common-length rule into the very opposite faith. With us the shortest and widest are the fastest, because on a given length and tonnage the *largest* sail can be driven the deepest and not necessarily upon any virtues of model. As it is plain to see that builders invariably aim to produce the *largest* yacht possible under any measurement rule, it ought to be equally plain that their *size* should be the only competitive test of the worth of their model. Fortunately length measurement seems now on its last legs for all but sand-bag boats.

NEW JERSEY YACHT CLUB.—The annual regatta will be sailed to-day off the Elysian Fields, Hoboken. The start will be a flying one for all classes. All yachts must be prepared to cross the line at 10:30 A. M., and must cross within ten minutes after the second whistle is blown. The signal to prepare will be a blast from the steamer's whistle, and ten minutes later for all classes to start will be the same, all yachts to have ten minutes in which to cross the line. The course will be for classes A and B from a line between the Fourth and Twelfth street dock, thence to and around Craven Shoals Buoy, lying 1¾ miles S. S. W. from Fort Lafayette, leaving it on the port hand, and return to Communipaw Dock, south end of Jersey city, crossing a line between slanting from said dock to the Hoboken shore. Class D and E will be from same starting line, to and around Fort Lafayette, leaving it on the port hand, and return to the line as above stated. This regatta is to be wholly governed by the by-laws of the club. Classes are for yachts over 30 feet; from 25 feet to 30 feet; under 26½, and a special class, E, for catamarans. The steamer Only Son goes over the course, and leaves 14th st., N. R., at 9:30 A. M., and 8th st., Hoboken, at 10 A. M. Tickets 50 cents.

PORCHESTER YACHT CLUB.—Entries for the deep-water matches of this club, June 16, should be made to the secretary, Louis M. Clark, Harvard college, Boston, Mass., by Monday previous to the race. Yachts not flying the club burgee should send sailing length with their entry —length on water line, plus one quarter overhang, and the extreme beam. For measurement add two-thirds the length found as above to the beam. This salutary rule is in the interest of the sloops for, as ever looked, the Dorchester Y. C. having decided against the children's rule of "simple length." The yachts will sail in five classes. Those sloops and cutters and schooners that measure 40 ft. or over will sail in the first race. In class B, open to sloops measuring less than 40 ft. and less than 40 ft. Sloops and cutters of 22 ft. and less than 32 ft. measurement will compete in the third race. Sloops and cutters that measure less than 22 ft. will sail in the fourth race. Prizes as follows: In the first race a first prize of $25 for sloops and cutters and a first prize of $25 for schooners; second race, for sloops and cutters, first prize $20, second prize $10; third race, sloops and cutters, first prize $20 and second prize $10; fourth race, first prize $15, second prize $10. No prize will be awarded unless two or more yachts start, and no second prize will be given unless three yachts start.

NEW SLOOP.—Willets, of Cow Bay, L. I., has launched a very fine sloop for Mr. E. A. Willard, of the N. Y. Y. C. The sloop will class with Regina and Vixen and promises to be a close match for the very best. She is a perfect wave-line design and in model is exceedingly handsome. It properly canvased and sailed for the best we think she will be without equal in her lot. After frequent inspection while building we cannot suggest the addition or cutting away of a chip on her hull For a sloop of the usual American type she must be considered perfect. She is 49 ft. long on water-line, 17 ft. beam and 5 ft. 4 in. depth, top of keel to deck at side. Draws 8½ ft. forward, 4½ ft. aft and has a centreboard 16 ft. long. Freeboard amidships is 2 ft. 6 in. Height of mainmast from deck 70 ft., and of jibboom 14 ft. 6 in. Carries 12 tons of bed ballast. Cabin aft as usual, stateroom on starboard side, pantry, galley, etc., on port side and forecastle forward. The sloop was launched Saturday last and christened Regina. She has been built in the best manner of thoroughly well-seasoned stuff.

OUTSIDE LEAD.—We hear that Cora, Fish is well pleased with the addition of 4 tons of lead to the keel of his trim schooner Agnes. The Cruiser has likewise come out with lead outside. The strange prejudice against outside lead in the Atlantic Yacht Club's New York is at last wearing away, and the nonsensical theories of men dubbing themselves "practical" are going to the wall in the light of experience. Why any one announcing himself as "practical" should want to backstay rather than iron, and not allow racing to degenerate into a mere matter of athletes and foolhardiness, meets with popular approval, is shown by the good list of entries the regatta on Decoration Day called out. Twenty-one boats started, the course being from Kensington Water Works to Bergen Point and return, a distance of 12 miles. First prize, $25, was taken by the Smith; second prize, $15, by the Nellie, and the third prize, $10, went to the Millers.

CUTTERS.—Mr. Kirby, of Rye, has about finished a cutter 35ft. waterline, 50 ft. beam, with no iron keel. C. M. Graves, of Fair Haven, has also finished one 36ft. long. She also has an iron keel, which has no gripe; carries in lower sails 150 yards. She is built with straight frames, having a knuckle instead of a rounded bilge. Mr. Smith's new design is 36ft. waterline, 10ft. beam, draws 7.3ft., and has 21.4 tons displacement, with about 7 tons ballast, a portion of which will be on the keel. She is to be off in two months.

TORONTO CANOE CLUB.—The secretary reports twelve canoes on the list, including the Fairy, Mr. Bridgman, with a metal centreboard which can be removed by working a lever from the deck, which can be worked without leaving the seat. The club has a fine library and has a bright future. Officers for the year were elected as follows: Commodore, J. W. Bridgman; Vice-Commodore, Edward Leigh; Secretary, Robert Tyson; Captain, Harry Nelson; purser, Arthur Hughes. N. H. Bishop, of the American Canoe Association, and W. P. Stephens, of Rahway, N. J., were elected honorary members of the club.

DETROIT YACHT CLUB.—The annual regatta will be sailed July 4 on Lake St. Clair over a triangular course, fifteen miles long for first and second class and ten miles long for third class. Officers for the year: Commodore, O. W. Baker; Vice-Commodore, Geo. Newberry; Rear-Commodore, Theodore Buhl; Secretary, Alvin Harmon; Treasurer, S. H. Ives; Measurer, R. G. Riddell; Regatta and Executive Committee, G. H. Lesher, Morse Stewart, Jr., Oliver W. Baker, Samuel Cowan and Robert T. Warren.

POINTS OF SAILING.—The new club books shows this excellent organization to be flourishing and steadily gaining in strength. The "signals," or more properly, the burgees, show eleven schooners and nineteen sloops. There are eleven honorary members and one hundred and forty regular members. The club has had the independence to throw aside the measurement rule and has based its allowances upon an approximation to the water-line girth, so as to make beam pay for something of its share in the estimate of size.

LEAD KEELS.—Says the South Boston *Inquirer*: "Capt. Lincoln's fleet covered herself with glory in the various races this week and proved the wisdom of the alterations made in her for the present season. She has a new lead keel, new sails and spars and, as she has beaten the wider and shallower craft, it goes to prove that good depth, and a moderate beam are the requirements for speed." Which goes to show that experience is bearing us out in all we have written in FOREST AND STREAM concerning outside ballast.

CAPE ANN YACHT CLUB.—The following club signal has been adopted: A red burgee, with white star in the centre, and a star of white in the field, the flag to be two-thirds as wide as it is long. The Commodore's flag is a swallow-tail pennant of white, with blue stripe and a red star in the upper corner. The Vice-Commodore's flag is blue, with red stripe and white star, and the Fleet Captain's red, with white stripe and blue star.

VOLANTE.—Manning's Agency has sold the cutter Volante to Messrs. Tower & Hodges, of New York. The Volante has the distinction of being the largest yacht in America, and as a safe, roomy, staunch and stylish cruiser has given the greatest satisfaction. She was designed for that purpose by Commodore Robert Center, and was built by John Munan, in 1878, for Messrs. Hitchcock. She is 48 ft. over all, 40 ft. on deck, beam and draft 9 ft. 10 in. depth.

WINTHROP YACHT CLUB.—This is the title of a new club recently formed at Winthrop, Mass. Membership includes 45, owning 17 yachts. Officers for the year: Commodore, Henry Putnam; Vice-Commodore, Walter Hunt; Fleet Captain, William H. Allen; Treasurer, G. F. Belcher; Secretary, John Hunt; Measurer, Henry Belcher. Club signal, a blue flag, swallow-tail, with a white letter W in the middle.

HEADSHEETING.—Here is the way tarry talent tried to make Prospero improve in stays. Flying jib was added at one end and mainsail at the other. The keel was then cut off a foot fore and aft alike. Result, Prospero was slower in stays than ever before! Now they are giving her more rudder. The same topmast authority gravely says: A boat can't sail with copper on her bottom, and so it comes from Spero's copper. For a botch job get a sailor-tinkering at a vessel's hull.

VARNISHES.—Practical yachtsmen know the difference in wear between good and poor qualities of varnishes, etc. It is to both economy and satisfaction to use the best in the market. F. O. Pierce & Co., 70 Fulton street, make varnishes and a spar composition especially adapted to the yachtsman's use. It will stand salt water and the weather and is more lasting than the usual run of compositions in the market.

YACHT BUILDING.—Saml. Ayers now occupies new shops in Peck Slip, and is prepared to build all classes of boats and yachts from the smallest to the largest, with a large force of hands on the largest sloop yacht. The Rosus, built by him last spring for Mr. Marshall, has proved a great success, having done a good deal of cruising down East last season and shown very fair speed.

CAMBRIA.—The handsome English schooner Cambria reports that she made the passage from Cape de Gate, Algiers, to Europa Point in 44¾ hours, a distance of 410 knots, averaging 9 knots or 10 miles an hour. She ran before the regular levanter with reefed squaresail and double reefed foresail and standing jib, never shipped any water and was not steered as a wheel could be.

NAVAL EXHIBITION.—The Shipwrights' Company of London, Eng., have issued a public invitation to the ingenious of all nations to contribute to a competitive exhibition to be held in Fishmongers' Hall in April next, of models designed for the use of fishing craft, from fishing smacks and torpedo launches to clipper-built schooners and stately vessels of war.

NOTES FROM SAN FRANCISCO.—Schooner Viva has been altered into a single-stick lumber yacht. Schooner Virgil is still lying up in Island Creek and will not fit out. Schooner Ariel has received a new keel with 2,400 lbs. of lead outside and will be raced against Aggie and class. Dr. Merritt has sailed in the big Casco for Monterey. The yacht fleet escorted the Corwin out of the harbor on her departure in search of the Jeannette.—C.

SALES.—Manning's Agency reports the sale through them of the cutter Volante, elsewhere noticed. Also, of the Emma T., cabin sloop, 40 ft. over all, to J. C. Hutchinson, of the flying cloud. The cutter Comfort has been chartered to E. D. Morgan, Jr., for the season and the schooner Resolute to F. A. Stout, for a cruise, or a three-months' cruise.

CONSISTENCY.—We call it none the less an American victory because an English jockey rode Iroquis at the Derby, but raise a howl at the mere thought that an American crew might sail the Atlanta in the American Cup match. Consistency, thou art a jewel—sometimes!

FASTEST OF HER INCHES.—The steam yacht Lelia was recently purchased from the Herreshoff Manufacturing Company, of Bristol, R. I., by the Toledo Boat Club. In seven minutes after leaving Detroit, the other day, she rounded Sandwich Point, which would make her time to Wyandotte, a distance of 12 miles, about 30 minutes.

AMERICA'S YACHT LIST.—Capt. Nelse Olsen has completed a new list of American yachts in a handy little volume, which shoul be in possession of all yachtsmen. The book will soon be offered to the public, when we will review it at greater length.

TIGRESS.—The schooner yacht Tigress, built at Salem, Mass., this spring, by Mr. Joshua Brown, has been purchased by Mr. J. F. Nickels, of New York. She is 62 feet 5 inches on deck and 15 feet 6 inches beam.

NEW BEDFORD YACHT CLUB.—The Flushing Bay faction of this club has obtained a permanent injunction against the Harlem division, restraining the latter from using the club seal, name or signal. The whole squabble has been discreditable.

A CANOEING VOYAGE.—A gentleman proposing a two months' canoeing cruise this summer is desirous of meeting some brother of the paddle with whom to make the cruise in company. Addresses can be left at our office.

TO SECRETARIES.—Secretaries of yacht clubs sending us notices, circulars, etc., are requested to add their address, so that we may communicate with them, if necessary, without loss of time.

EAST RIVER YACHT CLUB opened the season last Sunday with a squadron sail to Little Neck, where a clam chowder formed a savory attraction. The cruise was enjoyed by all hands.

NEW YORK CANOE CLUB.—The club will hold its annual regatta Saturday, June 25. A good list of entries is expected. The course will be a triangular one off the club house, Staten Island.

PUBLIC OPINION.—Says the *Detroit Intelligencer*: "If FOREST AND STREAM is always above the provincialism and narrow-mindedness of its New York contemporaries in general."

KNICKERBOCKER CANOE CLUB.—*Truth* says this club proposes a cruise from Quarantine bay, on Staten Island from July 2 to July 6, and all canoeists are invited to join.

TORONTO CANOE CLUB.—The colors of this club are a red point of burgee with white border and the letters T. C. C. in white Roman capitals.

NEW CANOE CLUB.—Cleveland, Ohio, has organized a canoe club

Remember Hop Bitters never does harm to the smallest child, but good, always and continually.

Answers to Correspondents.

☞NO NOTICE TAKEN OF ANONYMOUS COMMUNICATIONS.

READER.—There is no bounty on bears.

W. H. S., Turbotville.—We have no recipe for making birch beer.

M. W.—You can get the shells from New York dealers, if anywhere.

MERWIN, Geneva, N. Y.—For paper shells use wads of the same size; for brass shells two sizes larger. Crimp the paper shells.

CONSTANT READER.—For new gun barrels address the American agents of the gun, whose addresses are to be found in our advertising columns.

A. C. D., St. Louis, Mo.—We can learn of no agency of the Gibbs gun where the parts of the locks would be obtained. You can order them however through any one of the importers of foreign guns.

A NEW BEGINNER.—For ruffed grouse shooting use a 10 or a 12-gauge gun; weight to suit your own strength and build. Load with 3½ dr. powder, 1½ oz. No. 8 shot. You may address "Ruffed Grouse," care of this office.

H. P., Columbus, O.—You may address Mr. Fayette Giles, care of Mr. John Avery, Room 7, City Hall, New York City. The six-barrelled rifle is of late patent-date. We do not think that you need fear any interference in that direction.

J. H. A., Bingham's, N. Y.—1. Is there No. 22 cal. rim fire rifle made that used extra long cartridges? 2. If a shell of that size and length would burn all the powder? Ans. 1. Yes. A long chamber will use such a cartridge. 2. Yes.

F. A. M., Monroe County, Pa.—How late can brook trout be lawfully caught in Monroe County, Pa.? Ans. The season in the State is from April 1 to July 31, both dates inclusive. We have never heard of Monroe County being made an exception.

EVERGLADE, New Orleans.—1. The Dittmar powder people have adopted the scheme of mixing their powder with black powder, and are now trying to sell it as "gray powder." Let it alone is "our advice." 2. We have heard no complaints of the weakness of the gun.

A READER.—We think the gun safe for the charges mentioned, although we would prefer to invest money enough in a gun to insure its being of first-class workmanship. For the money you paid you ought to get an arm which would be unsurpassed and will perfectly safe.

H., Fortress Monroe, Va.—Go to the Rangeley Lakes by way of the Boston and Maine or Eastern railroad. See the advertisements of the two routes elsewhere. The roads are both first-class. See recent articles on Rangeleys. Go to Samuel Farmer's, whose house was noticed a fortnight ago.

G. C. P., New York.—For woodcock shooting use a 10 or 12-bore gun; barrels, 28 inches long, weight depends upon your own strength. The gun should not be so heavy that it will necessarily fatigue you excessively to carry it. Load with an ounce of No. 12 shot, and for late shooting No. 10. Powder, 2½ dr. to 3 dr.

T. C. S., Big Pine.—The defect will injure the shooting qualities of your gun. Have it removed by a first-class gunsmith. Better tend it to some one of those whose advertisements to repair guns are found in this paper. They are competent men and you will have the satisfaction pf knowing that the work is well done.

H. S. M., Bridgeport, Conn.—I am thinking of going down to Great South Bay, L. I., to try weakfish and bluefish next week. Can you inform me whether these fish are running in the spring? Ans. They are not plenty yet. A few have been taken down the New Jersey coast, and some in New York Bay and along Long Island in nets, but they are not taking the hook freely yet.

M. F. P., Tiffin, O.—1. Is it injurious to use a wire-muzzle brush on a fine Damascus barrel? 2. Is the new gun is chambered for 2-inch shells. Would it injure the chambers and make bad shooting if I would use a shorter shell. Ans. 1. No, not if you use plenty of oil. 2. It will not injure the gun to use a short shell, but the shooting will be of course poor if it fits the chamber.

OLD READER.—The Creedmoor targets are as follows: All distances over 600 yards, 6x12 ft. bullseye circular, 36 in. diameter; centre, 6 in. diameter; inner, 6x6 ft.; outer, remainder of target. For all distances over 200 yards, up to and including 600 yards, target 6x8 ft.; bullseye circular, 24 in. diameter; centre, 8 in.; inner, 64 in.; outer, remainder of target. Third class, up to and including 300 yards, bullseye circular 8 in. diameter; centre, 2 in.; inner, 16 in.; outer, rest of larget.

R. J. B., Philadelphia.—A friend of mine in Burlington Co., N. J., a lover of a good meal, is known to him. From his description it was, I suppose, of the crane species of wading birds, long yellow legs, long sharp bill like a heron, three long white feathers from top of the head, wings dove color, back bluish, breast yellowish white. Can you tell me from this meagre description what it was? Ans. From your description we presume that the bird was a night heron (*Nycticardea grisea naevia*).

A. D. E., Irvington, N. Y.—1. Will you be kind enough to inform me of some place, not to exceed 250 miles from New York city, where I can obtain good woodcock shooting this summer? 2. A few weeks ago I fired a charge of No. 8 shot from a breech-loader at what I took this one was by accident fired by a mongrel. Would you refuse the pup on that account? The pup to all appearances is promising. Ans. 1. We do not know of any such place; good woodcock shooting near New York is a thing of the past.

T. M. C., South Framingham, Mass.—Can you tell me what kind of fishing I will find in Jefferson County, N. Y., during the first two weeks in August, and what kind of an outfit to take with me as I know nothing of the kind of fish to be found there? Ans. The county is large and has a variety of fishing. If you go in the interior there are plenty of trout. If on Lake Ontario you will find pike, pickerel, muscalonge, black bass, etc. For the latter take stiffer rod than for trout, and heavier lines. Use spoons or minnows for bait.

GREEN TURTLE, Ohio.—1. What book is best for an amateur fisherman in Ohio to learn the haunts, habits, etc., of the pike, perch, bass, sunfish, chubb, catfish and silverside, they being the fish caught in the Eastern part of the State? 2. What book would be best in instructing a novice in breeding trout, salmon, carp and other fish? 3. Do the white bass and sunfish cover blue eggs as the trout do? Ans. 1. The "American Angler's Book," by Thad. Norris. 2. There is no good work on general fishculture in English. There are several on trout culture. "High Culture," by Norris, is the best general work, but it is antiquated. We have just published carp culture. 3. No, not as a rule; one catfish is so recorded.

T. J. B., San Jose, Cal.—Can you tell me where I can procure any work on carp raising, as it is my intention to enter into it on a small scale for my own benefit having the land to spare and good water facilities? Have made up your mind to do so, and if it is a success I am on the subject as carried on in an extensive manner. Ans. Our series of articles contained all that has been published on carp culture. You need not do it so extensively. We are continually pubtiisl ing articles on fish culture, and FOREST AND STREAM is the organ of fishculturists. Read it carefully and you will learn much.

R. H. D., New York.—I desire to know something about the country around Dalhousie, N. B., with a view to spending the summer there, for fishing (trout preferred), health and rest; kind of accommodations to be had, temperature, and if it is a good place for ladies and children, and whether physicians can be had if required? Is it likely to be raw and chilly most of the time? What kind or fishing prevails, salt or fresh water fishing? Ans. There is good brook trout fishing in the streams about there, and sea trout in the Bay of Chaleur. Salmon in the Restigouche. You can get both fresh and salt water fishing within easy distances. It is a large place and good accommodations can be found, and no doubt physicians who will visit. It is not usually chilly in summer. The climate is good.

What is hope? A smiling rainbow
Children follow through the wet;
'Tis not here—still yonder, yonder—
Never urchin found it yet.

What is life? A thawing iceboard
On a sea with sunny shore;
Gay we sail, it melts beneath us;
We are sunk and seen no more.

Forbes' Patent Ball & Socket Rowlock & Curved Oar.

No. 1—FEATHERING.

No. 2—NON-FEATHERING.

These oars are made of best second growth linden wood. Our locks of malleable iron, strong, very light and durable.

IN INTRODUCING FORBES' PATENT OAR, which is made on an entirely new principle, we believe we are presenting an article that, as its merits become known, will prove very popular among professional and amateur oar-men. The rowlocks are made in two styles, as shown in the above illustration—the feathering and non-feathering the former being adapted for professional or skilled rowers and the latter more for the novice, it being so constructed that the oar will feather itself a trifle without any effort on the part of the rower. The object of curving the oar is to bring the knee joint of the row lock in the direct line of draft. It is very easy to operate, will not blister the hands, and is not near as tiresome as the common oar.

Pronounced by professional oarsmen the most perfect thing in the way of a spoon oar ever brought out.

One trial of Forbes' Patent Oar will convince the most skeptical that it is the best thing in the way of an oar ever invented. Manufacturing the oars ourselves, in large quantities, we are enabled to place them on the market at the following very low prices:

	Per Pair.		Per Pair.
6 foot Feathering Oar	$4 00	6 foot Non-Feathering Oar	$4 00
7 " " "	4 25	7 " " "	4 25
8 " " "	4 50	8 " " "	4 50
9 " " "	4 75	9 " " "	4 75
10 " " "	5 00	10 " " "	5 00

Sent to any address upon receipt of price.

A more detailed description of these oars, together with an illustrated price-list of the

THE GREAT SINGLE BREECH-LOADER.

FOREHAND & WADSWORTH'S NEW BREECH-LOADER has so completely distanced all the others that it stands alone. There is no second. It is the only single gun worth having. As described in the above cut it is now complete, with rebounding lock, pistol grip, lever fore-end, nickel-plated frame, and is beautifully finished throughout. The barrels are either steel or twist. When steel they are bored out of a solid bar of steel, differing in this respect from all others, which are merely old musket barrels refinished. When twist they are the best imported barrels and of very fine grain. They are bored either cylinder for use in the field, or choked for very close shooting. When choked the targets will not suffer in comparison with Greener's, James', or even Colt's. Hitherto we have been far behind our orders, but having greatly increased the production we can fill orders immediately. The cost of these guns is a mere trifle. We are sole agents at New York for Colt's Club Guns, and also for Enos James & Co., Birmingham. We offer a small JOB lot of the celebrated Webley Guns of all sorts at about half price.

P. O. BOX 4,309. H. & D. FOLSOM, 30 Warren St., New York.

Sportsman's Goods.

5 Consecutive Shots, 50 feet, off-hand.

WILD HARRY, the Indian scout, says that with a Stevens' Rifle or Pistol, at 50 feet, off-hand, he can knock the spots out of a playing card in this way all day long. He is obliged to use these arms to do the great feats performed daily in Barnum's Circus and elsewhere. Ringing a bell *every time* through a *quarter-inch bulls eye;* cutting the ashes from a cigar held in another person's mouth; piercing a dime held between another's fingers, and numerous other difficult and wonderful shots. The only objection to these arms is that they shoot so well, are so handy to take apart and carry about in a trunk or bag, that every body wants them, and the makers have had to enlarge the factory, and work nights to supply the demand, and even in the dull season cannot get much stock ahead. Send for illustrated price list to

CHAS. FOLSOM, 106 Chambers St., N. Y.

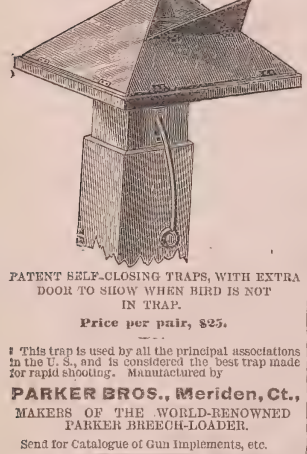
HUNTER'S PET RIFLES: .22, .32, .38 or .44 cal., 18 in., $18; 20 in., $19; 24 in., $21.
POCKET RIFLES: .22 or .32 cal., 10 in., $12.25; 12 in., $13.25; 15 in., $15; 18 in., $16.50.
GALLERY PISTOLS: Light, $20; heavy, $22.



CHICAGO, Ills., April 12, 1881.

For nine years I have been a patron of a shooting gallery; have tried the different makes of rifles, and my experience shows me that the Stevens' Rifle excels all others, and is more in demand than any rifle in my gallery. For beauty of finish, accuracy of aim, reliability and durability it gives general satisfaction to the public. I can cheerfully and fully testify to its merits, as I have one now in use, and been in daily constant use for *seven years*, firing over 200,000 shots, *which is as good to-day in every respect as the day it left the factory.*

Yours, etc., R B. FULLER, 172 Clark st.

Hotels and Resorts for Sportsmen

Black Bass and Maskalonge

THE CELEBRATED FISHING GROUNDS OF THE

THOUSAND ISLANDS.

St. Lawrence Hotel and the Rathbun House,

CAPE VINCENT, N. Y.

[Terminus of R. W. & O. R. R.]

Both under one management. The Rathbun House has been enlarged to double its former capacity, and both houses refitted and refurnished throughout. They are located in the immediate vicinity of the very

BEST FISHING GROUNDS OF THE ST. LAWRENCE RIVER.

Competent oarsmen with first-class boats at reasonable prices can always be obtained. Malaria, mosquitoes and hay fever are unknown at this point. The terms for board at either of the hotels are from $7 to $14 per week, according to location of room.

See FOREST AND STREAM of July 1, 1880, "Bass and Maskalonge Fishing," for description of the attractions, and send for circular containing full particulars.

H. L. FOX, CAPE VINCENT, N. Y.

RALPH'S

Upper Chateaugay Lake,

NEW YORK.
(ADIRONDACK MOUNTAINS.)

This popular resort is rapidly filling up with seekers after

H ALTH AND PLEASURE

The MAGNIFICENT SCENERY,

BRACING ATMOSPHERE,

EXCELLENT TROUT-FISHING,

combined with ease of access and first-class hotel accommodations, make this place especially desirable.

The Albany, N. Y. *Express* of April 23 says, *Editorially:*

"Life in the Adirondacks is very pleasantly written up in *Harper's Magazine* by Col. Marc Cook, whose article will undoubtedly induce many to seek the North woods in search of sport and health.

* * One of the most beautiful sheets of water in the Adirondacks is Chateaugay Lake. The mountain scenery around it is incomparable, the water deep and clear, and forest and water are not hunted and fished out. There is good shooting back from the lake, while speckled and salmon trout abound in its waters. The much-talked-of "Smith Weed Railroad" runs from Plattsburgh to Lyon Mountain, two miles by plank road from "Ralph's," the new hotel, which is everything it should be. Chateaugay Lake, from its beauty, its good sport, its accessibility and its excellent hotel, will soon be a famous Adirondack resort."

For further information see accurate description given in advertising columns of FOREST AND STREAM of April 28.

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R. R.

THE ONLY ROUTE TO THE
Trout, Grayling & Black Bass Fisheries,
AND THE
FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the
Grand Traverse Region,
and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept 1.

The GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections.

The hotel accommodations are excellent, and will be largely increased in time for the season of 1881 by new buildings and additions.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. Time Cards, Folders and further information, address

Connecting direct for Chincoteague, Cobb's Island, and points on the Peninsula, City Point, James River, Currituck, Florida and the mountainous country of Virginia, Tennessee, etc. Norfolk steamers sail Tuesday, Thursday, and Saturday. Lewes, Del., Monday and Thursday at 3 P. M. Full information given at office, 197 Greenwich Street, New York.

Bromfield House, Boston.

EUROPEAN PLAN.

MESSENGER, Proprietor.

TIM POND TROUT FISHING.

The boarding camps at this resort will be in readiness for sportsmen May 20. The abundance and quality of trout, the improvements in camps and boats, the facilities for reaching this pond and the beauty of lake and mountain scenery makes this one of the most desirable resorts in Northern Maine. The proprietor, Kennedy Smith, will give his personal attention to the wants of his guests. The railroads will sell tickets for round trip to Smith's farm in Eustis, and buck board teams will be ready to haul passengers and baggage from farm to camp at reasonable rates. Board and use of boat one dollar per day. Address KENNEDY SMITH, Eustis, Maine.

SUMMER RESORT.

ON SHINNECOCK BAY, LONG ISLAND

Having added largely to my house I am prepared to take two or three families for the summer. Surf and still water bathing, also good snipe shooting. Good boats and guides ready at all times. Plenty of sea food cooked in best manner.

Hornbeam Rods A SPECIALTY.

W. HUNTINGTON,
WILTON, CONN.

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly-fishing. Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON as above.

THREAD-WOUND, LONG-RANGE

SHOT CARTRIDGE CASES

For muzzle and breech-loading, cylindrical and choke-bore shot-guns. Made to open just short of 50, 70 and 90 yards, giving close pattern and great penetration. 10 and 12 gauge. Send for circular.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 1lb canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 8 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 1lb and 5lb canisters and 6¼ and 12½lb kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern, will be found well adapted for glass ball and pigeon shooting. Made of two sizes, only No. 7 and No. 8, No. 7 being the coarsest. Packed in 6¼lb kegs and 1lb canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 1lb canisters and 6¼ lb kegs.

Dupont's Rifle Fg. "Sea Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½lb, 1lb and 5lb canisters, 6¼, 12½ and 25lb kegs. Fg coarse, FFg. fine.

Dupont's Sporting, Mining, Sporting and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by **F. L. KNEELAND, 87 Beaver St., N. Y.**

N. B.—Use none but DUPONT'S Fg. or FFg. for long-range rifle shooting.

TO CORRESPONDENTS.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen.

Communications upon the subjects to which its pages are devoted are invited from every part of the country.

Anonymous communications will not be regarded. No correspondent's name will be published except with his consent.

The Editors cannot be held responsible for the views of correspondents.

All communications of whatever nature should be addressed to the Forest and Stream Publishing Company, Nos. 39 and 40 Park Row, New York.

FOREST AND STREAM.

Thursday, June 16.

WORMS IN FISHES.—We would call the attention of anglers to the article on this subject from Mr. Frederick W. True, of the Smithsonian Institution. Mr. True is a rising young student, who has taken up the little-known subject of intestinal and other parasitic worms. We have always claimed that the worms in fishes were harmless and have offered to eat any fish containing them or to pick out the worms and eat them alone to prove our belief in their innocent nature when taken into the stomach of a warm-blooded creature. It is pleasant to find that Mr. True coincides with this view of it, because some rash newspaper correspondents have tried to get up a scare on "trichinæ in shad" and other sensational questions. Just as the mites in cheese have a flavor undistinguishable from the cheese itself and are harmless in the human stomach, so, Mr. True informs us, are the worms in fish. They have not reached the proper place for development and are destroyed by digestion. It is of course a matter of taste with a person whether they will eat a fish inhabited by these tenants or not, but if they do there is no danger. Some people are a little nervous about such things and cannot take a cherry on trust, but must open and examine it. This is merely disgust at worms in general, without fear of becoming a "host" to them, and it is gratifying to be assured that the parasites of fishes are as harmless as the worms in cherries. For ourselves, we eat cherries in full faith that there are no worms in them and if there are we never see them and the taste must be like that of the cherries. We do not care to have our pleasure marred by the doubt that our cherries are not inhabited, and so we regard a ripe, plump cherry as Cæsar's wife was held to be, above suspicion. Mr. True is certainly worthy to be enrolled among the noble band composing the Ichthyophagous Club, who will thank him for the hint that the Italians eat the "macaroni worms" from fishes. At the next dinner of the club perhaps "macaroni worms, *a la* True," may adorn the bill of fare.

THE STATE TOURNAMENT.

THE preparations for the tournament at Coney Island have been completed, and the Long Island clubs will be ready next Monday to welcome the delegates from other parts of the State.

Badges for the delegates and visiting clubs have been provided, each one being numbered and the name of the person receiving it to be registered. They admit to all the privileges of the grounds and are not transferable. None but members of the State Association will receive them. They will be distributed at the headquarters of the Long Island Association, Hotel Brighton, Coney Island, at noon on Monday the 20th, by Mr. T. C. Chamberlain, Chairman of the badge committee. Members must apply for them in person.

Members who have not provided themselves with hotel accomodations are requested to send their baggage to the Long Island Sportsman's Association, Hotel Brighton, and to be present at noon on the 20th to select their hotel. Price at Hotel Brighton will be two dollars per night for rooms without meals; or four dollars per day including board. Lower terms can be obtained at other hotels, and there will be plenty of room for all.

On Monday noon a special chowder will be served in the large dining room of the Hotel Brighton to members of the Association who can obtain tickets without charge upon application to Judge Henry S. Lott, chairman of the reception committee, at the Association headquarters. The grounds will be open for inspection on Monday and the prizes will remain on exhibition at the rooms of the Brooklyn Furniture Company, 563 Fulton street, Brooklyn. The committee will accompany those wishing to view the grounds and prizes during the afternoon. The convention will assemble in the east dining hall at Hotel Brighton at 8 P. M. The balcony will be reserved for ladies and their attendants. Admission to the convention hall and to the balcony will be by ticket which can be obtained at headquarters. Attached to the ticket will be a coupon to be retained for admission to the dining room where the collation will be spread and tickets will be issued to the ladies as well. The collation will be largely composed of sea-food, and seats will be furnished to all who may attend. These details are intended to insure the comfort of visitors and ladies who may accompany them, and to insure freedom from intrusion and from outside interference.

The ground committee have arranged the traps so that the inside columns of the grand stand will form the eighty-yard rear boundary, and the outside fence of the track will form the one hundred-yard boundary for double birds. The pond for fly-casting will be about 100 feet square. Entries can be made at headquarters or with Fred Mather on the grounds. The rifle contest will be placed near the fly-casting at a distance of over a quarter of a mile from the trap score. Platforms are prepared at the traps so that the shooters may stand either on the planks or on the turf, as they choose. Comfortable moveable settees have been provided for the shooters with a canopy to protect them from the sun. During the tournament the tent committee of the Long Island Sportsmen's Association, Harry Miller, 451 Flatbush ave., Brooklyn, chairman, will provide a substantial lunch for those members who may not wish to leave the grounds during the day, without charge. Mr. Engeman, proprietor of the grounds, will provide an old-fashioned clam bake daily, and the Long Island Association will also provide a cook in order that no man shall hunger.

The bulletin, or illustrated programme, published by the Long Island Association, will be ready for delivery at noon on the 20th. Each delegate will be given two copies and each donor of a prize will receive one copy. The remainder will be sold at a price sufficient to cover cost of publication. This has been considered necessary by the extensive scale on which it has been gotten up as it will be a most elegant souvenir of the tournament. It will be a book of 172 pages on fine sixty-pound tinted paper and beautifully illustrated. It is from the press of William C. Martin, 111 John street, New York, and is under the direct supervision of Mr. Abel Crook, the President of the Association, and Mr. S. S. Conant.

Delegates are requested to present their credentials at headquarters at noon in order to avoid delay at the opening of the convention, and to allow more time for enjoyment of the elaborate musical and literary programme in the evening.

THE ORDER OF TROUT HOGS.

A PENNSYLVANIA subscriber, who by the way bears the honored name of Cotton, sends the FOREST AND STREAM this clipping from the Bradford, Pa., *Era*, and asks what is to be said of the exploit chronicled:

HAUL OF 4,000 TROUT.

To Gene Ford and Charley Eastman must be awarded the honor of Bradford's Champion trout fishers thus far this season. During an angling sojourn of less than two days along the green banks of the unpolluted streams at Cross Forks, Potter county, they caught four thousand of the prettiest specimens of the toothsome trout family. To remove that doubt, which mankind is so prone to attach to fish stories, the successful fishermen arrived in the city yesterday, in open daylight, with the full number of trout mentioned. The fish were fresh, fat and as tempting as the red lips of a maiden. The trout will be served at Henderson's Public Square restaurant.

Well, there is not much to be said in such a case of pure and unadulterated hoggishness as this. If the *Era* report be true, Messrs. Ford and Eastman deserve an exalted position in the ranks of the trout hogs. They have earned their shoulder-straps. We have no personal acquaintance with these Bradford fish scoopers, nor any desire ever to go fishing with them; but we take great pleasure in aiding them to make known to the universe their claims as "champions" of Bradford and of the whole country, for that matter—for let us hope that no one will be found anywhere else so shameless as to claim to have outdone this 4,000 trout haul. And while we are about it—provided no other claimant turns up—we propose a medal for the Bradford champions.

The editor of the *Era*, by the way, calls it "angling." Does he not know the distinction between fishing with a rod and line, and shoveling them out with scoops? And he says the streams were "unpolluted." Does he not know that sawdust and coal tar and lime and strychnine are not more polluting and destructive than this outrageously hoggish plundering he records?

Some of the fish commission reports contain drawings of the insects and other creatures which prey upon and destroy trout. Would it not be a most excellent plan for the Pennsylvania Commissioners to send a photographer to Bradford, and in their next report give us the portraits of these two "champion trout fishers?"

But perhaps the item is only an invention of some of the *Era* staff. If so, we do injustice to the parties mentioned; and as we would fain injure no one we invite Messrs. Gene Ford and Charley Eastman, of Bradford, Pa., to tell us how many trout they did catch, how long they were catching them and what style of tackle they employed.

It looks now very much as if they would come in for a medal. Can some one suggest a suitable design?

MIGRATORY QUAIL RETURN.—Last week we published a note of the return of migratory quail to one of their breeding places in Quebec, and we have received from Mr. C. B. Hazelton the pleasing intelligence that the birds put out at Winterton, Me., have also been seen there this spring, several of them having been observed on the 23d of May.

MR. BERGH has been talking to a *World* reporter about the coming pigeon-shooting tournament at Coney Island. How he talks and what his talk amounts to may be seen from the *World* extracts which we give elsewhere. Mr. Bergh's language needs no comment.

THE headquarters of the New Jersey Game and Fish Protective Society are at Plainfield. The organization is active, alert and prosperous. It is receiving accessions of non-resident members. A further notice of its mode of working will appear in our next number.

THE FOREST AND STREAM of June 30 will contain a supplement of four pages giving the full scores of the pigeon shooting at Coney Island.

IT'S a jolly company of *bon vivants* that will gather when that 'possum is served.

The Sportsman Tourist.

NOTES OF AN ANGLER IN THE NORTH.

BY FAIRCHILD, JR.—PART THIRD.

THE JACQUES CARTIER.

THE last ray of sunshine hung lovingly around the summits of the eastern mountains that close in the valley when wearily we launched our canoe upon the swift, dark waters of the river, and paddled to the other shore where stood our little camp of a departed year of fragrant memories. We are just comfortably settled in our bark wigwam when

Night draws her sable curtain round
And pins it with a star.

The warmth of our good log fire, the narcotic odors of the balsams, the murmur of the river and the soughing of the wind through the pines, together with the fatigue of the long day's journey, invite a night of refreshing and undisturbed slumber.

Early fishing in these high northern rivers is productive of nothing but discomfort to the angler, if not worse—an attack of rheumatism. The early morning air is too cold for the fish to rise to a fly, and there is always a heavy mist over the water that is as soaking as a Scotch rain. We therefore leisurely prepare ourselves for the day's work. Our little craft dances merrily in the current and tugs impatiently at her rope to be off on her mad career down the foaming rapids. Etienne takes the helm, with anchor and rope close at his hand to drop when I give the word. We run the first few rapids without stopping as from past knowledge of the river we know them to be barren of fish, but a perpendicular blue clay bank directly ahead points our first stop. About midway down the rapid, anchor is cast out; there is a sudden tug, a straining to be free, a slight drag and the canoe brings up just where it admits of a good cast into the back current, foam-covered and dark from the depth of the water. A few fine fish are taken, and as the rises are then few, we again proceed. We cover nine miles of the river this day, confining our fishing to those pools and rapids that contained the large fish. On arrival at our destination the weight and score of our fish are duly recorded, which if given would startle the Eastern angler into making, perhaps, a resolve never to again wet a line in other waters.

The charming diversity of scenery along this romantic river would prove ample compensation for a journey thither were it not, besides, one of the finest rivers in Lower Canada for fishing and canoeing. Like all the tributaries of the St. Lawrence taking their source in the mountainous region of the North, the Jacques Cartier, for many miles of its course, is a rapid stream impeded by chaotic rocks. The middle reaches of the river are more tranquil and filled with innumerable elm covered islands. The settlements extend along its banks for about thirty miles from its mouth, but beyond this the forests still hold their sway. It is the only river emptying into the St. Lawrence above Quebec that has a run of salmon.

A good day's tramp from the Jacques Cartier is the St. Ann's *en haut*, the upper reaches of which abound in magnificent trout, as does also the Tuilleries, which is forded on the way. The little *Riviere Aux Pins* will yield a good string of small fish to the unambitious angler, as will the numberless lakes everywhere about.

For many years I have taken smolt in the upper Jacques Cartier, though I know of but one well authenticated case of a salmon's having been taken above Dayrees. Yet they must ascend this river annually to near its source, or how account for the annual presence of the young salmon?

THE BEAVER.

It is pleasant to bear testimony to the fact that this interesting little rodent is increasing in numbers very rapidly in the Northern wilderness. It is largely due, of course, to the falling off in the demand for its fur and to the extinction of the noble redman. It is a prolific little animal and, when unmolested, rapidly increases in numbers. In the Northern wilderness the beaver very rarely locates on a stream, but prefers the lakes. It is much easier to dam up their discharges, with small risk of their being carried away by floods. All the small lakes in the interior that I have visited bore evidence of the presence of beaver there at some period, and many of them were then occupied by families of these industrious little animals.

To such an extent was the beaver trade carried in Canada between the years 1650 and 1725 that even the Governors and Jesuits were charged with devoting more attention to it than to the secular and religious welfare of the colony. It entirely usurped the legitimate occupation of the people, and at one period the colony threatened to become simply a community of beaver traders. Beaver skins became the currency of the colony. The company that controlled the exports were compelled by royal decree to take all the skins offered at a fixed price. From "The Journal of the Late Actions of the French in Canada," Beyard & Ludovick, 1693, I extract the following bit of information from the evidence of one Andre Casparus, an escaped prisoner, before Gov. Fletcher:

"The said Andre says he saw a prodigious quantity of beavers at Ottawawa; an inhabitant of Canada called Jaques de Taille told him he had 3,000 beavers of his own there and that there was as many beavers now in Ottawawa as would load 200 canows to Canada, and each canow generally holds nine to ten hundred beavers."

This was simply the number collected in one district. When to this is added the supply from five or six other districts equally prolific some idea of the numbers of the little rodents annually slain for their fur may be formed. When beaver hats went out of vogue in Europe the colony became bankrupt. The storehouses were filled to overflowing with pelts for which there was no market, and it was decided to burn them, which was accordingly done.

Of late years the fashion for other furs has respited the beaver of which it has not been slow to avail itself and the naturalist-angler may oft find an opportunity to study its curious and interesting habits.

WINTER FISHING.

In Canada winter fishing is as much followed as a pastime as in the more balmy months of summer, and as illustrating the hardihood of the Canadians and their indifference to cold in following the gentle craft I will ask the reader to accompany me to a camp of these ardent lovers of trout fishing in all its guises.

Their favorite resort is some one of the large lakes several days' journeying from the settlements. Well, within the shelter of a large clump of balsam trees, they have made their camp—not much of an affair certainly—a hole dug in the snow and a lean-to of green branches and birch bark built up with space in front for the huge log fire, and an unobstructed view of the heavens.

It is yet early in the day, but the long Arctic night has descended upon the forest. The ruddy glow of the fire discloses a highly animate scene within the *cabane*. The three occupants are all busily engaged in some labor, while one of them carols forth some old ditty to which the others lend a hearty chorus. The night is divided into watches in order to keep the fire up, and woe be to the unlucky watchman who falls asleep at his post. His punishment is double duty the next night.

As our friends appear on the lake in the morning they present a striking and novel appearance. To protect themselves from the fierce blasts that blow over the lake they have pressed into service every particle of textile fabric in their possession. The blankets, doubled with a drawing string to fasten around the neck, a rope to further secure it about the waist make excellent overwraps to the rather worse-for-wear overcoats the tails of which fringe the blanket. Their feet have lost all semblance of shape, but are elephantine in proportions covered as they are with successive layers of socks, moccasins, pampoos overtopped with bagging secured at the ankle with rope again. They are undistinguishable from each other by their countenances, for these latter are invisible from the wraps with which they have encased their heads. These gentlemen are now upon pleasure bent! Its attainment, however, might be considered much like hard work by a captious critic. Each man is armed with a heavy chisel mounted upon a long pole and a paddle scoop. The fishing ground is reached and they all commence a vigorous pounding upon the ice with their chisels, working them about in a small circle, so as to form holes only sufficiently large to haul a fish through. It is a good half hour's labor and then the friendly emulation of catching the first fish keeps them in good humor and their blood in circulation. But as the bites slacken there is a vigorous running to and fro and much stamping and clapping of arms. The sun is bright in the heavens, but it apparently admits no ray of heat. More holes are cut for the exercise afforded, and a temporary heat is thus stimulated, but it is painfully apparent that a suggestion on the part of one of them for a return to camp would be promptly seconded and acted upon. Finally some one does hint that a short run to camp would prove an agreeable stimulus to fresh exertions on the lake and away they all go. Their chilled blood is warmed at the fire, and, undeterred by their former experience, they are all off again and fishing away as vigorously as ever. Thus they keep it up all day, and find enjoyment in it. There is no accounting for taste in this world as the old lady said when, etc.

TO BE CONTINUED.

TENTING IN MICHIGAN.

I HAD never camped out; and the idea of rusticating *a la sauvage* during the sultry August days was peculiarly inviting.

We started on a bright, warm morning on the Grand Rapids and Indiana Railroad, from our busy, stirring town of G——. The cars whistle, and ho! for the glorious North! Hurrah for the land whose whispering cedars tell of health and vigor; whose lakes are framed in many-hued flowers; in whose forests dwell, in joyous peace, the birds, and in whose brooks and streams revel bass and pickerel and dainty trout. On we flew behind our iron steed—past towns and villages that spring up in this Michigan of ours like mushrooms in a night; past saw-mills and flour-mills bordering every stream and lake; past the forest dispossessed of its kingly trees, dethroned and beheaded by the busy lumberman, and past the forest, untouched in its rugged grandeur, save where our fiery steed had hewn down for itself a road.

Our railway journey terminated at Traverse City, but, gay little resort as it is, it could not tempt us to remain, so we took the evening boat, little Jennie Sutton. Our destination for the night was Elk Rapids, but Traverse Bay was so rough that the captain refused to take us further than Old Mission that night. There was only one other passenger besides our two selves. The crew consisted of the engineer and a small boy, while our hardy captain combined in his own trim person mate, surgeon, chaplain, or whatever else might be needed that the aforesaid grimy engineer and small boy could not answer to. It was too bad the evening shadows were about us, for, in other days, that same Traverse Bay has reminded us of the Bay of Naples, with its wooded Island of Capri and its town nestling at the foot of the hills behind, and of the sunny days not so long ago that we sailed its blue waters with merry hearts.

We stayed, perforce, at Old Mission for a day or two, that quiet, dead-alive little hamlet that is worked up a little during its short summer season by families sojourning there during the height of city dust and heat. The inhabitant of the region who is widest known is Mr. Parmalee, whose vast fruit orchard (for this, you must know, is a great fruit-growing region) has sent samples across the big fish pond to Great Britain itself. In odd contradiction to this fact is the scarcity of fruit for sale to travelers; desiring one or two juicy apples for immediate consumption; we had to try a whole half-bushel basket of them which were being shipped from the dock to Chicago.

We rusticated here, in this paradise of small children, for a day or two, then crossed Old Mission in the trim little steamer, "Queen of the Lakes," whose bronzed and courteous captain we had styled, on a previous trip, "King of the Lake." And then—ah! the scenery we traversed! Now along a narrow lily-bordered stream, where flocks of birds, disturbed by our rough intrusion, rose hurriedly on light pinions and soared away; then across a lake whose woody shores seemed to afford no passage-way for our boat. Here and there were small hamlets which sent representatives to the docks to obtain the mail packages or news of the far-off world. And all this time we were traveling in a shimmering blue—a blue sky above flecked with fleecy clouds, and a blue sky mirrored in the clear waters beneath us.

We leave the boat at Russell's Landing. Here we stayed over night and the next morning came the ride in the wagon —"stage" by courtesy—through avenues of tall forest trees, by mossy, fern-grown glens, up hill and down dale, over stumps and corduroy, while purling brooks and bird and whispering cedar murmured an accompaniment to our driver's story—his narrative of life in the North Country, the richness of the soil, the plentitude of fish and game, the distance from the busy home of the world and his cares about the education of his children—no school within four miles. His words I heard as one not hearing, for I was listening to the hum and stir of life around us, in every tree and under every fern and bramble. There, also, was not the battle of life being fought?

Arriving at the Central Lake Mr. Krieger, our driver, helped John fix up the tent, an A tent, with a hinged centre-pole fixed in two forked trees at each horizontal extremity. This same hinged pole afforded a pleasant and cheerful break in the monotony of our tent life, for when we would be sitting beneath it and least expecting it, it had a way of twisting in its forked sockets, so that the hinge came undermost, then suddenly collapsed, and woe be to the unlucky cranium that received its weight.

Our location was on a wooded bank that ran down to the lake and near its foot was the merriest, coolest, prettiest little stream imaginable. We called it our refrigerator, for fixed in its stony bed we set our pail of cream and our crock of butter and actually kept the former sweet four days. Our bed was made of first a wisp of hay on the ground, then our rubber sheet, then a comforter and lastly blankets.

We gleefully opened our camp chests and, taking a fallen tree for side-board, I arranged our store of shining sil——, I mean tin-ware, along it. Sorely grieved was I to discover that with all our careful packing various disruptions and breakages had occurred among our provisions. The jar containing huckleberries had smashed and metamorphosed the bag of salt till it was black in the face; the canned cherries had risen in mutiny and had a set-to with the crackers and the single pot of jelly had been overturned and generally spread itself over everything and into every nook and cranny that it could find. The salt was all we had, so we dare not throw it away—and after all it tasted just as usual, if its color was a little uncommon; and as for the smashed cans of fruit, an adventurous chipmunk came slyly down from its leafy home and amused us for days by its appreciation of our civilized food.

John, you must know, is a first-rate cook and his coffee and broiled ham were perfection. His *chef d'œuvre*, nevertheless, was fish chowder—such Fish Chowder, too! let us spell it with capitals, as befits its rank. It was made with the delicious fish we caught ourselves, seasoned with green red peppers and onions, while potatoes and crackers floated in a sea enriched with pork—that, indeed, was a dish for princes!

We were not, you must understand, quite outside the bounds of civilization; and so the awful animal I heard prowling about our tent the first night was not a bear nor even a tiger—it was simply a stray cow that was exploring our provision chest. I was rather disgusted on going out next morning to take an observation to find that a "city" of half a dozen houses, with one acting as a hotel, another as the post office and store of the country round, was within call; but we found the nearness of the "city" quite a convenience when our bread was finished and our soup "waterlogged."

As we stayed in "Camp Annie" two weeks, we were looked on as settlers by the community, and they made us visits of ceremony and took us to their homes with a kind cordiality that was very pleasant; indeed, all the dwellers in that region seem people of more or less ability and intelligence. They are a picked people; the oldest resident has been there only about five years.

Other tourists came and went, while we stayed on. A party of Southerners roughed it, and a company of Cincinnati men put up their tent "Camp Pinafore" on the bluffs near ours. All these travelers were sufferers from hay-fever or asthma, and had come to these health-giving regions for escape or cure, the air having almost an enchanter's spell on these two complaints in particular.

One day was very like another in camp. After breakfast, when the dishes were washed (John used regularly to take an hour and a half for this job), we took our boat and went up the lake for minnows, then down again to some shady nook, where we soon got our cargo of black bass, sunfish, and that vicious-looking pickerel. When I learned that pickerel were cannibals, I could at once account for the degraded expression on their faces. I took a book with me, and when I tired of fishing I would read aloud. Such gorgeous sunsets as we saw, and such glorious moonlit skies! Given either of these, with trees and water, and who could not make a lovely picture?

At first the noise of the forest bothered me, especially by night, but I could soon distinguish between the whispering of the trees, the falling of one in our vicinity, and the tread of a human foot on the dried leaves and brush.

How delightful were the afternoons when lying lazily in our hammock, swung in a shady spot in view of the lake beneath where the sky was mirrored in the water and framed with goodly cedars, I could read or dream, as the spirit moved me, and feel no duty's call to be up and doing.

But all the days were not bright and sunny. One terrific storm came when we were fishing some miles from home, and we had to take refuge among thick cedars on the shore. I never saw such a storm in my life as that one was in intensity. We had one umbrella and our rubber coats, and for six mortal hours we stayed under that hemlock waiting for the clouds to lift long enough for us to row back. The wind, rain, thunder and lightning together raged and roared and were supreme, hurling down mighty kings of the forest and forcing them to yield an unwilling homage, and the crack of their powerful limbs added to the terror of the scene. Our boat was filled with water up to the seats in the first three hours, then at sunset, when the storm had reached its fury, the rain had again filled it as full. John sent me to the hotel that night, but himself insisted on going over to the camp where he would stay the night, unless things were too badly ruined to admit of that. At dawn he appeared at the hotel and reported all safe and not much damage done. But when, a few hours later, he permitted me to wade through the deep mud and climb smitten trees to the camp, I thought there was at least all the damage done that any reasonably content person could be satisfied with. I had been priding myself on certain bags I had made from towels and pinned to the walls of our tent as additional cupboards for our provisions, but I soon saw how each of these attachments had resolved itself into a spout for the rain trickling down the walls, not only soaking the food they themselves contained, but pouring down generous streams on things around the tent. This and the melting off of our coffee pot spout in the first evening's blaze were the most aggravating tests of Christian patience that occurred during our life in camp. If you think it easy to pour out a cup of coffee, without spilling it, out of what is left when the spout is gone, just try it, that's all.

Fifteen days passed delightfully in this pretty spot, "forty miles from a lemon," and then Camp Annie was dissolved by mutual consent, and stakes pulled up. Our plan was to take a guide through the Intermediate Lakes to a point a day's journey down where we should come out into the waters

sailed by the "Queen of the Lakes" again, and so finish entirely our camp life. The proprietor of the Central Lake House was our oarsman. I must not forget the kindness of Mrs. Smith at the hotel nor how cordially her hospitality was extended to us.

Of this journey down the lakes in our boat how can I write graphically enough! The morning was a perfect one; cool, bright and alive with the song of birds. I sat in the stern where a little nest had been made of fragrant hay while John and the guide occupied the bow. My nest grew by degrees into a bower; tall, nodding bulrushes waved round it, and we gathered, besides a mass of lovely ferns and flowers as we drifted along, scarlet, cardinal flowers, queenly pond lilies and sturdy blue flags.

There was at one turn the daintiest picture—a water color—a veritable *tableau vivant* at one point. In a spot where the rapids were shallower and the stream narrow and shaded with fine old trees we met a party of four boys from seven to fourteen taking their boat up stream. The three larger were in the water pushing, a shirt their only garment, while their rounded limbs gleamed white and wet. They seemed quite shame-faced at meeting us in such guise, but they looked so handsome and bright, and the sturdy little fellows in the boat so well and happy that one might pray "God keep them young and innocent!"

That night we camped at Cedar Creek where the water is the deepest, most intense blue, and where pretty little speckled trout float and leap and play, now jumping clear out of the water for the bait, then nibbling it off the hook or dancing round it. They are the most coquettish creatures I ever saw in the animal kingdom. One never knows how to handle them or catch them. In some other life they must have been inveterate flirts, and have but changed their dress, for their beauty and nature still remain. I slept on a couch of cedar branches, a most delightful spring mattress, believe me, and our guide swung the hammock under the trees. The next morning the two men went off a second time to get some "speckled beauties" leaving me behind as the tramp was too hard. The first fishing had been rewarded by fifteen I think it was, and right dainty food they were, too, broiled at our crackling camp fire, but this morning they could not get one, so capricious were they. I climbed down the bluff to the water's edge, and found some delicate mosses, tiny ferns and graceful water weeds while they were away.

On our next day's sail (or row, rather), we saw flocks of wild ducks, snipe and pigeons, but had not time to do much havoc among them as we needs must catch the "Queen" on her down trip.

And now we were in civilization again; well-kept farms and orchards, fields with busy laborers and mills going up on the banks of the flowing water, while neat and trim homes waited here and there for tired men, and little children played round the door-step looking for father. And we, too, were going home; going with brightened eyes and reddened cheeks, with renewed health and strength, with bright hopes and aims for the morrow.

Of the more practical part of our camping, the exact distances we traveled, the number, size and weight of our fish, the hooks, linesand poles we used, all the minute detail that men delight in I have left John to tell; he says I have left it all out.

This year John goes camping without me. He says Baby Nell, with her eyes of Cedar Creek blue, would be good for nothing up there, but for a good-sized pickerel—the very idea! A. L. PH. A.

POOR LITTLE PENN.

BY ANNE G. DALE.

"LYNNE GRANGER has made the children a present of a Skye terrier—one that Paul imported—the ugliest, *handsomest*, sauciest, *cunningest* little imp you can imagine; and Bud and Posie are crazy over him."

So wrote Pedagogus one day last March, and every letter since has contained allusions to "the ugly, *lovely* darling," who had become the household pet. Greatly to my annoyance has been this praise of "the nasty little bundle of rags," as somebody styles a Skye terrier, for my best affections for a long time have been set on Trump—*Trump*, the dignified, sedate pointer, who made his most polite bow to the FOREST AND STREAM last summer, in a card of thanks to the editor for the relief afforded his lame paw by a lotion prescribed by said editor.

This dingy, shabby scrap of canine sagacity, bounding so suddenly, so impudently into favor provoked my jealously most severely. I never saw the interloper, but having heard a great deal about his familiarities with Trump and Philip Sheridan—the portly and gentlemanly house-cat—who both received his advances with the most contemptuous silence for several weeks, I have been ready to say with rough Bob Jakin: "I wouldn't own such a dog, I wouldn't," and have let my thoughts rest with pride on sober old Trump.

Not that I can call Trump handsome, or remarkably attractive in any way. He is not demonstrative, either—seldom shows much feeling in voice or mien. Nor yet is he eager to assert his claims to praise, or even to attention. He knows his place and has the good sense to keep it; knows how and when to speak, and when to hold his tongue also. In fact, he behaves himself like a worthy, though a very common-place citizen, and deserves, and doubtless receives, in ways best comprehended by his dogship, the thanks of the entire community therefor. He certainly has proved himself an industrious, faithful and affectionate servant in his journeyings to and from Florida, the land of his nativity, with his young master. Besides this, has attended him unwearedly in many perplexing, yet most enjoyable, expeditions across the everglades of the South, along the sands or over the marshes of our eastern coast, and through the intricacies of our northern woods, in the pursuit of game.

Still, though loyal to Trump, I must confess I have had some curiosity to see the frolicsome and fidgetty little Skye. I pitied him somewhat, truth to tell, because of his cumbrous name, Pennsylvania, which had to be docked to *Penn* to suit the manikin's curtailed proportions; and, picturing him to myself as bouncing about under the burden of that weighty appellation, led me to think more leniently of his imperfections.

Yet, imperfections he had none, in the eyes of Bud and Posie, who hugged and kissed and petted him within an inch of his life, after his most mischievous pranks, even; and pampered him with all the dainties they could coax or cajole from Muggie, the cook, or surreptitiously obtain from the table or the pantry, or spare from their own tit-bits.

And I did come near to seeing him once, when, tying a blue ribbon about his neck, "making him look like a beauty," Posie thought, he was promised a journey in the cars with them to visit me. But he behaved so naughtily at the very start that, like all bad boys, he was punished by being left at home. And now I shall never see him, never know what I have lost by not seeing him, Posie thinks.

Last Monday came a letter from Pedagogus: "You will be sorry to hear that our dear little Penn is dead. He had a bad habit of flying out at horses passing by, barking furiously, and getting in front of their feet. He was killed instantly, run over by a carriage yesterday morning—probably stunned first by the horses' hoofs and then crushed by the wheels. He made but one yelp, and it was all over. He couldn't have known what killed him. I am glad his death was instantaneous; it would have been much worse to have had him bruised and mangled and dying a lingering death. The children are heart-broken. It is their first grief, and they can't get over it. Poor Bud mourns him continually. We buried him by the hedge, between two apple-trees, and the children have decorated his grave with flowers and a little flag."

The little grave between the apple-trees will always keep a tender spot for "ugly, handsome" Penn in the memories of Posie and Bud; and from that will spring into fragrant blossoming kindness and gentleness toward all living creatures; out of this first grief will grow sweet sympathies, pitying words and loving deeds for the suffering, the unfortunate, the despised. And when I recall to mind their affection for miserable little Penn, their ridiculous petting of the undesirable little beast, I hang my head with shame, and sharpen to the utmost all compunctions of conscience as a penance for the scorn with which I have regarded that "sauciest, cunningest little imp."

Yes, I ought to do penance in some way, because of my inconsistency, for previous to hearing about Penn I had accepted Dinah Morris' views, and often quoted her words (from Adam Bede): "I've a strange feeling about the poor dumb things, as if they wanted to speak and it was a trouble to them because they couldn't. I can't help feeling sorry for the dogs always, though perhaps there's no need. But they may well have more in them than they know how to make us understand, for we can't say half what we feel with all our words."

I have just read for the fifth time an almost forgotten letter of poor Bud, who mourns so deeply now his wretched pet. The tiny sheet, covered with big, sprawling, childish characters which he had taken such pains to form neatly, telling me of his birthday presents and thanking me for a few simple gifts, and then—with anxiety that set his words awry and hurried his sentences—saying: "Did you know that Penny, poor, dear Penny, had the mange? If you do not know what that is I will tell you. It is when dogs scratch themselves and are sore. So one afternoon papa went down to Mr. Marsh's store and bought two boxes of ointment to rub on him, and now he is almost well."

I should like to be the owner of those empty boxes, now that poor little Penn is gone, and to be able to remember that he was almost well, because of what they once contained, when the sharp hoofs and cruel wheels put a stop to his frolicsome life, and hushed forever the merry clamor of his shrill voice.

DEER HUNTING IN CANADA.

"UP, Freezy, up!" were the first sounds I heard as I disentangled myself from the coaxing arms of sleep. We had, the previous evening, reached our camping ground in the fastnesses of the Madawaska district, and, after having raised our cotton habitation, carried the boats to Poison Lake, housed the dogs and made things comfortable, we had retired to an early couch, wishing that the morrow would prove auspicious as to the weather and lucky in its results.

We were in number four. Our man, Friday, whose French name had on our tongues assumed the sound of Freezy, was the object of the ejaculation which opens this article. Gerald, the spokesman, was the life, soul, and in a great measure (especially at meal times) the body of the camp. A surveyor by profession, endowed with fine features, great agility and strength, and withal a most pleasing temperament, he had spent the greater part of his life in the wild woods of our Province, and had acquired while using his theodolite a thorough knowledge of the bush and its inhabitants. His brother John was No. 3. Though somewhat younger in years, he had all the good qualities which are admired in a camp-fellow—genial, good-humored, with a strong appreciation of the sense of the ridiculous, and a ready inclination to make himself useful and to share the burthen of his neighbor's pack. No. 4 was your humble servant, a limb of the law who believed in hurrying away annually toward the end of October, from office and courts, to enjoy the free breezes and the invigorating exercise of the chase.

Freezy's response was a growl indicative of an inclination to question the authority of *Monsieur Jar* (for Freezy retaliated our bad pronunciation with a will), but the persuasive powers of a well-directed gun-cover added greatly to the alacrity of his obedience. After wrestling for a while with an obstinate pair of frozen boots, he set himself to the task of starting the fire with the aid of green balsam, disdaining to use the dry splinters we had so zealously collected the previous evening for that purpose. His ill success made us all nimble, and we were up in a trice favoring Freezy with emphatic comments upon his stupidity as we went to work, and after enjoying a dip in the ice-fringed creek hard by were ready for the morning meal which the joint efforts of the whole community prepared.

The day was scarcely yet at hand, but the lowering clouds on the hill-tops that surrounded our cozy tenting ground gave promise of snow which was soon coming down quietly upon the dried leaves and wide-spreading branches.

The dogs had been lightly fed, and Jack started off with them to a hill-side some four miles from camp to look for tracks and get a start.

Gerald hied to the shore of the lake to take his chances in an Abenaki canoe which no one could be tempted to sit in but himself. The cook remained in camp while I sauntered off to a point which the experience of other years had taught me to be a well-frequented runway. Ere long the dogs give forth the joyful tongue—the first notes have an inquisitive pitch. Now, Paddy, the stand-by of eight seasons, is heard loud and deep, while Wallace and Hector answer back in eager, fitful strains.

The sounds seem to come from every point of the compass as the freshening breeze winds through the sinuosities of the gullies, growing louder and weaker, and then bursting suddenly on the almost startled ear within three hundred yards. A rush is heard, and the white flag, which the eye has looked for all along, appears among the trees. How beautifully the agile doe takes each leap, with ears thrown back, listening to the dreadful tongue of the hounds, but hurrying not as one might expect. Suddenly a puff of smoke issues from among the branches, and a tremendous report wakens the echoes of the hills and is prolonged through the valleys, and the awe-stricken deer, galvanized by the shock, halts, crouches down, and with useless eye, inquires into the cause of the commotion.

A false move betrays me ere I can insert a second cartridge, Up rises the white flag, and off darts the target through the thickest of the brush, and before the rifle can be raised the favoring branches cause further hope to die within me. I should not have missed, but I did.

In nine cases out of ten, if you see the deer coming toward you in the woods, you will obtain a standing shot by whistling or shouting *hah*. The animal will stand in its tracks until it finds out the source of this new danger.

A large amount of calculation and coolness is required in shooting at a flying deer. I have almost invariably discovered that shots delivered otherwise than when the animal is on the point of making its spring are useless, they either drop behind or under the object.

I felt somewhat crestfallen, for somehow I have the reputation of being a good marksman, but my chances for the morning were gone as the three dogs had, by some strange fatality, taken up the same trail. However, I remained at my post lest fortune should tempt the doe back on her tracks, and made up my mind that the second shot of the season would prove more telling than the first.

A rifle report from the lake tells me Gerald is in luck, and my experience of his accuracy of aim leaves me no doubt of the result.

Much has been written against hound hunting, and more ink will be wasted on the subject before the close of the chapter is reached. Some maintain that the music of the dogs frightens the deer from the neighborhood, but my experience and that of many to whom I have spoken on the subject lead me to think otherwise. The deer seem to know when the dogs are on their own particular trail, and do not apparently heed the tongue of a whole pack which may be rushing upon another of their own kind, and most deer, especially old stagers, take a delight in circling round, stopping to listen to the music of the hounds, and then scampering off toward their point of departure, again to repeat the same antics after a dash of a few hundred yards.

There was joy in the camp when Gerald returned with news of his success. I came in for some quiet hints as to the propriety of my turning cook and giving my gun to Freezy, whose visage is adorned with two swivel eyes, and who looks fixedly at you if you chance to be beside him, while he swings the axe over his head preparatory to sinking it into the tree he is chopping.

The snow fell quietly and dreamily at intervals during the day, so that when on the second morning we had got through the pantomime of breakfast it was proposed to devote the day to still-hunting.

Still-hunting is not a favorite sport of mine; it smells of the barn-yard; it looks too much like killing in cold blood, which, according to every authority legal, is murder. And yet I have indulged in it, and, thanks to the power of learning by imitation, which the Darwinian theory teaches me I came by honestly from a remote ancestor, I have acquired some knowledge of the ways and means of this branch of sport.

And first let me assure the novice he had better avoid leather in his apparel; leggings should be eschewed. The noise they make is too much for the equanimity of any deer of ordinary circumspection. The soft deer-skin or the short-legged beef-skin Canadian moccasin is the easiest and best covering for the feet, and if the trowsers are fastened round the ankles, the flapping of their lower extremities will be avoided.

The still-hunter must be a man of patient mould. His mind must be satisfied that no crouching or reclining form has escaped his eye as it sweeps the wood after every step. His attention must be, above all, bestowed on the upturned roots of fallen trees, lest beneath or behind them should rest the object of his researches; and while watching to the right and left he should not neglect the country ahead. I think fewer deer are passed by than are almost walked over before they are seen.

If you wish to follow up a trail do not choose one that follows the direction of the wind. Remember that a deer's nose is his very best friend, his ears the next, and his eyes the least trustworthy. Take notice whether the animal browsed on the beech-tops on its way, and whether the hoofs were lazily dragged along the ground. In the rutting season, the buck seems too lascivious to raise his feet after him. You can generally count upon starting your quarry soon if you notice these signs; but as you hope for success do not walk upon the trail. Sweep round it in curves having an arc of 200 or 300 yards, according to the thickness of the wood, alternating to the right and to the left in a very zig-zag line. Should you proceed in a straight line upon the trail you will certainly be seen before your eye meets its point of attraction. The advantage of making the curves is that it enables you to fix the position of the deer before he can be made aware of your presence. If when your half-circle is completed you find the trail, you know the prey is still ahead; if you find it not, you then are sure the animal lies somewhere between you and where you left his track 200 or 300 yards behind. And now you must strain your eye and ear, and watch your footsteps, lest one false move should spoil your morning's work and allow the king to escape the intended mate. Let no bush, no lump of earth, no upturned root, no lying log, no heap of brush large enough to conceal a few feet of succulent venison go unscrutinized.

You will generally find that when the deer is about to lie down it will sweep around in a half-circle on his track immediately before doing so. If the trail does not swerve to right or left, you may in almost every case make up your mind that you are still 300 yards behind the object of your inquiry.

A startled deer always takes time to dung after springing to its feet, and this gives you the best opportunity you may expect of placing your shot in position. In the thick woods of the Madawaska a second shot is not to be expected. Sending rifle-balls through intervening branches after a fleeting object is not as paying a transaction as an investment in U. S. bonds which have twenty years to mature.

If your eye takes in any spot likely to hold your game, approach it stealthily, but do not be neglectful of other points in the compass; use your neck as does the heron in the long grass, and if there are two or more of your party hunting in the same locality fix the direction of your companions in your mind's eye before the time comes for belch-

ing forth, or you may give them a treat of whistling that may fail to excite their risibles.

I am at a loss to give more hints now, except this: Aim well forward, and make no noise even after you have delivered your shot, but reload as quietly as possible, and then lie low and watch if you have missed; approach cautiously if you have tumbled your game.

If following single trails be not your idea of still-hunting, take to the crown of the hills on the south side, and if the country is as favorable as some I have visited, you may come upon the doe, buck and fawn either browsing or reposing side by side; and if you can, unseen and unsmelled, approach within shooting distance, the three will be yours so long as you remain so. Deer will not run even when the shot whistles round them so long as their eyes, ears or nose refuse to tell them of the point whence danger lies.

But I dread to wear out my welcome to the cheerful columns of FOREST AND STREAM, so I shall now say good-bye, friends, and may some one take up the trail where I have left it. T. P. F.

Natural History.

A TAME CHIPPY.

EDITOR FOREST AND STREAM:

Among our feathered favorites, whose return from their winter migrations is always so heartily welcomed by all who live in the country, the chippy or chipping sparrow, *Spizella domestica* (Bartr.) Coues, occupies the first place. His plumage is very modest and his song monotonous, and yet none of our wild birds is as fearless as he or shows a greater partiality for building his nest and rearing his young close by the house, and not even that noisy and quarrelsome foreigner, the English sparrow, enjoys more being fed with crumbs or seeds. For years at our place in Flushing, L. I., my father has fed some half-dozen of these chipping sparrows and the young birds have taken bread or seed from his hand when it was held near the ground, but the old birds would never allow any such familiarity. One of the adult birds, however, seemed more inclined to do so than his companions, and at last, in the summer of 1879, mustered courage enough to follow the example of the young birds and, finding no ill effects, jumped on to my father's finger and, sitting there, ate his breakfast. The ice once broken, "Dick," as we christened him, seemed to lose all fear, and from that time always ate his breakfast from my father's hand. As he became tamer he would come to the other members of the family if my father was not present, but he always showed a strong preference for his first friend. This continued all the summer, but when fall came, with the first cold blasts Dick took his departure for the summer regions of the South. The next April, however, he returned and without any hesitation came one morning to my father's call and in his old accustomed way ate his breakfast from my father's hand. Dick and his mate built their nest in the vines which clambered over our piazza and spent the summer with us. The young birds, however, were as wild as their mother, and Dick alone came when called. The others would eat at our feet, but nothing more. Dick became a prime favorite and when again he took his departure we wondered if he would again return. Sure enough, on April 27 he came at my father's call and, fluttering before him, lit as before upon his hand. This year he has gone further, as he has several times, while sitting on my father's hand, ceased eating and poured forth his song of thanks. He has never favored any of the rest of us in this way and only remains on our hands long enough to satisfy his appetite. It has long been known that birds would return to the same locality year after year, but that a wild bird should remember a person's voice and come back after his long wandering as tame and confiding as when he went away is, I think, very remarkable. Dick has lost one of the secondaries of his right wing and can easily be recognized. He is a great pet and we should be sorry to lose him. The only precautionary measure I have taken is to make a target of every cat I have seen near the house.

BEAVER TRAPPING IN THE NORTHWEST.

BOZEMAN, Montana Ter., May 21.

IN the FOREST AND STREAM of April 28, I noticed an article from H. C. W., Wellsville, N. Y., describing different methods of trapping beaver. As I am an old trapper myself it interested me in some respects. As your correspondent's methods are different from most used here in this part of the country by most old trappers I concluded to give you some notes about beaver trapping as practiced in Montana, Idaho, Wyoming and the far Northwest.

Trappers generally start out trapping in September, provided with the necessary supplies, camp outfit, pack and saddle horses. After finding a stream with plenty of beaver on it, they pitch their camp and commence their operations. One man generally takes care of from nine to fifteen beaver traps, which he strings out either up or down stream from camp. After catching most of the beaver in a neighborhood of from two to five miles above and below camp, they move their camp to some other place, and so on. Most trappers prefer setting traps from six to eight inches under water near the bank of the creek or dam, fastening the end of the chain to a long, dry pole, the lower end of which is under water out of sight, the upper end being tied to some willows or stake up stream to allow it to swing either way. As soon as the beaver gets into the trap he plunges into the water trying to escape. In his efforts to extricate himself he soon tires himself out, and drowns, providing the water is deep enough. In some localities, where poles are scarce and the water deep, stakes are sometimes used. Stakes are objectionable, however, as the beaver will wind around it, and sometimes succeeds in either breaking the chain, gnawing off the stake, or twisting his leg off, and a good many beaver and traps are lost in this way. Where stakes are used, however, another stake about two or three inches distant from the first stake ought to be driven into the ground to facilitate the winding up of the beaver, and to prevent him from gnawing off the stake the trap is fastened to. As good and as sure a way as any (in beaver dams) to set a trap is to fasten the chain of the trap to a large boulder or rock, and put both trap and boulder under water out of sight. To the boulder attach some willow bunch so, in case the beaver drags the trap and boulder into deep water, the willow bunch which floats on top of the water will indicate the place where the beaver lies. For all my trapping I never caught a beaver in a trap on dry land, and I never saw a trapper who followed this method. Once in a while a man may be successful and catch a beaver in a trail on dry land, or near a tree stump on dry land, but I think if he earns his salt at it he is lucky. Beaver are very shy, and have a very fine scent, especially where they have been trapped to any extent—for that reason trappers splash water over the place on the bank where they have fixed the place for the trap.

Now, suppose a trapper finds a large beaver dam with several smaller ones above or below it, as is generally the case, he carefully ascertains where the beavers stop, which they generally do in the largest and deepest dam. The first night he sets no traps in the large dam at all, but as far as practicable away from it up and down stream in the smaller dams or near trails or mud piles. As soon as a beaver gets into a trap he gives a splash with his tail, as a warning signal, which can be heard at a distance of from fifty to three hundred yards. All the other beavers which may happen to hear this signal will strike for their respective holes or houses, and may not come out again for the rest of the night. By having traps far enough away from their houses at the start, so that they cannot hear the signal, the trapper stands a chance of catching several beaver that night out of one family, while if the traps were set close to the holes or houses one beaver would be about all he would be likely to catch, and the rest of the beaver family would be scared so badly that they might not come out again the next night at all, or might leave that dam and abandon their houses altogether. Besides, the old beavers generally reconnoitre up or down stream in advance of the younger ones, and the trapper, by setting his traps some distance below the houses, generally catches the largest and smartest ones first, but by setting near the houses or holes the chances are that one of the smaller beavers is caught first instead of the largest ones. Setting on beaver slides between dams or near houses is practiced at last. Most trappers use "medicine," especially in the spring of the year. As a general rule, every trapper has his own way of fixing his "medicine." The musk of the beaver, sometimes mixed with the oil (castors) of the beaver, oil of rhodium, oil of annis, or balm of Gilead buds are used to draw the attention of the beaver to a certain place. Most trappers set their traps to catch the beaver by the hind legs, thus securing the best hold and the surest way to drown them. By setting traps deep enough under water only large beavers will be caught, and the kittens saved for future trapping. Trapping in winter under the ice is practiced but very little in this part of the country. As a rule, trappers are very cautious, and take great pains not to disturb any beaver unnecessarily. Beaver feed here principally on the bark of alder, willow, cottonwood and balm of Gilead.

Pine or spruce poles or stakes are far preferable to any other kind of wood here, although some times they will cut them off. The only place where I found beavers using spruce and pine for building and repairing their dams was at the headwaters of the Yellowstone and Snake rivers, where they could not procure any other wood except dwarf willows, the altitude being too high for quaking asp, alder or cottonwood.

AN OLD HUNTER AND TRAPPER.

SOMETHING ABOUT WOODCHUCKS.

SINCE the publication in FOREST AND STREAM some time ago of the inquiry of a correspondent for a good dog to kill woodchucks, *Arctomys monax* has had a good deal of attention directed to him. Now the woodchuck, if we read his nature aright, is by no means an ambitious animal. He is far from seeking newspaper notoriety, and asks nothing better than to be left in his quiet obscurity to eat the farmer's cabbages and young clover, and to trample down his grass. There is no doubt, however, that the devastations of this animal are, in many localities, very serious, and in the aggregate cost the farmers no little loss.

We think, therefore, that in bringing this subject before our readers, a large proportion of whom are residents of the country, we are performing for them a real service. There is variety enough in the different methods recommended for destroying these vermin to suit all tastes, and that some of our agricultural readers will put one or another of them in practice we have no doubt.

We print below several letters recently received which bear on the habits of this, the largest of the rodents of our thickly settled districts.

Lynn, Mass., June 5.—*Editor Forest and Stream:* I notice Rio's article of May 23. He doubts if any reader of FOREST AND STREAM ever saw a tree-climbing woodchuck. If Rio had been with me one bright May morning in 1871, about three miles from Minneapolis, Minn., on the St. Anthony side of the river, where I went to shoot wild pigeons which were reported to be very plentiful in the oak woods there, he would have learned that the woodchuck knew the art of climbing trees at least ten years ago

I was sitting under a large oak, and had just raised my gun to shoot into a flock of pigeons as they were about to alight within range. While glancing along my gun barrels, and just before pressing the trigger, I caught a glimpse of some animal up in a small oak tree, and about twelve feet from the ground. After giving the pigeons the contents of both barrels, I slipped a shell into the left chamber and let loose at what I supposed was a cat, but judge of my surprise to see a woodchuck tumble headlong to the ground. What our festive friend was doing up there I couldn't possibly guess; but one thing is certain he was there.—H. L. M.

Berwick, Pa., June 4.—In FOREST AND STREAM of June 2 I see that W. B. L. says he cannot get a turtle to go into a woodchuck's hole. If he will drill a small hole through the back part of a turtle's shell and fasten a wire about four inches long to the turtle and tie a small ball of lamp cotton to the other end of the wire, wet the cotton with turpentine, put his turtle at the mouth of the hole and set fire to the cotton, he will see whether a turtle will go in or not. Let W. B. L. try it and report. I think he will find the turtle is as afraid of fire as the woodchuck is, and he will see some tall traveling done.—SUBSCRIBER.

Near Springfield, Mass., June 6—*Editor Forest and Stream.*—Quite an amusing occurrence in the shape of a woodchuck hunt took place here this forenoon. I have been annoyed for some time by a woodchuck that has harbored near my garden the past two years, and this morning one of my boys chased him into his hole, and having stopped it up, came home for a shovel to dig him out. Having read in the FOREST AND STREAM of catching them by means of a turtle, I took a dip net and went to the river and caught a small snapping-turtle, so-called, and we went to the hole. In the absence of spirits of turpentine I took a match, and placing the turtle at the mouth of the hole, applied the match to his tail, and away went the turtle down the hole. Before we were at all ready for him, out came the woodchuck with a rush, over went my bravest boy backward, and the rest forgot their stones and clubs. I made a dip for him with my net, but before we could either kill or capture him he darted into another hole near by. While we were recovering from our surprise one of the boys said: "There goes another," and we saw a big fellow going across the garden for a heap of stones. We all went for him, but in spite of our best efforts he got into his hole under the pile of stones. Our turtle was gone, and we plugged up the holes and gave up the hunt.—C. A.

LEAVES FROM THE NOTE-BOOK OF A SCHOOL-GIRL.

June 3. The cave-swallows are getting the mud for their nests. They skim round and round, close to the ground, and finally light in the mud. They hold their wings nearly perpendicular and quiver them almost continually as to keep themselves up.

June 7. The red-winged blackbird flies in a straight line with three flaps of the wings, then a pause, then three flaps more, and so on with an occasional "chuck."

June 8. The tilt-ups build their nests a stone's throw from the river which they frequent. When disturbed they fly up silently and skim swiftly away over the tops of the clovers.

A discovery! As we neared the pasture fence the blackbirds spied us afar off and began to be alarmed at once. We walked down to a marshy place, overgrown with tufts of grass and low bushes, where we thought to find a nest. Sure enough there was an empty nest down in the middle of a clump of grass, and as the old birds were still scolding and flying excitedly around just over our heads, we concluded that the young birds were near by. I had just stepped from one bunch of grass to another when I heard a great squeaking and peeping from the clump I had just left. I turned back and searched through it, but no birds could I find, though the noise still came from the same spot. I put my ear down and listened. The sounds came from the ground. I pulled up some dry grass and found—ten little mice. The old blackbirds continued to scold till we were out of sight. Perhaps they were interested in their little neighbors.

June 17. The tilt-up's flight somewhat resembles that of the chimney-swallow. He, however, keeps close to the water and is apt to fly in a curve.

The catbird hops along the ground with his head up so as to resemble the robin in everything but color.

June 28. It is stated by a reliable witness that the best indication of rain is shown by the cave-swallows. Before there is to us a sign of rain the birds light on the ridge-pole of the barn. If there is going to be a heavy shower large numbers light, if not much rain only a few.

The red-start is a lively little fellow. When he is excited he spreads his tail so that the end is almost a half-circle.

Hatfield, Mass. MARGARET MILLER.

ANOTHER DRUMMING WOODPECKER—Waxahachie, Texas, May 25.—*Editor Forest and Stream:* I noticed a communication in a recent number of FOREST AND STREAM where the writer describes the performance of a woodpecker in the *role* of a drummer. This article had a peculiar interest to me, as I once had a similar puzzling experience with a bloody crested picus. About four years ago four or five young gentlemen besides myself were rooming in the second story of a building which had an iron roof, and early every morning, after taking up our abode there, we would be awakened by the most unearthly tattoo seemingly directly over our heads.

Investigation only increased the mystery, as nothing could be discovered to account for the noise. After enduring this ear-splitting rat-tat-tating for some time, and loosing three or four hours' sleep every day, I slipped quietly out of bed one morning just at daybreak, and taking up a position where I could overlook the whole roof of the building, I quietly awaited events. Nor was I kept long in suspense, for just as the sun was gilding the top of a neighboring church steeple a common red and black woodpecker, or, as it is often called, "white-tailed" woodpecker, lit on the very apex of the roof, and after gazing about for a few minutes, slowly dipped his head until his bill touched the iron, and the mystery was solved. I could see no motion of the bird's head or body while he was drumming, he would merely incline his head and body as if drinking, until his bill reached the iron, and then the noise began. And he was not hunting for a wife either, as he already had as many as the law allows in this State, and was also provided with a comfortable home on a telegraph pole, a few yards from the building. My story has a bloody sequel, for "Bachelor Bob" becoming exasperated at the noise one morning arose, and in his wrath, procured a shotgun and dealt death and destruction to that once happy family, and somehow we could not find it in our hearts to censure him for the act.—S. W.

NOTE ON THE WOODCOCK.—A writer in the Chicago *Tribune* gives an account of some curious observations made by him on the woodcock. Something similar to this account we have heard before, but never with any detail. If it has any basis of fact upon which to rest, further observations are required before the habit can be explained or accounted for. The writer says:

"On a number of occasions I have closely observed the woodcock's system of telegraphy. The bird's mandibles are furnished with extremely sensitive nerves, so arranged that when the point of the bill rests upon the ground the slightest sounds are conveyed to its brain. Standing upon the water-saturated earth of a spouty bog, our bird utters a faint, keen cry, scarcely audible at two rods' distance, then immediately lets fall his head till the tip of his bill touches the ground, and listens attentively. If his mate hears him she replies, puts her bill on the ground, and listens in turn. So the love messages go back and forth as long as the birds have anything to say. This sort of thing usually happens in the soft twilights from May till the middle of August, though occasionally I have seen and heard it in the broad light of a summer day. In June, 1863, I made the following note: 'To-day sketched a woodcock in the listening attitude. Shall try to get further studies.'

"Five years later I succeeded in getting three more sketches, and last year (1880) I got four more. Many of these and kindred sketches have been obtained at the end of indescribable care and labor. The woodcock is so shy, so attentive, so sensitive, that the least sound will cause it to skulk and hide—a thing it does with even greater cunning and success than the quail. The only way in which I have been able to get near enough to the bird to sketch its natural

attitudes is to crawl on the wet ground through tangled weeds and shrubs until I reached a hiding place on the border of its feeding range, and there patiently and silently watch for its coming. This I have done over and over again for days together before getting sight of the bird."

We have ourselves seen the woodcock stand in a listening attitude with his bill touching the ground, but we have always believed that the sensitive bill was held to the earth in order that the bird might perceive, whether by the sense of touch or hearing we are in doubt, the movements of the worms that might be moving just below the surface. It may be that love is the motive which actuates the woodcock in performing this curious action, but we are inclined to think that it is something much more prosaic—namely, hunger.

BIRDS AND ANTS.—Perth Amboy, N. J., May 21.—I noticed yesterday quite a number of black ants, with long wings, emerging from the cracks in the floor of my south porch. Procuring some hot water I destroyed several hundred in a few moments, but soon found that it was a waste of time as well as of water, for the insects continued to pour out in such prodigious quantities as to defy all attempts to reduce them. And so the living stream kept on, until the air was full of them too, for as fast as the sun's rays warmed them they would take to flight and drift away on the gentle breeze. And here came in the fun. My house is surrounded by shade and fruit trees, in which I have encouraged birds to build, and many are the English sparrows whose quarrelsome interference with my wrens and bluebirds has cost them their lives, for my little Stevens' pocket rifle, 22, is ever ready for instant use. So these foreign pests have learned to give me a wide berth, and the early morning is enlivened with the notes of robins, bluebirds, wrens and orioles (Baltimore and orchard), kingbirds, yellowhammers, peewee flycatchers, willow-wrens and cat-birds, while barn and chimney have their occupants, and even the voice of the meadow-lark and quail may be heard occasionally from adjoining fields.

Well, as may be imagined, it did not take the birds long to spy the winged ants, and such a frolic as they had! In less than five minutes nearly every bird on the place was chasing them, and it was indeed a pretty sight to see them darting and wheeling in the air, every second lessening the numbers of their prey. Oh, they had a royal feast! I could see the sparkle of their eyes and hear the snapping of their bills, so closely and fearlessly did they circle round my head. And as I watched them I called to mind the words of the Psalmist—"So they did eat and were well filled; for He gave them their own desire."—J. L. KEARNY.

WE will serve that 'possum hot.

Game Bag and Gun.

OUR DETROIT LETTER.

AFTER my long and pleasant sojourn in the roaring metropolis whence FOREST AND STREAM is distributed all over the mighty nation I find myself once more in a position to acquaint your readers with those current happenings in which they naturally take the liveliest interest. I dare say most of them recollect my history of a fortnight's deer slaying (last November) in the North Woods of Michigan by Gillman, Rogers, Long *et al* under the guidance of those trained frontiersmen, Joseph Kurtz (Black Joe) and Albert Beaufor, who is better known to sportsmen as "Buck," the pioneers of Turtle Lake, since christened Roger's Lake in compliment to Detroit's enthusiastic and sportsmanlike police superintendent. This gentleman likes nothing better than an occasional camping respite from the exasperating demands of thief-catching, and it is a pleasant honor that his name and fame should be immortally associated with one of the most enchanting regions in our Western wilds. I dropped in at a favorite place of resort for Detroit sportsmen to-night, and stumbled upon those identical frontiersmen of Roger's Lake. They told me they had come down to civilization to learn by observation how the world wagged, and to gather food for mental chewing against the time when they will return to their guns and traps, and deer and bear, and fragrant hemlock boughs. The summer flies drove them out, but they look like a pair of cast iron men with their splendid muscular development, lack of superfluous flesh, and clear healthy skins that look as if their owner's could not so much as imagine the significance of a day's sickness. When I look at such men I long for the free life of the woodsman, I covet his powers of digestion, I admire his panther-like activity, and glory in his true manliness. His untrammelled life is the thing that makes the man. Let us all take to the backwoods and be just such men. What should we care about tare and tret, fuss and fret, and all the other enfeebling conditions that make up the sum of average life in the busy mart? I am rebellious under them, and it would require but little urging for me to cut loose and live the remainder of my life out in buckskin leggings and a woolen shirt. Hurrah for the woods!

Joe brought down with him a handsome and playful cub, the history of whose capture forms an interesting narrative as illustrating the way its captor and men like him live. He told me the story in his own modest way, and so I give it to FOREST AND STREAM as nearly in his own language as I can recall it. "One night about six weeks ago," he said, "I struck a deserted lumber camp in the woods near Roger's Lake. I kinder thought there was bear around, and so I made up my mind to watch. I knocked a bit of the chinkin' out from between a couple of logs of the cabin, locked the door, and took a peepin' position. I sat there nigh onto four hours without a sign of showin' up, but bime-by a big she bear showed up smellin' round for the scraps left by the lumbermen. I had a Winchester express rifle with explosive bullets and I let drive. The first hit her fair, but before she would give up I had to send three other bullets after the first, and I tell you she was pretty much torn to pieces. I dragged the carcass into the cabin, and lay down near it, with my clothes on, to sleep. It must have been about two hours after that when I felt something soft-like crawlin' over me, and when I was square woke up I see it was a cub. The little cuss had missed his mother, and as I had forgot all about fastening the door he had nosed it open and come right in without stoppin' to knock. I just quietly tied him up and got an eye out for the other one. I knew he couldn't be very far off, and sure enough he came waddling along in a little while, and I took him in, too. This one you see here I I thought I'd fetch down to the boys, and I've turned him over to Mr. Gillman to do what he likes with him. The old bear weighed about 400 pounds."

The high character of the Michigan Sportsmen's Association and its exceptionally good work have been very influential factors in procuring important game legislation during the session of the Legislature which ended to-day. The game bill passed in pretty good shape, under it the woodcock season opens August 1, duck, September 1, and quail November 1.

The only criticism of the law I have heard is in relation to deer, some hunters having expressed a modest regret that the killing season was not held off at least a fortnight later. However, it is now pretty nearly perfect, and the State Sportsmen's Association is entitled to congratulations.

Fishing at the Flats is booming now, and some lively stories are flopping around. The best work is got in on bass, muscalonge and pike. AMATEUR.

THE OLD GOOSE-BLIND.

FOR many a year on the edge of the bay
The old goose-blind had stood,
Where the marksman had watched like a bird of prey
To slaughter the innocent brood.
And now the sides had been freshly lined
With salt water bushes and boughs of pine;
And the fowler within the stand reclined,
Eyeing the wash of the ocean's brine.

A crystal stream by the structure's side
Trickled out to the ocean's brink;
And here the fowl, at ebbing tide,
Would come to sand and drink.
To gabble and tell of each other's sins,
And how on far Spitzbergen's shore
Miss Goosey had had eight pair of twins
When she never expected but four.

Around her axis old Terra may roll,
But only those silly creatures
Can enjoy the gossip and news of the Pole
In all its novel features.
And much they resemble the tender sex,
Who clatter together in noisy groups
Of dresses and jewelry, frailties and checks,
Engagements, births, perfumes and soups.

And now you may see by the sportsman's eye
That the tide is fast receding,
As with anxious gaze he watches the sky
With a face that is almost pleading.
The hidden rocks are beginning to bare;
The breakers cease their dreary moan;
The winter gull idly fans the air;
The fowler is there on the shore alone.

All is peace; not a sound or cry
Is heard at the lonely scene,
When suddenly in the seaward sky
A moving speck is seen.
Like the cinder of a burning reed,
That, parting from the parent stem,
Off through the cloudy air doth speed,
The tiny atom appears to skim.

It seems to approach the mainland shore.
See, the fowler prepares his piece,
For what was naught but a speck before
Is a flock of flying geese.
On past the inlet's lonely light,
And following the deep channel's bed,
In single file, with waving flight,
Toward the blind at last they head.

Great Nature! dost thou not control
The flight of birds aquatic?
Is there a loadstone at the Pole
To guide their course erratic?
Doth Agib's mountain stand there still,
Whose dense attraction draws them nigh?
Has each a magnet in its bill,
That northward they seem bound to fly?

Oh! Goose, thou vile, ill-omened bird,
Whose shrill, unearthly howl
Whilom the sleeping Romans heard,
Thou dark, historic fowl;
Though bitter gall to Gaul thy cry,
Avenging France now cries thee, hah
Thy screech preludes her famous pie,
Delicious *pate de foie gras*.

But now each silver-feathered breast
Sinks down upon the tide;
While the bolder ganders leave the rest
Beguiled to the streamlet's side.
"Honk! who!" they call their charge in trust;
"The *bar* is free; come one and all!
No excise law you need distrust."
They go to sup at the gander's call.

The fowler exultant with gleaming eye
Takes his sure, unerring aim.
Ye gods! what a roar salutes the sky;
What a belching mass of flame!
The blind disappears like the one-horse shay;
The geese in fright beat the smoky air;
The water reels back from the shores of the bay—
But naught can be seen of the marksman there.

From the house old Joe is heard to bawl,
"Boys, get out the cart and boat,
I loaded that gun; he has killed them all.
You'll have a smart lot to tote."
They found no blind or fowler there,
But under the shade of the cypress trees
They discovered a gory lock of hair
And a piece of one of his shattered knees.

And now old Joe wanders round the shore
With a wild and vacant state,
And he looks where the blind had stood before,
And he peers above in the air.
He mutters aloud, in a weird, sad way,
"To think that a quart of double B's
Should have sprinkled the poor lad over the bay
And all we could find was one of his knees."

A SPECIAL meeting of the Long Island Sportsmen's Association will be held Friday evening in the Royal Arcanum Rooms, Music Hall, Flatbush avenue and Fulton street, for the purpose of distributing the association badges and completing the arrangements for the convention.

Holabird Shooting Suits. Upthegrove & McLellan, Valparaiso, Ind.

THE NEW YORK GAME LAW.

CONTINUED FROM PAGE 370.

Sec. 11. Section twenty-three of said act, as amended by section one of chapter 531 of the laws of 1880, is hereby further amended so as to read as follows:

Sec. 23 No person shall kill or catch, or attempt to kill or catch, or have in possession after the same has been killed or caught, any fish, except minnows, in the waters of Lake Ontario on the American side thereof, for the distance of three miles from the mouth of Niagara River, or in Onondaga, Oneida, Seneca, Cayuga or Cross lakes, or in any of their outlets or tributaries, or in the American waters of the Niagara River above Niagara Falls, or in the Mohawk River or any of its tributaries in the counties of Oneida and Herkimer, in any way or manner, or by any device whatever, except with that of hook and line [and any person catching or killing any fish except minnows in any of the above-named waters shall be liable to a penalty of one hundred dollars for each and every offense]. No person shall kill or catch, or attempt to kill or catch, any fish except minnows, bullheads, eels, suckers and catfish, in any other of the fresh waters, or in any of the canals of this State, or in the American waters of the St. Lawrence River, in any way or manner, or by any device whatever, except that of angling by hook or line, save only in the following waters, namely: The Hudson River below the dam at Troy, Black Lake in the county of St. Lawrence, St. Regis River, Grass River and Racket River below the line of the Ogdensburg and Lake Champlain Railroad, and in Lake Ontario, except Great Sodus Bay, Port Bay, East Bay in the county of Wayne, Henderson Harbor or Henderson Bay in the county of Jefferson; and also except in Lake Champlain, during the month of October and the first fifteen days in November; and also except in the waters of the Wallkill River within the county of Ulster, wherein it shall be lawful for any person or persons of one and the same family or household to possess and fish for suckers and eels in the waters of said river during the months of March and April and October and November, with a single fyke, the meshes of which shall not be less than one inch; and also except all that part of the waters of Lake Ontario, together with its bays or inlets lying and being in the county of Jefferson, and in that part of Oswego County lying between its Jefferson County line and the westerly line of the town of Mexico, and within one-half mile of the outlet or mouth of Salmon River, saving and excepting the shoals adjacent to Henderson Bay on the lake side from the main shore to and including Smoke Island, except during the months of November and December, which waters are hereby released from the operation of the provisions of sections twenty-three and twenty-six of the act hereby amended. No person shall [knowingly] sell or purchase, or have in [his or her] possession, any fish killed, caught or taken from any such waters contrary to the provisions of this section. Any person violating any of the provisions of this section shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of twenty-five dollars for each and every such offense, and for each fish so caught, killed or held in possession. And all nets, seines, traps, weir or other devices forbidden by this section are hereby declared contraband, and any person finding the same in any place where they are forbidden is hereby authorized to destroy such contraband articles, and no action for damages shall lie against him for such destruction.

Sec. 12. Section twenty-five of said act is hereby amended so as to read as follows:

Sec. 25. No person, association, company or corporation shall throw or deposit, or permit to be thrown and deposited, any dye-stuff, coal-tar, refuse from gas houses [saw dust] lime, or other deleterious substance, or cause the same to run or flow into or upon any of the rivers, lakes, ponds, streams [or any of the bays or inlets adjoining the Atlantic ocean], within the limits of this State. Any person who shall violate this section, or any member of such company, association or corporation, who shall authorize and direct any such violation, shall be guilty of a misdemeanour, and, in addition thereto, shall be liable to a penalty of fifty dollars for each offence. But this section shall not apply to streams of flowing or tide-water which constitute the motive power of the machinery of manufacturing establishments, where is absolutely necessary for the manufacturing purposes carried on in such establishments to run the refuse matter and material thereof into such stream.

Sec. 13. Section thirty-one of said act is hereby amended so as to read as follows:

Sec. 31. A State bounty of thirty dollars for a grown wolf, fifteen dollars for a pup wolf [and] twenty dollars for a panther, and fifty cents for any hawk except a night-hawk, shall be paid to any person or persons who shall kill any of said animals or birds within the boundaries of this State. The person or persons obtaining said bounty shall prove the death of the animal or bird so killed by him or them, by producing satisfactory affidavits, and the skull and skin of said animal, or the head and claws of said bird before the supervisor and one of the justices of the peace of the town within the boundaries of which the said animal or bird was killed. Whereupon said supervisor and justice of the peace, in the presence of each other, shall burn and destroy the said skull and brand the said skin of said animal, so that it may be thereafter identified, and shall burn and destroy the said head and claws of said bird, and issue to the person or persons claiming and entitled to the same, an order on the treasurer of the county to which said town belongs, stating the kind of animal or bird killed, the date of killing the same, and the amount of the bounty to be paid in virtue of the within section of this act, and the county treasurers of this State are hereby authorized and directed to pay all orders issued as aforesaid; and all orders issued in the manner aforesaid and paid by the treasurer of any county in this State shall be a charge of said county against the State, the amount of which charge on delivery of proper vouchers, the comptroller is hereby authorized and directed to allow in the settlement of taxes due from said county to the State.

Sec. 14. Section thirty-three of said act is hereby amended so as to read as follows:

Sec. 33. All penalties imposed by this act may be recovered, with costs of suit, by any person in his own name, or by any society in its name, upon such society giving security for costs, before any justice of the peace in the county where the offence was committed, or in an adjoining county, when the amount does not exceed the jurisdiction of such justice, or when such suit shall be brought in the city of New York, before any justice of the district court, or of the marine court of said city; and such penalties may be recovered in the like manner in any court of record in the State; but on recovery by the plaintiff in such case for a less

sum than fifty dollars, the plaintiff shall only be entitled to costs to an amount equal to the amount of such recovery; and it shall be the duty of any district attorney in this State, and he is hereby required to prosecute, or to commence actions in the name of the people of this State, for the recovery of the penalties allowed hereby, upon receiving proper information; and in all actions brought by such district-attorney, one-half of the penalty recovered shall belong to the persons giving information on which the action is brought, and the other half shall be paid to the treasurer of the county in which such action is brought. All judgments recovered in pursuance of the provisions of this act, with the interest thereon, may be collected, and the payment thereof enforced by execution against the person; and no person imprisoned on execution under this act shall be bailed or admitted to the liberties of the jail; and any person imprisoned upon any such execution shall be so imprisoned for a period of not less than five days, and at the rate of one day for every dollar or fractional part thereof of such judgment, and interest when the same exceeds five dollars; and such imprisonment shall not be satisfaction of such judgment; but no person shall be more than once imprisoned upon any such judgment or execution, and two or more penalties may be included in the same action.

SEC. 15. Section thirty-five of said act is hereby amended so as to read as follows:

SEC. 35. Courts of special sessions in towns and villages and the several courts in cities, situated in the county in which the offence was committed, or in any adjoining county having jurisdiction to try other misdemeanors in their own county, shall have jurisdiction to try offenders in all cases occurring under this act, in the same manner as in other cases where they now have jurisdiction, and to render and enforce judgment accordingly. All fines recovered by the provisions of this act shall be paid over by the court receiving the same, to the treasurer of the county wherein the [offence was committed] offender was tried, except in the county of New York, and in the county of New York to the chamberlain in the city of New York, within ten days after their reception by such court, and such moneys shall be kept by such treasurer or chamberlain as a separate fund to be applied to the enforcement of the provisions of this act in such manner as the board of supervisors of the several counties, except in the city and county of New York, and in such city and county the board of aldermen may direct, either for the employment of special detectives or the payment of rewards for the detection and arrest of offenders, and each of the boards of supervisors of this State shall have power to raise by tax, in the same manner as other taxes are raised for county purposes, such sum not exceeding one thousand dollars in any year, as they shall deem proper to further aid in the enforcement of the provisions of this act. It shall be the duty of every sheriff, under-sheriff, deputy-sheriff, officer of police or policeman, and of every constable, and every game constable, and every bay constable, and every game and fish protector, to arrest, wherever found within this State, without warrant or process, any person whom they shall find violating any of the provisions of this act, and immediately to bring such offender before [the nearest] any magistrate residing in the county in which the offence was committed, or in any adjoining county having jurisdiction of the offence, for examination and for trial. Any justice of the peace, police justice or recorder, residing in the county in which the offence was committed, or in any adjoining county, shall have jurisdiction to organize and hold a court of special sessions for the examination and trial of offenders under this act in the same manner as in other cases, and to render and enforce judgment accordingly. Any officer or magistrate who shall neglect or refuse diligently to enforce the provisions of this act, upon proper information and complaint, shall be deemed guilty of a misdemeanor, and shall be punished by fine or imprisonment, or by both such fine and imprisonment in the discretion of the court.

SEC. 16. Sections thirty-four and thirty-six of said act are hereby repealed. SEC. 17. This act shall take effect immediately.

"SLAUGHTER OF THE INNOCENTS."

IN his "Lonesome Lake Papers," written for the *Journal of Commerce*, William C. Prime discourses at length on the subject of killing animals for food, sport and other purposes. His general views may be obtained from the following extracts:

There is a mass of accumulated correspondence on the cabin table. Among the letters are two or three, of a class not at all uncommon, from very good and very gentle persons, who share with more or less people the idea that hunting and fishing are cruel sports, and tend to the cultivation of brutal dispositions. One letter incloses a newspaper article of considerable length in which the writer uses very strong language about the evil natures and evil hearts of those who go about shooting deer and birds, and other beautiful living objects in nature.

To what extent man's rights over brutes may reach, how far he may subject them to slavery, compel their labor, kill them for food, clothing and other uses, it is unnecessary to consider here. The question fairly arises on those words "other uses." For food and clothing we agree that brutes are properly killed. So, too, I have never heard the killing of whales and other fish for oil condemned by any one. The newspaper writer referred to above, strongly condemns ladies who wear beautiful feathers as ornaments, for which innocent birds have been slaughtered. But the love of beautiful things is one of the purest and noblest characteristics of the human soul, and it may well be asked whether brute life is not rightly subjected to the cultivation and enjoyment of this high characteristic in man. It is not a question of the feathers in ladies' hats, but of innumerable uses in the arts in which animal life is destroyed to produce beautiful objects for the refinements and enjoyments of human life. Is the killing of animals for oil wherewith to light up God's darkness any more justifiable than killing them for æsthetic purposes? In short, the infinite difference between the life which is of man and that life which is of the beast or the bush, makes its exceedingly difficult to show why the picking of a rose or a violet is any less offence than the killing of a bird for a brilliant wing. The materialist who holds that the life of a man is no more precious than that of a dog or a horse, must be a very poor philosopher if he does not rank the life of a plant on the same plane. From his point of view he should extend his sympathies to the flowers.

But we will leave the question of subjection of brute life to our love of the beautiful and confine our attention to killing food animals to be used as food. This is the employment of the mass of hunters and anglers, and the fact that they do this for pleasure, that they find enjoyment in it, leads to the condemnation of some sensitive people.

By the law of common sense, the law of the natural world, the law of our physical structure, and the revealed law of God, such beasts, birds and fish as can be eaten are properly used for food. They must be killed. Killing is a part of the process of making them food. Killing them is, therefore, not cruel. It is duty—some one's duty. Now it is absurd to say that such a duty ought to be painful, and one which is to be abhorred. On the contrary it is plain that if it be duty to provide animal food for one's self and one's family, then it may be equally a pleasure to gather fruits, reap grain or kill animals for that provision. No possible argument can show that one ought to regard providing animal food as a sad and solemn necessity, a terrible affliction, which should be delegated to a special class of men, separate from their fellows, men of blood, working out a curse. For if the provision of animal food is a painful duty, in which the provider sins if he works joyously at his work, if the killer of beasts for food ought to be a mournful man and regard his duty as a constant pain, then the making of men to eat animal food is a curse instead of a blessing from God. Nay, the eating it should be with sorrowful countenance, for the killing is our own agent, and we should all share the curse and the sadness with the purveyor of our tables. All dinners should be funeral feasts, and all salads made of bitter herbs.

But it is plain enough that the butcher has right to be as happy at his work as the apple picker. Both work in God's appointed way for the good of mankind. It is equally plain that every man may rightly be happy in killing animals for the food of himself and his family or others. If the point were the cruelty and wrong of the wanton killing of animals, not to be used for man's proper purposes, killing for the mere enjoyment of the killing, there would be no discussion. I find no limit of this kind, however, in the writings now under discussion.

All sportsmen condemn killing game or fish which cannot be used for food, except in those cases where we kill fish which prey on others. I never knew a true sportsman who did not regard the final destination of his game for food as an absolute essential to his enjoyment of the sport. We will not stop to discuss the killing of venomous reptiles, beasts of prey, birds and fish which are enemies of the food animals. One writer describes all hunting as "slaughter of the innocents," and says it cannot be countenanced as "an element of culture:" "its object cannot be to sharpen the finer feelings and deaden the brutal ones. There is no poetry in destroying the animated poetry of Nature." These are somewhat rash sentences; and it will perhaps surprise him to hear that not only I, but hosts of men renowned in the literature of all ages and countries, churchmen and laymen, have held directly contrary views as to the effects of these sports on the moral character. They are accounted by us so elevating and refining in their influences that we think every father who can do so will do well to encourage his sons in the love of hunting and fishing. Eliminate the sentimental idea that the killing a bird or a deer for food is wicked, and you at once see why hunting has been esteemed a healthful, manly man-making occupation in all ages since Nimrod was a mighty hunter before the Lord. No idle, dreamy stroller through "Nature's poetry" derives from the sight of beasts and birds and trees and streams such permanent lessons as the hunter or angler who is at home with nature, pursuing his objects in it. This part of the subject is much too long for discussion here, and it may be dismissed with a reference to the long list of great teachers of truth, in pulpit and books, who have recorded their obligations to field sports for the most valuable lessons of their lives. And it is proper to add that this notion—that brutality and cruelty of disposition are characteristics of anglers and hunters and increase with their practice of these employments—is of course absurd. The testimony of all ages is to the direct reverse and angling is proverbially known as the gentle art. There was once a quite prevalent idea that the life and labor of a butcher brutalized him, but that fancy has long since been abandoned. There are butchers and butchers, as there are lawyers and lawyers. The cruel and brutal are found in all stations and employments, as are the gentle and refined.

The sentimentalism to which allusion has been made prevents due consideration of the ordinary laws of nature which God has established and which are parts of His wonderful beneficence in providing this world for man. The question often asked, "Why was this insect or that plant created?" would be answered easily if we saw through the vast system which He has ordained for man's good. We can see part of it. The life of one being is sustained by the death of another. This is the grand law of natural succession of life. Millions of minute insects are made. They are food for larger insects, or for birds, or for fish, which in turn are food for man. Man cannot live on grass or green food alone, and deer, rabbits, cows, sheep, eat grass, make flesh and man eats the flesh. The decaying vegetable, the oozing sap of the tree is the food of the insect, the insect is the food of the small fish, the small fish is the food of the pike or the trout, or the bass, and finally man is fed. The great truth that the lower orders of animals are food for each other escapes the view of sentimentalism. You admire the superb oriole, singing in the sunshine, and do not know that he loves the brains of smaller birds and feeds on them when he can. The thrush, miscalled a robin, wakes you with his morning song, and you forget to think that he has already destroyed hundreds of animals in feeding himself and his young. It is not to disturb your love for the birds that you are to think of these facts, but that you may bear in mind that they too are to serve a purpose in the way of nature, and kill their food so that they become food to sustain other animal life, whether of plant or bird, or reptile, beast or man. Always at the summit of this grand system of life from death stands man, and God has placed him at the summit because he alone has a soul, and the soul is immortal. Everybody, whether of beast or bird, alas even the body of man, is to form food in its death, and nourish trees and plants or birds and winged insects, to serve the purposes of successive generations of mankind. Only the soul is free from this law, coming from God and going hence to Him. Only the dead dust of humanity is to be gathered again, wheresoever scattered, by the Giver of Life, and revived in immortal beauty.

BURSTING SHELLS.—Sauk Centre, Minn.—What is the cause of shells (paper) bursting in a No. 12 gun in very cold weather? I am stumped, and don't know what is the cause. The same shells, best quality Winchester make, do not burst in warm weather, as I have repeatedly shot five and six loads out of them before they gave out. They were loaded with 3¼ drs. powder, 1¼ oz. chilled shot, and every time they "ripped" open from the top to the edge of the flange. Please answer in correspondents' column and oblige.—AMATEUR.

If our correspondent really were an amateur—as he is not—we should suggest that his shells did not fit the gun. The cold weather has nothing to do with it. There must have been some irregularity in the loading, or in the size of the shells.

MR. BERGH ON PIGEONS AND SNAKES.

From the New York World, June 13.

"I have indeed heard of the intended insult to our civilization of the nineteenth century," said Mr. Henry Bergh when he was asked what he intended to do with regard to the shooting tournament of the New York State Sportsmen's Association, which is to be held on Coney Island next month. "I hear the association is making great preparations, and is to have 25,000 pigeons ready for the slaughter. Just think of it. These poor creatures, which are emblems of our holy religion—for the pigeon and the dove are identical—are to be flung into the air, and while dazed by the change from a cramped trap are to be fired at and cruelly mutilated. But I can do nothing for my constituents—the dumb animals. I tried in 1874 to introduce a bill, a clause in which would have given our society the power to stop a pigeon-shoot. But I was told that the bill could not become a law. Senator Wagstaff was particularly active as the champion of the slaughterers. I have tried again and again to introduce similar bills, but the pigeon-haters not only put me off, but passed an act legalizing this sport. This act said that any incorporated society may conduct such an inhuman exhibition, provided that such birds as are mutilated shall be killed as soon as possible. In other words, brutes who are useless to put in a trap because they have no wings may hang away at pigeons, and when the birds have been so torn and mangled as to be of no further use their necks may be wrung. I am told that young ladies attend these exercises and honor them by keeping the score. I cannot for my life see how they can do such a thing. I rejoiced when we were able to turn back those Spanish bull-fighters, but I blush to see that the pigeon, which has as much right to humane treatment as the bull, is denied its rights. I'll tell you the secret of the whole thing. All these club-men vote, and the men at Albany know this, and the blood of countless pigeons goes to stain the ballot-box, and then, too, there are gun-makers and powder-makers and lead men and other persons who profit by pandering to this low form of so-called recreation. Yes," said Mr. Bergh, sadly, "I cannot do anything but go to Coney Island next month to see that pigeons half-killed are put out of their misery. I suppose those fellows will offer me a front seat and one of their horrid cigars. Oh, they are solid in their way, but I can portray their proceedings in a pen-picture that will make New York shudder to its very marrow. I only wish that I could induce every man and every women in New York city to see that show. Then such a grand chorus of protest would go up to Albany that the Empire State would follow the example of little Rhody, as Connecticut and New Hampshire have done, and make a law prohibiting pigeon-shooting in any way. Think, too, dosing pigeons with laudanum to make them fly slowly, or biting off a piece of their flesh and rubbing cayenne pepper on the raw part to make them fly quickly. One thing more. You know I am not a politician, or at best only a sort of a satellite in the Republican party, but I cannot help recalling that everything this society has secured in the way of legislation we owe to the Democrats.

"Here," continued Mr. Bergh as he took a bit of printed paper from his desk, "is a unique sample of a blot on the civilization of our age. Allow me to read it: 'The men employed in the hat factory of Sparrow, Venino & Co., Orange Valley, have caught three snakes, which they intend to fight on the Fourth of July. One of the reptiles is a copperhead, another a flat-headed adder and the third a black snake. They are confined in pasteboard hat boxes in which are small holes admitting air. In order to make them savage from hunger their captors give them nothing to eat. The men in the shop are making up pools on the fight, and to keep informed of the condition of their favorites they inspect them every week. The plan is to allow the snakes on the morning of the Fourth to escape from the hat box into a large iron tank which is used for soaking hats.'

"Did you ever hear the like?" said Mr. Bergh, laying down the slip. "Here, Mr. Secretary, write at once to the officers of the Essex County Society in New Jersey and put them on their guard that they may stop the perpetration of this great shame. I blush for these workmen. I will ask the New Jersey Society to see that these snakes are fed, and if there is a fight between them to arrest all the persons present at it. We do not stop such brutal exhibitions because they debase the men, but because they injure the animals. I have just received a letter from Copenhagen saying that on the 15th of last month the King of Denmark in person, assisted by the Grand Duke Vladimir, who is a brother of the Princess of Wales, presented the medal to those selected by the Danish Society for the Prevention of Cruelty to Animals. The medals were given to men who had saved animals from burning buildings; and this fact shows that persons of quality in Europe are alive to the importance of encouraging love for dumb animals."

MR. CROOK ON MR. BERGH.

From the Brooklyn Eagle, June 13.

Mr. Abel Crook, in the presence of several of the members of the Long Island Sportsmen's Association, yesterday authorized an *Eagle* reporter to say; in regard to the above, that if Mr. Henry Bergh came to Coney Island and attempted to interfere with the pigeon shooting of the State tournament, he would be arrested by the officers who would be there under control of the State Association, and would be taken before one of the three justices of the peace on Coney Island, and, if necessary, would be locked up.

MR. BERGH ON MR. CROOK.

From the Brooklyn Eagle, June 14.

Mr. Bergh replies that if Mr. Crook thinks of opposing or violating the laws of the State in relation to cruelty to animals, and by preventing the society he represents from performing its duties, he labors under a mistake. Mr. Bergh will attend the pigeon shoot and take with him several officers. If the law is violated in the least he will arrest the offenders, and to do this he can call upon the local police if necessary.

ASIATIC BIRDS FOR CALIFORNIA.—Portland, Or., May 24.—The ship Oakworth, from Shanghai, arrived at this port about two weeks ago with seventy-five Mongolian pheasants consigned to Postmaster Coey, of San Francisco, for distribution in California. They came in good condition and were forwarded by steamer. The pheasants and grouse that were

turned out in Geo. Greene's place are doing well. Some of them have been seen ten miles from where they were turned out. I have not heard from the sand grouse sent to the coast.—STANSEL.

We shall watch this experiment with much interest, and trust that our correspondent will keep us informed.

THE 'possum will be served cold.

HOUNDING VS. STILL-HUNTING.

WE continue the publication this week of the numerous replies received in response to our request for experience and observation on the subject of deer-hunting. There is no necessity of calling attention to the value of the data we are collecting and setting forth here. The views are those of experienced, well-informed observers. The particular points of the inquiry are as follows:

1st. What is the character of the country referred to?
2d. What is the prevailing method of hunting deer?
3d. Describe hounding deer, as practiced in the section referred to, and its effects. Does it drive deer out of the country?
4th. Describe in like manner still hunting and its effects.
5th. What class of men kill the most deer?—market hunters or parties of sportsmen?—residents or non-residents?
6th. Would resident sportsmen approve of a law prohibiting hounding deer? Would the residents assist in enforcing it?
7th. Would they approve of a law permitting hounding, but prohibiting the killing or capturing of the deer after it has been run into the water? Would such a law be practicable?
8th. What is the open season for deer?
9th. What are the winter habits of deer, so far as you have personally observed them.

PERTH, Ontario.

I had determined to keep out of this controversy, but I cannot do it. So, in brief, I would say that there is no doubt whatever that the number of deer killed by still-hunters is largely in excess of those killed by hounding, and that the outcry raised in some localities against using hounds is the mercenary clamor of the pot-hunter and the dog-in-the-manger settler; in a word, of that class who hunt deer not for sport but for profit.

In the northern section of this county, Lanark, the deer are plentiful, and the settlers, through their local member, have managed to get an act passed restricting the use of hounds to six weeks in the season, which provision the habitants most manfully assist in carrying out by shooting every hound they can slyly pick off. Yet these people have about as much regard for the season as their ill-bred curs which, when running at large, are continually watering deer, in season and out of season.

This class like to be able at all times and seasons to step to the neighboring wood and pot a deer for the next day's dinner, but object to the hound, probably on the ground that the deer are more on the alert when accustomed to be chased by dogs, and so they cannot pick them off as they would a cow at large in a pasture field.

As far as driving them away permanently from their haunts, my experience coincides with that of others, that this is not the case. I am in the habit of hunting in a small section of woods not far from here where there are very few deer; and although the laugh may go against me, I may say that I have found at the end of the season more deer in that particular woods than there were at the beginning. And a deer has been recognized more than once as one of those driven out by dogs. In fact, when I have driven a deer across the lake one day he has been seen to return the next; and again, other deer, when hunted on the far side of the lake, have at once returned to their former haunts.

The facts are on the side of using hounds for sport, and rare sport it is. I have seen nothing controverting the facts as appearing in your columns; why, then, should people who can occasionally find time to enjoy a few weeks' hunt be debarred because others, forsooth, desire to monopolize the game and line their pockets? I notice that one writer has the coolness to assert that it is quite right for a settler to shoot a deer out of season simply because he is a settler and wishes to obtain an easily-earned dinner.

To conclude, though I regret exceedingly that I cannot say all that I would like to say on this subject, since it is an undoubted fact that less deer are killed by hounding than by other methods, why should not the former method of hunting be sustained? From my experience I have noticed that those who are opposed to hounding are those who, not being able to kill enough with dogs to pay, resort to the more deadly method of still-hunting. RIFLE.

HURLINGHAM CLUB RULES.

April, 1881.

1. The Referee's decision shall be final.
2. The gun must not be held to the shoulder until the shooter has called "Pull." The butt must be clear below the arm-pit, otherwise the Referee shall declare no bird.
3. A miss-fire is no shot, provided the shooter has a cap or tube on the gun, and it be cocked and loaded, or, in the case of a breech-loader, if the cartridge does not explode.
4. If the shooter's gun miss fire with the first barrel and he use the second and miss, the bird is to be scored lost.
5. If the miss-fire occurs with the second barrel, the shooter having failed to kill with his first, he may claim another bird; but he must fire off the first barrel with a cap on, and a full charge of powder, or in case of a breech-loader, with a blank cartridge, before firing the second. And he must not pull both triggers at the same time.
6. The shooter in a match or sweepstakes shall be at his shooting mark at the expiration of two minutes from the last shot, unless in the case of an accident, when the Referee shall decide what time shall be allowed to remedy the accident.
7. The shooter's feet shall be behind the shooting mark until after his gun is discharged. If, in the opinion of the Referee, the shooter is baulked by any antagonist or looker-on, or by the trapper, whether by accident or otherwise, he may be allowed another bird.
8. The shooter, when he is at his mark ready to shoot, shall give the caution "Are you ready?" to the puller, and then call "Pull." Should the trap be pulled without the word being given, the shooter may take the bird or not; but if he fires, the bird must be deemed to be taken.
9. If, on the trap being pulled, the bird does not rise, it is at the option of the shooter to take it or not; if not, he must declare it by saying "No bird;" but should he fire after declaring, it is not to be scored for or against him.
10. Each bird must be recovered within the boundary, if required by any party interested, or it must be scored lost.
11. If a bird that has been shot at perches or settles on the top of the fence, or on any part of the buildings higher than the fence, it is to be scored a lost bird.
12. If a bird once out of the ground should return and fall dead within the boundary, it must be scored a lost bird.
13. If the shooter advances to the mark and orders the trap to be pulled, and does not shoot at the bird, or his gun is not properly loaded, or does not go off, owing to his own negligence, that bird is to be scored lost.
14. Should a bird that has been shot at be flying away, and a bystander fires and brings the bird down within the boundary, the Referee may, if satisfied the bird would not have fallen by the gun of the shooter, order it to be scored a lost bird; or if satisfied that the bird would have fallen, may order it to be scored a dead bird; or if in doubt on the subject, he may order the shooter to shoot at another bird.
15. A bird shot on the ground with the first barrel is "No bird," but it may be shot on the ground with the second barrel, if it has been fired at with the first barrel while on the wing; but if the shooter misses with the first and discharges his second barrel, it is to be accounted a lost bird, in case of not falling within bounds.
16. Only one person to be allowed to pick up the bird (or a dog, if the shooter will allow it). No instrument is to be used for this purpose. All birds must be gathered by the dog or trapper, and no member shall have the right to gather his own bird, or to touch it with his hand or gun.
17. In Single Shooting, if more than one bird is liberated, the shooter may call "No bird," and claim another shot; but if he shoots he must abide by the consequences.
18. The shooter must not leave the shooting mark under any pretence to follow up any bird that will not rise, nor may he return to his mark after he has once quitted it to fire his second barrel.
19. In matches or in sweepstakes, when shot is limited, any shooter found to have in his gun more shot than is allowed is to be at once disqualified.
20. Any shooter is compelled to unload his gun on being challenged; but if the charge is found not to exceed the allowance, the challenger shall pay forthwith £1 to the shooter.
21. None but members can shoot except on the occasion of private matches.
22. No wire cartridges or concentrators allowed, or other substance to be mixed with the shot.
23. In all handicaps, sweepstakes or matches, the standard bore of the gun is No. 12. Members shooting with less to go in at the rate of half a yard for every bore less than 12 down to 16-bore. Eleven-bore guns to stand back half a yard from the handicap distance, and no guns over 11-bore allowed.
24. The winner of a sweepstakes of the value of ten sovereigns, including his own stake, goes back two yards; under that sum one yard, provided there be over five shooters. Members saving or dividing in an advertised event will be handicapped accordingly.
25. Should any member shoot at a distance nearer than that at which he is handicapped, it shall be scored no bird.
26. That for the future the charge of powder is limited to four drams, chilled shot and "sectured" powder may be used. The weight of guns not to exceed 7 lb. 8 oz. Size of shot restricted to Nos. 5, 6, 7 and 8. Charge of shot limited to 1¼ oz.
27. All muzzle-loaders shall be loaded with shot from the club bowls.
28. If any bird escapes through any opening in the paling, it shall be a "No bird," if, in the Referee's opinion, it could not have flown over the palings, but in no instance shall it be scored a dead bird.
29. From the 1st of May the advertised events shall begin at three o'clock, unless otherwise notified, and no shooter will be admitted after the end of the second round in any advertised event.
30. No scouting allowed on the Club premises, and no pigeon to be shot at in the shooting ground except by the shooter standing at his mark. Any one infringing this rule will be fined £1.

RULES FOR DOUBLE RISES.

1. In double shooting, when more than two traps are pulled, the shooter may call "No birds," and claim two more; but if he shoots he must abide by the consequences.
2. If, on the traps being pulled, the birds do not rise, it is at the option of the shooter to take them or not. If not, he must declare by saying "No birds."
3. If, on the traps being pulled, one bird does not rise, he cannot demand another double rise; but he must wait and take the bird when it flies.
4. A bird shot on the ground, if the other bird is missed, is a lost bird; but if the other bird is killed, the shooter may demand another two birds.
5. If the shooter's gun misses fire with the first barrel, he may demand another two birds; but if he fires his second barrel, he must abide by the consequences. If the miss-fire occurs with the second barrel, the shooter having killed with the first, he may demand another bird, but may only use one barrel; if he missed with his first barrel, rule 5 in single shooting will apply.

A bird falling dead on the scoring box is to be counted for the shooter.

THE (LONDON) GUN CLUB RULES.

April, 1881.

1. The gun must not be carried to the shoulder until the shooter has called "Pull."
2. A miss-fire is no shot under any circumstances.
3. If the gun be not cocked it is a lost bird.
4. If the shooter miss fire with the first barrel and use the second and miss, the bird is to be scored lost.
5. If a person pull the trap without notice from the shooter, he has the option to take the bird or not.
6. If, on the trap being pulled, the bird does not rise, it is at the option of the shooter to take it or not; but if not, he must declare it by saying "No bird." If the bird rises at once, it must be shot at.
7. SINGLE SHOOTING.—If more than one bird be liberated, the shooter may say "No bird" and claim another shot; but if he shoots he must abide by the result.
8. DOUBLE SHOOTING.—If more than two traps be pulled, the shooter may say "No birds" and claim two more; but if he shoots he must abide by the result.
9. A bird to be scored good must be gathered by the dog or man without the aid of a ladder or any other instrument.
10. All birds not gathered on the ground to be scored lost.
11. If a bird that has been shot perches or settles on the top of the fence, or on any of the buildings higher than the fence, it is to be scored a lost bird.
12. Or if a bird perches or settles on the top of the fence, or on anything on the ground higher than the fence, and then falls dead on the ground, it is a lost bird.
13. If a bird once out of the ground should return and fall dead within the boundary, it must be scored a lost bird.
14. Should a bird that has been shot be flying away, and a "scout" fires and brings the bird down within the boundary, the Referee may, if satisfied the bird would not have fallen by the gun of the shooter, order it to be a lost bird; or, if satisfied that the bird would have fallen, may order it to be scored a dead bird; or, if in doubt on the subject, he may order the shooter to shoot at another bird.
15. A bird shot on the ground with the first barrel is "No bird;" but it may be shot on the ground with the second barrel, if it has been fired at with the first barrel while on the wing.
16. A bird killed on the ground with the first barrel is no bird; if a bird be shot at on the ground with the first barrel and it escape, it is a lost bird.
17. The shooter is bound at any time to gather his bird, or depute some person so to do when called upon by his opponent; but in so doing he must not be assisted by any other person, or use any description of implement. Should the shooter be in any way baulked by his opponent, or by any of the party shooting, or dog, he can claim another bird with the sanction of the Referee.
18. The shooter cannot leave the shooting mark under any pretence to follow up any bird that will not rise, but is walking away from the trap after it is pulled; and having once left the mark after shooting at the bird, cannot return to shoot at it again under any circumstances.
19. In matches or in sweepstakes, any shooter found to have in his gun any more shot than is allowed, to be at once disqualified.
20. Any shooter is compelled to unload his gun on being challenged; but if the charge is found not to exceed the allowance, the challenger shall pay £1 to the shooter, which must be paid before he shoots again.
21. A shooter may at any time object to the use of a spring trap, either in a match or sweepstakes.
22. None but members can shoot, except on the occasion of the open handicaps.
23. That breech-loaders be not loaded until the shooter is at the mark; and on leaving the mark, should a cartridge not have been discharged, it is to be removed.
24. No wire cartridges allowed, nor is any bone dust or other substance to be mixed with the shot.
25. Should any shooter shoot at a distance nearer than that at which he is handicapped, the bird if killed is "No bird," if missed a "lost bird."
26. That 1¼ oz. of shot be the maximum charge for all occasions, except private matches.
27. That all muzzle-loaders be loaded with shot from the club bowls, and that is, per day will be charged each shooter for shot.
28. In handicap sweepstakes, winners of under £10 go back one yard; £10 and up to £20, two yards; £20 and over, three yards. Unless a sweep be worth £5 the winner does not go back.
29. In shooting in a sweepstake of three birds, five birds or six, shooters can only enter and commence to shoot up to end of first round, after that number of birds up to the end of the second round.
30. Distance of new members, 27 yards.
31. Thirty-one yards being the maximum distance, should any one win at that distance all remain as they were in such sweep.
32. In large sweepstakes, if the money does not amount to £100, it shall be divided into two prizes.
33. After the first three sweepstakes of the value of £5 and upward have been shot on any day, members joining in the sweepstakes to go back one yard beyond their regular handicap distance.
34. Winners dividing £9 or less in a handicap do not incur any distance penalty.
35. In even-distance shooting, should a winner win at or above his handicap distance, he is to be penalized for such win in the handicap book.
36. During shooting hours, or whilst any sweep or match shall be in progress, or be desired by any member, no shooting at birds thrown up, or other irregular practice with guns, shall be permitted on the ground.
37. Should two members agree to save stakes, and one of these divide with a third person, the member so dividing shall pay the full stake to the member who does not win or divide.
38. In case of any division of stakes in advertised events, the amount of division is to be declared to the Referee, and the members dividing shall be penalized to the amount they receive. This rule not to apply to the saving of stakes.
39. The size of chilled or ordinary shot is restricted to Nos. 5, 6, 7 and 8.
40. No member allowed to shoot in any sweepstakes or handicap until he shall have paid the amount of his entry to the scorer.
41. No round shall commence in any sweepstakes previous to the advertised event of the day after three o'clock.
42. The handicap distances shall range between 21 and 31 yards.
43. The weight of guns is limited to eight pounds, and the charge of powder to four drams.
44. No guns above 11-bore allowed.

The following fines will be strictly enforced:

Pointing a gun at any one, £1.
Firing a loaded gun without permission, except at the mark, £1.

VICKSBURG, Miss., June 6.—Weather delightfully cool and breezy for the season. Squirrels more numerous here than for many years. Three gentlemen from this place killed 45 in about a half day. I was out one day last week and killed only 4 and a woodchuck. The wind was too high. The average number killed in a half day is 10. Too much rain for any successful fishing. The Grange outlook is fair, and the prospects for a good crop of quails is excellent, as many old birds were left over from last season.—GUYON.

ALLEGHENY SPORTSMEN'S ASSOCIATION—Pittsburg, June 10.—At the annual meeting of the Allegheny Sportsmen's Association last night the following gentlemen were elected to fill the offices for the year: S. S. D. Thompson, President; D. M. Martin, Vice-President; Wm. A. McIntosh, Treasurer; J. R. Henricks, Secretary. Board of Directors—C. G. Donnell, I. R. Stayton, Edward Gregg, C. B. Lovatt, C. H. Voigt, M. D.—Resp'y, I. R. STAYTON, Reporter.

Holabird Shooting Suits. Upthegrove & McLellan, Valparaiso, Ind.

THAT 'possum is now being frosted.

NOTES FROM PHILADELPHIA.

SEVERAL pairs of woodcock on their arrival in this section this spring took up their quarters along Cobbs Creek, the dividing line of Delaware and Philadelphia counties, Pa., which runs directly through Mt. Moriah Cemetery. The eastern portion of this burial ground is occupied by graves, while the western portion is woodland, through which, at its lower end, runs the creek I have mentioned. The spot is an admirable breeding place for woodcock.

I have learned from residents of that neighborhood that young birds, already quite large, have been seen. One would suppose that the sanctity of the breeding ground chosen by these woodcock would protect them from dog and gun, but it is not so; last year it was not, and it will not be this; and it will be found that notwithstanding the Cemetery Association forbids trespass of this kind, the birds will all be killed off before the season is open. Why do we have summer sporting at all? A pair of birds have bred in Eastwick's woods, Philadelphia, but ere this, doubtless, both young and old have been illegally slaughtered.

It is not generally known, certainly not excepting perhaps by the residents of Chambersburgh and surrounding country, that Conecocheague Creek, running through the above mentioned town, is literally alive with bass. The creek is not a wide one, but varies its depth in its course—now a deep pool, then a stretch of still water, and then a rapid swift—to the Potomac River. Parties who have just returned from the stream tell me before the heavy rains took place, which has made it very muddy, bass were freely taking the minnow, notwithstanding the season was chilly and unpleasant. There is a deal of nonsensing in reference to the bass with us, be it *Salmoides* or *Nigricans*, taking the fly. I'll wager seven out of eight are taken with either minnow or crawfish. I am well aware the bass of the northeastern lakes will rise, trout-like, to the fly, but he is a different fish. Our bass I take it—I do not pretend to be authority—is identical with the bass of the Potomac River and Western lakes, and has a larger mouth. Won't Mr. Mather rise to explain? The one thing I do want to say is our bass do not take the fly as those of St. Lawrence and Lake George do, and to me are different. There is a difference between a fish coming lazily to the surface and sucking in a fly, and that bold rush for his prey the genuine fly taker makes. Our fish, red fins and minnows,

will do the first, the black bass of our rivers will not do the latter.—HOMO.

[We think that your bass are all small mouth, *M. salmoides*, while it is probable that both species inhabit the Potomac. In some waters black bass do not take the fly well, but why not seem to be known at present.]

Sea and River Fishing.

FISH IN SEASON IN JUNE.

FRESH WATER.

Brook Trout, *Salvelinus fontinalis.*
Rainbow Trout, *Salmo iridea.*
Dolly Varden Trout, *Salvelinus malma.*
Grayling, *Thymallus tricolor* and *T. montanus.*
Black Bass, *Micropterus salmoides* and *M. pallidus.*
Mascalonge, *Esox nobilior.*
Pickerel, *Esox reticulatus.*
Pike or Pickerel, *Esox lucius.*
Pike-perch (wall-eyed pike) *Stizostethium americanum, S. griseum*, etc.
Yellow Perch, *Perca fluviatilis.*
Striped Bass, *Roccus lineatus.*
White Bass, *Roccus chrysops.*
Rock Bass, *Ambloplites.* (Two species).
War-mouth, *Chænobrytus gulosus.*
Crappie, *Pomoxys nigromaculatus.*
Bachelor, *Pomoxys annularis.*
Chub, *Semotilis corporalis.*

SALT WATER.

Sea Bass, *Centropristis atrarius.*
Striped Bass, *Roccus lineatus.*
White Perch, *Morone americana.*
Bluefish or Taylor, *Pomatomus saltatrix*
Scup or Porgie *Stenotomus argyrops.*
Pollock, *Pollachius carbonarius.*
Tautog or Blackfish, *Tautoga onitis.*
Weakfish or Squetague, *Cynoscyon regalis.*

Few fish bite more eagerly than gudgeons, and this, perhaps, is the reason why so many persons may be seen patiently sitting in punts from morning to night on the river Thames employed in catching these fresh water smelts. There appears indeed to be a fascination in gudgeon fishing which it is not easy to account for, and the wonder is increased when we see three or four persons in a punt lightly jerking a rod every instant, and watching a float as it glides down the stream before them, the sun sometimes scorching them, and at others the rain wetting them through. Notwithstanding this, however, the fascination certainly exists, and it is mentioned as a fact that the clergyman of a parish in the neighborhood of Hampton Court, who was engaged to be married to the daughter of a bishop, enjoyed his gudgeon fishing so much that he arrived too late to be married, and the lady, offended at his neglect, refused to be united to one who appeared to prefer his rod to herself.—EDWARD JESSE.

WORMS IN FISHES.

BY FREDERICK W. TRUE.

WHEN the philosopher first affirmed that man is a microcosm it did not perhaps occur to his mind that he is a "little world" in a literal as well as in a metaphysical sense, and that he shares this peculiarity with the lower animals. It it indeed a strange fact that every creature which creeps the earth, flies through the air, or swims the sea, is a living, moving world in which animals are born, mature, grow old and die—and plants unfold their leaves and shed their ripened fruits. If the Helminths and the Bacteria reason, and there be scientists among them, they must long ago have advanced the theory which our ancient sages put forth, but more truly, that their earth is an animal, and they but parasites upon it.

Of all animals which are infested by parasites perhaps no group is more seriously afflicted than the fishes. From time to time the ichthyophagian portion of our community is thrown into a panic because in some locality a favorite fish is found teeming with worms which look exceedingly like the dreaded trichinæ, and seem to threaten with dire consequences the persons who should be rash enough to partake of the delicate viand. The matter is at once reported to the papers as something quite new, and specimens are sent to the doctor of science for his opinion. Now, if the doctor is wise he answers that all fishes are afflicted by such worms to a greater or less extent. The species of one large group, the *Hematodes*, or round worms, he will say do resemble the trichinæ, but only as the garter-snake resembles the copperhead. They are small, round worms commonly pointed at each extremity, and white or transparent. Another group, he will continue, are known as *Cestodes*, or tape-worms, and resemble the ordinary tape-worms, which at times are so annoying to man. They are very numerous and varied in kind and in details of form and proportion. He will also allude to two other groups of parasitic worms, which, however, are of less interest to the sportsman because they are commonly too small to be seen with the naked eye. These are the *Trematodes*, or flukes, and the *Acanthocephalis*, or thorn-heads. In conclusion, the doctor will assure his anxious readers that they need have no alarm in regard to the worms they have discovered; that they will do no harm, and that in fact in Italy there are certain kinds taken from seafishes which the epicures call "macaroni worms," and which they consider a great delicacy.

It may be food for meditation to some angler as he sits watching his trembling float, that he is about to bring the world to an end for a whole race of creatures when he draws out of its native waters the gleaming fish which is nibbling so cautiously. The salmon, in addition to a host of inferior animals, harbors at various times no less than sixteen different kinds of parasitic worms, or at least so many sorts have been discovered, and undoubtedly many others remain unknown. Four species are tape worms, and four round worms; the rest belong to the other groups mentioned. The yellow perch has been a favorite hunting ground for the helmintholologist, and he has already brought to light twenty-three species. The pike (*Esox lucius*) carries about with him at least twenty kinds. The parasites of our trout have escaped attention to a great degree, and it is credited with only one kind, but the European saibling plays host for five tape worms and three or four other worms. But one species is known to infest our shad, namely, the round worm, *Agamonema capsularia*, Diesing, although the German maifish (*Alosa vulgaris*), a close relative, carries at least seven. It must not be gathered from these facts that our fishes are more favored than those of other parts of the globe, but only that the parasites have been less carefully studied.

It was the shad worm (*Agamonema capsularia*) which caused some excitement among the fishermen in a certain part of New Jersey a few years ago, where it was found in great numbers. All anxiety was removed, however, by Dr. Leidy, of Philadelphia, the only American helmintholologist whose observations have been at all extensive, who pointed out the harmless character of the animal.

The carp, lately introduced from Germany by Prof. Baird, undoubtedly brings with it some of the twelve parasitic worms which make its life unhappy in its native waters. Every new animal thus introduced in this way adds more han one name to the faunal list.

I have in my possession, but yet undescribed, a tape worm which infests the herring of the great lakes. It is not content to live in the intestines of the fish, but at a certain season in its development must needs bore into the flesh, producing ugly marks and quite injuring the fish for sale, much to the disgust of the fishermen. It would appear from this that these worms are interesting not only zoologically but economically. In this and some other cases it is a matter of dollars and cents.

It seems that all our game fishes are more or less thickly settled, if I may use such an expression, but the census has been not yet carefully taken. Anglers and sportsmen generally would greatly aid in advancing the study of American helminthology if they would preserve in spirits and send to the Smithsonian Institution any specimens of parasitic worms which they find in the game fishes and other animals which their skill with rod or gun brings into their hands. The writer would be pleased to receive and to give information regarding any specimens sent.

Smithsonian Institution, June 8, 1881.

RECORDS OF FLY-CASTING TOURNAMENTS.

THE following records have been furnished us by Mr. Abel Crook, president of the New York State Sportsmen's Association, from the official records of their yearly tournaments.

We give it as it stands, although it is far from being complete in detail. The omissions are—the distance cast in many cases, the absence of statements regarding the cast whether it was actually cast or made up by an allowance for shortness of rod, and the absence of all data regarding the force and direction of the wind. In some cases the length of the rod is given, and in the record for 1871 it will be noticed that the second prize went to a shorter cast than the third one. Here is the record, it being for single handed casting in all cases except where "salmon fly-casting" is stated:

PALMYRA, MAY 29, 1866.

Seth Green, Rochester.....1st prize. } No score report.
H. H. Morse, Rochester.....2d " }

LE ROY, MAY 21, 1867.

H. H. Morse, Rochester.....1st prize. } No score report.
F. Arrowsmith, Le Roy.....2d " }

BUFFALO, JUNE 8, 1868.

Robert B. Roosevelt, New York.....1st prize. } No score report.
L. A. Pratt, Rochester.....2d " }

SYRACUSE, MAY 31, 1869.

Seth Green, Rochester.....1st prize, 84 feet.
G. A. Ostrander, Syracuse.....2d " 45 "

ROCHESTER, MAY 23, 1870.

L. A. Pratt, Rochester.....1st prize. } No score report.
H. H. Morse, Rochester.....2d " }

UTICA, MAY 22, 1871.

Charles H. Wells, New York..1st prize, 65 feet. Rod, 12 feet 3 in.
James Meyer, Jr., New York..2d " 60 " " 11 " 6 "
John B. McHarg, Rome....3d " 65 " " 12 " 7 "
John D. O'Brien, Oswego....4th " 60 " " 12 " 6 "
Charles Northrup, Rome....5th " 40 " " 11 " 9 "

Salmon Fly Casting.

James Meyer, Jr., New York..Special prize, 80 ft. Rod, 17 ft. 3 in.

SENECA FALLS, MAY 20, 1872.

Seth Green, Rochester.....1st prize, 65 feet.
R. W. Wood, Syracuse.....2d " } No score report.
W. A. Wyburn, Oswego.....3d " }

BATAVIA, JUNE 9, 1873.

R. Wood, Syracuse.....1st prize. }
W. A. Wyburn, Oswego.....2d " }
James Annin, Jr., Le Roy.....3d " } No score record.
H. H. Morse, Rochester.....4th " }

OSWEGO, JUNE 22, 1874.

Reuben W. Wood, Syracuse.....1st prize, 63 feet 6 inches.
S. M. Allen, Oswego.....2d " 65 " 6 "
C. Northrop, Pulaski.....3d " 63 " 6 "
J. F. Miller, Oswego.....4th " 62 " 6 "

PRACTICAL FLY-TYING.—A new edition of a useful work ("The Practical Fly-fisher, more particularly for grayling or umber. With ten plates, colored by hand, representing 120 flies, natural and artificial. By the late John Jackson, of Tanfield Mill. Third edition. London: John Slark, 12 Busby place, Camden road, N. W. 1880) has just reached us. It is a thoroughly practical work and wastes no space in theorizing. The plates are elegant. The fact of its having been republished long after the author's death proves it of value. Collectors have paid as high as 21 shillings for a copy of the second edition. The present one is published at 7s. 6d. It gives plain directions how to tie flies in general, and then states the materials for imitating natural flies, while on the opposite page is a colored picture of both the natural fly and the imitation as it should appear. It is not a complete angling treatise, but accomplishes what it claims to do, *i. e.*, to give directions how to make and use many flies, especially those designed for grayling fishing.

THE FLY-CASTING TOURNAMENT.

THE following are the rules of the N. Y. Sportsman's Association:

FLY-CASTING.

No rod shall be allowed over eleven feet six inches nor less than nine feet six inches in length, and it shall be used with a single hand.

A practicable line and reel shall be attached to the rod.

Three flies—one stretcher and two droppers—must be used and a casting-line, or leader, of single gut, of not less than eight feet in length.

No attached weight of any kind on the line or fly shall be permitted.

Allowance of distance shall be made according to the length of each rod of five feet for every foot of length and at that rate for each part of a foot.

Each contestant shall be allowed five minues for style, delicacy and accuracy, and five more for length of reach; and in case of accident, such as parting or fouling of the fly or line, the referee may allow additional time, in his discretion.

No cast shall be valid unless the line be retrieved.

The contest shall be as to distance, accuracy, delicacy and general style combined, and the distance, if practicable, shall be measured along the water. The casting shall be done with one hand across, against and with the wind.

The distance of the casting shall be measured from the stretcher fly to the tip of the rod.

SALMON FLY-CASTING.

The foregoing rules shall govern, except that the contest is to be with double-handed rods, which thall not be over twenty feet in length; the casting line or leader shall not be less than ten feet in length. Allowance for distance shall be made for length, but not for weight, and no more than one fly shall be used.

BASS CASTING.

Above rule (salmon fly-casting) shall apply, except that weight, as nearly equal as possible to the ordinary bait, shall be attached to the line, which shall be used by all the contestants. Lines and their arrangement are unrestricted.

NEW YORK, June 10.

To whom it may concern:

The Long Island Sportsman's Association, under whose auspices the State tournament is to be held at Coney Island in the week beginning June 20, having placed the entire matter of fly-casting in my hands, I will say: There will be three judges and a referee. The fly-casting will take place in the grounds selected, on Thursday, the 23d inst., and entries can be made on that day at the office or a few minutes before the casting, at the pond. The programme in full can be found in FOREST AND STREAM of May 26, as well as in the published bulletin of the association.

I have made application to have certain rules changed, as follows: Believing that if a man cannot cast as far with a nine-foot rod as he can with a longer one he had better provide one that he can do the best with, I have recommended that allowance for distance be abolished and only the actual cast considered. That, as heretofore all prizes have been awarded for distance alone, and none for style, delicacy and accuracy, I will set apart certain prizes to go to the ones whom the judges shall decide are best in these qualities and have a special casting for competition for them. Also, that the distance be measured from the advanced toe of the caster and not from the tip of his rod.

Also to abolish the allowance in salmon casting.

In bass casting the adopted rules are not explicit. A literal interpretation of them would allow a rod of twenty feet in length. This does not seem to be in accord with the practice of bass fishers either at Cuttyhunk or elsewhere. I have recommended that rods shall not exceed nine feet nor be less than seven feet in length, and that the attached weight shall be one ounce. On the latter subject there has been a difference of opinion which does not seem to be easily compromised. At Cuttyhunk and Pasque Island baits are used from menhaden which take about one-quarter of an eight-ounce fish, also the tails of lobsters of different sizes. Those who have advocated a four-ounce weight claim that lobster tails, shell and all, are mainly used and that the 10½-inch lobster law prohibits small ones. The majority of bass casters with whom I have consulted claim that one ounce of lead, with its smaller surface, affording less resistance, is equal to an ordinary bait, and so that weight has been fixed upon.

These things have not been definitely decided upon, but are now under consideration by the committee; and in conclusion I will say that I have no interest in any change suggested except for the general good of fly-casting and to elevate it from a mere side-show at the State tournaments to a place beside the other sports as one of the best, most graceful and beautiful of arts. FRED MATHER.

ANGLING NOTES AND QUERIES.

IS there any record of bluefish (*Pomatomus saltatrix*) caught in the Gulf of Mexico? When in Florida last year with Dr. Ferber, of New York, he told me that he caught one on the west coast of that State in January, 1880, north of Charlotte Harbor.

I think many of your contributors could give to your paper much useful and interesting information if they would enumerate the names of the food fishes of their respective localities. In that manner a knowledge of their geographical distribution may be obtained by those interested in the subject.

I have in mind a fish that I have caught in Canada and in Florida, and I would like to know where it occurs in other portions of our country. This fish, of the family of perciæ, is called by Prof. Cope *Pomoxys annularis*. It probably is closely related to the bream and the sunfish, both of which it much resembles, though it is thickly spotted all over its body. The largest fish that I have seen of this species weighed one and three-quarter pounds. In Canada they call it shiner. Along the south shore of the St. Lawrence River they call it moonfish. In Florida they call it speckled perch. I saw some in the New York Aquarium, which were labeled "Strawberry bass, Virginia." In the Canada lakes they are usually caught in the weed beds, in water from twelve to sixteen feet deep. A favorite place for them is also under rafts of logs. They bite best on

cloudy days or after sundown in the evening. They are frequently caught in winter through holes in the ice. There is a chain of lakes connected by drowned lands and canals with locks, making navigation practicable between Ottawa City and Kingston, the route being about forty miles north of the St. Lawrence River. The whole is called the Rideau Canal, and the largest body of water Rideau Lake, twenty miles long and from one to five miles wide, with an altitude of 175 feet above Lake Ontario. This work was constructed about forty years ago, prior to which time the shiners were not found in the lakes, though now they are very abundant in them.

In Florida I have caught these fish in the lake called Payne's Prairie, near Gainesville, and in Lake Maitland, in Orange County, but I have not seen them in the streams on the gulf coast of that State.

My much esteemed friend, the late Prof. Milner, once told me that he did not think the small mouth black bass existed in any of the waters on the Atlantic coast south of the James River in Virginia. Cannot some of your readers give information on that question?

I believe sheepshead fish are not found in fresh water in the Northern States, but on the west coast of Florida they appear to be equally abundant in fresh and salt water. In the small rivers there these fish are so plentiful that they do not find a sufficient quantity of their natural food, such as mollusks and crustaceans, so they accommodate themselves to their circumstances and eat grass, which grows in great profusion there, covering nearly all the bottom in some streams, except in the swiftly running channels. What they eat is a fibrous, moss-like species of confervæ which grows upon the broad leaves of the grass. I have examined many stomachs of these fish without finding anything in them except this grass. I sent some of this grass to Dr. Leidy, who examined it with his microscope. He told me that it was covered with myriads of diatoms.

About the middle of March these fish are heavy with spawn, after which time I could not find any in the fresh-water rivers, except small fish too young to spawn.

JOSEPH WILLCOX.

ANGLING AT MONSON, MAINE.

I DESIRE to call the attention of the sporting and angling fraternity to some of the many attractions which this place offers as a centre for trout and land-locked salmon fishing, gaming, etc. Monson is situated five miles from the Bangor and Piscataquis Railroad, and fourteen miles from Greenville, at the foot of Moosehead Lake, and eight miles from the head of Sebec Lake.

Hebron Lake is the first object that attracts the sportsman's attention as it is only a few yards from the hotel (Chapin House) in Monson village—a picturesque little village which nestles at the foot of this lake, and which is famous for its roofing slate industry. It is about three and a half miles in length and one mile in width, surrounded by beautiful hills and fine scenery, with Russell Mountain in the distance. Spotted and lake trout are very abundant. Anglers have this spring caught hundreds of them from this lake. They average 2 lbs. in weight, many from 2½ lbs. to 5 lbs.

The next most important resort in this vicinity is Lake Onaway sometimes called by the settlers Ship Pond and Greenwood Lake. The latter is eight miles and the former nine miles from here. Lake Onaway is its original Indian name, and there is a pretty legend about the capture of an Indian maiden connected with it. From the Chapin House the tourist rides in a carriage to a Mr. Holt's, in Elliottsville township a distance of eight miles. The scenery is charming and delightful all along this drive. When arriving at Mr. Holt's he is but a few rods from Greenwood Lake, a beautiful sheet of water several miles in area. He crosses this in row boats, walks three quarters of a mile, and then reaches Lake Onaway which is about five miles long and two miles wide. The lofty peakes of Bore Stone Barren and Benson Mountans rear their heads above, and it is surrounded by rugged hills, mountains and dense forests. Here the sportsman can with fly or bait secure an abundance of handsome, spotted and lake trout of different varieties, land-locked salmon, smelts, yellow perch, etc. If he is willing to walk a distance of one and one-fourth miles through the forest at the North he will be well rewarded by a visit to the two Benson ponds where spotted trout fishing is unequalled.

Besides these are also some thirty other ponds ranging from ten to two hundred acres in area within a radius of ten miles of this village. The accommodations are ample, as the Chopin House, kept by A. D. Sherman, is one of the best country hotels in Maine. Boats, guides and teams are furnished at reasonable rates to all fishing parties. Those desiring to visit this place will do well to correspond with E. R. Haynes, A. D. Sherman, J. F. Sprague, Frank Holt or W. S. Knight, Monson, Me., who will furnish all necessary information.

Among the prominent sportsmen who are visiting here at the present (June 9) are L. L. Hubbard, of Cambridge, Mass., author of "Hubbard's Guide to Moosehead Lake;" J. C. Withington, of the Boston *Journal*; E. T. Rowell, one of the editors of the Lowell, Mass., *Courier*; H. A. Hildreth, and G. S. Cushing, of Lowell, and G. A. Mathews, of Andover. The latter is arranging to supply several of the smaller ponds here with German carp. Messrs. John F. Sprague, Edwin R. Haynes, G. A. Mathews, E. T. Rowell and others obtained a charter from the Legislature of Maine last winter for the "Piscataquis Fish and Game Protective Society." The object of this association is to assist in the propagation of fish in the many lakes and ponds in this region, and also to aid in the enforcement of the fish and game laws now in force in Maine.

The forests here also abound with grouse and the ponds with duck. Other game of almost every kind is to be found in these woods. PISCATOR.

BLACK BASS BAIT.—Newark, N. J., is a pleasant place to live in, and is convenient for people who do business in New York. One of its newspapers, the *Sunday Call*, says:

"The common domestic cockroach is good bait for many kinds of fresh water fish, black bass especially, and no bait can be more easily procured. They will collect under a damp rag in quantities in almost any house in the city."

We give the item for the benefit of bass fishers, who no doubt can arrange with some friend in Newark for a supply. If they have no friend there write to the editor of the *Call*, who will doubtless respond with cheerfulness and alacrity. By the way, what are cockroaches?

Do you eat a 'possum hot or cold?

SOUTH FORK FISHING ASSOCIATION.

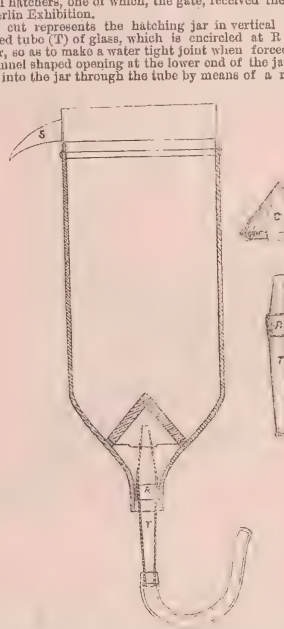
THE subjoined account of a Pittsburg, Pa., enterprise is taken from the *Post* of that city. Mr. W. A. McIntosh, the vice-president of the association, is also a member of the Pennsylvania State Field Trials Association, and of the Allegheny Sportsmen's Association, and is enthusiastic and accomplished in all matters pertaining to the sports of the field:

About two years ago the South Fork Fishing Association, which was made up of forty or fifty Pittsburg gentlemen, came into life. The association purchased from the Pennsylvania railroad the old reservoir of the canal, nine miles above Johnstown on the South Fork of the Conemaugh. This reservoir was built some fifty or sixty years ago, and cost between $200,000 and $300,000. With the reservoir the association bought about fifteen hundred acres of land. The reservoir was then converted into a lake. The reservoir originally supplied all the water for the portion of the canal between it and Pittsburg, and of course it was of larger dimensions. The lake is four miles long and three quarters of a mile wide, which is no inconsiderable sheet of water. The lake is formed by the South Fork of the Conemaugh and four other streams which are smaller. The dam is a magnificent piece of work and is three hundred feet thick at the base. After the reservoir had been bought from the State by the railroad company it was abandoned, and persons in the neighborhood destroyed about two hundred feet of the dam in order to get the stone for building purposes. This breach was repaired by the association at a cost of $15,000. The dam has been finished for some time, and the water is sixty feet deep at the breast of it. The object of the association was to have the lake as a fishing resort and in connection with it a club house. Last week the association did some fishing on a grand scale. An arrangement was entered into some time ago with parties at Sandusky, by which they were to supply the association with live black bass. Accordingly about one thousand bass were caught in the lake pound fisheries, and were kept alive in special reservoirs. The fish in weight were from a pound and a half to three pounds. On Tuesday last a car was sent to bring the fish to the lake. This car was arranged by Mr. W. A. McIntosh, who is Vice-President of the association. The car was fitted out with tanks to hold the fish, and the water was aerated by a very ingenious air-pump, invented for the purpose by Mr. McIntosh. Messrs. McIntosh and W. C. Taylor accompanied the car and superintended the transfer. On Wednesday night seven hundred fish were placed in the car. The water in the lake from which they were taken was at 72 deg., and by a plentiful use of ice the temperature was reduced to 45 deg. and kept at that point. The car was hurried through to South Fork station on the P. R. R., and reached there on Thursday morning. The station is two miles from the lake, and the fish had to be placed in casks, which were covered with an ingenious head, planned by Mr. McIntosh, and which prevented the water from splashing out, and at the same time admitted air. The casks were carried on wagons to the lake and the fish were liberated. Only thirty-five fish died in transit. This is the largest transfer of grown live fish ever made in this country. It is probable that the ride on the wagons killed the greater part of the fish which were lost.

The association is now building a fine club-house, which will soon be completed, and the place will then be one of the most delightful in the mountains. The lake is now in charge of a watchman, whose duty is to prevent depredations, and thus far he has been quite successful.

THE SARANAC REGION.—Adirondacks, June 1.—Well, I am here again as usual, and find many old friends to greet me. This time came in via Keeseville. The road to Miller's, formerly Martin's, is very good. A great change at the old-time hostelry on the Lower Saranac, many improvements being made, which will make it the Saratoga of the Saranacs, if not of the Adirondacks. I find registered here the Masons of New York; Bentley, of Rochester; Shaw, of Hartford; Dr. Cammen, of New York. Proceeding through the lake to Bartlett's Sportsmen's House, find Dr. Romeyn and family, of Keeseville, N. Y.; Messrs. Tileston, of Boston; Winants, of Bergen Point, N. J.; Col. T. J. Hoyt, of St. Louis, and Mr. Soms, of New York; Vice-President Wheeler and party, and others. There is only one Bartlett's in the Adirondacks. The house looks uninviting, but its comforts are appreciated by all who are its guests. At Covill's the VanWoerts, of New York, are stopping, and at the Prospect House on the Upper Lake, find Dr. Trudo and family; Mr. Penfold and sister, Mr. Meyer and daughter, of New York, with Mr. and Mrs. Weed, of Malone; also Mr. Alford and party, of New York. Trouting in this section is not what it was in former days, owing to the inattention paid to the game laws; and to secure good trouting and continuance of the sporting community the waters must be stocked. During the past winter, however, owing to the vigilance of Mr. Liberty, the game detective, the amount of trout taken through the ice was much less than in former years, but the decrease of trout is very marked and demands stringent laws to protect what is left, or we bid an everlasting farewell to the sport of trolling and fly fishing throughout this region. And is it not a burning shame that it should be thus? From parties visiting the Hitching pond region, I learn that excellent trouting still exists there, and also at Robbins on Little Tuppers. The houses here are all well kept. Derby, at the Prospect, knows well how to please his many guests. Many are expected at all points throughout this region. You will hear again from me while I wander around. L. MoN.

THE MEGANTIC DISTRICT—June 7.—I am having fine sport among the trout here on the waters in the vicinity of Megantic Mountain. A few days ago I paddled up quite near to a large bull moose that was in the water, feeding on lily pads. After gazing at me for some minutes he leisurely walked out of the water back into the woods. I met on the train to-day your Maine correspondent "Penobscot," which has increased greatly the pleasure of my trip here. "Penobscot" is a genial gentleman, and alive to all legitimate sport with the rod and gun except hounding deer. "None o' that for him." Still-hunting is his delight. Weather the past two nights very cold. Yesterday at 1 P. M. I enjoyed the luxury of a June snow-squall on the highest peak of Megantic Mountain. So far as I can learn I am the first white man who has set foot on the highest peak of this mountain. The magnificent view of mountain, lake and forest that I had there amply repaid me for my trouble in making the ascent. In descending we took the advantage of a long slide that starts within half a mile of the top and extends to the base and had a smooth though steep pathway down.—STANSTEAD.



Hollbird Shooting Suits. Upthegrove & McLellan, Valparaiso, Ind.

Fish Culture.

AN IMPROVED SHAD HATCHER.

WE have received the following drawing and description from Mr. Frank N. Clark, of the U. S. Fish Commission. It is in practical use now in the shad work at Havre de Grace, Md. This is the second improvement which Mr. Clark has put upon the conical hatchers, one of which, the gate, received the diploma at the Berlin Exhibition.

The cut represents the hatching jar in vertical section, with the feed tube (T) of glass, which is encircled at R by a ring of rubber, so as to make a water tight joint when forced down into the funnel shaped opening at the lower end of the jar. The water is fed into the jar through the tube by means of a rubber hose;

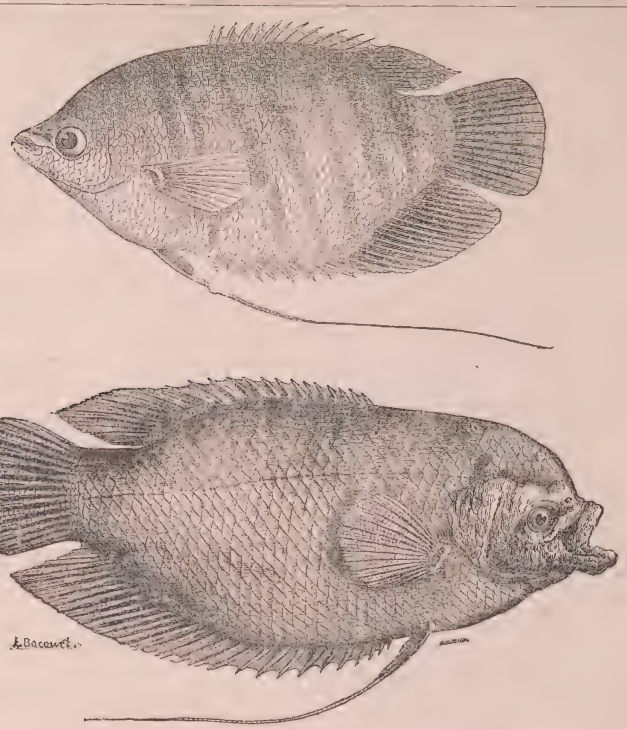
the force of the current is arrested and broken by a heavy, non-corrosible hollow metal cup or cone (C), which rests on the inside of the jar on three short feet of equal height. The current from the tube impinges on the under side of the hollow cone, and is deflected downward, to escape upward into the space above. At three points between the feet upon which the cone rests the force of the current is regulated by the supply cock, and as the water escapes from under the edge of the hollow cone the entire mass of eggs is kept in the gentlest possible condition of motion, being thrown gently outward and upward all round, except at the points where the feet of the cone break the current. The only detachable portions of the apparatus are the cone and the tube, shown separately at the right. The cone, of Britannia or block tin, is sufficiently heavy to remain in position by its own weight. The water which is to escape passes out of the jar through the spout (S), which is closed with a wire-cloth gate or slide when desirable, at the top, which is part of a japanned tin rim that is cemented to the top of the jar, and rests on a rim or flange of glass just below it. The jar is ten inches in diameter and two feet high from the point where the cone rests, and will hold 500,000 eggs of the shad.

THE GOURAMI.

IN view of the proposed introduction of the gourami into our more southern waters, the following article by Col. Nicolas Pike, which he has kindly permitted us to publish in advance of his book on the fauna of India and the fishes of the Indian Ocean, will be read with interest. The cut to which Col. Pike refers is not yet finished, and we substitute two cuts of the fish, drawn by Prof. Gill.

The gourami, a native of China, was introduced into Mauritius in 1761 by Messrs. de Surville, Yoanne and Magay, of the French Navy. They most probably brought it from Java, where it was seen and much admired by Commerson, who found it kept in large earthen vessels by the Dutch colonists, and was much pleased to find it in the Isle of France on his arrival in 1770. From the Isle of France some couples were taken to Bourbon, where they existed and throve for many years in some ponds at St. Suzanne, but, to the great disappointment of those who possessed them, it was found they did not breed.

The cause of this was not discovered till about twenty years after their introduction. It was then ascertained that the lowness of the temperature in the high localities in which they had been placed was the cause of their sterility, and on removing them to spots on the level of the sea they began to breed freely.



The gourami is a remarkable looking fish, and the young differ widely from the adults. In the former state the muzzle is attenuated and produced, with a concave forehead, and the sides show eight vertical bands. In its second year the gourami begins to assume its distinctive garb. The stripe gradually disappear. The white, tinged with lilac, which formed the ground color of its body, changes to a bronze tint, with golden reflections on the sides and brown on the back, and the head is tinged with pink. The colors of the male are lighter and brighter than those of the female, and he is also distinguished by a lump on the forehead as well as on the symphysis of the jaw. The eyes are small, prominent, and set high and forward, the nostrils crescent shaped. The proportions of the gourami in length and breadth are as five to two.

It is a thick, solid fish, and possessed of great strength, and unless a net be held a foot or two above the water, it will leap over it to a distance of several feet outside. When caught and laid on the ground it will leap to a height of three or four feet, and unless promptly secured it will batter itself to pieces, as it is most tenacious of life.

The gourami is not a fish of rapid growth. When just hatched it is less than half an inch long and very flat. It attains a length of about four inches the first year, seven or eight the second, and ten or eleven in the third, when it begins to breed and is considered better for the table than at any other period, and weighs about three pounds.

They are sometimes met with two feet in length, weighing twelve or fourteen pounds, but the flesh is not nearly so good as that of younger subjects.

Few fishes are more accommodating as to food than the gourami; frogs, shrimp, insects, leaves, fruit, grain, roots or bread, all are acceptable, and even the leaves of the acrid *Arum colocasia* (large leaved souge) are eaten with avidity. Nor is it more difficult with respect to habitation. The rapid stream or stagnant pool appears to please equally well, provided food be abundant.

YOUNG GOURAMI AND OLD GOURAMI.

The thing most hurtful to the gourami is cold, of which they show their abhorrence by burying themselves in the mud or taking shelter amongst weeds during the cold season. An intelligent captain, who had on board a quantity of these fish destined for Australia, found that when the thermometer reached 66 deg. Fahrenheit they all died. This must have been caused by some sudden transition of temperature, for they thrive and breed freely in the Mauritius where the mercury often descends to 50 deg.

They love to bask in the sun, and always choose a spot for their nests to which its beams have full access. These nests are formed by the joint labor of the male and female, and consist of a mass of aquatic plants or any fibrous substance they find in the water, matted together so as to form a tissue of considerable tenacity, further strengthened by the web to which the ova are attached. These are deposited in the nest, which is fastened to any suitable body, and always close to the surface of the water. That formed by a pair of large fish is as big as a man's hand, of a somewhat oval form, and employs the fish about a week to make it. As soon as the spawn is deposited, both male and female mount guard over the nest, and will attack any fish that approaches, and such is the violence of their onset that even large eels are fain to fly from them.

The spawning time is in March and October, and the eggs are hatched about a fortnight after deposition. The fry are of a violet tint when they emerge from the egg, and the first ray of the ventrals is then much longer than their bodies. This does not grow with the fish, so that the larger the fish the shorter in proportion is the filament. The fry remain about the nest for eight or ten days, during which time they appear to be under the protection of the parents, after this they swim off in schools.

Two fish are particularly injurious to the propagation of the gourami—the golden carp and a little fish called in Bourton, *prisonpiat*, and in Mauritius, *Marie Jeanne*. They are very fond of the spawn, and I suppose from their small size escape the notice of the guardians of the nest.

Notwithstanding the variety of tastes, the flesh of the gourami is universally esteemed. It is of a light straw color, firm, and easy of digestion. The fish of a rocky river is much better tasted than that of a muddy pond, but they nowhere attain so fine a flavor as at the embouchures of rivers where there is a mixture of salt water with the fresh.

The sketch is from an old gourami weighing about eight or ten pounds, caught at Riche Maire, where I had a fine days' sport with my friend, M. Ange Renard. Even at this size the serrations are almost effaced at the border of the præoperculum, which are very sharp in individuals about half the growth.

This fish appears to be blessed with longevity, as many fresh water fish are. I have been told of one big fellow known to have lived in one bassin for thirty years, that was perfectly tame and would come at a whistle to be fed, and would eat out of the hand. He was evidently lord of the place, for although there were a number of others of all sizes they dared not approach to take the bread thrown in till he was too busy eating to notice them. The rash youngster that presumed to take the first piece was summarily chastised.

A small barrel, with the ends knocked out, was fixed in the bassin, and the water was clear enough to watch the operations of the fish. When a nest was required, the patriarch would busy himself with the female, catching the dead leaves as they fell in, straws, or anything else that suited his purpose, and carry them into the barrel till there was quite an accumulation of debris. When the female entered to lay her eggs he jealously guarded the nest and kept the whole community in a ferment, chasing away any fish that came within a yard of the barrel. Even when food was offered he would hastily snatch a bit and rush back to make a scattering among the curious who thought to take advantage of his absence, and they had a bad time all round whenever there was an increase to the family, pending the female helping also to chase intruders till the young were hatched. The old fellow was very ugly, and covered with bosses and excrescences. He came to a bad end, for during the inundation of February, 1865, he, with all his mates, was washed out of the bassin by the waves of mud that poured into it, and all were found dead next day.

Knowing that the public gardens at Pamplemousses were stocked with gourami, carp, clatte, eels, etc., I made application to Sir Henry Barkly, the governor, for permission to sweep my nets there at a proper season for procuring specimens. In 1873, when about leaving the island, I conceived the idea of introducing the valuable gourami into the United States. I procured a number of young gourami—I handled the fish myself, as I had had many years experience in transporting fish—and I took them in safety to Port Louis, about nine miles. It was then a temperature of about 90 deg. Fahrenheit. I did not lose a fish, but placed them safely in my tanks prepared for them, and they soon became accustomed to their new quarters. I was careful in noticing the temperature of the water two or three times a day, as when it is too low they become sluggish and will not feed. It had been my intention to arrive in New York in summer, but business connected with the consulate detained me till autumn, and, after going on board, the temperature lowered so rapidly it was impossible to keep them alive, and one by one they died off.

The introduction of the gourami into the waters of the United States would be a great addition to our ichthyological treasures. They may, with great care, be brought to the southern shores of California from China. Perhaps when well acclimated they might by degrees be introduced into higher latitudes than those now assigned to it.

I made some experiments with hatching the eggs, but though they were taken apparently alive and in good condition from the nest, I failed in every instance, even with the greatest care. I did this at the request of the late lamented Prof. Agassi, to whom everything connected with fish in Mauritius was of such deep interest, and to whom I am indebted for most valuable letters appreciating the services I was able to render him in ichthyology in that island.

Weakness and sickness changed to health and strength with Hop Bitters, always.

The Kennel.

FIXTURES.

September 1, at Pittsburgh, Pa. Close of entries Pennsylvania Field Trials. First Annual Derby. I. R. Stayton, Secretary, Pittsburgh, Pa.

October 4, 5, 6 and 7, at St. Louis, Mo. St. Louis Kennel Club Third Annual Bench Show. Charles Lincoln, Superintendent.

October 1, at New York City. Close of entries Eastern Field Trials. Trials commence on Thanksgiving Day. Jacob Pentz, Secretary, P. O. Box 274, New York City.

November 28, Louisiana State Field Trials, Edward Odell, Secretary, New Orleans, La.

November —, at Grand Junction, Tenn., National American Kennel Club's Field Trials. Jos. H. Dew, Secretary, Columbia, Tenn.

SNIPE SHOOTING WITH JOHN DAVIDSON.

THE first day of the merry month of May was pleasant, the air bracing, and the reports of good snipe-shooting stimulated our hunting propensities to try the cunning of our hand upon the multitude of birds that were said to be feeding in the marshes of Monroe. We left our home on a bright and beautiful afternoon, and taking the Detroit train, were soon at our destination. On every side, beneath the little hills and nestling along the edges of the Huron River we saw peering forth from their long winter hiding places the wild flowers strewing the grounds here and there with their variegated tints and filling the atmosphere with their grateful odor and beauty. The tiny violet, the cowslipper and the daisy blush out in all their springlike garniture and fragrance. On the prairies, through the oak openings and in the deep woods the early grass shoots up in every direction and tells us that genial spring, with its smiles and flowrets, is fairly before us.

Alighting from the car, we are suddenly gripped by the hand, and are made thrice welcome by the smile of good will and kindly feeling that animates the face of our whilom friend and host, Davidson. Getting all our traps stowed away in the comfortable and roomy hunting-wagon, our seats occupied and the ponies rested and anxious for a start, John and I indulge in a mutual and hearty hand-shake, and we are off for his farm home, about two miles from the city of Monroe. The road is level, the ponies spirited, the miles speed rapidly, and in a jiffy we are welcomed by his kind and hospitable wife and daughters.

In the morning we arose early and hailed the glorious orb as it slowly rose in the east, scattering its mellow light over hill and house top, till the whole earth seemed filled with his genial glow and the kindling azure and the mountain's brow, illumined with fluid gold, betoken gladness at his near approach.

Mr. Davidson has recently purchased a beautiful farm of forty acres, and has erected a home whose architectural design is in quiet harmony with the features of the surrounding scenery. His kennels, unlike the solitary ones of his previous place, scattered here and there over a wide expanse of territory, are now built neatly and tastily in the rear of the house, and are divided into compartments having especial reference to the scientific and proper culture of man's noblest companion and friend. Everything around shows the care and attention that is given to this branch of business; and no one can feel greater pride and take more interest in all that pertains to the kennel than Mr. Davidson. We pass from kennel to kennel and see all his magnificent specimens of the English field setter, and our eyes light upon four beautiful white and black ticked female scions of the famous Rob Roy strain. Adjoining this are some handsome descendants of his prize winner Afton. His four kennels contain more fine specimens of the genus dog than I ever saw gathered together under one owner before. I suggested that I would like to see them put out into the field, and two Rob Roy bitches, less than two years old, were first sent off, and they showed a rapid and fine work, keen noses and perfect scent, obedience to the hand and whistle and general grand work as ever was seen. Two others were then dispatched, and their work was so beautifully done and their forms and carriage so gracefully shown that I hardly knew to which pair I would award the prize if a competitive trial was intended. Thus we went through his kennel, dispatching the noble animals and watching their movements, till I almost adopted the conclusion that the education of dogs for field work was really a grand and beautiful art, and few men hold a higher rank in such kind of instruction than Mr. Davidson.

Breakfast over, our attention was given to preparations for the day's sport, and taking our seats behind that same pair of ponies we were soon carried to the place where our day's shooting was to commence. Putting the two dogs, "Johnnie Faa" and "Tyne" down, off they started at a slashing gait, ranging and quartering in beautiful style. Over marsh and swamp they go, when of a sudden "Tyne" dropped to a point, "Johnnie" backing handsomely. John motioned me forward, when I flushed and killed the bird, both dogs dropping to shot, and the bird was handsomely retrieved by "Tyne." This was the first blood, and gave us more encouragement for the future sport. The dogs were again ordered on, and both dashed off at a clipping gait and in good style, showing better speed and wider ranging than before, countering and quartering with a precision almost marvellous to behold, when of a sudden "Johnnie" dropped to a point with the bitch at a distant part of the field. Now it was John's time for a pull, and he flushed the bird and killed it in splendid style, both dogs down. By this time we had hunted over considerable ground, and found the birds so scarce that we concluded to try our hand on other fields. Here we found more game, and John keeping his dogs closer in hand, we succeeded in bagging quite a number, which, added to our already small store, gave us a fair bag for this season. The birds were both scarce and wild, and considerable difficulty was experienced in getting near enough to make our shooting sure. We next concluded, after taking a little rest for refreshments, to make our way homeward by a circuitous route, and try our luck along the margin of a small stream that afforded good feeding-grounds for these peripatetic fenfowls. The journey was long to me, and I was getting somewhat tired after the fatiguing walk of the forenoon, up to my knees at times in mud and water. Still I jogged on, and succeeded in getting two or three shots only the balance of the day. But I was abundantly satisfied and pleased with the working of the dogs, for I have never seen better work done by two dogs in any field. I believe I have one of the very best field bitches in the country, a native Gordon setter, somewhat celebrated about these parts, and admired by all who have shot over her, but for *rapid movements*, I am willing to acknowledge the corn that John's dogs can beat mine, but I cannot for any thing else give up my predilections for my own "Fannie."

We reached home about 5 o'clock in the afternoon, bagging nineteen as pretty snipe as ever passed human palate. After a little rest John called me again to see his dogs exercise, and the first put out were Abbess, by Afton and Faunie, and Glenfiulass, by Rob Roy and Doll. This was the team first started in the morning, and I think they are his favorites; surely they were mine. Off they scampered, and in less than a minute they were "lost to sight but to memory dear." A shrill whistle brought them in, and at the lifting of the hand, down they went as if shot. Next, Doll, by Prince and Dora, and Glengyle, by Rob Roy and Doll, were sent out, and seeing the beautiful work done by these I felt like the poet who said something like this:

"How happy would I be with either, if the other sweet charmers were away."

Ailss, by Royal and Nina, and Nellie Gray, by Afton and Nellie, concluded the trial show, and a finer lot of bitches for form, style and field work is hard to find anywhere, and I fancy some of our friends at the next Derby will have to look out sharp for their laurels if Dr. Wilson enters either of these flyers. Prince of Orange, Prince Charlie and Scottish Chief, the finest, I think, among his stud dogs, were also given a fly over the daisies, and it would be invidious in me to make comparisons where all were so fine and worked so handsomely.

We spent the evening together, talking over the prospects of State field trials, where the sportsmen of different States could come together annually and inaugurate a system of field trials for each State. This would create a new interest and bring in many who now know not the value of field trials than what they read in the sporting journals. I am sure if this was advocated by some of our leading sportsmen there would be no difficulty in getting up a field trial in our own State which would be the initiative of a more satisfactory and pleasing trial for our dogs than the great national Derby from which so many of our younger sportsmen are shut out. Now let us all pull together and inaugurate a State field trial this fall, where we can all attend and enjoy the pleasures and profitable relaxation that follow these really captivating field sports. We have an abundance of birds, any number of sportsmen, and the finest country in the world to run our dogs over. Who will take the initiative? Let us have a committee appointed, but one which will represent all classes of our citizens, and let the good work go on.

SENEX.

PET DOGS AND HOW TO TEACH THEM.

I HAVE often wondered, when seeing what trouble and care ladies take over their pet dogs, and the admiration they always express for a dog which is clever at tricks, that they do not sometimes try to teach their favorites to acquire the accomplishments they admire, and go beyond the "begging" and walking on the hind legs. Men also frequently give large sums for dogs which have been trained by professionals, but yet very few think of undertaking their education themselves. Surely it must afford much more pleasure to any one to watch the intelligent actions of an animal which have been called forth by the owner than to purchase it at a high price after its *natural* intelligence has been so cultivated.

One of the chief reasons for this, I have no doubt, is that people are too indolent to undertake what they suppose would be a wearisome task; but I think there are also many who have quite sufficient energy, but who labor under the common mistake that it is a very difficult thing to do, and that it requires a special master mind to teach and train dogs. This I hold to be an entirely erroneous idea, and am decidedly of opinion that any one who goes the right way to work, and perseveres, will succeed. As to its being a wearisome task, I have always found it the very opposite, and highly interesting and amusing, as I am sure it would be to any lover and admirer of the canine race. In the belief, then, that there are many who would like to amuse themselves by training their own dogs to perform, but who do not know exactly how to set about it, I shall now do my best to instruct them by my own experiences.

There are, undoubtedly, some kinds of dogs which are more ready to learn and of quicker intelligence than others, such as poodles and Dandie Dinmonts; but I have seen performing dogs of almost every kind, and it is possible to teach any dog of ordinary intelligence, if he be taken in time. That is one of the great essentials in all kinds of education, from the grounding of the young classical scholar or the initiation of the juvenile sportsman, to the puppy, that their instruction should be begun at an early age; in the case of the latter he should be taken in hand when between six months and a year old if possible. There is still one greater essential which is of more importance than all others, and which relates to the teacher; it is patience. Without patient, good temper comparatively nothing can be done with a young dog, and

I always made it a strict rule, when I began, that if I lost my temper over trying to teach any one trick, that particular one was to be given up as a punishment for myself. The system which must be pursued all through is "kindness tempered with severity;" and the canine law must be opposite to the human, not "whoever does wrong shall be punished," but "whoever does right must be rewarded."

Hardly ever strike your dog during his lessons, and, especially, never with the hand, which ought to be looked upon as containing rewards, and not covered away from when raised. A cuff upon the head, as I have seen given, quite drives all ideas out of it, and stupefies the owner for the rest of the lesson. The dog should be taken into a room with no other occupant but his master, as the presence of any one else always distracts the animal's attention; and it should be always in the same room, and about the same time of day, if possible, because then he knows, when you begin, that he is intended to learn. There must be a supply of dry biscuits, or something of which the pupil is especially fond, close at hand, so that at first he may receive a reward for the first sign of doing what you wish. It is important that the word by which the dog is to distinguish the particular trick which he is meant to do should be well impressed upon his mind by frequent repetitions during the lesson.

I will now point out some of the easiest and yet most amusing tricks which may be taught, and a few hints on the method of doso, and commence with the easiest tricks of all, which may be of use to some, though many people get as far as the first two or three.

SITTING UP OR BEGGING.

Sitting or begging is soon taught. Take the dog up, and sit him down in a corner of the room, so that he has his back supported by the angles of the walls, supporting him in front with the hand, saying, constantly, "Beg, beg!" After a few moments, reward him, and very soon he will come to get up into a sitting posture of his own accord; but he must not be allowed to stand on his hind legs, as most dogs try to do, but must sit down upon his hind-quarters. When he has learned to balance himself in the corner, he must be advanced to a plain wall, and then in the open room.

WALKING ON THE HIND LEGS.

Walking on the hind legs may next be taught by walking him round the room with his fore-paws resting upon your hand, a piece of biscuit being held above him with the other hand, saying, at the same time, "Walk, walk." The support of the hand must be gradually decreased until he walks alone.

SHUTTING THE DOOR.

Shutting the door is taught by placing the fore-paws of the dog, who must be standing on his hind legs, against it. Then, by pushing him forward, cause him to shut the door, saying, "Shut it!" and give him biscuit after each time it is shut. After some time, with encouragement from hand and voice, he will jump against the door and close it himself. This trick may be shown off with effect by entering a room, followed by your dog, and leaving the door open after you. Then turn round and say, "Bude dog! where are your manners? Shut it!"

SHOOTING DEAD.

Shooting dead.—Make him sit up, push him gently over on his side, stretch him out on the floor, and hold him down, saying "Dead" in an impressive voice to prevent wagging of the tail. This must be repeated until he falls "dead" from the sitting-up posture of his own accord, when it is time to begin shooting him, which is done with a pistol extemporized from your fingers thus: Extend the index finger of the left hand, pointing at your doomed canine, and holding the thumb perpendicularly in the air. Then place the tip of the index finger of the right hand inside the left thumb, and snap loudly the second finger and thumb of the right hand. This must be done at the same time as saying "Dead!" but soon the word "dead" may be dispensed with, for he will expire to the pistol alone. The great thing in this trick is to get him to fall promptly at the snap of the fingers, and not before, which he is apt to do when he knows what is coming.

GOING INTO THE CORNER.

Going into the Corner.—Place the dog in a corner of the room on his hind legs, with his nose in the angle of the walls, repeating "Corner," and make him stay there until released by word. After a little practice send him from gradually increasing distances to do the same. If he turns his head round while standing there, say sharply, "Face to the wall!" when the tone of scolding will make him turn it back again.—V. M. B. in *Live Stock Journal*.

SCHEMES FOR A DOG'S RESCUE.

INTEREST in the cast-away dog, now living on Taylor's Island, in full view of the railway Suspension Bridge, manifests itself in numerous plans for his release. On the arrival of the Atlantic and Pacific each day about noon, each day great numbers of passengers leave the trains and walk across the bridge to see the monarch dog. Many of these commence to speculate as to the best mode of rescue. The first plan proposed was that which was attributed to Mr. Clifford Kalbfleisch, the ticket agent at this place, but which we understand was really the invention of Mr. C. E. Lewis, of the customs force. It was simply this:

"After the animal has been left without food for two or three days, and is famished, a bag with a spring attached to it, and containing a piece of meat, will be let down. It is expected that when the dog seizes the meat the trap will spring upon him, and he will be drawn up in the bag to the bank above."

Some person at Raleigh, South Carolina, wants the following scheme:

"Take a small line, make a slip loop on it, cast it so as to lay the loop flat on the rock, watch closely the movements, when the dog puts a foot in the loop, draw quickly so as to fasten the foot or leg in the loop."

"A friend of the dog" writes from the Shaker Settlement, N. Y., the following:

"Take a large, deep basket, in the bottom of which put a piece of meat, lower the basket by four ropes fastened to the four corners of the basket. The dog will naturally get in the basket for the meat. Then commence hoisting the basket, and in all probability the dog will then remain quiet and not attempt to jump out, and thus be rescued."

"A disciple of Walton," who is believed to be fisherman Waldron, suggests the following novel scheme:

"It is a mistake to suppose that fish only can be caught with a hook. Take a large bass hook, bait it with fresh beef, let it down with a strong line, and when the dog grabs the beef let two men with the shore end run for the railroad track, and they will land the dog on the bank."

A humane berson suggests the following:

"Take a five pound can of dynamite, insert an electrical wire, put over the can a tube just large enough for the dog to crawl into; in bottom of tube place meat, when the dog crawls into the tube pull the wire; the dog will be blown on the bank."

A sporting man is the author of the following:

"The dog, I understand, is a bull dog which is always a fighting dog, and his late solitary life has undoubtedly increased his nerve. Attach a rope to the tail of another fighting dog and let him down to Taylor's Island, when they are clenched in deadly strife pull up on the rope. A bull dog never lets go as long as he is face to face with his adversary, as he would be in this case, so the rescuing dog would be pulled up by the tail."

The following simple plan is published in the *Daily Gazette*:

"Take a barl and bore some holes in the top and put a rope in; place some straw in the barl and carefully let it over the Cliff down on the iland. Let it stay there for a few days, and you will find that the dog will soon use it for a place to slep. Watch it, and when he has gone in some night and got to slep, carefully raise it up, and my word for it, he can be landed safely."

The above is taken from the *Suspension Bridge Journal*. An account of the dog was published in the FOREST AND STREAM of May 12.

THE NORFOLK SPANIEL.

[Reprinted from Vero Shaw's "Book of the Dog," furnished to the FOREST AND STREAM by the author, through the courtesy of Cassell, Petter, Galpin & Co., publishers, No. 739 Broadway, New York.]

THE last variety of the Springer family which we shall treat of is the Norfolk spaniel, which is a breed highly prized if met with pure, though there are, comparatively speaking, very few dogs of the variety which come under this category, as it has been very much crossed with other breeds of spaniels. Interesting as the Norfolk spaniel most undoubtedly is, there is not much in the way of pedigree for him to claim, though he is credited with having been for years a protege of the Duke of Norfolk. Formerly he was much darker in color than nowadays, for he had usually a great deal of black about him. Now the color mostly met with in dogs of this variety is liver and white, though good specimens of the black and white variety are often to be met with.

The Norfolk spaniel does not hunt mute; on the contrary, he is disposed to throw his tongue when questing; but mute hunters have occasionally been known, though their appearance is very uncommon.

Youatt in his work gives his opinion regarding the origin of the Norfolk spaniel, which may be taken for what it is worth by admirers of the breed, as he appears to have devoted but a very small portion of his time to the consideration of the spaniel family. In speaking of the Springer, in 1845, he wrote:

"From a cross with the terrier a black and tan variety was procured, which was cultivated by the late Duke of Norfolk, and thence called the Norfolk spaniel. It is larger than the common springer, and stauncher and stouter. It often forms a strong individual attachment, and is unhappy and pines away when separated from its master. It is more ill-tempered than the common springer, and if not well broken in is often exceedingly obstinate."

The above is the only theory which we can discover of the origin of the Norfolk spaniel, who unfortunately appears to have fallen into disrepute since the blacks began to appear in numbers. However, in the present day black and tan is by no means recognized as the correct color for a Norfolk spaniel. On the contrary, this dog is, when found pure, most usually a liver and white, the white spots being heavily flecked with liver, which gives him a very handsome and showy appearance. A blaze of white up the forehead adds a great deal to his beauty, and a white tip to his tail, which, as in other breeds, should be docked short, is an additional attraction, though, of course, these may only be taken as fancy markings, and would merely count as such in competition.

The Norfolk spaniel will be no mean assistance to the sportsman in pursuit of water-fowl, for he will take water readily, and retrieve well—though hard in mouth. On land he is also a very handy dog, and will face the thickest coverts pluckily, and may therefore be taken as a valuable dog, whose breeding should be encouraged by sportsmen of all denominations. He is not mute.

In appearance the Norfolk spaniel is inclined to be higher on the leg than either the Sussex or the Clumber; his head is lighter than the latter's, and he is, in short, finer all over. Although longer in his leg than these breeds he is much lighter in bone, and has been rather aptly described as a thick-made English setter. The height of a Norfolk spaniel is about nineteen inches, but owing to the frequent crosses which have been made between this breed and the Clumber and the Sussex, a great difference of height is perceptible in so-called perfectly pure-bred Norfolks. In the face of so many cross-bred spaniels, which are spread about the country and styled Norfolks by their owners, there is a considerable difficulty in giving a description of what a Norfolk spaniel should be, but the chief difference between a dog of this description and the Clumber has been given above. As regards a scale of points for judging at their club-show, the standard which is given for the black spaniel will apply almost as well to the Norfolk, as will be seen from the annexed:

STANDARD OF POINTS FOR JUDGING NORFOLK SPANIELS.

	Value.
Head	5
Ears and eyes	5
Body and chest	10
Legs and feet	5
Loins	5
Coat	5
Color and markings	5
General appearance	10
	50

PHILADELPHIA BENCH SHOW.—Mr. G. W. Smith, Secretary of the Mount Airy Kennel Club and Game Protective Association of Philadelphia, informs us that at a meeting of the organization, held at their club-room on June 6, a committee was appointed for the purpose of arranging for a bench show in the city of Brotherly Love during October next. While, of course, a show at any time is better than no show at all, yet the month of October is one in which many dogs are in the field, and therefore we should think September a more convenient season in many respects.

THE NEW YORK CITY DOG ORDINANCE.—The city ordinance regulating the ways and wanderings of the canine family of this metropolis was introduced by Alderman Morris, and adopted by the Common Council, in the latter part of the spring of 1877, and went into force in the summer following. Since that period the enormous number of 33,864 dogs have perished by asphyxiation under the law prescribing their doom, and the city has realized from the granting of licenses the sum of $42,461.

The subjoined table shows the number of dog licenses issued, the amount paid to the city and the number of dogs drowned from 1877 to 1880:

	Permits granted.	*Amount received.*	*Dogs. drowned.*
1877	12,002	$24,004	9,661
1878	5,335	6,548	7,200
1879	4,217	5,747	8,500
1880	4,311	6,162	8,503
Totals	25,865	$42,461	33,864

From May 1 of this year to June 11, 3,175 permits for keeping dogs have been granted. For every dog captured and impounded the dogcatcher gets thirty cents from the city. The number of dogs received at the pound last year was 8,862, and the number redeemed was only 83. The amount paid as rewards to catchers was $2,596.50, and the amount received for redemptions, $252. Cash disbursed for feed and sundry expenses, $322.02. Since the opening of the pound on the first of this month, 317 dogs have paid the penalty of death for their defiance of the provisions of the city ordinance regulating their rambles through the city.

From the above figuring it will be seen that but few dogs of value are ever taken to the pound, and although unquestionably many are captured, the dog catchers know a trick worth two of that.

KENNEL MANAGEMENT.

156. C. G., Pittsburgh, Pa.—My coon dog, eight years old, had a bad cough all winter; runs occasionally at the nose. It seems to come from his throat; it also makes him hard of hearing. Ans. The warm weather will probably cure him, if you take good care of him and feed him properly.

157. W. B., New York City.—Low diet with no meat; an occasional purge and plenty of exercise will soon reduce your bitch's fat and improve her health. Probably you were mistaken about her having been with pup.

NEW MARKET, Md., June 8, 1881.—*Editor Forest and Stream:* In a late issue of FOREST AND STREAM you give cuts of the beagles Rattler, Major and Dyke, and of Dyke you say "his weight is 20 lbs. and his spread of ears 16½ inches." Have you not made a mistake in these measurements? I have several times seen this dog belonging to Messrs. Bond and Maddux, and I feel sure that his weight is nearer 30 lbs. than 20, and his spread of ears does not exceed 14½ inches. I hardly think these gentlemen could have given these measurements, as they know they are not correct, and it must be a typographical error. MOLLIE COTTONTAIL.

[The measurements and weight of Dyke were sent us by Gen. Frank A. Bond, and we presume they are correct.—ED.]

KENNEL NOTES.

**** Breeders and owners of dogs are invited to send memoranda of names claimed, bred, whelps, sales, etc., for insertion in this column. We make no charge for the publication of such notes; but request in each case the notice be made up in accordance with our form, that the name of both owner and dog be written legibly, or printed, and that the strain to which the animal belongs be distinctly stated.*

NAMES CLAIMED.

Gypsy Queen—Mr. Schuyler Waldren, Brooklyn, N. Y., claims the name of Gypsy Queen for red Irish setter bitch whelped May 14, 1880, by Dan out of Maud, the property of Mr. Horace Silsby, Seneca Falls, N. Y.

Princess Loo—Mr. E. Langdon Wilks, Galt, Ontario, claims the name of Princess Loo, for black, white and tan English setter bitch whelped October 19, 1880, by imported Prince of Orange out of Mr. Davidson's Doll

Garnet—Dr. J. J. Jennelle, Du Quoin, Ill., claims the name of Garnet for red Irish setter dog puppy, whelped April 5, 1881, by Elcho II. out of Doll.

Nannie—Dr. J. J. Jennelle, Du Quoin, Ill., claims the name of Nannie for Irish setter bitch puppy whelped April 5, 1881, by Elcho II. out of Doll.

Count Ringen and Blue Gown—Mr. Wm. H. Hawkins, Fall River, Mass., claims the names of Count Bingen and Blue Gown for black, white and tan setter dog puppy and black and white ticked setter bitch whelped December 5, 1880, by Blue Dan (Dash III.-Opal) out of Flake (Druid-Spring).

Kadi—Mr. Everett Smith, Portland, Me., claims the name of Kadi for red Irish setter dog puppy whelped November 13, 1880, by Cale out of Nell.

Blue Dick—Nelson D. Hatheway, M. D., Middleboro, Mass., claims the name of Blue Dick for black, white and tan setter dog puppy whelped December 5, 1880, by owner's Blue Dan (Dash III.-Opal) out of Scanlon's Flake.

Mickey Free and Biddy Muldoon—Mr. Wm. W. Castle, Portland, Maine, claims the names of Micky Free and Biddy Muldoon for red Irish setter dog and bitch puppies whelped November 13, 1880, by Cale out of Nell.

Diorado—Mr. J. Palmer O'Neil, Pittsburgh, Pa., claims the name of Diorado for his white and black setter puppy, whelped April 27, 1881, by Thunder out of Best.

Clover—Mr. H. C. Shearman, Bradford, Pa., claims the name of Clover for pointer puppy bought of Detroit Kennel Club, by King Bow out of Doi.

Ned—Mr. E. Osborn claims the name of Ned for puppy whelped April 26, 1881, by Mr. H. L. Cowell's Jocko (Heyer's Belle-One Eyed Sancho) out of his orange and white English setter Maud (Fancy-France).

BRED.

Lulu II.-Rory O'More—Mr. J. J. Scanlan's (Fall River, Mass.) red Irish setter bitch Lulu II. (champion Berkley-Lulu) to champion Rory O'More.

Violetter-Elcho II.—Dr. E. C. Bain's Irish setter bitch Mistletoe to Dr. J. Jennelle's (Du Quoin, Ill.) Elcho II.

Dot-Elcho II.—Mr. Solon W. Paul's (St. Louis, Mo.) Irish setter bitch Dot (champion Bob-champion Duck) to Dr. Jennelle's Elcho II.

Daisy-Dan—Mr. T. Donoghue's (La Salle, Ill.) orange and white setter bitch Daisy to Chicago Field Kennel's dog Dan, May 18.

Sting-Bonnie Boy—The Bull Dog Kennel's (Mr. John P. Barnard, Boston, Mass.) Sting to Bonnie Boy.

Judy-Bonnie Boy—The Bull Dog Kennel's Judy to Bonnie Boy.

Ruby-Dash—Mr. John P. Benard, Jr.'s (Boston, Mass.) black and tan setter bitch Ruby (champion Reuben-Nellie) to Mr. Chas. T. Brownell's Dash. 1st New York, 1881.

WHELPS.

Rhona—Mr. Edmund Orgill's pointer bitch Rhona (Snapshot-Rose) whelped June 2, nine puppies, five blue ticked and four dogs, by owner's Rocket. The dogs are lemon and white in color.

Gertrude P.—Messrs. Robert Sewell's and Chas. H. Raymond's Chesapeake Bay retriever bitch Gertrude P. whelped June 21, at Boothby Hill, Md., nine puppies, seven dogs and two bitches by same owner's Cork.

Belle of Nashville—Mr. I. Louis Valentino's (Nashville, Tenn.) black, white and tan setter bitch Belle of Nashville whelped May 25, nine puppies, four dogs and five bitches, by champion Joe, Jr.

Fay—Mr. S. Huntington's (Plainfield, N. J.) setter bitch Fay whelped June 10, 1881, six dog puppies, by Gen. Stirling's Ben.

SALES.

Garnet—Dr. J. J. Jennelle, Du Quoin, Ill., has sold the red Irish setter dog puppy Garnet (Elcho II.-Dell) to Mr. Will H. Hopps, Aurora, Ill.

Judy—Mr. T. Donoghue, La Salle, Ill., has purchased from Mr. Daniel D. Lawlor, Vernon, N. Y., the Irish water spaniel Judy (Drake-Duck), winner 2d New York, 1881.

Diana—Cortland, N. Y., June 11, 1881.—In reporting sale of cocker bitch Diana, in last number of FOREST AND STREAM, the purchaser's name given was J. Bland, which should have been J. T. Blandford, Sing Sing, N. Y. EUGENE POWERS.

Bugle No 2—Mr. Colin Cameron, of Brickerville, Pa., has sold to Mr. F. F. Dexter the beagle dog Bugle No. 2 (Knight's Sports-Blarney).

Agnes—Mr. Colin Cameron, of Brickerville, Pa., has sold to Mr. B. F. Dexter the beagle bitch Agnes (Pownall's Victor-Fanny 5th).

Miss Miggs—Mr. Colin Cameron, of Brickerville, Pa., has sold to Mr. B. F. Dexter the beagle bitch Miss Miggs (Pownall's Victor-Fanny 5th).

IMPORTED.

Taff and Nep—Mr. John F. Scholes, the well-known Toronto athlete, has imported a pair of Manchester terriers from the kennel of Mr. Christopher Whitehouse, of Birmingham. The bitch Taff, which has taken many prizes at bench shows in England, is by champion Dazzler out of Stella. The dog Nep is by Ogden's Kelly out of champion Cupid. They arrived by White Star steamship Germanic in perfect condition.

PRESENTATION.

Venus—Mr. Robt. Lenox Belknap has presented his mastiff bitch Venus (Ajax-Dido), winner 2d prize New York, 1880, puppy class, to Mr. James Lenox Banks, Jr., New York city.

See Kennel adv. of Geo. O. Goodhue, who wants to buy a first-class Pointer or Setter.—*Adv.*

Rifle and Trap Shooting.

J J James	32	21	13	66

WATERTOWN, Mass., June 10.—The Middlesex Club, of Cambridge, which boasts among its members some of the best shots of the State, met to-day at its grounds at Watertown for its regular shoot. A rotary trap was sprung for ten balls, and, notwithstanding the wind played with the little blue sphericals like toys, Mr. E. C. Gove broke ten straight, Mr. W. F. Webster following for nine, J. S. Sawyer for nine also, and Messrs. Taylor and Enoch for eight each. Mr. W. C. Story broke six and W. B. Taylor four. The shooting was capital for the day, and shows what the club can do in good weather conditions.

BOSTON, Mass., June 11.—The conditions to-day at Walnut Hill were adverse to good scores in the early part of the day. A heavy fog which nearly obscured the targets and a rain which washed the targets, spoiling the bullseye, was poor encouragement for gentlemen to purchase tickets in the several matches with the prospect of making even a fair score. The wind was northeast, uneven and coquettish, and the light poor. After 1 o'clock the fog disappeared, the light became elegant and the wind toned down to that degree that it could be controlled by the marksmen at 200 yards. The late trains brought out quite a number of riflemen and spectators, among whom was Mr. C. H. Brown, an American resident in Peru, who took great interest in the shooting, and faced the butts for three consecutive bullseyes from the shoulder with a Maynard rifle. The conditions at this time had become perfect for large scores, and when Adams, Jewell and Jackson stepped to the firing point all looked for large results, which were achieved and recorded. Each of the gentlemen opened with bullseyes, the two former inside the four-inch ring. Adams kept in the bull for seven shots, and closed for a total on the paper target for 113, beating his big score of a week ago by one point, and tieing the best scores of Jackson and Jewell. In the handicap match Mr. J. B. Fellows carried off the honors of the day on the Creedmoor target with a brilliant 47, closing with six consecutive bullseyes. Mr. Baird followed for 46 and Frye for 45.

J R Scott	35 42			

Rifle range, 150 feet; pistol range, 60 feet.

CAMDEN, N. J., June 11.—The Stockton Rifle Range Association had two matches to-day. The first was a short-range military match, open to non-commissioned officers and privates of the National Guard of Pennsylvania and New Jersey; 100 yards; weapons, Springfield B. L. rifles, .35 and .50 calibre; 2 points allowance for .50 calibre; 10 rounds, without cleaning.

A J Millette	48	1st prize	G W Coulson	*45	5th prize

T F Rose	45	3d "	H C Irvin	37	7th "
R A Beck	*45	4th "			

G W Coulston won the competition for the champion marksman badge of 1881, making 19 at 200 yards and 17 at 500 yards; total, 36 out of possible 50.

NEW ORLEANS, June 5.—The contest for the J. M. G. Parker prize concluded to-day after several months' struggle. It was won by D. G. Gaerdner. Below are the scores made at the range of tha Louisiana Rifle Club:

	200 yards.	500 yards.
Gaerdner	4 4 3 4 4 3—25	3 3 4 4 4 3—25—51
Ahrens	2 4 3 3 2 4 3—21	2 0 2 4 2 3 4—26—47
Sandola	4 2 3 3 3 2 3—20	0 3 3 2 3 3 3—19—39
Moss	0 4 3 2 3 2 2—16	2 2 0 2 3 2 3—14—30
Reehler	2 3 2 0 3 2 2—15	0 3 0 0 4 0 2— 9—24

And another contest may soon be looked for, as a prominent friend of the Orleans artillery proposes to put up another valuable prize.

There were two matches shot to-day on the grounds of the New Orleans Gun Club. The first was a bat match, double bats, 22 yards rise, with 14 entries. Chaudet won the first prize, and killed 17 out of 20; De Buys took the second prize by a score of 15; the third prize went to Chaudet on a score of 14, and 8 straight in a tie shoot-off. The next event was a pigeon match, 7 birds, 25 yards rise, with 9 entries. First prize, Le Breton, who killed all his birds; Caisin and DaPonta divided second money, each killing six birds; Chaudet took third money on a shoot-off.

GARDNER, Mass., June 10, 1881.—The following scores were made at the last shoot at Hackmatack range by members of the Gardner Rifle Club, 200 yards, off-hand, using inch ring and Creedmoor target combined:

	R.	C.	R.	C.	Totals.
I. N. Dodge	85	45	90	46	175—91
C. H. Pratt	80	44	80	43	160—87
G. F. Ellsworth	77	46	78	43	155—89
J. E. Newton	86	45	69	44	155—89
Wm. Austen	71	44	71	44	145—88
H. S. Prine	61	43	83	44	144—87
A. Matthews	62	41	80	40	142—86
C. Merritt	74	43	68	42	142—85
F. H. Knowlton	69	44	68	43	137—87
G. C. Goodale	66	41	63	43	129—84
S. B. Hildrith	63	42	61	42	123—84
C. F. Mason	64	41	55	42	117—84
C. Shumway	50	42	65	43	115—84

BROOKLYN, N. Y., June 8.—The Washington Gun Club opened its second season at Ridgewood Park on this afternoon in a regular contest for a double barreled gun, valued at $100, which the members have donated as a prize to be presented to the man making the best average during the year. There are three other prizes of lesser value to be shot for monthly. The weather looked rather dubious for the sport, but notwithstanding there was a fair attendance of spectators, and the club turned out strong. Each of the competitors shot at seven birds, New York State rules, handicap rise, one barrel. The shooting was the best that the club has done since its organization, and should they keep it up there is a fair chance of the club carrying off some of the principal prizes in the Coney Island tournament. The following is the score:

	Yards.		Yards.
Kellett	23....7	Kampfmuller	21....6
Metcalf	21....7	Altenbrand	21....6
Wilson	21....7	McGill	23....5
Evans	25....7	Hedeman	23....5
Frank	25....6	De Nyse	23....5
Morgan	21....6	Armbruster	21....4
Kreuscher	21....6	Krauser	25....4
Van Sise	21....6	Zeller	21....4
Moller	21....6	Laughran	21....4
Carrick	21....6	A. Altenbrand	21....3
Malcolm	21....6	Knubel	21....1

At the close of the regular match the members and those on the ground were photographed in a group, making an excellent picture. A sweepstakes was then arranged, one dollar entrance, three birds each, ties, miss and go out. Below is the summary:

Geo. Van Syse, 6; C. Zeiller, 6; H. Altenbrand, 5; J. Evans, 4; P. Medlin, 3; F. Hedeman, 3; F. Morgan, 3; Dr. Metcalf, 3; Theodore Obig, 1.

Messrs. H. Hedeman, Thos. Kellett and John Evans have been selected as a team to represent the club at Coney Island during the State shoot.

A MEETING of the Gun clubs of Massachusetts is called for the 16th and 17th at Lynn.

A. C. GOULD, Treasurer of the Massachusetts Rifle Association, has resigned because of business engagements. J. B. Fellows is mentioned as his successor.

THE first glass-ball match of the season at Walnut Hill will be opened in about two weeks.

WINTHROP, Mass., June 7.—The weekly meet of the Schuetzen Corps at the new range at Bayside, to-day, was attended by a jolly crowd of marksmen, who, despite a troublesome southeast wind, succeeded in making excellent records, as under:

Massachusetts Target (rest).

Max	12 11 12 12 12 12 11 11 10 12	115

MEDFORD, Mass, June 8.—The Medford Amateur Rifle Association will hold gold membership badge and silver dollar matches at Bellevue range, beginning to-day. The badge matches will be shot every Wednesday, from 1 o'clock till sunset, to close when 125 entries have been made. Distance, 200 yards; rounds, 7; rifle, any within rules; off-hand firing; Creedmoor target count; open to members only; the aggregate of five scores to count as one continuous score. Members will be handicapped on their records. The silver dollar matches open on the same date for ten prizes, ranging from one to ten hard dollars, and a general prize of $5. Distance, 200 yards; rounds, 15; rifle, any within rules; off-hand firing; Creedmoor target count; open to all comers; the aggregate of three scores to count as one continuous score. Any member making the largest score two or more days will be entitled to a chance to shoot for the general prize on the day the match closes, same rules and handicap list to be used. Members of the Medford Amateur Rifle Association will be handicapped on their records; members will be required to state the highest recorded score they have made, and will be handicapped by the directors. The opening shoots resulted as follows:

Membership Badge Match.

Teel	5 4 5 4 5 4 5—32	Richardson	4 4 5 5 4 4 4—30
Whittier	4 5 5 4 5 5 3—31	Webb	4 4 4 5 3 4 4—28

ALBANY, June 9.—The dull, gray light this afternoon was especially gratifying to the riflemen, and a large number availed themselves of the favorable condition to visit Rensslaerwyck and do their best. Two matches were on the programme. The first, at 200 yards, for an imperial photograph. The match continued all the afternoon, and had seventy-six entries. Capt. Fitch succeeded in putting up a full score and was declared the winner. The leading scores were as follows:

Photograph Match—200 Yards.

Wm E Fitch, Wes S	5 5 5 5 5—25	S Baldwin, Bal S	4 5 4 5 4—22
L Geiger, R S	4 4 5 5 5—23	A Carpenter, Bal S	5 4 5 4 4—22
E Brown, Bal S	4 4 5 5 5—23	O Dexter, S S	5 5 4 4 4—22
Wm T Mills, Bal S	4 4 4 5 5—22	A Thorne, S M	4 4 4 4 5—21
H L Grant, S S	4 4 5 4 5—22	S Henry, Bal S	4 4 5 4 4—21
J Fewedt, R S	4 4 5 4 5—22	J D Peterson, Wes S	5 4 4 5 3—21
A Stalwart, Bal S	4 4 5 4 5—22	D Edwards, Bal C	4 4 4 4 2—18
James I Miles, Bal S	4 4 5 4 5—22		

During the progress of the photograph match the sixth competition in the J. E. Griswold match was shot. The match was won by Theodore Mosher, with the good score of thirty-four out of a possible thirty-five. Scores were made as follows:

F. E. Griswold Mid-Range Match—500 Yards.

Mosher, Bal S	5 5 5 5 5 4—34	Fitch, R C	4 4 4 4 4 5—30
Cheyer, R C	5 5 4 5 5 3—32	Brown, Bal S	5 4 4 5 4 5 3—30
Denison, Bal C	3 5 5 5 5 4—31	Carpenter, Bal S	5 3 5 4 4 4 3—28
Thorne, S M	5 4 5 3 5 5 4—31		

Next Thursday the Winchester match and the 200 yard life membership match will be on the programme.

MASSACHUSETTS RIFLE ASSOCIATION.—The programme for the spring meeting opening on June 16 and continuing through the 17th and 18th, provides a prize list of 600 dollars. The matches are as follows:

I. 200 yards (Directors' match), open only to directors and honorary directors; rounds, 5. Prize, Directors' gold badge, to be held by the winner for one year.

II. 200 yards (Victory Medal match), open to all comers; position, standing; rifle, any within the rules; rounds, sixty. Entry fee for members, $3; for non-members, $5. The match will be divided into two "stages" of 30 shots each. All of the shots in each "stage" must be consecutive. Prizes, 1st, Victory gold medal of the association, $75; 2d, Victory silver medal of the association, $40; 3d, Victory bronze medal of the association, $25.

III. 200 yards (Mass. target match), open to all comers; position, standing; rifle, any within the rules; rounds, 7. Entry fee, $1. Re-entries permitted at fifty cents each. Choice of prizes to be won on the aggregate of best three scores made at any time during the meeting, to be treated, in case of ties, as one continuous score, ranking according to standard rules. 10 prizes, value $80.50.

IV. 200 yards (Maynard match, Creedmoor target), conditions same as in match No. 3. Competitors using military rifles will be allowed one point on each score. Prizes, 1st, $65; 2d, $15; 3d, $12; 4th, $10; 5th, $10. 25 prizes, value $186.50.

V. 500 yards (Carton match), open to all comers; rifle and position, any within the rules; cartons to count six. Other conditions same as in match No. 3. Prizes, 1st, $28; 2d, $20; 3d, $15; 4th, $10. 9 prizes, value $90.50.

VI. 900 yards (Carton match), conditions same as in match No. 5. 1st prize, Boston Herald Cup, presented by R. M. Pulsifer & Co., $50, and 9 other prizes, value, $69.50.

Sighting shots are not allowed in any of these contests.

Bullseye practice allowed at all ranges throughout the meeting when the targets are not required for scoring.

All the matches will be called at 11 o'clock A. M. on the first day, and at 9 A. M. the two following days. All prizes will be awarded at the close of shooting on the third day.

CONLIN'S GALLERY.—The records in this gallery will be found worthy of inspection. They are very interesting, and give a good idea of the advance made toward perfection in marksmanship since 1864, as well as showing how very near perfection some of our present marksmen stand. There is some talk among the pistol shots of the gallery about getting up a match with the pistol experts of Boston, whose scores indicate that they would prove both worthy and formidable opponents. It is probable that a contest will be brought about. To give additional interest to rifle-shooting a badge will be offered to every marksman making a full score after June 13 and until further notice. All comers can participate. Conditions—rifle 22 cal., ten shots, position off-hand. There will be considerable strife among the regular patrons of the gallery to capture the first full-score badge, and a lively race is anticipated. The pistol scores made at the new gallery compare favorably with those of the late place, as will be seen by the following, possible score being 50: Dr. E. T. Marsh, 9 yds., full score; Wm. M. Chase, 12 yds., full score; W. H. Wickham, 12 yds., 49; D. A. Davis, 12 yds., 48; Col. J. J. Dunne, 12 yds., 47; J. B. Miller, 12 yds., 46; R. S. Gifford, 7 yds., 10 consecutive, ⅜ in. bullets. J. F. Duckworth scored 48 points with rifle, firing 12 shots in one minute.

HAMILTON, Canada, June 8.—An unfortunate mishap occurred to-day at the new ranges of the Victoria Rifle Club, between here and the Half-way House, Dundas road. Members of the club were engaged in practice at the 1,000-yard range, and George Margetts was firing at the target when the marker, George Jenkins, stepped in front and received the bullet, which passed through his body and, strange as it may appear, struck the bullseye, which was bespattered with blood. It has been the practice of the marker at the ranges to wave a red flag when he wishes to repaint the target, after a number of shots have been fired, or prior to examining it after the marksmen are through firing. But in this instance Jenkins neglected to wave his flag and exposed himself with the result stated. The bullet was one of Remington's 550 grains, and entered at the back below the shoulder blade, passing out about an inch below the left nipple. After looking where the ball had struck the target, and seeing that it was a bullseye, Jenkins says he felt a stinging pain as if a needle had gone through him. He then yelled to the parties at the range, for the purpose of letting them know that he had been struck, and ran down the ranges 240 or 250 yards, and as several of the marksmen approached him he fell over. He bled but little from the wound, and there has not been much internal hemorrhage. Jenkins has performed the duty of marker at the rifle ranges for nearly three years, and has always been considered a very cautious man.

THE TRAP.

THE FOREST AND STREAM of June 30 will contain a supplement of four pages giving the full scores of the pigeon shooting at Coney Island.

BRIDGEPORT, Conn., will have a shooting tournament at Sherwood's Park, June 16, 17 and 18.

DU QUOIN, Ill., will celebrate the Fourth of July with a glass ball shooting tournament. The committee of arrangements are: J. J. Jennelle, James Jopling, C. P. Richards, Don Onstott, Jon Smith.

EAST NORWAY, Kans.—Shoot of the Norway Gun Club, twenty glass balls, from a Bogardus trap; twenty yards rise: Roots, 13; Stiles, 17; Hardy, 12; Frey, 16; Gray, 16; Stewart, 14; Heeney, 16; Lyons, 12.

BOGARDUS announces his intention of challenging, before the match, the winner of the coming Scott-Carver match for the London *Sportsman's* championship of the world cup. This cup, it will be remembered, is now in the possession of Carver, who won it with a score of 79 out of 100 at 30 yards, English rules. Bogardus has written to England to learn whether, if the cup is won by a foreigner, it can be taken out of England, or whether all matches for it must be shot in England. If the latter is the case Bogardus himself proposes to give a medal for the world championship which can be shot for in any part of the world where its holder may belong. As the rules for the *Sportsman* cup limit the weight of the gun, which must be under 8 lbs. (4 drs. powder, 1¼ oz. shot), the Captain has ordered a special Scott gun made for him which is to weigh 7¾ lbs.

CAPITAL CITY GUN CLUB.—Washington, D. C., June 6.—A team match shot on the grounds of the club at Eagle Park, Saturday afternoon, resulted in favor of Capt. Farnsworth's team by one ball, as shown below; Card's trap, screened, 20 yards rise:

F B Farnsworth, Capt	1111100111111110111—17

WESTMINSTER KENNEL CLUB VS. STATEN ISLAND GUN CLUB.—New Brighton, June 11.—Match for handsome silver tankard; 5 men each club; 25 birds each man; 30 yards; 3 traps to a team; gun not to exceed 7¾ lbs. nor 12 gauge; 1¾ oz. shot. Seldom has a better lot of birds been seen to fly from the traps, and although the sky was dark and lowry, the shooting of six of the participants was exceptionally good. Of the kennel club men the first four on the list did fine work, killing 69 birds out of 80 shot at.

† Both barrels used.

The grounds of the Island Club are admirably situated in a wide opening surrounded by trees; a high board fence, horse-shoe in shape, marks the boundaries at 31 yards from the traps, and the stand is well arranged for both the comfort and convenience of the shooters and lookers on. The Island club has a large list of members, many of whom are among the best shots in the vicinity of the metropolis.

STATEN ISLAND GUN CLUB.—Weekly Shoot for Club Cup.—After the inter-club match with the team from the Westminster Kennel Club, the members of the S I G. Club and their friends shot for the club cup and sweepstakes of 5 each; 10 birds, handicap rise, ties to shoot off, Staten Island Gun Club rules; 15 entries for cup and 7 for sweepstakes:

Thompson	23½ yards	1 1 1 1 1 1 1 1 1—9
Randolph	27	1 1 1 1 1 1 1 0 1—9
Gilbert	28½	1 1 1 1 1 1 1 1 0—8
Allyn	27	1 0 1 1 1 1 1 0 0
Minto	30	0 1 1 1 1 1 1 1 0 W
Boughton	29	1 0 1 1 1 1 1 1 0 W
Edwards	26	1 1 1 0 1 1 0 W
Thomas	26	1 1 1 1 0 1 W
Dennison	29½	1 1 1 1 0 1 0 W
Ford	26	1 0 0 1 1 0 1 W
Camp	26	1 1 1 1 0 0 0 W
Roberts	28	1 1 1 1 0 0 0 W
Tracy	28	1 1 1 0 1 0 0 W
G De Forest Grant	29	0 1 0 1 1 1 0 W
Minga	27	0 0 1 1 0 0 1 W

In the shooting off of the ties between Mr. Thompson and Mr. Randolph the former won the cup on the following score:

Thompson...29½ yds...11111111—8 Randolph...27 yds...1111111—7

For sweepstakes only:

Travis	30 yards	1111110W—6	Wagstaff	30 yards	110W —3
Jones	26	1111110W—6	Robinson	28	10001W—2
Thompson Jr.	27	11110W —5	Richards	28	0W —0
Lewis	23	1110W —3			

5. 1st prize, Boston Herald Cup, presented by R. M. Pulsifer & Co., $50, and 9 other prizes, value, $69.50.

Sighting shots are not allowed in any of these contests.

Bullseye practice allowed at all ranges throughout the meeting when the targets are not required for scoring.

All the matches will be called at 11 o'clock A. M. on the first day, and at 9 A. M. the two following days. All prizes will be awarded at the close of shooting on the third day.

CONLIN'S GALLERY.—The records in this gallery will be found worthy of inspection. They are very interesting, and give a good idea of the advance made toward perfection in marksmanship since 1864, as well as showing how very near perfection some of our present marksmen stand. There is some talk among the pistol shots of the gallery about getting up a match with the pistol experts of Boston, whose scores indicate that they would prove both worthy and formidable opponents. It is probable that a contest will be brought about. To give additional interest to rifle-shooting a badge will be offered to every marksman making a full score after June 13 and until further notice. All comers can participate. Conditions—rifle 22 cal., ten shots, position off-hand. There will be considerable strife among the regular patrons of the gallery to capture the first full-score badge, and a lively race is anticipated. The pistol scores made at the new gallery compare favorably with those of the late place, as will be seen by the following, possible score being 50: Dr. E. T. Marsh, 9 yds., full score; Wm. M. Chase, 12 yds., full score; W. H. Wickham, 12 yds., 49; D. A. Davis, 12 yds., 48; Col. J. J. Dunne, 12 yds., 47; J. B. Miller, 12 yds., 46; R. S. Gifford, 7 yds., 10 consecutive, ⅜ in. bullets. J. F. Duckworth scored 48 points with rifle, firing 12 shots in one minute.

HAMILTON, Canada, June 8.—An unfortunate mishap occurred to-day at the new ranges of the Victoria Rifle Club, between here and the Half-way House, Dundas road. Members of the club were engaged in practice at the 1,000-yard range, and George Margetts was firing at the target when the marker, George Jenkins, stepped in front and received the bullet, which passed through his body and, strange as it may appear, struck the bullseye, which was bespattered with blood. It has been the practice of the marker at the ranges to wave a red flag when he wishes to repaint the target, after a number of shots have been fired, or prior to examining it after the marksmen are through firing. But in this instance Jenkins neglected to wave his flag and exposed himself with the result stated. The bullet was one of Remington's 550 grains, and entered at the back below the shoulder blade, passing out about an inch below the left nipple. After looking where the ball had struck the target, and seeing that it was a bullseye, Jenkins says he felt a stinging pain as if a needle had gone through him. He then yelled to the parties at the range, for the purpose of letting them know that he had been struck, and ran down the ranges 240 or 250 yards, and as several of the marksmen approached him he fell over. He bled but little from the wound, and there has not been much internal hemorrhage. Jenkins has performed the duty of marker at the rifle ranges for nearly three years, and has always been considered a very cautious man.

THE TRAP.

THE FOREST AND STREAM of June 30 will contain a supplement of four pages giving the full scores of the pigeon shooting at Coney Island.

BRIDGEPORT, Conn., will have a shooting tournament at Sherwood's Park, June 16, 17 and 18.

DU QUOIN, Ill., will celebrate the Fourth of July with a glass ball shooting tournament. The committee of arrangements are: J. J. Jennelle, James Jopling, C. P. Richards, Don Onstott, Jon Smith.

EAST NORWAY, Kans.—Shoot of the Norway Gun Club, twenty glass balls, from a Bogardus trap; twenty yards rise: Roots, 13; Stiles, 17; Hardy, 12; Frey, 16; Gray, 16; Stewart, 14; Heeney, 16; Lyons, 12.

BOGARDUS announces his intention of challenging, before the match, the winner of the coming Scott-Carver match for the London *Sportsman's* championship of the world cup. This cup, it will be remembered, is now in the possession of Carver, who won it with a score of 79 out of 100 at 30 yards, English rules. Bogardus has written to England to learn whether, if the cup is won by a foreigner, it can be taken out of England, or whether all matches for it must be shot in England. If the latter is the case Bogardus himself proposes to give a medal for the world championship which can be shot for in any part of the world where its holder may belong. As the rules for the *Sportsman* cup limit the weight of the gun, which must be under 8 lbs. (4 drs. powder, 1¼ oz. shot), the Captain has ordered a special Scott gun made for him which is to weigh 7¾ lbs.

CAPITAL CITY GUN CLUB.—Washington, D. C., June 6.—A team match shot on the grounds of the club at Eagle Park, Saturday afternoon, resulted in favor of Capt. Farnsworth's team by one ball, as shown below; Card's trap, screened, 20 yards rise:

F B Farnsworth, Capt	1111100111111110111—17

BALTIMORE, Md., June 10.—A pigeon match was shot June 8 for a very fine Scott gun. Conditions—10 birds, 21 yards rise, plunge traps Messrs. E. L. Mills and Wm. Wagner of Washington, D. C., came over and participated in the shooting, Mr. Wagner carrying off the gun on the remarkable score of 55 straight. Finer shooting was never displayed before the traps in this vicinity than was witnessed in this contest, Mr. Wagner, including five birds shot for practice, killing sixty birds straight, Mr. Ritter 57, and Mr. Mills 43 straight, or a total by the three men of 159 birds without a miss. Has this score ever been beaten by any three men in a single contest? The birds were selected by an experienced man from coops containing about 300, care being taken to get them all of a color and as strong as possible, to make it as even for the shooters as possible. Following are the scores:

Wertsner	1 1 1 0 w — 3
Ritter	0 1 1 0 1 1 1 1 1 1 — 8
Mills	0 1 1 1 w
Kell	1 0 1 1 w
Sell	1 0 0 1 w
Wagner	1 1 1 1 1 1 1 1 1 1 — 10
Ritter (re-entry)	1 1 1 1 1 1 1 1 1 1 — 10
Wertsner (re-entry)	1 1 1 1 1 1 1 1 1 0 — 9
Coulson	1 1 1 1 0 — 4
Mills (re-entry)	0 1 1 1 — 3
Mills (re-entry)	1 1 1 1 1 1 1 1 1 1 — 10

Messrs. Wagner and Ritter tied on five straight eight times, Mills going out with four on sixth shoot off, and Ritter with four on ninth shoot off, Wagner killing his five straight.

BUFFALO, June 9.—The Audubons of this city went to Bradord, Pa., to-day to shoot a return team match with the Bradford Club. They shot and below is the score:

Audubon.		Bradford.	
Smith	1011110111—8	Kerstetter, J	1111111111—10
Taylor	1001110011—6	Black	1111101111—9

	103		114

MR. HASKELL'S FEAT.—Mr. Jno. C. Haskell, the City Engineer, of Lynn, Mass., undertook on Decoration Day to break 500 glass balls inside of 25m. 15s. Mr. Haskell is a member of the Lynn Central Shooting Club, and is well known as a crack shot. The conditions of the match were that Mr. Haskell should expend Bogardus' best time—28 minutes 13 seconds—for breaking 500 glass balls, thrown from two Bogardus' traps, 15 yards rise, traps twelve feet apart; balls broken in air to count; Haskell to load his own gun. At the time announced for the match the heat was simply intense. Before Mr. Haskell began his great attempt, Capt. Bogardus announced that Mr. Haskell's manner of loading was not the same as his own. He claimed that he took the cartridges from the box himself, while Mr. Haskell had an assistant place them in the barrels for him, but he said that if Mr. Haskell accomplished the feat he would make a match with him at some future time. Mr. Haskell then broke seventy-eight balls without a miss, and missed only fourteen balls during the match. He used four double-barreled Parker guns. In the first half of the time he broke only 250 balls, but after that he increased the number of shots per minute very rapidly. The excitement was at its highest heat when he was on the last fifty. What his success was may be seen from the score—500 glass balls in 24 minutes 2 seconds.

SYRACUSE, N. Y., June 9.—The 1,000 ball team match for $500 a side was contested at Lakeside Park this afternoon in the presence of between 500 and 600 people. The match was shot over the Card traps, the men coming to the score in squads of ten men—five of each team—each round being ten balls. Dixie Dadin acted as official scorer and caller, a position which he filled to the entire satisfaction of the competing team. The following was the score of the match:

Onondaga County Team.							
	1st round.	2d round.	3d round.	4th round.	5th round.	Ti.	
Hudson	6	8	8	5	6	33	
Halloway	7	7	6	10	6	36

Hotchkiss	8	9	10	7	7	41	
Team total						352	
Average						35 1-5	

ROCHESTER, N. Y., June 9.—The opening shoot of the Genesee Sportsmen's Club was held on the river flats below Vincent place bridge, this afternoon. The first contest was at glass balls, 18 yards rise, 10 balls:

H. B. Hooker	8	H. Andrews	8	W. J. Babcock	4	R. Gardiner	8
H. P. Fleischer	7	John Norton	6	C. Goetzman	6	A. Evershed	10
J. Sherry	8	J. Reisinger	8	F. Chaffy	7	G. Green	7
A. Morris	9	J. H. Brown	9	Wm. M. Richmond	7	W. A. Lyon	9

Ties of nine were shot off at 21 yards rise:

Morris	1 0 0 —1	Lyon	1 0 0 —1
Brown	1 1 0 1 1—4		

The ties of eight, which were next shot off, evoked the most exciting sport of the day, J. H. Andrews winning after a very hot contest:

Hooker	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0—15
Andrews	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—16
Gardiner	0 1 1 — 2
Sherry	0 0 0 — 0
Reisinger	1 1 0 — 2

The next contest was a sweepstake, open to all, 21 yards, at 5 smoke balls:

Youngs, 4; Lyon, 1; Fletscher, 2; Green, 5; Weighell, 3; Gardiner, 1; Reisinger, 2; Hooker 5; Andrews, 5; Redmond, 3; Richmond, 5; Evershed, 4; Norton, 1; Chaffy, 4; King, 4.

Ties of Five—Twenty-six yards rise.

Green	1 0 —1	Andrews	1 0 —1
Hooker	0 —0	Richmond	1 1 —2

Ties of Four.

Youngs	1 1 1—3	King	1 0 —1
Evershed	1 1 1—3		

Ties of Three.

Weighell	0 —0	Chaffy	0 —0
Redmond	1 1 1—3		

While the shooting was in progress, the club held a special business meeting on the grounds, Mr. Crouch presiding. It was voted that the club enter for the State Sportsmen's shoot, if it be deemed advisable by the delegates; also that the delegates select the shooters.

BROOKFIELD, Mass., June 10.—The Sportsmen's Club have been trying their hand at breaking balls thrown by their new Holden trap. The record made is as follows:

Mathewson	11110 01111 11111 11110—17
Herrschler	11010 11000 01011 11001—12
Shepard	01011 11010 01110 11100—11
Moulton	01100 00001 01111 11110—11
Crosby	10111 01000 11001 00111—11
Whittemore	11010 00010 00001 01001 — 7
Twichell	01101 00010 01100 00000— 5

RAYMOND SPORTSMAN'S CLUB—June 10.—The spring meeting of the above club and the State Glass Ball Association occurs June 16, 17, at Oak Island, Revere Beach. The first event is an individual association gold badge match, open to members of the association, entry $1, fifteen-ball shoot, eight from Card and seven from Holden trap; prizes, badge and 40 per cent. of entries to be first, 30 per cent. for second, 20 for third and 10 for fourth. The second event is the subscription match for class No. 1; classifications determined by committee; entrance, $1.50; open to members of association; prizes pro rata of entries; all from Holden trap. The third event is a match similar to the above for class No. 2, shooting each ten balls from the Card trap. The fourth is an all-comers' subscription match; five pair double balls from Bogardus trap. The fifth is an all-comers' veteran match for all above fifty years of age; five balls from Holden, five from Card trap. The sixth is a juvenile match for all boys under 15 years; from Card trap; open to all members of the association. The eighth is an association team gold badge match, open to one team from each club of the association of five men. The ninth and tenth are association shoots for donated prizes, with valuable prizes, ten balls from Card trap. The eleventh is a consolation match for those who have not won a prize during the meet and shot in at least two matches. The twelfth is an officers' match, open to the president and vice-presidents, secretary and directors. The club held its regular weekly shoot to-day. The day proved cold and the conditions unfavorable. The club, however, turned out large numbers and the shooting was capital. Among the clubs represented was Winchester, Merry Mount, Lynn, Malden and New Hampshire clubs. The detail shooting is as follows, from a Holder trap, twenty balls: F. Johnson, 18; G. Mouk, 17; C. Stark, 16; C. F. Jordan, 15; H. May, 15; G. B. Blanchard, 15; H Dutton, 14; H. Motmoyer, 13; W. Waterman, 13; D. H. Moore, 13; E. M. Bagley, 13; H. S. Brookings, 13; C. H. Harkins, 13; F. H. Raymond, 11; F. Symmes, 11; J. A. Dill, 11; E. C. Quincy, 11; F. C. Blanche, 11.

WEBSTER, Mass., June 9.—At the recent shoot of the Rod and Gun Club, the weather light and ground was excellent. The following scores were made. Ten balls each: A. Lowdrich, 9; H. Butterfield, 8; T. Bigelow, 8; C. Powers, 7; R. Todd, 5; W. Tanner, 3; V. Conant, 8; H. Bates, 8; E. Smith, 8; E. Rich, 8; C. Gerber, 5; W. Haven, 2; A. Keebort, 1. This match was followed by a contest by sides, ten balls each. The following was the result: T. Bigelow, 8; E. Smith, 8; Y. Conant, 6; W. Haven, 5; C. Gerber, 2. Total, 29. C. Powers, 7; H. Bates, 10; R. Todd, 8; S. Davis, 7; A. E. Klebart, 1. Total, 39.

Hop Bitters strengthens, builds up and cures continually, from the first dose.

SAILING RULES.

NOW that the racing season is under way and promises to be brisk, the committees are engaged in drawing up codes of rules to be observed at the matches under their charge. All our codes owe their origin to the sailing rules of the New York Y. C., being more or less copies of the latter passed around from club to club and moulded according to local customs and exigencies. These modifications, and even alterations, have become in time so numerous and radical that the rules floating about at the service of the general public are extremely lax, incomplete and sometimes actually erroneous in conception. The original source itself was and still is open to similar exceptions, though to a less degree, for the New York Y. C., many years ago, had only the Royal Yacht Squadron of England for its guide. Their rules, with the imperfections of the day, were imported and have ever since served as the basis upon which we have all built. Since then racing in England has developed with great strides from its infancy into a full-grown sport, carried on with the system and detail of a regular business by thoroughly-trained sailors. The old rules underwent modifications and additions, as experience proved to be necessary, until now the code adopted by the Yacht-Racing Association of England represents the most matured and equitable collection, deduced from long years of practice, during which almost all possible phases of a race requiring regulation or admitting of dispute have been settled by the most competent authorities into fixed principles, receiving the general indorsement of yachtsmen and clubs throughout Europe. As a biting and trustworthy guide to us in America we are right in referring to the Y. R. A. sailing rules as the best compilation upon which our clubs can build to advantage, in place of the less thoroughly digested and rather one-sided matter on hand, of even the New York Y. C. In giving this advice to sailing committees we hope to meet in advance the flippant charge of "Anglophobia" upon the grounds of recommending the best, whether born in England, China or among the Zulus. The time has long passed when our readers will save us from the vulgar hue and cry so often raised by curbstone patriots against those who choose to search for the best wherever it is to be found and refuse to accept as final the standards of narrow-minded men unable to see further than their nose and incapable of separating the great traits of the world from the petty political jealousies of the day. The English have simply had a hundred times as much experience in yacht racing as we in America. Their rules ought to be and are, in consequence, more complete and reliable than our own. Common sense therefore dictates a reference to English rules, unless we prefer to let years roll by until a similar amount of relevant material has been gathered and digested on this side of the Atlantic, thereby sacrificing the racing yachtsman's peace of mind for a long period to come, lest the forced solidarity of the patriot for his flag be ruffled by looking across the water for what he has not got at home.

Making use of Y. R. A. rules as a foundation upon which to build ensures a complete covering of the field in the most advantageous way to competitors and in the next. It is an easy matter to modify such paragraphs as are not applicable to local customs, waters or types of boats as our own experience dictates. Then we will have nearly perfect regulations, which can be readily referred to in a single line on regatta advertisements and which will gradually produce uniformity all the country over. They will save considerable useless printing, much racking of brains to judges and committees, much dispute and a perturbed state of mind to those yachtsmen desirous of "making the most" out of their yachts while sort of rules they are sailing under. They will produce order out of chaos and furnish a standard often above the best possible productions of local or extemporized authorities. They will serve to lift yacht racing out of its babyhood and give it national dignity at least in one respect. To formulate acceptable rules was one of the labors we wished to see accomplished by the National Yachting Association of America, fairly set upon its legs a year or more ago. Unfortunately, the association was unequal to its task and "petered out" in a "day regatta." Managers, patriots have none but themselves to blame if we now ask their cooperation in reviewing our sailing rules through another medium entirely.

The Y. R. A. of England publishes a pamphlet containing their rules in detail. It is not to be had in America except by ordering from abroad. The publishers are Harrison & Sons, St. Martin's Lane, London, and the price not over $1. The same rules have been reprinted in Hamersly's Naval Encyclopedia, L. R. Hamersly & Co., Philadelphia; price, $10. Last year the Southern Y. C., of New Orleans, finding their old rules not explicit enough and not covering all prominent cases of dispute, resolved upon revising the work. For this purpose the Y. R. A. book was sent them, enabling them to compile intelligently just what they needed. The result now lies before us and, believing their new rules to be the most complete and concise in America, we reproduce them next week as a guide for all the junior clubs sailing open boats, as well as for the use of provincial committees in charge of regattas, subject of course to the minor changes necessary to conform to the requirements of each locality.

ATLANTIC YACHT CLUB.

AFTER the extensive preparations made for the regular annual "Regatta" of the club, June 11, it was a little disappointing that the wind gave out, especially after opening the morning with so much promise, that the small sea yachts did not venture outside of Sandy Hook for a spin down to the lock and back. But for this the club is not to blame, and that a very good fleet as well as numerous spectators should have turned out on a stormy looking morning was something like satisfaction to the members, for it proved that the club is not lacking in good material. Interest centered in the larger craft, as before racing was promised, and Class C was invested with a sort of international import, for both Gracie and Mischief must be considered very likely candidates for sailing against the coming Canadian in fall. Among the sloops of Class B, the new Eclipse had not yet put in an appearance, Sunita failed to hoist fighting colors, and so Regina had a sure thing of it with nothing but Pirate to tackle, as the old time Dolphin did not start. In the next class below there was no show for a good race, Lizzie L having to sail to herself, Sarah Genin and Regina being famous for speed, Amelia not being especially remarkable either, while these and Caprice suffered from being so much smaller, the latter being in addition handicapped with the yawl rig. This rig is exceedingly good for easy cruising as compared to schooners, but every-day experience has proved, to class her with sloops is out of the question. She sailed with them in this race, not expecting any wonderful increase of speed, but simply to try the exact value of the yawl alongside of boats she has previously sailed with, and in comparison with whom her speed is known. Her owner wants to get the gauge of her, and does not in any way claim her to be fast, for he knows very well that even as a sloop she had no chance with the ships met last Saturday any more than she has now. Pilot, Corinne and their lot unfortunately thought best not to sail. These little cabin yachts ought to be encouraged, now that the club has a fine harbor, and we hope that before long they will be sufficiently numerous to compel setting apart a special day for their benefit. Expensive excursion steamers are not requisite for the objects in view, and no more than a volunteer service for judges or regatta committee, bringing the expenses down to nothing more than prizes. It is always a mistake to sail small yachts the same day with the large ones. Interest in them is completely swamped in the doings of more prepossessing craft, nor can their movements over the course be properly followed from the judges' steamer, which has to race off to time the rest of the fleet at other marks. Small yachts are deserving of as much consideration as large ones; in fact, the latter can take pretty good care of their own interests, and the object of the club should be all they can to foster the development of the "School for the Sailor," represented by small cabin yachts with fixed ballast. There is as yet a very noticeable absence of such craft in New York compared to other seaports, and this is owing largely to the fact that they receive little consideration where most should be expected. Hence, many would-be Corinthians are driven into clubs countenancing open boats and sandbags, and the numbers of these and their influence are increased instead of diminishing as seems more preferable to us. In time, it is likely that small cabin yachts will organize a club for their own benefit, and that club is certain to grow popular and command a fleet by the hundred.

For the races, June 11, the start was a flying one, but thoroughly spoiled by the ten minutes provision. All classes were started together, and confusion in signals avoided. The course has been altered from last year's custom by omitting to round the Spit, passing direct out to sea and rounding the Scotland, then the Sandy Hook lightship, the small sloop only to round the Scotland, and the little schooners only the mark of the Hook. Time of race was limited to 10 hours, any one yacht arriving home in that period to make it a race for all hands. Besides regular club prizes, the Livingston Memorial was to be awarded to first sloop home in Regina's class. Of the sailing little is to be said, as it was only a processional outing when the wind failed, and kinks went down as the flood began to make. Among the small schooners, a class seemingly becoming very popular and quite unlike the pretensions of the Atlantic Y. C., we noticed Lotus, a very pretty, tidy, little craft, and kept ship-shape and Bristol fashion, as is the wish of the well-known Herreshoff stamp about her. In speaking of Triton, another of his productions, Mr. Herreshoff always told us that his best schooner would have a trifle less flare, an idea he has carried out in altering his model, and as a result Lotus has no handsome a bow as she could wish to look at. Her canvas certainly has a smarter cut to it than what we turn out in New York. Sails have plenty of head, and gaffs peak well with the stays. It looks as though cut to the dimensions of a fitted draughtsman, and not by rule-of-rule, pin-of-pin case, producing hideous rigs with booms sagging, nigger heels, narrow heads and not the slightest trace of "style." Many well-known yachts we might mention subject to such exceptions, but Lotus has a pretty rig, and sailmakers at home might learn a thing or two from the cut of her jib, which she started to carry under way. Her owner, Mr. W. A. Cole, is not "a racing man," as the phrase goes, and his yacht is overpowered by Triton, otherwise she might hope to score oftener than likely. As it is she is rather more than a match for the rest of her lot, and would always show well so smartly and in such good form that she must be counted a tough customer while in present hands. Madcap, originally of Eastern import, we believe, has been much improved since last year both in looks and sailing. She showed good form all day, and when the wind failed was well up to the van.

Among the large schooners, the way Crusader left Atalanta took us a little by surprise, and it was rather agreeable to find such a whooping-hush-decked ship a Mr. Maxwell's. Crusader has no handsome

them, Gracie leading by a few lengths. The rest of the match between them has already been given above. The rear guard never got to the Hook even. Lizzie L. hugging the shore got through, and finally rounded the Scotland, and ,was off home with things her own way. The rest of the fleet came to anchor for a couple of hours, then hove up, drifted about and put helm up with the flood, disgusted. A few stuck to it, however, and when the southerly wind at last freshened across they went along trimmed down at a merry speed, rounded and were off for home in good style. Under the circumstances the "times" of the yachts have little value, not being an index to relative performance. For reference a summary is appended. The starters were:

CLASS A.—SCHOONERS.

Atalanta, Vice-Commodore Vermilye, 90 feet 4 inches; Clytie, A. P. Stokes, 81 feet 2 inches; Crusader, J. Rogers Maxwell, 87 feet 7 inches. Fleetwing, R. S. Elliott, was entered, but could not be got off the dock in time.

CLASS B.—SLOOPS.

Agnes, Commodore L. A. Fish, 57 feet 5½ inches; Triton, G. A. Thayer, 64 feet 4½ inches; Lotus, W. A. Cole, 60 feet 3 inches; Madcap, F. W. Shaw, 45 feet ½ inch; Sunshine, William Peet, 47 feet 11 inches.

CLASS C.—SLOOPS.

Gracie, C. R. Flint, 75 feet 2 inches; Mischief, Jos. R. Busk, 61 feet. Coming did not sail.

CLASS D.—SLOOPS.

Regina, W. A. W. Stewart, 49 feet 4 inches; Pirate, T. A. Howell, 45 feet 5½ inches. The Fanita and Dolphin did not start.

CLASS E.—SLOOPS.

Genia, T. A. Fiske, 40 feet 10 inches; Caprice (yawl), David Williams, 34 feet 7 inches; Lizzie L., J. G. Johnson, M. D., 43 feet 9½ inches; Amelia, Stephen Loomis, 40 feet 4½ inches; Kelpie, J. N. Winslow, 42 feet ½ inch.

The start was made as under:

	H.	M.	S.		H.	M.	S.
Lotus	10	49	41	Caprice	10	58	55
Triton	10	52	25	Gracie	10	54	52
Madcap	10	53	49	Lizzie L	10	59	17
Crusader	10	53	53	Pirate	11	00	00
Agnes	10	53	58	Amelia	11	01	30
Atalanta	10	56	09	Regina	11	01	45
Clytie	10	57	00	Genia	11	02	29
Sunshine	10	57	43	Kelpie	11	06	05
Mischief	10	58	07				

Sandy Hook was passed:

	H.	M.	S.		H.	M.	S.
Gracie	12	38	23	Lizzie L	12	49	50
Mischief	12	39	11	Pirate	12	50	00
Regina	12	45	42	Agnes	12	51	08
Crusader	12	48	04	Genia	12	54	00
Clytie	12	46	32	Madcap	12	55	26
Lotus	12	46	40	Atalanta	12	56	58
Triton	12	47	08	Kelpie	1	00	18

The Scotland lightship was passed by Mischief at 1.41.24, Gracie at 1.42.37, Triton at 1.43.37, then Crusader and Lotus, the rest having given up. The outer mark, the Sandy Hook lightship, was rounded at:

	H.	M.	S.		H.	M.	S.
Mischief	5	45	12	Regina	6	13	45
Gracie	5	58	43	Crusader	6	21	20
Triton	6	13	03	Lotus	6	28	40

In class A, Crusader wins; in class B, Triton; in class C, Mischief; in class D, Regina, baking also the Livingston Memorial: in class E, Lizzie L.

SEAWANHAKA YACHT CLUB.

IT is always a pleasure to publish anything concerning this club. They deserve the good will of all having the best interests of sailing at heart. The club is wide awake, has its special mission, is prosperous, and is a thoroughly businesslike organization, composed of the best amateur talent in the country, and containing a long string of names closely identified with the furtherance of some praiseworthy feature of the sport, to the instruction and advantage of the whole community. Among other details, the S. Y. C. is one of the few displaying a sufficient mastery of good English not to misuse the word "regatta" in their circulars, but adhere to the correct words, "race," or "match." In reality the term "regatta" has no more application to a sailing match than to a trotting race, and it is only in deference to the official sanction of the word "regatta" on club circulars that such an inappropriate and rather verdant designation has been followed in these columns. The Eleventh Annual Corinthian races of the Seawanhaka Y. C. have been fixed for Saturday, June 18. They will be governed by the subjoined rules, issued by the committe, Messrs. Jas. H. Elliot, C. Wyllys Betts, Louis P. Bayard, Robert Center and Girard Foster.

The attention of several clubs, having made inquiry of us for such rules, is especially directed to the following:

The Seawanhaka Yacht Club offers prizes for a Corinthian race, to be sailed over the Club course, in New York Bay, on Saturday, June 18, 1881, by second class schooners, first, second, third and fourth class sloops. Classification will be governed as follows:

The race will be open to yachts of the New York, Atlantic, Eastern and New Bedford Yacht Clubs, and will be governed by the sailing regulations and time allowances, and under the direction of the Regatta Committee of the Seawanhaka Yacht Club.

The committee hope that yacht owners and members of clubs will continue to encourage this most enjoyable and instructive kind of racing. The classification is especially favorable to a fair race among the smaller yachts, and a numerous entry is invited.

Five prizes are offered, as the class in which a two or more yachts start, and personal prizes to each member of the winning crews.

Classification.—Schooners—2d class: All whose area is 1,950 square feet or less. Value of prize, $150.

Cabin Sloops—1st class: Those whose area is greater than 900 square feet. Value of prize, $100.

2d Class: Those whose area is 900 square feet or less, and greater than 650 square feet. Value of prize, $100.

3d Class: Those whose area is 650 square feet or less and greater than 350 square feet. Value of prize, $35.

4th Class: Those whose area is 350 square feet or less. Value of prize, $25.

Rules for Measurement.—Add the length over all to the length on the water line, and divide the sum so obtained by 2; this will give the *mean length* of the yacht. Multiply the *mean length* and the *extreme beam* together, and the result will give the *area* in square feet.

Length over all will be measured from the after end of the plank sheer at the middle of the stern to a point perpendicular to the forward end of the load water line at the upper line of the plankskeer, or a point corresponding thereto, if the plankskeer does not extend so far.

Entries.—Entries must be made in writing, addressed to the Regatta Committee, and filed with the Secretary of the Club, O. E. Cromwell, 34 Liberty street, Room 4, by 5 o'clock P. M., on June 16, accompanied by the measurement of the yacht certified according to Seawanhaka rules, certified to by the measurer of the club from which she enters, or by her owner, together with a list of the proposed crew, their several occupations and addresses.

Protests.—All protests must be made in writing and handed to the Regatta Committee before 6 P. M. of the day succeeding the regatta.

If the measurement of a yacht be called in question by protest, she will be remeasured by the measurer of this club and his report will be final, and the measurer shall collect the usual fee,

30, and the subsequent match for July 2. The Silence is 27 ft. 1 in. long, was built in 1880 by Lennox, South Brooklyn. She is, therefore, comparatively a new boat without a long record. In model she is much like the Susie S., though a few inches deeper. She is a fairly smart boat, but owes much of her reputation to the manner in which she has been tooled by Capt. Smith. The race with the Southern flyers promises to be close. The *Sun* says that "Sam" Greenwood will tend mainsheet, and "Charley" Smith, brother of the owner, will be jib sheet man and "Luke" Welsh will give the cue to the sandbag brigade. It is said that the Southerners will pay expenses home if the visitor fails to score. Certainly the New Orleans yachtsman have shown a wonderful liberality and even generosity in the matter.

BIG CUTTERS.—Boston is to have an 80 ft. cutter, and a correspondent thinks the honor of owning the first big one of the kind will likely belong to the East unless the contemplated hundred tonners in New York are put in hand soon. It is no longer a mystery why there should be a "cutter craze" as the old school puts it. Yachtsmen are becoming sailors, and sailors want something more than overgrown, unmanageable, over-rigged, capsizable toys. It is moderate form, keels and outside ballast, double-head sail, low rig and housing topmasts, flush decks and man-of-war smartness they want, and they find this all in the cutter of fair beam; hence the "craze" introduced by FOREST AND STREAM is bearing fruit in able, safe and honest ships all along the coast. Contemporaries will in due time swing around in tow. They are up in the wind even now.

LAKE GEORGE MEET.—It will be a big fleet of canoes at the meet on Lake George in August. Already the freight agent at Glen's Falls has received notice of thirty canoes on their way by rail to the lake. If canoeists will continue to "pool their issues" in the same generous manner they did last year, the August meeting will give such prominence to the sport that a very appreciable accession to the ranks of paddlers will be the result. Canoeing ought to be the most popular sport in America, for we have creeks, rivers, lakes, ponds and canals all over the country for local work, and interlaced systems of communication by water offering thousands of miles of the picturesque, civilized and wild, to those on cruising bent.

CLEVELAND YACHTING ASSOCIATION.—*Editor Forest and Stream:* The annual regatta open to all yachts of the chain of lakes will be sailed Monday, July 4. In the first class there will be two prizes and a flag; in second class, three prizes and a flag; in third, three prizes and a flag. The first class yachts will sail for the Gardner Challenge Cup, now held by the Cygnet, of Buffalo. In the second class, a cup will be offered, which shall become the final property of the yacht winning it in three regattas. Entries should be sent to the club rooms, 345 Superior street, Cleveland.—KRAVSE.

GOOD.—Chalk a big, very big, mark for the Dorchester Y. C. In their ocean matches, June 18, the start will be simultaneous. The start will count from the final gun, and it will be the business of the yachts to get across the line as smartly as they know how, all their "times" being counted from gun fire. Abolishing the ten minute period of grace is something we have all along insisted upon, and so to the Dorchester Y. C. belongs the credit of inaugurating this new reform. Now, who will follow in New York?

THE CUTTER FLEET.—Of the three new cutters added to the Boston fleet, the South Boston *Inquirer* says: "Mr. Cabot's new cutter, sister boat to Mr. Burgess' cutter Moya, is out of the house at Lawley's, and rapidly approaching completion. Mr. Forbes's cutter Mavis is in the dock receiving her spars and rigging; she is not much smaller than the other cutters, and if the Moya is to be taken as a criterion, although odd looking, they will prove fast and able sea boats, and reflect credit on the builders and designer.

PORTLAND YACHT CLUB.—Of the eleven schooners in the club, every one is a keel. Of the fifteen sloops, nine are keels. The club has besides one cutter, two cats and one catamaran. Keels are evidently carrying the day everywhere outside of New York harbor and shoal, land-locked bays. Wherever yachts have the chance to develop, unhindered by purely local topography, the keel is driving out the board, facts which correspond with the teachings of these columns.

BRENDA.—This schooner, E. Y. C., has had a 15 in keel added, through which the centreboard will drop. The work was done by Harrington, of Bath, Me.

Nothing purifies and enriches the blood and destroys all poisons in the system like Hop Bitters.

Answers to Correspondents.

☞NO NOTICE TAKEN OF ANONYMOUS COMMUNICATIONS.

J. W. B., Pittston, Pa.—You can probably get the birds of Miles Johnson.

M. L. A., Yonkers.—Your rifle will be improved by the reduction of the pull and by substitution of the combination sight.

H. M., Hennepin Co., Minn.—Your rifle can be altered. For cost write to the manufacturers. See their address in our advertising columns.

CRICKETER.—This paper ceased to publish records of the game of cricket last autumn. Address Mr. O. A. Knipe, editor *American Cricketer*, Phila., and he will send you a sample copy of his paper.

W. H. H.—There was no bench show for dogs held in this city in 1870. The first show was held in 1877 under the auspices of the Westminster Kennel Club. No imported English setter dogs named Ben and Daisy won at that show.

W. B., Wellsville, N. Y.—3. See extract from Greener's new book in our issue of June 2 for oil for your rifle. 2. Do you want the skins tanned with hair on or not? 3. For game law see last issue of this paper and the current number.

H. W. M., Cincinnati.—It is safe to shoot buckshot in your gun. Chamber them carefully. If your gun is a choke-bore you must chamber them in the choke, which you can do by driving a wad down from the muzzle and chambering on that to determine the correct number.

A. B. A., Orono, Maine.—Will you kindly inform me what provision the New York dog law makes for the sporting dogs of gentlemen who wish to stop a few days in the city when passing through it? Also, what provision is made in the Boston dog law? Ans. The laws of New York and Boston make no provision to cover your case; only the dogs that are found running at large are seized. If you carefully keep your dogs housed and have them on chain while passing through the cities named you will have no trouble whatever.

P. F., Rosemount, Dundrum, Dublin, Ireland.—Following are some of the references which you request. *Philomachus pugnax* is reported as having been captured in North America by Nuttall in Manual of the Ornithology of the United States and Canada, Vol. II, p. 131; by Cassin, in Baird, Cassin and Lawrence, Birds of N. A. (Ninth Volume Pacific R. R. Exploration and Survey) p. 737; by Lawrence in Annals Lyceum of Nat. Hist., N. Y. 1852, p. 229; by Brewster in American *Naturalist* Vol. VI, p. 306, and by Brewster *Bulletin* Nutt. Orn. Club Vol. I, p. 24, April, 1876; by Wheaton in *Bulletin* Nuttall Ornithological Club, Vol. II, p. 83, July, 1877.

H. F. S., Brooklyn.—1. The English *Live Stock Journal*, the English *Stock Keeper* and the *Poultry World*, published by Stoddard in Hartford, Conn., will be the best papers for your uncle in Germany. 2. For cocker spaniel pup write to the breeders who advertise in our columns. 3. You must decide what you want for yourself. One is as good as another. Read our Kennel department. It would take a page to answer your dog questions exhaustively. 4. Go into one of the pistol galleries and examine the weapons there. Then select such a one as you find suited to yourself. 5. We know nothing of the pedigree of the dog, but have seen some very high testimonials as to the dogs sold by the dealer.

E. E. M., Charlemont, Va.—1. My fox terrier bitch, three years old, and her puppy, one year old, every four or five days refuse food, but eat a good deal of grass and then pass blood and thick white-looking stuff. They are both in good order and are otherwise healthy. Their food is corn bread and table scraps. Lately I have mixed sulphur with their bread, but it did not seem to do them much good. Some weeks back I treated them for worms, so I do not put it down to that. 2. Can young mocking birds be reared by hand. What is the best food for them? Ans. 1. The grass is good for them and they should have free access to it. Do not press food upon them; wait until they are hungry for it. Give a couple of small doses of castor oil and they will probably come out all right. 2. Yes; feed them on Reiche's prepared mocking bird food, which is for sale by dealers.

No health with inactive liver and urinary organs without Hop Bitters.

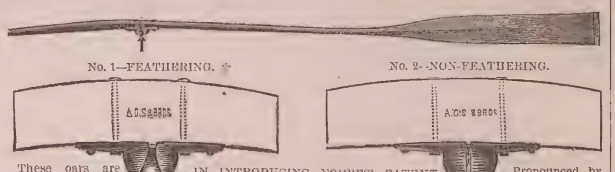
A BOOK ON DOGS
For 10 cents by mail. Engravings and descriptions best varieties. How to select, manage and breed. List of 33 diseases; symptoms, treatment and cure, 51 plain prescriptions, to be had of any druggist. Also, best remedies for Mange, Distemper, Cough, Worms, Fleas, etc., with directions, ready for use. Price, 30 cents each. Can be sent by mail. Address
FREDERICK STEARNS, Druggist,
DETROIT, MICH.



WANTED—Either a Pointer or an English Setter Dog, obedient, under easy control and thoroughly broken on woodcock, not under two nor over four years old; must be a close, thorough, careful ranger; staunch, with fine nose; stand or drop to shot; retrieve carefully and well; mind cheerfully and promptly at the word and be in all respects a prime woodcock dog; pedigree no object—a first-class cover worker is what I want and have been after for two years, without success, although I have advertised and had a number of dogs on trial. For the right dog am willing to pay a liberal price. No one unwilling to send his dog for a week's trial, at my expense both ways, need answer this advertisement. References: Bank of Montreal, at Montreal; Clarke, Coburn & Co., Boston; Forest and Stream Publishing Co., New York, etc. Address, giving full particulars and price, GEORGE C. GOODHUE, Danville, Richmond Co., Province Quebec. June16,2t

$5 to $20 per day at home worth $5 free. Sampler, Address, STINSON & CO., Portland, Maine.

Forbes' Patent Ball & Socket Rowlock & Curved Oar.

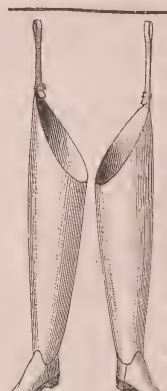
These oars are made of best second growth linden wood. Oar locks of malleable iron. Strong, very light and durable.

IN INTRODUCING FORBES' PATENT OAR, which is made on an entirely new principle, we believe we are presenting an article that, as its merits become known, will prove very popular among professional and amateur oarsmen. The rowlocks are made in two styles, as shown in the above illustration—the feathering and non-feathering—the former being adapted for professional or skilled rowers and the latter more for the novice, it being so constructed that the oar will feather itself a little without any effort on the part of the rower. The object of curving the oar is to bring the knee joint of the row lock in the direct line of draft. It is very easy to operate, will not blister the hands, and is not near as tiresome as the common oar.

Pronounced by professional oarsmen the most perfect thing in the way of a spoon oar ever brought out.

One trial of Forbes' Patent Oar will convince the most skeptical that it is the best thing in the way of an oar ever invented. Manufacturing the oars ourselves, in large quantities, we are enabled to place them on the market at the following very low prices:

	Per Pair.		Per Pair.
6 foot Feathering Oar	$4 00	6 foot Non-Feathering Oar	$4 00
7 " " "	4 25	7 " " "	4 25
8 " " "	4 50	8 " " "	4 50
9 " " "	4 75	9 " " "	4 75
10 " " "	5 00	10 " " "	5 00



Sent to any address upon receipt of price.

A more detailed description of these oars, together with an illustrated price-list of the

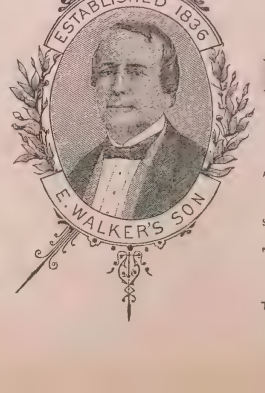
CRUTTENDEN FLY ROD.



This Cut is an exact representation of this Rod, which
CANNOT BE EQUALLED FOR THE MONEY.

It has Solid Reel Plate, Nickel Plated, Patented Ferules, allowing the wood to be used the full size, thus preventing rod breaking where wood and ferules join. But wound with cane and silk, giving it that Desirable Appearance and the Feeling of the high-priced rods. The first two joints are made from Best Selected Second Growth Ash, Stained and Polished. The tips from fine Lance wood, polished. The Rod is Well Ringed Throughout. Length, ten and one-half feet; weight, from nine to ten ounces. This is the best-made, best-finished Rod for the money in the United States and will guarantee it every way. If by accident any part should get broken, we can send a duplicate, thus saving expense and trouble of returning Rod to be repaired. With short tip it makes an excellent Bass Rod.

PRICES:—With one Trout Tip, in Case, $4.00. With one Trout Tip and one Bass Tip, $4.75. With two Trout Tips and one Bass Tip, $5.75.

Hotels and Resorts for Sportsmen.

Black Bass and Maskalonge
THE CELEBRATED FISHING GROUNDS OF THE
THOUSAND ISLANDS.
St. Lawrence Hotel and the Rathbun House,
CAPE VINCENT, N. Y.
[Terminus of R. W. & O. R. R.]

Both under one management. The Rathbun House has been enlarged to double its former capacity, and both houses refitted and refurnished throughout. They are located in the immediate vicinity of the very

BEST FISHING GROUNDS OF THE ST. LAWRENCE RIVER.

Competent oarsmen with first-class boats at reasonable prices can always be obtained. Malaria, mosquitoes and hay fever are unknown at this point. The terms for board at either of the hotels are from $7 to $14 per week, according to location of room.

See FOREST AND STREAM of July 1, 1880, "Bass and Maskalonge Fishing," for description of the attractions, and send for circular containing full particulars.

H. L. FOX, CAPE VINCENT, N. Y.

ADIRONDACKS.

Sportsmen and Tourists going to the woods via Plattsburgh after July 1 can find me at the Fouquet House, that city, and on the train for Ausable Forks Tuesday, Thursday and Saturday mornings to arrange for conveyances and seats in coach for the lakes. My coaches being new and of Abbott & Downing's latest approved pattern, I am not only able to offer more comforts and conveniences than other lines, but having guided over the entire Adirondack region so long I can furnish my patrons with such reliable information as may assist them in carrying out their plans for hunting or fishing. CHAS. J. GREENOUGH, Village Prop. and U. S. M. Agt., Saranac Lake, Franklin County, New York.

Virginia Midland R. R.
The Safest, the Shortest, the Best Route to Florida and South.

Pullman Palace cars direct without change. Guns and dogs carried free. Leaves New York at 10 P. M. and 8:40 P. M.; Washington, 7:10 A. M. and 10 P. M. MERCER SLAUGHTER, General Ticket Agent, Alexandria, Va.

$66 a week in your own town. Terms and $5 outfit free. Address H. HALLETT & CO., Portland, Maine.

FOR MOOSEHEAD, 7 P. M.

Excursion Lists will be ready about June 1.
LUCIUS TUTTLE, GEN. PASS. AGT.
Boston, May 12, 1881.

"THE FISHING LINE."
TAKE THE
Grand Rapids & Indiana R. R.
THE ONLY ROUTE TO THE
Trout, Grayling & Black Bass Fisheries,
AND THE
FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF
NORTHERN MICHIGAN.

The waters of the
Grand Traverse Region,
and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections.

The hotel accommodations are excellent, and will be largely increased in time for the season of 1881 by new buildings and additions.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. Time Cards, Folders and further information, address

A. B. LEET, Gen'l Pass'r Agent,
Grand Rapids, Mich.

Fishing Season at Rangeley Lakes Again Open.

Gen. Pass. and Ticket Agent.

Hotels and Routes for Sportsmen.

TO SPORTSMEN.
The Pennsylvania R. R. Co.,
Respectfully invite attention to the
SUPERIOR FACILITIES
afforded by their lines for reaching most of the TROUTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.
THE LINES OF
Pennsylvania Railroad Company
also reach the best localities for
GUNNING AND FISHING
in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principal cities to LAKE, RENOVA, BEDFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for
Trout Fishing, Wing Shooting, and Still Hunting.
Also, to
TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.
L. P. FARMER, Gen'l Pass. Agent.
FRANK THOMSON, Gen'l Manager. feb17-tf

Chesapeake & Ohio R'y.
THE ROUTE of the SPORTSMAN and ANGLER TO THE BEST HUNTING AND FISHING GROUNDS OF VIRGINIA AND WEST VIRGINIA,
Comprising those of Central and Piedmont Virginia Blue Ridge Mountains, Valley of Virginia, Alleghany Mountains, Greenbrier and New Rivers, Kanawha Valley, and including in their varieties of game and fish, deer, bear, wild turkeys, wild duck, grouse, quail, snipe, woodcock, mountain trout, bass, pike, pickerel, etc.
Guns, fishing tackle and one dog for each sportsman carried free.
The Route of the Tourist,
through the most beautiful and picturesque scenery of the Virginia Mountains to the White Sulphur Springs and other famous summer resorts.
The C. & O. R'y is reached by rail at Huntingdon, W. Va., from the West, Northwest and Southwest; at Charlottesville, Va., from the North and East, and at Richmond, Va., from the South.
The completion of the Peninsular Extension in the summer of 1881 affords
THE ONLY ALL RAIL ROUTE TO THE "YORKTOWN CENTENNIAL,"
and establishes a continuous rail line, via Richmond, Va., and Huntington, W. Va., between the mouth of Chesapeake Bay and the Pacific Ocean.
CONWAY R. HOWARD,
G. P. & T. A., Richmond, Va.

Old Dominion Line.
THE STEAMERS of this Line reach some of the finest waterfowl and upland shooting sections in the country. Connecting direct for Chincoteague, Cobb's Island, and points on the Peninsula, City Point, James River, Currituck, Florida and the mountainous country of Virginia, Tennessee, etc. Norfolk steamers sail Tuesday, Thursday, and Saturday. Lewes, Del., Monday and Thursday at 3 P. M. Full information given at office, 197 Greenwich Street, New York.

Bromfield House, Boston.

EUROPEAN PL...
MESSENGER, Proprietor.

TIM POND TROUT FISHING.
The boarding camps at this resort will be in readiness for sportsmen May 20. The abundance and quality of trout, the improvements in camps and boats, the facilities for reaching this pond and the beauty of lake and mountain scenery makes this one of the most desirable resorts in Northern Maine. The proprietor, Kennedy Smith, will give his personal attention to the wants of his guests. The railroads will sell tickets for round trip to Smith's farm in Eustis, and buck board teams will be ready to haul passengers and baggage from farm to camp at reasonable rates. Board and use of boat one dollar per day. Address KENNEDY SMITH, Eustis, Maine.

SUMMER RESORT.
ON SHINNECOCK BAY, LONG ISLAND
Having added largely to my house I am prepared to take two or three families for the summer. Surf and still water bathing; also good snipe shooting. Good boats and guides ready at all times. Plenty of sea food cooked in best manner.
References—J. B. Shepherd, 891 Broadway, New York. Wm Dutcher, 320 Broadway, New York.
Address WM. N. LANE, Good Ground, Long Island

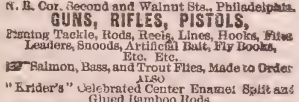
Hornbeam Rods
A SPECIALTY.
W. HUNTINGTON,
WILTON, CONN.

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly-fishing. Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON, as above.

THREAD-WOUND, LONG-RANGE
SHOT CARTRIDGE CASES



For muzzle and breech-loading, cylindrical and choke-bore shot-guns. Made to open just short of 60, 70 and 90 yards, giving close pattern and great penetration. 10 and 12 gauge. Send for circular.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 1lb canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 1lb and 6lb canisters and 6¼ and 12½lb kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern, will be found well adapted for glass ball and pigeon shooting. Made of two sizes, only No. 7 and No. 8, No. 7 being the coarsest. Packed in 6¼lb kegs and 1lb canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 1lb canisters and 6¼ lb kegs.

Dupont's Rifle Fg. "Sea Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ⅛lb, 1lb and 5lb canisters, 6¼, 12½ and 25lb kegs. Fg coarse, FFFg. fine.

Dupont's Sporting, Mining, SHIPPING and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by **F. L. KNEELAND, 87 Beaver St., N. Y.**

N. B.—Use none but DUPONT'S Fg. or FFg. for long-range rifle shooting.

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound *only*.

Hazard's "American Sporting."

Nos. 1 (fine) to 5 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration*. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG FFG, and "Sea Shooting" FG in kegs of 5, 12½, and 6¼ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ¼ lb. canisters. Burns strong and *moist*. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* Powder of the country.

OUR FISHES.

[Read by Fred Mather before the New York State Association for the Protection of Fish and Game.]

AFTER all that has been said on the necessity of increasing and preserving our fishes, in the past ten years, it would seem as though there was little left to say upon these subjects. There would be no need of saying more now if all that has been written had been acted upon, but the facts are that the people at large have very indefinite ideas upon the subject beyond the increasing scarcity of fish which, rightly or wrongly, they usually attribute to the sewage of cities or the increase of steamboats, which they think scare them away from their haunts. The latter cause I do not believe in. The Hudson River, at New York city, is continually pounded by steamboat paddles night and day in every direction, and one of the most timid of fish, the shad, pass up in great numbers. Ordinary house sewage is not bad for fish, neither is decaying animal matter, and where sewage contains no coal-tar, or other product of petroleum, lime, dye-stuff or chemical refuse, it is not injurious to aquatic life.

The causes of decrease must be looked for in our increasing population which demands more food, and the consequent increase of the number and efficiency of means of capture; the destruction of the food on which fishes live, by various means; the pollution of their spawning grounds and other causes consequent on the interference of man in the domain of nature. Our trout streams are made impassable by dams, their gravelly spawning beds are covered with sawdust, and our salt water bays are over-fished. The remedy for these things is propagation and protection, which should go hand in hand. The New York Fish Commission propagates but does not, and perhaps can not, protect, and the people at large do not see the necessity of protection. A few sportsmen's clubs protect, as far as it is in their power to do, but the public look with indifference on it as mere selfishness on their part, when in reality it is a measure of public good; as much so as if the wheat crop could be increased, and on this ground the sportsmen must present the case to the people and to the Legislature if they would arouse a sentiment in behalf of protection. Appeal to them for fish protection as a measure of political economy, which it really is, and when there are plenty of fishes for food we can enjoy the wetting of our lines. Some rivers in Great Britain are good salmon streams in the midst of a swarming population, and this is maintained by protection alone, for their attempts at fish culture are on the most limited scale. Some may say that the laws which accomplish this are oppressive and that they deny to the poor man his rights of free fishing. To this I would answer, that in our centres of population, free fishing means no fishing. There is such a thing as too much freedom. We see this when we find boys of twelve to sixteen years of age roaming the fields with guns killing every robin, yellow bird and other thing that lives. We see it when we find bands of poachers armed to resist the officers of the law, who are protecting the fish in their spawning season. The splendid work of the New York Fish Commission should be supplemented by protection of the fish during spawning time, and by facilities to enable them to surmount dams which interfere with their ascent to the upper waters where the insect life furnishes food for their young. We are suffering from the inheritance of ideas which were formed when our country was new, and the forests and streams contained what was thought an inexhaustable supply of food. Then no restrictions were necessary upon the rifle and the net. Nature provided an abundance. Now the demand for food has nearly exhausted the supply from our forests, and sadly diminished the products of our streams. Art has stepped in to supply the latter, and amid the doubts and jeers of the fishermen the Connecticut River was stocked with salmon, after being barren of that fish for nearly fifty years. The planting was kept up for several seasons, and last year many salmon were taken. Connecticut River salmon were quoted regularly in New York market and sold at the high price of one dollar per pound. The fishculturists rejoiced. This year one salmon was caught, only one; the last of his race—the Uncas of the *salars*. The greed of gain had captured the tribe and left but one fish to tell the tale. They were taken while obeying the instinct to perpetuate their species and died in attempting to reach their spawning beds. The fish-culturists have ceased in their labors of re-establishing the salmon in the Connecticut, but their labors have not been in vain. They have proved that steamboats and sewage have not destroyed the salmon-bearing qualities of the river and that is a triumph. The people did not protect the first crop and the seed was lost.

The Hudson has never been a salmon river. It is not too far South for salmon for they have lived in the Delaware. Its faults are mechanical entirely. Given a practical fishway at Cahoes, Glen's Falls and at other obstructions, protect the fish, and the Fish Commission can make the Hudson a salmon stream. The few "stray" salmon taken in the river since a few straggling lots have been deposited in the upper waters prove that the temperature is not too high nor the sewers too foul for them. But the Fish Commission see the hopelessness of stocking the Hudson with salmon at present. In the future when our people are educated up to the standard of united action on all points of common interest this may be done.

I have only hinted at the poacher. He is thoroughly imbued with the principles of freedom. He believes that all fur, fin and feather should be free as the air we breathe, and he lives up to his belief. The rights of the community he does not consider, but loudly declaims of his individual rights and of the "monopoly" of certain waters set apart for private uses. This man needs educating. He needs to learn that the one who forestalls the opening of the trout season by a single day is a thief, who is stealing from the common fund of the people of the State as much as one who puts his hand into the State treasury. Those not directly interested in this question look too leniently on the misdeeds of the poacher who is in fact a felon, and should be so severely dealt with that he would learn to recognize the fact that a theft from the public is as great as a theft from an individual. One obstacle in the way of his education to this point is that many honorable and respectable men in every community look upon poaching as a venial sin. I claim that it is theft, and that the man who takes trout or venison out of season, except to supply his necessities when beyond civilization, is a thief.

Lately, while gathering the statistics of the fisheries of Long Island for the fishery census under direction of Profs. Baird and Goode, I have had opportunities to get the views of men on Long Island which has the unenviable name of the "home of the poacher," on this question. Said a very respectable oysterman to me in reply to a question, "No sir; we do not consider the stealing of oysters from a private bed as criminal an act as taking potatoes from a field. It is true as you say, both are planted, and to rob one is taking the results of a man's time, capital and labor, but somehow our people don't seem to look at it so. They don't consider that a man has the same right to properly covered by water that he has to land, and while a man would be forever disgraced if convicted of stealing potatoes he would be regarded as sufficiently punished if fined ten dollars for taking oysters from a private bed. He would not be looked on exactly as a thief." This answer in my opinion needs no comment.

Gentlemen of the New York Sportsmen's Association! You have a broad field before you for good work which will not only elevate the people among whom it is accomplished, but will elevate and ennoble yourselves. You can help to educate the people that sportsmanship is not to merely to shoot a gun or throw a fly well, but that it includes the first principles of gentility, the regard for the rights of others, without which no man can be either a gentleman or a sportsman.

AN IMPOTANT TEST CASE.

THE RIGHT TO FISH IN MAINE WATERS.

A LAW-SUIT, important to the sportsmen's fraternity, is now pending in the Supreme Judicial Court in Piscataquis County, Me. It was to have been argued before the full bench at the low term of the Eastern District for Maine, the third Tuesday of the present month. Of the result we are not yet informed.

The history of the case is this: Among the most attractive little ponds within six miles of Monson village is one known as "Grindstone Pond," which for many years has abounded with very fine spotted trout, weighing from one to two pounds. Some two years ago a Mr. Wm. E. Barrows, a gentleman of wealth and affluence, residing in the distant State of Connecticut, purchased all the land around and inclosing this sheet of water. The pond contains more than ten acres, and it is a natural pond. The land was a part of the public domain of the commonwealth of Massachusetts prior to A. D., 1647, and all of the land around this pond is in common, with no fences or inclosure of any kind.

Mr. Barrows about one year ago posted notices forbidding any persons fishing on "Grindstone." Several parties persisted in so doing, and among them was a young man named John M. McDermott, who fished there after the forbiddal of Barrows during the summer of 1880. Barrows commenced an action of trespass, and the case of Barrows *vs.* McDermott is the one referred to above, and is very interesting to lawyers as well as important to the public generally for if this pond can be closed up and monopolized then there are thousands of others in northern and eastern Maine which may be shut up in the same manner.

The Supreme Court of Mass., have decided in several instances that a natural pond of more than ten acres is free to the public for fishing and fowling, by virtue of the Colony ordinance of 1641 and the amendment to said ordinance of 1647. The Supreme Court of Maine has held that the ordinance of 1641 is the common law of Maine, and the counsel for McDermott claim that if this is so it follows that the amendment is also the common law of this State. By the amendment of 1647, large and important rights were conferred upon the people, for by it was granted the right of passage over all lands lying in common adjacent to natural ponds of more than ten acres, providing they did not pass over any man's corn-field or meadow.

These are the questions involved in the case:

1. Are natural ponds of more than ten acres free to the public for fishing and fowling?

2. If so, are the public allowed free passage on foot over adjoining lands where no annual crops are growing?

As this is the first time that these identical questions have arisen in the Courts of Maine, the decision of the Court will be watched with much interest.

The counsel for plaintiff are Hon. A. G. Lebroke, Esq., and W. E. Parsons, Esq., of Foxcroft. The counsel for defendant are J. F. Sprague, Esq., of Monson, and H. Hudson, Esq., of Guilford.

We subjoin the agreed statement of the case:

STATE OF MAINE, Piscataquis, ss. Supreme Judicial Court, February Term, A. D. 1881.

WILLIAM E. BARROWS VS. JOHN M'DERMOTT.

Agreed statement on which the above action is to be marked Law. Action, Trespass *quare clausum*. The writ dated August 27th, A. D. 1880, and entered Sept. Term, 1880, contains sufficient counts, alleging the trespass to have been committed in the summer of 1880. Plea, not guilty. Writ need not be copied. Either party may use one copy of declaration. The plaintiff had in his enclosure, described in the writ, in Township No. 8, Range 8, in said County of Piscataquis, called "Howard," a natural pond of about twenty acres in area, known as Grindstone Pond. All of said pond was within the close of plaintiff; and the land around said pond was wild and uncultivated with the exception of about two acres upon the shore and adjacent to said pond, which had been cleared and cultivated. No crops were raised, or hay cut, upon said cleared and cultivated portion of said close during the year 1881. The plaintiff, in order to protect and forward the propagation of fish in said pond, had forbidden the public from entering said close, or fishing in the waters of said pond, by posting in said cleared portion of said close and elsewhere around and on the shore of said pond conspicuous notices in clear letters painted upon boards, forbidding all persons from entering said close or fishing in the waters of said pond; and said notices were so posted when defendant entered said close, as alleged in the writ. Defendant, in committing the acts constituting the alleged trespass, passed over and through the cleared portion of said close, to wit, two acre lot, and caught and carried away fishes from said pond without permission or license from the plaintiff, as alleged in the writ. The public had for many years, to wit, thirty-five years, prior to the forbiddal of Plff., and the posting of said notices as aforesaid, had access to said pond for the purpose of fishing. None of said land was enclosed by fences of any kind.

It is agreed that the damages, if this action is maintainable, are the sum of one dollar. The Law Court are to render such judgment, by nonsuit or default, as the rights of the parties shall demand. The *locus in quo* of the alleged trespass was a part of the public domain of the Commonwealth of Massachusetts, prior to A. D. 1647.

A. G. LEBROKE & W. E. PARSONS for Plff.
J. F. SPRAGUE & H. HUDSON for Deft.

THE LITTLE HELLBENDER'S APPEAL

IN common with the press of New York, the FOREST AND STREAM has received from Mr. Henry Bergh an illustrated circular setting forth the cruelty of pigeon shooting, and calling upon American citizens to rise up in their seats and abolish the practice.

The only trouble with Mr. Bergh is that he does not go far enough. Why does he put in a plea for the pigeon and remain silent upon the late unholy holocaust of hellbenders by the greedy Ichthyophagi? What is sauce for the goose is sauce for the gander; what is good from a Bergh point of view for the pigeon must be good also for the hellbender. The language of Mr. Bergh's ultra-humanitarian plea for the birds will apply equally well and with as much reason to the unlovely object of the Ichthyophagist's perverted appetite. We quote:

"Now, let us imagine for a moment that this unoffending little being (the hellbender) is suddenly endowed with speech. Might not its language (to the Ichthyophagist) be somewhat like the following:

"'I am wholly in your power; you will not pretend that I have ever harmed you, or that there exists any natural or legitimate reason for my destruction. The sphere in which I moved was assigned to me by the same Allwise Being who made you, and so bountifully endowed you with wealth, reason and all the material possessions of this world. I was betrayed into captivity while seeking to provide nourishment for my little family of hellbenders now dead of starvation.

"'You are about to immolate me upon the blood-stained altar of inglorious, gluttonous rivalry, and what will you gain by the crunching of my delicate limbs and ruptured arteries, that a senseless turnip would not afford you? If, however, this little body, so cunningly and so mysteriously contrived by its Creator, be necessary to your reasonable benefit—if the brief existence which it inherits be required for any purpose which religion and human policy condemn not—take it, it is yours; but offend not its Author, nor insult the cultivated spirit of your generation, by a deed which your own conscience, on reflection, will characterize, but which I refrain from doing.'

"Thus might the unoffending little hellbender address the Ichthyophagist, and what answer could he make? None, absolutely none; nor could the combined intellect and learning of the world controvert the argument of the tiny pleader awaiting his irresistible fiat."

If this appeal does not have the hoped-for effect upon the cruel ichthyophagists Mr. Bergh might interfere with the annual dinners of that society on the ground that they are in direct violation of the gambling laws, or the divorce law, for that matter. To tell the honest truth, we confess that this point seems to us a little weak, but doubtless Mr. Bergh can make the District Attorney see it.

If Mr. Bergh is still unsuccessful in his humane endeavor to preserve the unoffending hellbender, we advise him to write to all the daily papers, and call all the members of the Ichthyophagous Club dog-fighters, cock-fighters, Spanish bull-fighters, prize-fighters, burglars, highway robbers and sawdust swindlers. If in the same letter he can say something about policy playing and piracy on the high seas he will have an argument fully as logical as that which he has caused to be printed in reference to the pigeon shooting tournament now in progress at Coney Island. And we venture to say it would have as much effect.

KILLING THE SPARROWS.—Some of the towns of Georgia which are coping with the English sparrow plague are seriously contemplating the possible good results of a wholesale slaughter with powder and shot and poison. The birds have increased so rapidly in the Philadelphia Zoological Garden Grounds that they are now trapped to the number of twenty or thirty per day and fed to the snakes. This snaring has not diminished their numbers perceptibly, but by perseverance and an increase of snakes we see no reason why our Philadelphia friends cannot solve the sparrow problem. A note in our natural history columns on this subject gives evidence that the birds are in some European cities as great a nuisance as they are here. By the way, are any of our readers familiar with the poem written by Bryant upon the introduction of the birds to this city?

CARP CULTURE.—In all parts of the country people are making carp ponds, some of them on a large scale. No doubt this fish will be plentiful in our markets in a few years, and prove a great blessing in those places where good fish are now not to be had. In the markets of our seaboard, where a wealth of sea fish are to be had, they will never take a high rank, nor perhaps on the great lakes, but in the interior they are destined to rival the pork barrel as a source of food supply. Mr. Harris, in Tennessee, and Mr. A. A. Wright, in Georgia, have both constructed ponds on a liberal scale for the culture of this fish.

THE GROWING taste for sports in America is shown by a glance through our columns this spring and a comparison with former years. In all directions the desire is manifest to give the body its due and to cease the daily grind and toil for a period of rest, change and diversion. The "Fixtures" appertaining to the various departments, of which we make a specialty, are year by year stretching into long lists, the best index to the future. America is destined in time to take the lead in all sports, as it has done in so many things already.

FRESH AIR FOR THE CHILDREN.—The Children's Aid Society, of this city, are doing a most commendable work in securing for the poor children an opportunity to enjoy seabathing, fresh air and a bit of free out-door life. The society depends for support upon the voluntary contributions of its friends, among whom should be numbered many of our readers. The particulars of the society's work may be obtained from Mr. C. L. Brace, the Secretary, No. 19 Last Fourth street.

AMONG the passengers who sailed from this port to Europe last Saturday was Prof. H. B. Rouey, of East Saginaw, Michigan, who will spend several months abroad. The present Secretary of the Michigan Sportsmen's Association is Mr. Wm. B. Mershon, East Saginaw, Mich., to whom all communications regarding the Society should be addressed.

HOME AGAIN.—Mr. Thos. Manning has recently returned from Colorado for a short respite from his hard labors in connection with his mining enterprises, which he has carried through to success. He will remain in the city for a month or so to recruit, his headquarters being at the well-known yacht agency, 53 Beaver street.

GOVERNOR CORNELL'S VETO.—Just as we go to press we learn by telegram that Gov. Cornell has vetoed the game bill published by us a fortnight ago. This will be a disappointment to those who were counting on July shooting.

CONEY ISLAND.—The weather has been perfect at Coney Island, and the tournament, as we go to press, is progressing smoothly. The scores of the shooting will be given in our next issue.

DEFERRED.—We are obliged to defer a number of communications until next week. We beg the indulgence of correspondents whose communications should have appeared with this issue.

A SUMMER TRIP TO NEWFOUNDLAND has many attractions, which are admirably set forth in the sketch sent by a St. John's correspondent, and published in our sportsman tourist columns.

Southern Illinois is to have a sportsmen's association. A meeting to organize such a society will be held at the office of Dr. J. J. Jennelle, Du Quoin, July 4.

THE rabbits are out early in the morning in Central Park; and the rats are out at all times of the day stealing the food of the swans in the lake.

The FOREST AND STREAM of June 30 will contain a supplement of four pages giving the full scores of the pigeon shooting at Coney Island.

THAT 'Possum will be served July 7th. It will be put on the table hot; and enough will be left over for any one who prefers it cold.

The Sportsman Tourist.

FISHING AND SHOOTING IN NEWFOUNDLAND.

BY D. W. PROWTE.

I PROPOSE in this paper to say a few words about fly-fishing, caribou hunting and grouse shooting in Newfoundland, but first let me endeavor to disabuse the minds of those who think that the island is only remarkable for dogs and fogs and fish, that its climate is damp and disagreeable, and that it is a hopeless, barren and uninteresting country. These ideas about the colony are wholly incorrect; the fogs on the banks do not prevail on the land, the winters are milder than those of Canada and, although the spring is sometimes late and cold, owing to the prevalence of polar ice, the climate from June until October is one of the finest in the world. As seen from the deck of an Atlantic steamer the Newfoundland coast certainly does present a most bleak and forbidding aspect. The country, however, must not be judged from its rude exterior.

Within its stern and rockbound shores, lie noble bays, deep land-locked fiords, clothed to the water's edge with greenery; the deeply indented coast line affords every variety of magnificent vistas, grand ocean-washed headlands, bectling cliffs and deep gorges with precipitous sides, leading into long, placid reaches surrounded by the forest primeval. Everywhere there is an abundance of water. Lake scenery in every variety, clear, pellucid streams, foaming waterfalls; in short every form of wild, natural beauty that the combination of wood and fell and water can produce.

The island has an infinite variety of fruit and berry bearing scrubs, beautiful mosses, ferns and wild flowers. There is not so great a diversity of forest trees as on the continent. Neither walnut, elm nor oak are found within the colony. Their places, however, are well supplied by the several kinds of birch, poplar, juniper, pine, willow and maple, which are exceedingly abundant. Besides her inexhaustible fisheries, that vast harvest of the seas, which English, French and Americans help to gather in every year, Newfoundland promises to be one of the greatest copper-producing countries in the world.

But without further enlarging on the wealth of timber, or the great agricultural capabilities of the island, let me say to my American readers that within forty hours' steaming from Halifax lies a perfect refuge from the sweltering caloric of the heated term in New York, a paradise for the sportsman, a sanatarium for the used-up, and an almost virgin field of exploration for the artist, the naturalist and the geologist. For the dweller in pent-up cities it is worth while making the voyage, if it were only to see the fair, fresh complexioned fisher folk and the stalwart sealers brimful of lusty health and redolent of seal-fat.

No where is an American made more welcome than in St. John's. We have had most pleasant and intimate relations with the States from the old colonial days. We do not forget how much we owe to the enterprising capitalists of the great Republic. A New York company has just paid a million dollars for some of our copper mines, and another American syndicate is going to build us our first railway, which will run through the interior (a vast, natural deer-park), and terminate in the copper region at the northeast of the colony. Cyrus W. Field gave us telegraphic communication with the world, and when the railway is built we shall owe the two great civilizers of ern times to Americans. We have no insular prejudices against the citizens of the United States, no prepossessions whatever against American dollars. The sportsman with his rod and gun will be heartily welcomed, and the capitalist with his enterprise and his cash will be received with open arms.

A visit to the colony may now be made with much more convenience than formerly. The Allan steamers from Baltimore and Halifax touch at St. John's every fortnight, both going and returning to Liverpool. There is also direct communication in summer between New York and St. John's by the Cromwell line; the sea passage from Halifax to St. John's takes about forty hours. The best time for fishing is from the middle of June to about the middle of August; the best sea-trout fishing is between the end of July and the early part of August, ranging sometimes as late as the 15th or 20th of the month. The shooting season legally commences on 1st September, and the best months for winged game are September and October, sometimes November. Caribou shooting extends from September to the first of March. The fresh water game fish are salmon, brook trout and salt water trout, the latter being very abundant, and affording the finest sport. The principal game birds are willow grouse, ptarmigan, snipe, plover, curlew, ducks and geese. The sportsmen who care for killing sea birds will find them in great abundance on the coast. Of large game there is only one kind of deer, the caribou or reindeer; two hares, Arctic and American hare; of fur-bearing animals the principal are black bears, wolves, foxes, martens, beaver, otters, etc.

Although Newfoundland is larger than Ireland, its population is only 180,000. The great peninsula called Avalon contains more than half the whole population. The remainder are scattered in small settlements over a large extent of deeply indented coast line. On the southwestern coast and in the interior are many large plains called by the natives "barrens." These barrens are so many great unpreserved grouse moors. Into nearly every inlet on the coast flows either a river or a brook. All these water courses and the innumerable lakes abound with fish. The paucity of population naturally produces an abundance of fish and fowl. Even at the present day, when game has most materially decreased, on the 1st of September bags of eight and ten brace of grouse are frequently made within ten miles of St. John's, and dozens of lake trout may be caught within twenty miles of the capital.

It will naturally be asked, are there no drawbacks to all this anticipated pleasure? To the shooter I answer that the country is wild and hard to travel; that a good day's shooting involves a great deal of walking, and sometimes very tiresome walking. To the disciple of dear, old Izaak Walton, I say emphatically that there are flies to be contended with—yes, I am bound to confess it, there are musquitoes in the colony, and they have been here a very long time. Richard Whitbourne, Mariner of Exmouth, in Devon, a godly and religious seaman, whose discourse on Newfoundland was recommended by the bench of Bishops and the High and Mighty Prince James, thus wrote of these pestilent insects in 1610:

"Those Flies seem to have a great power and authority upon all loitering people that come to the Newfoundland; for they have this property, that when they finde any such lying lazily, or sleeping in the Woods, they will presently be more nimble to seize on them than any Sargeant will bee to

arrest a man for debt; Neither will the leane stinging or sucking out the blood of such sluggards vntil like a Beadle they bring him to his Master, where he should labour; in which time of loytering, those flies will so brand such idle persons in their faces that they may be known from others as Turkes do their slaues."

I regret to say that good old Master Whitbourne lied like an epitaph; these insects bite alike the idle and the diligent, and spare neither Monarchists nor Republicans in their voracity. Various more or less abominable preparations will modify their attack, but nothing that I know will wholly do away with the annoyance. For the angler who minds the bite of a tiny insect, while his sporting soul is set on flie by the whirr of his reel and the dash of a magnificent fish, these lines were not penned; my prosings are for the hearts of those who, like the prince of anglers, have a deep and fervent love for the gentle craft who think with Walton "that God neuer did make a more calm, quiet, innocent recreation than angling," "no life so pleasant and so happy as the life of a well-governed angler."

Both salmon and sea trout are very abundant in Newfoundland and on the Labrador coasts. They are caught principally by means of nets set along the shore or at the mouths of the estuaries. So great is the quantity taken, even in the vicinity of St. John's, that in June plenty of magnificent salmon may be bought for five cents a pound. The first catch of fish are splendid specimens, ranging from ten to twenty and sometimes thirty pounds. After the first run is over the fish are small, not more than three or four pounds. Strangely enough the large fish rarely take the fly. Small salmon or grilse from three to five pounds are often killed with the rod, but rarely a ten-pounder. I believe the same thing occurs both in Oregon and in British Columbia. Many reasons are given for this unaccountable freak of nature, but none, I think, that are wholly satisfactory. It has been attributed by some to the frequent barring of the rivers by nets, whilst others consider that our fish want to be educated to take the fly. Whatever be the cause, there can be no doubt that the splendid salmon rivers of Newfoundland and Labrador have been shamefully neglected, and that if proper care and attention were bestowed upon them they would become the finest streams for sport in the world. This is the opinion of all experienced English sportsmen who have visited the colony.

Sea-trout fishing is par excellence the best angling in Newfoundland. The finest sport is obtained from about the middle of July to the 15th or 20th of August. The trout come down the rivers in the spring, and remain about the mouths of the estuaries until July, when they commence to ascend the streams. Their time for this annual migration is uncertain and depends upon the movements of their favorite food, a small fish called capelin (*Mallotus villosus*). When fresh run from the sea the salt-water trout are in grand condition and afford splendid sport. After August they are invariably to be found in the deep pools on the rivers. I can well remember one special day's fishing on the southwest coast. The party who were with me toiled along the banks of the river until they reached a large deep pool, with a shelving granite rock on one side and a steep bank with overhanging woods on the opposite shore. Believing in my own experience, I had whipped every likely place as I went along; but only small trout had so far rewarded my exertions. As soon, however, as I came in sight of the pool to which my friends had gone direct, I saw a sight to be long remembered—four rods bent double and four individuals in a frantic state of excitement; three had hooked large sea-trout, whilst the fourth was fast to a splendid salmon. Presently there was a gleam as from a molten bar of silver as the noble fish, a twelve-pounder, made a frantic leap; a whirr of the reel as the short line all ran out, then the poor angler, deep in the water, madly trying to follow his prey; a report like a pistol-shot, and then the disgusted fisherman holding on to a broken rod and the fragment of a snapped line. My companions' idea of fishing seemed to be that the trout were to be hauled ashore by main strength, but after two more tips were broken and two more lines carried away they began to display a little more skill and patience. Of course each discomfited fisherman declared and swore that they could have held an ordinary fish, and that the trout or salmon that had caused all this wreckage were veritable whales. Naturally I was excited by the scene I have described, and hurried up to mingle in the fray. Just as my flies touched the water two splendid fish rose, and I struck both. My rod had seen good service, and my gear was good; so, after about ten minutes' play and some ugly rushes, I managed to land both fish (three-pounders) in a little cove above the rock. After fitting out my companions with fresh flies and repairing damages, we set to work and had grand sport. In less than two hours we had landed upward of one hundred fine sea-trout, some weighing four pounds, two five pounds, and none under one pound and a half. Thirty-three fish out of my own catch scaled one hundred weight. A day's sport like this is a red-letter day in a fisherman's calendar, the remembrance of it "a joy forever." There are hundreds of rivers in the colony where just as good fishing can be obtained. Within one or two days' journey by land from St. John's, both in St. Mary's and Placentia bays, capital sea-trout fishing can be had, provided the angler hits the right time. Every Newfoundlander is a fisherman, but as a rule the codfishers despise fly-fishing; they prefer catching these big sea-trout with a pole fit for the "mast of some tall admiral," a strong line, a big hook and a gigantic float. When they get a bite, with a herculean jerk the fish is sent flopping on the bank. It is a rough and ready method, but I have often seen these huge polers kill big fish when the scientific fly-fisherman could catch nothing.

Three of Her Majesty's ships of war annually visit Newfoundland for the purpose of protecting the fishery and looking after the many vexed questions arising out of French and American fishery rights on the coast. Most of the English officers are keen sportsmen, and profane people say that amongst the important state documents which the senior officer annually brings with him from the Admiralty are to be found lists of all the best places for fly-fishing in the colony, but however that may be, the officers, who are Justices of the Peace for the colony, undoubtedly do a good deal of fishing. One of them, a capital sportsman, writing under the signature of "Mariner," in the London *Field*, gives an amusing account of his naval worship trying a case whilst fishing, plaintiff and defendant shouting their grievances to the sporting Justice from opposite banks. "Mariner's" views on the subject of fly-fishing in Newfoundland will be found to correspond pretty much with my own.

Space will not permit me to say more than a few words to those meeker souls to whom lake-fishing is an unmixed delight. Fresh water trout are simply innumerable, countless dozens may easily be caught everywhere in the colony, varying in size from a few ounces to some pounds. For the sportsman who delights in sea fishing there is cod galore. The more adventurous spirits may indulge in a small Arctic expedition and go to the seal fishery in one of the many fine sealing steamers that leave St. John's and other ports on the 10th of March. Several of these vessels this year killed in less than a month over 20,000 seals.

Sometimes very curious fish are caught around the Newfoundland coast. Of late, some very large devil-fish have been killed, but nothing in modern times comes up to the "queer fish" described by Whitbourne. "In the year 1610 in the morning early, as I was standing by the water side in the harbour of St. John's, I saw a strange creature which I espyed very swiftly to come swimming towards me, looking cheerfully as it had been a woman by the face, eyes, nose, mouth, chin, cares, neck and forehead; it seemed to be so beautiful and in those parts so well proportioned, having round about the head all blew strakes resembling hayre, down to the necke (but certainly it was no haire), seeing the same coming swiftly towards me I stepped back, which when this strange creature saw it presently thereupon dived a little under water and did swim towards the place where before I landed, whereby I beheld the shoulders and back down to the middle to be as square, white and smoothe as the backe of a man, and from the middle to the hinder part poynting in proportion like a broad hooked arrow. How it was proportioned in the forepart from the neck and shoulders I know not. This I suppose was a mare maide—now because divers haue written much of mare maides I haue presumed to relate what is most certainie of such a strange creature that was seene at New-found-land; whether it were a mare maide or no I know not, I leaue for others to judge." The ingenuity with which this ancient mariner constructs a Newfoundland syren out of a common seal is worthy of Barnum.

I have stated before that the interior is one vast natural deer park. One solitary settler alone inhabits this vast wilderness—the telegrapher at Sandy Pond. This is the main cause of the great abundance of deer in Newfoundland. In the spring they migrate from the southern and southwestern parts of the coast to the northeast, and return again to their old quarters in the fall. Good shooting is to be had in September by going into the interior. A party of hunters with good Mic-Mac Indians, and well-fitted out, would be sure of fine sport, provided they came in the right season, and were not too much pressed for time. September is the best month for deer-stalking in the North; by November the deer have returned to their winter quarters in the Southwest. For the September deer shooting take canoes up one of the many rivers that lead into the inland lakes, fix your camp in some convenient spot and hunt around it. It is very rough, hard work, and no one but a keen sportsman and a good walker should attempt it. At least three weeks would be required on an expedition of this kind. Good coastal steamers now ply north and south, and the hunting-grounds may be reached either from the northeast by Hall's Bay, or from the southwest by the Humber River; the latter is the easier route into the interior, but it involves a somewhat longer sea voyage. The naval officer who writes under the *nom de plume* of "Mariner" in the London *Field*, has had good sport for the past two years on the Grand Pond grounds, getting there by way of the Humber.

Whilst it is an indubitable fact that there are thousands of deer in the interior, the vast wild country over which these countless herds roam, and their shy nature will always make stalking a somewhat precarious sport. This very difficulty is probably an added charm in the eyes of many sportsmen. Winter shooting (tracking the deer on the snow), is a far surer method of killing them. Engl shmen profess to despise this truly indigenous American mode of shooting. I fancy I hear some well got up and gaitered son of Albion pronounce it, "Ah, beastly butchery," quite American, "doocid pot-hunting, ah!" Now, why following a wild animal by his footmarks on the snow should be viewed in this way, whilst stalking the same animal by his tracks on the marshes or the barrens is considered noble sport, is quite a puzzle to me. A thing, I suppose, that no colonial fellow can understand. For the winter shooting the sportsman may visit St. John's at any time that suits his convenience. From Christmas up to the beginning of February let him take the coastal steamer to some point on the southwest coast, where he will obtain either native or Indian guides. On the 17th of March last a friend of mine in company with some Indians killed eleven deer in one day near Bay du Nord in Hermitage Bay, and they saw one herd in which my informant considers there must have been one thousand deer. In nearly all the great winter hunting grounds the settlers have rude huts for shelter called in Newfoundland "tilts." In Bay du Nord one sportsman uses dogs and sledges, but even without these luxurious appliances the walking is much better in the interior than it is in the autumn; the cold is never very intense, and there is a dead certainty of getting a shot at a caribou.

To the lovers of big game grouse shooting will be considered very tame and humble sport, but to my own mind good grouse or snipe shooting over well-trained dogs is the finest amusement in the world.

> Of all the joys that sporting yields,
> Give me to hunt the stubble fields,
> Quite early in September.

Thus sang Somerville two hundred years ago of partridge shooting in England. Pretty shooting certainly if you know a Duke who has good manors, but tame and unexciting sport when compared to grouse shooting over the wild, wind-swept barrens of Newfoundland. Here as far as the eye can reach are level plains alternating with undulating hills. There may be no "bonny, blooming heather," but there is a wealth and profusion of berries, mosses, ferns and wild plants, fit concomitant for this truly indigenous wild sport of the West. With good dogs and straight shooting powder bags of ten and fifteen brace may be made in a day, and in killing that number of birds the sportsman will have enjoyed genuine, good, manly sport.

All I ask of my readers is to come and judge for themselves about the sporting capabilities of this unknown island of Newfoundland. The trip is short and inexpensive, the country is a virgin field of exploration for sportsman, artist and naturalist, and for all there is health and lusty vigor in this new playground of North America.

GEORGE IS WELL—Gouverneur, N. Y., June 15.—In FOREST AND STREAM, of May 26, "X" (Canton, N. Y.), reporting some of the exploits of the favorite guide George Muir, stated that "George" was out of health this season, in which he was in error. "George" was sick a short time early in the spring, but is fully recovered. I saw him yesterday; he had just returned from a successful trip in the woods.

Natural History.

THE ANTLERS OF DEER.

THE theory that the spike buck is a new species developed on account of the greater utility of the spike as a weapon of offence has been pretty thoroughly disposed of, and is not likely to be resuscitated at once. A valued correspondent has brought to our notice a letter written by him some years ago to the Germantown *Telegraph* which contains so much valuable information in regard to the antlers of deers that we reproduce it here. After stating the novel theory that the spike horned deer is a new species the writer says:

Now, to any one who knows anything at all about the nature and habits of deer, this new fangled species will be only laughable. The transmission business would sound plausible enough, if it were not for the fact that the horn is not a permanent peculiarity, either in time or form. The deer's horns are not completed until he rubs the velvet off in September, and he loses them again in January; while as to form there is no rule and any amount of variety. The spike buck is an eighteen months old deer; born in the spring, his horns begin to grow the next spring and are hard spikes in the fall. If he is not strong enough and active enough, he will not whip off the old veteran bucks, and the next year he adds a prong on his new horns and becomes a "forked horn." The popular idea, and under conditions as to undisturbed solitude and plenty of food, the true idea, is that the deer adds a prong to the main beam each year; that the deer with four prongs on a beam is four years old—in his fifth year.

I have said "the true rule," but true under certain conditions, and my experience running through the last twenty years puts it about thus: The normal growth of a deer's horns, where the deer lived undisturbed by either man or wild animals and had plenty of suitable food, would be represented by a spike at a year old, that is in the second year; a forked horn at two years, and a prong added each year—the deer being called three-year old, four-year old, etc., or three-pronged buck, etc. After the deer had passed the meridian of his life, however, his horns would be irregular as to size and the number of prongs, so that his horns would no more determine his age. In reality we find this rule working, but under difficulties. The constant disturbances to which the deer are subject from both man and beast, cause frequent changes in location of haunts and character of food and water, and the horn when young being very soft, and brush and trees plenty in the deer country, very few deer manage to carry their horns from spring to fall without more or less harm coming to them. So that out of a hundred pair of deer-horns from deer killed in the same season and locality, not more than twenty per cent. would be tolerably even, and not more than half those could be called perfectly even. I killed this fall a buck whose saddle weighed fifty-five pounds, and took from his head as perfectly even a pair of horns as I ever saw, weighing four and a half pounds, with five points on a beam; but this deer was killed in a country where the chances were a hundred to one against his having been disturbed during the season by anything unless a panther. There are no wolves there. I killed in the same region a year or two ago, a buck whose hams, cut above the joint and with no saddle weighed forty pounds, while his horns were mere spikes, one of which made a feeble attempt to fork. A deer killed a day or two after, not by me, had four points on a beam on its horns, while the saddle, with the legs cut below the joint, only weighed forty-two pounds. I killed a deer in 1874, whose horns had fewer prongs and were not even half the size of the first one I mentioned as killed this year, and yet he was as large a deer. I have seen thousands of pairs of deer horns from deer killed in all parts of the country, and yet have rarely seen two pair exactly alike. I have seen one horn straight, the other curved; one with no prong, the other with several; a head of horns with a third horn growing between the two regular ones. I have a pair hanging on my wall at home, with twenty-six points on the two beams together.

I have also a pair of horns which, if I did not think too highly of the natural sagacity of the deer to suppose that he would so far fly in the face of Providence and the experience of the world for the last few thousand years as to walk in the Darwin runways seeking pasture, I might judge the buck who wore them to have adopted on the natural selection principle. The buck lived in a dense windfall, surrounded by a desperate country of thick spruce, laurel and rocks. Traveling with a widespread set of horns being troublesome there, this deer crossed his in front about an inch, so that they would part the bush instead of catching in it. This deer, by reason of his living in the windfall, the natives knew as the "Hurricane buck."

The most curious head of horns I have ever seen came from the head of a deer killed by a friend of mine two years ago. These horns are very thick in diameter of beam, but the beams, instead of curving, stand straight up like candlesticks a foot or more high, and then at the top spread out with a number of points starting from the same base, something like a man resting his elbows on a table and holding his forearms erect with his hands and fingers half spread out. The argument against the transmission and survival of the fittest business is, that there are always in any one year more deer over the spike buck age than under it, so that if each deer transmitted his own peculiarities to his descendants there would be more deer with large heads than small ones.

But what the spike buck transmits is not the peculiarity of having straight horns, but the faculty, among others, of shedding his horns every year and growing a new pair, of which the size and shape depends on a variety of circumstances. If the spike horn is making its appearance as a new variety in the Adirondacks, it is simply because the deer are slaughtered so recklessly in that region by cockneys in summer and market-hunters in winter that the average life of the deer has been reduced to such a low point that no buck, as a rule, has a chance to get beyond the spike age.

BAINBRIDGE, Ga., June 7.

EDITOR FOREST AND STREAM:

In your issue of the 2d inst., the question is asked: "What is a spiked buck?" Well, Mr. E. A. Bonnetti to the contrary notwithstanding, it is a young *Cervus virginianus*, not a new species as he claims. Both naturalists and old hunters know when this species abound, by actual observation, that spiked buck is but the young of the *Cervus virginianus*. Catch one and raise it, as many of us have done when this variety exists, and all doubts will be at once dis-

pelled on this question. The first year the spike appears, the second year two, the third three, and then a full head of horns follow. O. G. GURLEY.

THE SWIMMING POWERS OF SERPENTS.

RATTLESNAKES in Florida often cross extensive waters. In May last while fishing in the Halifax River, Eastern Florida, which is a sound or bay of salt water from one to two miles wide I saw a rattlesnake swimming from the mainland to the peninsula. My companion, who had lost many dogs by snake bites, and was their enemy in consequence, pulled up the anchor to go and kill the snake. It swam strongly and swiftly, but as it saw that we should intercept it, it turned at bay, came toward us, and as we approached it threw itself into a coil to strike. It was, however, easily killed by a blow of our oar, and it measured about five feet in length with a diameter of four inches—small for the Florida species—which often grow to be seven or eight feet long.

A few days after, fishing in the same river, we saw a racer, or whip snake, crossing the river. Him we pursued also, and he turned to fight although without poisonous fangs. It was about eight or nine feet long, and as thick as a man's arm. It swam boldly and well, with the head raised a foot above the surface. Being a harmless or rather useful serpent which kills many rattlesnakes and moccasins we allowed it to go unmolested on its way.

The rattlesnakes are often found on this peninsula between the river and the ocean as well as on the mangrove islands in the river. Their food seems to be small animals, such as squirrels, rabbits and rats, the two latter of which are abundant, also such birds as they can capture. S. C. C.

THE LOON.

GREAT NORTHERN DIVER.

I.

WINGED correlate of moose, bear, caribou,
Creatures of nature's savage mood.
With primitive and uncouth forms indued,
And cries and voices keyed to solitude,
Such screams and wails as ancient nature knew,
When man in caves still inarticulate grew.
Lone lakes remote thy lavatories be;
Eluding in their depths the hunter's eye,
Thou taunt'st him from afar with clamorous cry,
As of derisive laughter, maniac glee.
Where falls the shadow of the desert pine
On coves of wild-wood meres thou oar'st thy way
With swan-like stateliness at day's decline,
Startling with screams unearthly twilight gray.

II.

Deepening the weirdness of the forest old,
Which, hushed and sad, seems brooding on the days
When mammoths, crashing, roamed its branchy maze,
And beasts and men were of a huger mold,
In immemorial years of that far past,
Oh, raucous bird, thy kindred screamed and dived,
And with the moose and reindeer have survived,
Where primitive woods their mystic shadows cast,
In a still vigorous progeny, which soon
The hunter's rifle will exterminate,
Sole live things of the world's primeval state,
Still stirring in the light of sun and moon,
As fast as vanishes the forest gloom,
Wild creatures of its shades must meet their doom.
—B. W. BALL, *in Boston Herald.*

SHARON HILL, Delaware County, Pa., June 9, 1881.
Editor Forest and Stream:

While the loon subject is receiving attention in your columns, I would like to add some of my own observations in reference to this bird. I have frequently noticed them in the lakes in the interior of Canada, but I never saw more than two young loons accompanying the same parents, and I naturally conclude that they lay only two eggs.

The young loons frequently sit upon the back of the parent while swimming. I have often pursued the young loons in a boat with the view of capturing one, but never succeeded, as they are expert divers, even when quite small. On such occasions sometimes the old loon would rush toward me, elevating its body out of the water and flapping its wings frantically, apparently endeavoring to inspire terror by its actions. I have never seen a loon on shore, and I do not think they go on land, except to their nest, which is said to be only a few inches from the water. It is not uncommon to see several families (old and young) swimming together. When approached they all dive and separate from each other.

Loons are quite abundant in the Gulf of Mexico in winter on the west coast of Florida, but I have never seen them in fresh water in that State.

They are sometimes found napping on the water in the daytime. A friend of mine lately sailed close to one while asleep and shot it. I shot two loons on the west coast of Florida lately. They each weighed six pounds.

JOSEPH W. WILLCOX.

THE PHILADELPHIA ZOO.

LAST week the Philadelphia Zoological Society purchased from a captain of a sailing vessel plying between this port and South America eight especially fine specimens of the boa constrictor, those formerly at the Garden having succumbed to the rigor of the past winter. The new boas average about eight feet in length, are in good condition, and immediately began feeding on being put into their new quarters.

The pair of large Florida alligators which were lately sent to the society died very soon after their arrival. At first it was thought the change of climate caused their death, but dissection showed that one of them had a number of buckshot in his head, and in the other a large bullet was found.

"Henry," the large baboon which is chained a short distance from the monkey house, has had given him a female companion of his race, and the two appear to be on the best of terms. "Henry" is ever ready to throw back the sticks and stones with which the small boys pelt him. So expert is he in retaliating with these missiles and with so much power does he cast a stone that his keeper has dug up all the stones that were in the ground within Henry's reach, to prevent him from doing injury to the visitors.

English sparrows have increased so rapidly in the Philadelphia Zoological Garden that they are being caught and utilized as food for the snakes. Twenty or thirty are daily snared, and yet the flock seems to be as large as ever.

The wild fowl in the Garden wintered well and are in possession of their old quarters in the lake.

The upper Delaware and Schuylkill rivers are still muddy, so clouded as to render it impossible to fish for bass with any success. We hear of but few taken. Some of our anglers have done well with the perch in Timber, Raccoon and Oldmans creeks. I am still hearing of more woodcock having bred within the city and just beyond the city limits. HOMO.

THE VIENNESE SPARROWS.—In a Paris exchange, the *American Register*, we find this hint which might profitably be acted upon in some of our American cities: "It would seem as though the Viennese sparrows were more numerous and more unruly than their kindred in other cities, nay, in any other city in the civilized world. At all events the Viennese City Council has appointed a regular sparrow-hunter, who, by virtue of his office, is to see to it that the sparrows in the city park stop their incessant noise, no longer soil the few trees therein, and leave the singing-birds in peace, which are too modest to cope with their troublesome neighbors, and in order to best and practically accomplish this mission, to reduce their number by powder and shot. Lest the sparrows practice deceit at sight of the official executioner, or the singing-birds take fright at the unwonted detonations of the murderous instrument the functionary in question has been provided with an air-gun and noiselessly brings down from forty to fifty marauders per diem, which, tastefully strung, he sends to the competent municipal father as a token of his properly attending to his duty. If the sparrows do not quickly perceive that they are anything but welcome guests in the Austrian capital they must be thick-headed indeed."

SOUTH KEENE, N. H., June 14.—*Editor Forest and Stream:* In your issue of June 2, Mergus, of Poccasset, Mass., speaks of loons laying white eggs. I think Mergus is mistaken, for I know the nesting places of both species, and have in my possession an egg taken from the nest of the larger one, and it is light brown or gray with dark spots. I have taken their eggs for several years and have never found but two.—MART.

Our correspondent, Mergus, only reported what was told him, and not his own observations. The egg of *Colymbus torquatus* is brownish drab in color, with dark spots. Its color in fact is something like that of the woodcock's eggs, but the shade is darker throughout. The egg of the sandhill crane also resembles in color that of the loon

WHAT IS IT?—Pine River, Wis.—A gentleman friend has caught what he calls a "Samson fox," a red fox with short wool like a lamb. Is it a separate species or a "freak of nature?"—MALLARD.

Game Bag and Gun.

THE NEW JERSEY SOCIETY.

PLAINFIELD, N. J., June 11.

THE prospect of July woodcock shooting in this vicinity is fair. Numbers of birds are reported as having been seen, and the recent wet spell will undoubtedly keep them with us longer than as though it had remained dry. But few quail are heard whistling in this vicinity while rabbits are plenty. A fair number of grouse are reported as being seen on the sides of the adjacent hills.

It is the intention of members of the game societies in this section to rigidly enforce the game laws regarding woodcock shooting as they do other existing game and fish laws, also the "non-resident" law of this State, which provides that "no person or persons non-residents of this State shall kill, destroy, hunt or trap any game whatever, at any time, in this State without first complying with the by-laws of the game societies organized or to be organized under the laws of this State, under a penalty of $50 for each offense. Members of societies for protection of game and fish are empowered to make arrests of persons violating the same." The New Jersey Game and Fish Protective Society, whose headquarters are at Plainfield, N. J., W. L. Force, Secretary, are making many members of "non-residents" from New York and Philadelphia who see the wisdom and justice of such a law. By the payment of their annual dues of $2, which money goes toward stocking sections with game and prosecution of violators of the game laws, they find when the time set by law arrives for shooting and fishing that their money has been well invested. Since the organization of this society in 1879, "pot-hunting" has rapidly decreased in this section, and I trust the time is not far distant when I can say it is entirely eradicated, and every miserable "pot-hunter" brought to grief.

The above society have established an agency at No. 2 Cortlandt street, with Mr. Fred. Volckman an (honorable Vice-President of the same), who is authorized to receive names of new "non-resident" members, and grant them a certificate of membership. Also an agency with Mr. J. F. A. Leateur, at Philadelphia, cor. Seventh and Pine streets.

FOX.

THE STATE SPORTSMEN'S CONVENTION.

THE twenty-third annual convention of the New York State Association for the Protection of Fish and Game was convened on Monday, June 20. During the morning large parties of delegates arrived from the northern and central parts of the State, and at twelve o'clock a complimentary chowder was served to those present. From then until eight o'clock in the evening the time was passed by the delegates in sight seeing. At eight o'clock the delegates and their friends all assembled in the spacious east dining-room of the Hotel Brighton, the members being welcomed to the hospitalities of Long Island by Mr. George A. Chappell, the President of the Long Island Sportsmen's Association. After this came some excellent instrumental music by Ceiler's Quartette, and then followed the

ADDRESS OF PRESIDENT ABEL CROOK

GENTLEMEN, Members of the New York State Association for the Protection of Fish and Game:

On behalf of the Long Island Sportsmen's Association, and in the name of all our fellow Sportsmen and citizens of this section of the State, I congratulate you upon your re-assemblage, and heartily bid you welcome.

Two years ago thirteen representatives of the clubs of Long Island participated, for the first time, in your Convention at Rochester. The consideration shown them is green in their memory. Strangers in a strange land, they found friends, and returned to relate to willing listeners the story of their adventures, and to advocate the propriety of an attempt to induce you to visit their home by the sea.

Encouraged by the sympathy of our local clubs, the Long Island Sportsmen's Association was organized, and in harmony and an honest wish to entertain the members of the State Association, 55 delegates from this locality in Convention assembled at Saratoga Falls last year, extended to you a cordial invitation to hold the Convention of 1881 at this place.

The unanimity with which you responded was alike pleasing to them and gratifying to their club associates.

Appropriately they were permitted, at the muzzle of the gun, if not at the point of the bayonet, to bring with them for safe keeping the three State prizes. Prized indeed were they, but overshadowed by the greater prize of your goodwill and confidence, as evidenced by the manner in which you met and treated them.

They have faithfully endeavored to make your advent among them pleasant to you and notable in the annals of your meetings. Energetic committees have labored day and night. Many varied and valuable prizes have been provided to reward your skill in the proposed friendly competitions with the rod and gun. Thousands of dollars have been expended in the many detail arrangements for your comfort and pleasure, and the result is within your control. You have congregated from the various cities, villages and hamlets of our great "Empire State," and present an imposing spectacle to those who are watching your deliberations.

After an existence of twenty-three years, the purposes and accomplishments of this Association are scarcely known outside of the western and central portions of the State. Why are we assembled here? Why have these beautiful trophies been presented? What has this organization accomplished? In what work is it engaged? What achievements await its future? Is it beneficial or injurious to its members and to the public? Is its existence a subject of congratulation or regret? These are pertinent questions which are repeated upon every side, and should ever be borne in mind until a conclusion shall have been satisfactorily reached.

In 1859, at Geneva, under the style of "The Sportsmen's Club of the State of New York," it sprang into existence, and through its fostering care the first reasonably consistent Game Law, of the year 1860, was enacted and enforced. In 1865, at Niagara Falls, its ranks having been increased by the addition of other organizations, it adopted a Constitution and By-Laws for the government of the aggregation of Clubs under the new name of "The New York Sportsmen's Association." Still later, in 1873, at Batavia, it adopted its present style of "The New York State Association for the Protection of Fish and Game." The original title of "Club" was suggestive of the social character of its deliberations. The present name indicates its purposes without robbing it of those elements which bind man to man in the strongest ties—"friendship and brotherly love." To cultivate the latter, contests are arranged, and friendly emulation encouraged, and skill with the rod and gun rewarded.

The pastimes naturally attract more attention than the business portion of the meetings, and tend to excite unwarrantable criticisms.

To this Association belongs the credit of initiating bench shows of dogs in this country. They were held at Oswego, in 1874, and at Watertown, in 1875.

By the assiduous efforts of Seth Green and his co-workers and members, fisciculture has been proved to be practicable and profitable, and many of our waters which had become depleted of their finny denizens have been re-stocked and furnish sport and livlihood to many.

The reckless devastation of the forests of the North Woods, or Adirondacks, with the concurrent effect upon the canals and rivers, has been stayed, and the territory, with its variety of game animals, birds and fish, largely guarded and protected through the efforts of influential members of this organization.

In number of clubs and of members; in wealth, in influence, this Association stands without a peer and can and should afford an example for others.

The protection and preservation of fish and game involves two methods of procedure. In the first place, suitable game laws are required, to restrict and regulate the destruction in order that the game may be afforded an opportunity for natural reproduction.

In the second place, artificial propagation, or re-stocking may be beneficial. The latter has been proven practicable, and some localities have thereby been rendered paradises for sportsmen, and certain foreign specimens introduced which have become acclimated and thrive.

Legislation will be useless unless sensible. At heart men are more or less selfish, and our statute books evince the willingness of local Solons to prohibit their neighbors from indulging in the chase provided such restriction be not applicable to the home industries. As a result, more ink and paper are consumed in specifying the exceptions to the rule than in the statement of the rule itself. Perhaps this is based upon the adage that "the exceptions prove the rule"

Varying conditions of temperature and of climate, of soil formations, of artificial improvements and of new industries, must be considered in the preparation of a Game Law. This is peculiarly within the province of this Association. How shall it acquit itself?

During the past year that grim tyrant, Death, has invaded our ranks and removed from our midst a former President, Greene Smith, of Petersboro, and also James F. Williams, of Dansville, a member of the Standing Committee on Game Laws. Their many estimable qualities are known to you and they need no eulogy from me.

To-night is devoted to the consideration of the business of the Association. Friends are present to contribute to our pleasure by offerings of verse, prose, song and instrumental performance. A period of recreation and sport will follow. No one should consider himself a stranger. All are invited to participate freely. I sincerely trust that the preparations will prove equal to the occasion, and that nothing will occur to mar the celebration of our re-union.

When we part may it be with pleasant remembrances of this event. Continue in the work which you have undertaken. This organization may not directly accomplish great things to be seen of men. Our individual clubs must perform. Let us unite in pledging ourselves and our clubs to faithful co-operation, and ere long our forests and waters will teem with the subjects of all sportsmen's desires, and the silent places will again resound with the warbles of our departed song birds. Then, indeed, will be the fruition of our hopes, and we shall be recognized by all as justly styled "The New York State Association for the Protection of Fish and Game."

"The American Sportsmen's Song," written by one of the members of the Washington Gun Club, Mr. Henry Alten-

brand, was then sung by the glee club of that gun club assisted by the Fountain Glee Club, and was received with marked favor by the assembled sportsmen, who indeed from the first had manifested a good-natured tendency to applaud everything that was offered for their entertainment. *Encores* were the order of the evening.

Mr. Wm. E. MacMasters, of the Albany *Argus* and the Philadelphia Press read the following poem which he had written for the occasion:

FIELD SPORTS.

A Poem of Greeting:

BY WILLIAM E. MAC MASTER.

I.

Hail, brother sportsmen of the Empire State,
I give you greeting in my humble lay;
More noble hearts, or strife more truly great,
Ne'er nerved the heroes of our palmiest day.

II.

From Erie's shore to Coney's Island's strand,
From the old "North Woods" to the "Southern Tier,"
Here where the Atlantic laves our native land,
Again our contests signalize the year.

III.

In friendly war matched like a Spartan band,
With eye undaunted, nerves as staunch as steel;
You'll win your honors from a comrade's hand,
In emulation which only sportsmen feel.

IV.

Like the bold clansmen of Auld Scotia's pride,
Where every plaid sheds lustre on the scene;
Here at her threshold our contests to decide,
New York gives welcome to all clubs I ween.

V.

Here then on wings poetic we will try,
Nor hope our Muse to amuse you with her lay;
Yet chip not our pinions ere the birds do fly,
Since ammunition's not restricted in this fray.
Then pass the amber cup with jolly cheer,
And crown our sportsmen heroes of the year;
For bards poetic, like birds who soar and sing,
Do flutter least when longest on the wing.

VI.

From scenes like these of gay and mimic strife,
We turn exultant to the sterner life:—
Where rosy fingers paint the dappled morn,
And merry hunt smart, with resounding horn,
Summons the drowsy dogs to eager ear,
And rouse from leafy couch the startled deer.
Bid the well-trained pack with cautious pace,
"Point" well the grouse with an unerring trace,
While field and wood resound the flying war,
Which every mountain echoes from afar!
Till vale and forest repeat the loud refrain
While the warm scent draws on the deep mouthed train.

VII.

Hurrah for the prairies
And sports of the field,
Where grouse in full coveys
Lie closely concealed;
Where mountain and forest
Nor deep tangled glen,
Interfere with our dogs
Or weary the men;
Where the unbidden acres
Like oceans are spread,
And the birds are still waiting
Our deluge of lead!
"He on!" what a magic
That sound to the ears
Of full-blooded pointers,
Whose instinct it cheers;—
They dash on like coursers
Until the warm scent,
Unerringly leads them,
Where now more intent—
Staunch as old veterans
To their "points" they stand,
Each "backing" the other
And waiting command!
Now swift on the pinion,
From stubble they rise;
The quick blood is mounting,—
Their flight hits the skies.
Escape? It is hopeless,
Our scattering lead
Is thundering o'er them!
And the dogs "mark" them, dead!

VIII.

When summer's o'er and autumn mild succeeds,
And quail or partridge on the heather feeds;
Before his lord the setter then should go,
And beat the cover carefully and slow.

IX.

When the days shorten and the nights grow chill,
And softer light doth rest on vale and hill,
The sportsman then will change his hunting ground
For lakes and streams where water-fowl abound.
Where heavy geese scream up against the sky,
And swift-winged teal almost our skill defy.
Where skies are darkened by mallard in their flight,
And the rice fields are garrisoned at night.

X.

Now comes the sport which gives such manly zest.
Wild fowl shooting, most difficult and best.
To measure speed and distance, and to bring
A teal at sixty yards upon the wing;—
Or land a wigeon with unerring skill,
On some safe log, convenient to your will;
Requires a master in the sportsman's art,
Whose every nerve obeys his head and heart.

XI.

Hunting in all phases, on the field or flood,
Makes men more hardy, more humane and good;
Gives health and pleasure, sets the spirit free,
Teaches love of nature—helps the memory;
And more than this, it teaches love of law,
Which will not kill to feed a greedy maw.
How the locks bristle and the eyebrows arch,
For quail or partridge massacred in March.
With what contempt true sportsmen shun the spot,
Whereon they meet some hunter for the pot:—
Poor worthless d——l, his head beneath a price,
Else Courts might ask if "Pot"-ers hunted twice.

XII.

Gladly would I sing when our hunt is o'er,
The pleasure which our camp has still in store;
The smoking viands of our simple fare,
Appetites keen as is the morning air;
A hospitality that's no empty name—
Each guest a brother whencesoe'er he came.

XIII.

A cordial greeting, then, brothers of a race
Whose deeds are sung in many a loving chase;—
Heroes whose brows by fairer hands than mine
Are wreathed with chaplets—human, yet divine.
May scenes like these their annual pleasures bring,
And bards more worthy of their merits sing;
While here with new fields and contests at bay,
I give you welcome in my humble lay.

The roll called showed that the clubs, represented by accredited delegates, were: Phœnix Sportsmen's Club, Seneca Falls; Phœnix Gun Club, Brooklyn; Spencer Sportsmen's Club, Lyons; Adirondack Sportsmen's Club, Adams; Long Island Shooting Club, Brooklyn; Fountain Gun Club, Brooklyn; Jefferson Sportsmen's Club, Watertown; Audubon Club, Rochester; Brooklyn Gun Club, Brooklyn; Monroe County Sportsmen's Club, Rochester; Genesee Sportsmen's Club, Irondequoit; Niagara Falls Shooting Club, Niagara Falls; Corning Sportsmen's Club, Corning; Wayne County Sportsmen's Club, Clyde; Rochester Gun Club, Rochester; Dansville Sportsmen's Association, Dansville; Nassau Shooting Club, Brooklyn; Long Island Shooting Club, Brooklyn; Le Roy Sportsmen's Club, Le Roy; Deer Richmond Club, Batavia; Seth Green Rod and Gun Club, Dansville; Forrester Club, Buffalo; Queen City Club, Buffalo; Washington Gun Club, Buffalo; Central City Sportsmen's Club, Syracuse; Central Gun Club, Troy; Onondaga County Sportsmen's Club, Syracuse; Onondaga County Fishing Club, Syracuse; Seneca Gun Club, Seneca Falls; Nonpareil Sportsman's Club, Brooklyn; Lewis County Sportsmen's Club, Lowville; Garden City Gun Club, Hempstead; Livingston Sportsmen's Association, Geneseo; Audubon Club, Buffalo; Falcon Gun Club, New York; East Buffalo Shooting Club, East Buffalo

After a tenor solo, "The Standard Watch," by Mr. Fred. Harvey, of the Fountain Glee Club, and the rendering of a song, "Toast," by that club, the follow ng new clubs were admitted to membership in the State Association: Game and Fish Protective Association, of Richmond County, Staten Island; Coney Island Rod and Gun Club, Brooklyn; Prospect Gun Club, Brooklyn; Eastchester Gun Club, of Westchester; First German Gun Club, New York City.

The essay prepared by Gaston Fay was then read by Mr. F. K. Castner, of the Nonpareil Sporting Club. It is printed in another column. At the conclusion of this reading and after the singing of "The Loyal Song" by the Washington Glee Club and a tenor solo, "Did'st Thou But Know," by Mr. Fred. Harvey, it was voted, because of the lateness of the hour, to suspend all the remainder of the programme except the necessary business. For the next convention the three places named were Niagara Falls, Dansville and Lyons. Horace Silsby, of Seneca Falls, and Dr. E. L. Sargent, of Watertown, were appointed tellers of the election and, on informal ballot, the following result was obtained: Niagara Falls, eighty-four; Dansville, seventy-nine, and Lyons nineteen, when Lyons withdrew. On the formal ballot the vote was announced: Niagara Falls eighty-eight and Dansville eighty-seven. The convention will therefore assemble at Niagara Falls the coming year. The meeting then adjourned to a sumptuous collation, when the scintillations of wit, brilliant repartee and jovial merrymaking were prolonged to a late hour, even for Coney Island.

The adjourned meeting of the association was held at the Hotel Brighton Tuesday evening, President Crook in the chair. The report of the Treasurer, Mr. W. J. Babcock, was read and showed a balance of $215 86 in the treasury. The election of officers for the ensuing year resulted as follows: President, Mr. Sheldon T. Murray, of the Niagara Falls Shooting Club; First Vice-President, Mr. Robert Robinson, of the Long Island Shooting Club; Second Vice-President, Captain W. L. B. Steers, of the Coney Island Rod and Gun Club; Recording Secretary, Mr. John B. Sage, of the Forester Club, Buffalo; Corresponding Secretary, Mr. William Pool, of the Niagara Falls Shooting Club, and Treasurer, Mr W. J. Babcock, of the Monroe County Sportsmen's Association, of Rochester. The Southern Ulster County Club was admitted to membership of the association.

The retiring President, Mr. Abel Crook, and the various committees of the present convention were tendered a vote of thanks for the able manner in which they had conducted their duties. A motion was made that the number of birds to be shot at in the coming matches should be reduced to seven, but it was decided to leave it to the judgment of the officers of the Long Island Sportsmen's Association.

Mr. M. A. Stearns, of Rochester, gave notice that at the proper time he would lay a resolution before the Standing Committee to the effect that any man who should challenge a man for unfair loading, without proper evidence, should be well punished for the offense.

A resolution was offered to the effect that as Mr. Bergh was endeavoring to get a bill passed to prohibit trap shooting in this State, the members of the different clubs request their members of the Legislature to oppose any such bill, but before any action was taken the meeting adjourned to meet Thursday evening to discuss the game laws. The Driving Park is easy of access from Hotel Brighton, and handsomely decorated for the occasion. Prominent among the well equipped tents are the Long Island Sportsmen's Association large three-pole tent, fully eighty feet long; Phœnix Gun Club of Seneca Falls; the Monroe County Club and Rochester Gun Club, both of Rochester; the Audubon Club of Buffalo, the Spencer Club of Lyons, the Dean Richmond Club of Batavia, the Onondaga County Club of Syracuse, Seneca Gun Club of Seneca Falls, East Buffalo Shooting Club and the Forester Club of Buffalo.

Unfortunately a sad scene occurred on Tuesday evening in the destruction by fire of the tent of the Monroe County and Rochester Gun Clubs, containing several valuable guns with their equipments as well as the stores and supplies belonging to the members. This is the first accident of the kind that has ever occurred in the history of the organization. The official list of scores will be published in the next issue of the FOREST AND STREAM.

NEW YORK GAME LAW.

AS soon as it was announced that the Governor had signed amendments to the game law we telegraphed and wrote to Albany for a copy of the same. In response we received from a prominent member of the Assembly the bill already published. A telegram just at hand now informs us that the bill signed by Governor Cornell was one referring to fish only, and that he refuses to sign the one which we published upon the strength of the representations made to us by the member of the Assembly referred to.

The law respecting game will therefore remain the same that was in force last year.

We regret exceedingly that we and our readers should have been misinformed.

A BARGAIN IN RIFLES.—We call special attention to the card of Messrs. William Read & Sons, of Boston, Mass. They offer a real bargain in rifles, and purchasers should avail themselves of the opportunity to secure a good arm at a low figure. The firm are thoroughly reliable and their representations are to be accepted as square.

See adv. of large sale of Archery Goods at Auction on Friday, June 24.

THE GAME BIRDS OF LONG ISLAND.

[Delivered before the New York State Association of Sportsmen at their Twenty-third Annual Convention, Coney Island, N. Y., June 20, 1881.]

THE occasion that has called us together, is one of momentous interest not only to us individually, but to the people at large. Our main object and primary aim is to examine into, and recommend the best measure for the preservation of the game of our island, that of late years has been so ruthlessly destroyed; and if some adequate check is not put upon this wanton and reckless destruction, the time is not far distant when many species at least will be exterminated. Our efforts to protect our game birds from extermination by securing the enactment of proper, concise and stringent laws to that end, will subserve more than one purpose; not only will it protect our game from needless destruction, and allow their decimated ranks to recuperate by natural causes, so that the true sportsman may in the near future be enabled to find in plenty what he now so often seeks in vain, but it will do far more practical good in its benefits to the agriculturist, by the protection such laws will afford against the heartless and wanton destruction of the smaller birds, so many of which, living more or less upon insect life, keep in check the ravages of these silent and voracious pests.

All tribes of animal life were created to subsist upon some other, thus to keep in check their otherwise too rapid increase; this is seen even from the highest form of animal to the lowest form of insect life. No insect so minute but some other tribe of insects are their foes, and subsist upon them, another tribe on them, and on so *ad infinitum*. Were it not for this wise provision of nature, the earth would be over-run with insect life. It is here that the usefulness and necessity of birds are most apparent. It is well known to all who have made the subject a study, how much the agriculturist is indebted to the feathered tribe for the good they subserve by keeping in check the ravages of insects. Why, a single pair of insectivorous birds no larger than a common sparrow, will destroy more obnoxious insects in a day than any man. Have you ever stood and watched our little nuthatch, titmouse or creeper, hopping from twig to twig, prying into every crevice, with its sharp and pointed bill picking out even the minutest egg of insect life, examining every leaf and twig and seizing its insect prey with amazing dexterity; restless, ever on the move, doing a better day's work for the farmer and fruit grower than the ablest man he hires; and yet these little benefactors to man are ruthlessly shot down by any ignorant lad who is enabled to gain the use of a rusty gun. I would not so desecrate the name as to call him a sportsman, this merciless destroyer, who kills at random everything that is clothed with feathers, killing perhaps in one day's shooting the authors of more substantial good to the country at large; more good in many places, than he himself ever confers upon his country, society or himself.

As an illustration of the inestimable value of birds in destroying insect life, a better perhaps could not be offered than that of the introduced European sparrow. Most of you will doubtless remember, before the introduction of these birds, that the maple trees in our streets were infested by a measure worm, the larvæ of a delicate white moth—the *Ennomos subsignaria*; these worms were so exceedingly numerous and annoying that no one could pass under any trees on which they were without having them dangling in their face or attaching themselves to some part of the clothing; besides this they stripped these beautiful trees of every vestige of verdure, in many cases destroying them; yet as soon as the noisy and pugnacious house sparrow was introduced, so rapidly were they exterminated that now not a single one can be found on any of our shade trees.

It is true that many birds are very destructive to the agricultural interests, these are chiefly confined to the granivorous or seed-eating birds, though a few omnivorous ones do their share of destruction. Foremost of these most destructive is the well-known bobolink—*Dolichonyx oryzivorus*; the rice or reed bird of the Southern States. In the North they commit considerable havoc in the cornfields, and in the South the spring wheat and barley, and later the rice fields suffer immeasurably by this depredator.

Another great enemy to our cornfields is the red-winged starling or swamp blackbird—*Agelaius phœniceus*. So well known is his character that in many districts he is called the corn or maize thief. But whilst a few species are enemies to the farmer, by far the larger portion are his friends.

It is chiefly to the insectivorous birds that we must look for protection from the depredations of insects, and by reason of the incalculable blessing they are to the agriculturist, and the rich and varied melody nature has endowed so many of the species with, they well deserve our fostering care. None of the species belonging to the following families or genera should ever be wantonly destroyed:

None of the Sialia or bluebirds, none of the Sylviadæ or warblers, a large family of strictly insectivorous birds; none of the Parianæ or Titmice, or the Certhiadæ or creepers; none of the Vireos or greenlets, or the Sittinæ or nuthatch; none of the Tyranninæ or fly-catchers, or the Troglodytes, wrens; none of the Picinæ or woodpeckers; none of the Caprimulgidæ or night hawks, and none of the Hirundinidæ or swallows.

All the species belonging to these groups are highly beneficial to man, and include the main body of our strictly insectivorous birds.

Quite a number of families of omnivorous birds are equally worthy of our protection, in recompense for the good they conserve in keeping in check insect life, without taking into consideration their melody. The chief are to be found in families: Merulidæ—Thrushes; Icterinæ—Hairynests and Tanagrinæ—Tanagers.

Now, by well-defined protective laws such, as your Association desire to have enacted, you would not only restore the decimated game, but also be the means of protecting our useful birds from wanton destruction. From a long residence in your midst, and intimate acquaintance with the western section of our Island, I am fully aware how, not only our game has been thinned out, but also our small birds. The time was, when it was the boast of the Long Islander that his favored Island was frequented by a larger number of species of the feathered tribe than any locality in our wide domain; for, independent of the large number of species, either resident here or always to be found during some part of the year, its position being so favorable, it was at times visited by many species whose natural home was the Gulf States or the Atlantic sea-board; besides this, species belonging to the inhospitable regions of the far North often found their way to our more congenial shores; these circumstances always rendered the Fauna of Long Island, particularly favored as to birds. But how is it now? Large tracts

hitherto melodious with the song of birds are now comparatively silent. Every half-grown boy who can either buy, beg, borrow or steal a gun, new or old, bright or rusty, musket or fowling-piece, rushes out to the fields, woods or shore, and pops away regardless of the consequences, driving away what he fails to kill. Such marauders should be summarily dealt with, through the agency of stringent laws, and no one individual, or body of men, are and should be more interested in the faithful carrying out of those protective laws than the real sportsmen of the country.

Nor is all the wanton destruction of birds to be laid at the door of the youth of our cities; for it is a well known fact that there are men living along our sea-coast who make it a practice during the breeding season of robbing the nests of our Grallatorial or Wading Birds, for the pittance they receive from the sale of the eggs thus gathered. By this wanton destruction the Clapper Rail or Mud-Hen—Rallus crepitans, has particularly suffered; cases are known where a single egg hunter has taken 100 doz. eggs of this bird in a single day; this, though true, is an unusual number, and occurred where the birds were very numerous.

The robbing of bird's nests prevails to a great extent right in our midst, in our own beautiful Park, within whose precincts we would think the feathered tribe would be secure; the practice of robbing the birds of their eggs is alarmingly on the increase, despite the printed rules and regulations posted on every hand. Were a few examples made of these despoilers, no doubt it would exert a salutary influence in deterring others from committing like offense.

But a few years ago how different were our woods and fields to what they are now. How well do I remember when the western end of our Island, during the vernal season, was musical with countless songsters, and our coast in the proper season prolific with Snipe, Fern, Ducks and other waterfowl. When the shrill cry of the beautiful Blue Jay—Cyanurus cristatus, could be heard in every wood. When our well known friend the Quail—Ortyx virginianus, was everywhere abundant, and his familiar "bob-white" could be heard on every hand. When the spotted breasted Wood Thrush—Turdus mustelinus, uttered his brief but sweetly melancholy note in every deep wood. When the ventriloquist, the Yellow-breasted Chat—Icteria viridis, was one of our common birds. When the gay decked Scarlet Tanager—Phœnisoma rubra, in his bright red plumage, flitted through the green trees, and the sprightly and pert Redstart—Setophaga ruticilla, with his orange and black plumage, darted from twig to twig in search of its favorite wood. When not even a cabbiar or alder bush, even in our suburban districts, but was the refuge and hiding place of such tiny choristers as the Yellow Throat and Summer Yellow Warblers—Sylvicola flaviceilis and æstiva. Few were the ploughed fields where the Black-bellied Plover—Charadrius apricarius, was not seen, or their loud whistling note not heard. Now, I would ask how many fields of this character might be gone over in vain for them? During the season now passed, I have walked miles through woods and fields, sometimes without seeing or hearing even the commonest Finch.

Of the Rasorial Birds, comprising the true land Game Birds, our Island has but a limited number; of the first family, that of Pavonidæ, but two species are natives of the United States, the Meleagris gallopavo or Wild Turkey, and the Meleagris Mexicanus or Mexican Wild Turkey, neither of which are found on the Island.

Of family Tetraonidæ—Patridges and Grouse, but two species are known on the Island; these are the Pinnated Grouse—Tetrao cupido, commonly known as the Heath-hen, and Ortyx virginianus—the Quail, our old friend Bob White.

The Pinnated Grouse or Heath-hen has from time immemorial been peculiarly associated with the vast barren plains of Long Island, extending a length of over 40 miles, and a width of 6 or 7; in other words, embracing the section of the Island from Hempstead to Shinnecock Bay; and although laws have been in existence from an early date, with the object of protection to this bird in particular, s ill such laws have been so openly violated or evaded, that their complete extinction from our Fauna, must soon surely be realized, if more energetic measures are not instituted and carried out to protect them. The first law passed by the State Legislature to protect these birds, was that introduced by Mr. Cornelius J. Bogert, a Member of Assembly from the City of New York, in February, 1791.

That statute declares among other thing, that "the person who shall kill any Heath-Hen within the counties of Suffolk and Queens, between the 1st day of April and the 5th day of October, shall, for every such offense, forfeit and pay the sum of two dollars and a half, to be recovered, with costs of suit, by any person who shall prosecute for the same, before any Justice of the Peace, in either of the said counties; the one-half to be paid to the plaintiff, and the other half to the overseers of the poor; and if any Heath-Hen, so killed, shall be found in the possession of any person, he shall be deemed guilty of the offence, and suffer the penalty. But it is provided, that no defendant shall be convicted, unless the action shall be brought within three months after the violation of the law."

The Quail or Partridge—Ortyx virginianus, was at one period quite common throughout the Island; his well known and familiar call of Bob White is universally known, but the persecution they have suffered has so thinned them out, that in many districts their cheery voice is but seldom heard. Not content with striving to exterminate them by the gun, it has become a common practice to take them alive in traps, made of sticks or laths and a common figure-four trigger; to show how they have been destroyed, and how their present range has been restricted, I can well remember the time when I have repeatedly found their nests where the site of the present Prospect Park is, and it is needless to say how many fields or woods you would of necessity have to pass over now, in order to find one.

In Family Columbidæ—Pigeons, we have two species found on the Island, and both well known, the Ectopistes migratoria, or Passenger Pigeon, and the Ectopistes carolinesis, the Carolina Pigeon or Turtle Dove. Of the Passenger Pigeon we may say, but a few stragglers comparatively are seen on our island, when we take into considerat on the vast numbers that every year congregate in our Western States. So, too, with the Turtle Dove, their singular mournful note seldom falls upon our ear, and except at the period of migration are seldom seen in larger numbers than three or four together.

One of the main causes of the dearth of game on the Island is the wholesale slaughter carried out by those people on the shore, who make a living by acting as guides to our sportsmen, and let out batteries and decoys through whose use such large quantities of water-fowl are annually destroyed. No shore in the whole Union is naturally richer in Grallatorial and Natatorial Birds than the bays and inlets of our favored Island, and on account of its proximity to our large cities, no locality has suffered greater from the abuses we complain of than this.

In order to more fully illustrate our subject, it will not be out of place to briefly review the Water Birds that are to be found upon the shores of our island, some of which are, however, now but occasionally seen.

It is in the Order Grallatores, or Waders, that the sportsman finds a large part of his favorite Game, for in these are included the Herons, Egrets, Bitterns, Ibises, Rails, Snipe, Woodcock, Sandpipers, Tatlers, Curlews and Plovers.

In the first Family, Ardeadæ—Herons, we find our well known Green Heron or Green Bittern—Ardea virescens, known by every gunner by an unutterable name.

The Ardea Herodias—Great Heron and Egrettaleuce—Great White Heron, are rare on our coast. The Nyctiardea gardenii—the Night Heron, or Qua Bird—is occasionally found.

The last in this Family is the Botaurus Minor—the American Bittern, called by some the Indian Hen and by others the Dunkadoo.

The next Family is the Rallidae—Rails. In genus Rallus we have the Rallus virginianus, or Virginia Rail; the Rallus crepitans, or clapper rail, and the Crex carolinus, or Sora Rail. The flesh of the latter is peculiarly delicious and furnishes the gunner excellent sport in attempting to follow this nimble-footed bird.

The family Scolopacidæ embraces the Sandpipers and Snipe. In this family is the best known and most sought after of all the Game Birds of our Island, the American Woodcock—Scolopax minor.

The most numerous, perhaps, of all the family is the Scolopax Grisea, or Red-breasted Snipe; its flesh is held in high esteem, is a favorite with the sportsman and great numbers are annually killed. The Scolopax Wilsonii, commonly called the English Snipe, is also much sought after. The Great Marbled Godwit—Limosa fedoa—known to the many sportsmen as the straight-billed Curlew and the Red Curlew, is not as numerous as the Short-billed Curlew, its favorite associate.

Of the Sandpipers the following are found on our shores: The Tringa semipalmatus—the Semipalmated Sandpiper or Willet; the Little Sandpiper—Tringa minutilla; the Red-backed Sandpiper—Tringa alpina; and the Ash-colored Sandpiper—Tringa canutus. Of the Plovers, the Ringed or Piping Plover—Charadrius melodus—and the Kildeer—Charadrius vociferus—are perhaps the best known. The other species are Golden Plover—Charadrius virginianus; Wilson's Plover—Charadrius Wilsonii; and the Sanderling—Calidris arenaria. Our review of the Long Island Grallatores closes with the Long-billed Curlew—Numensis longirostris, and the Short-billed—Numensis borealis—both well known to our gunners. Space will not permit to mention all our Gallatores, but the foregoing includes the greater portion.

The last Order, called Natatores, or Swimming Birds, we must confine our remarks to the most conspicuous family—that of Anatidæ, embracing the Geese and Ducks.

In the first sub-family, the Anserinæ, is the well known Canada or Wild Goose—Anser canadensis; the Snow Goose—Anser hyperboreus, is rare on the Island. The last is the Brant—Bernida brenta.

The next sub-family are the Anatinæ or River Ducks; we have species belonging to three genera, Marica—Widgeon; Dendronessa—Tree Ducks, and Anas—Typical River Ducks.

The Marica Americana, or American Widgeon, better known as the Baldpate, is one of our well-known Ducks whose flesh is highly esteemed.

The Dendronessa sponsa—Summer or Wood Duck, the most beautiful of all our water birds, is now rare on our coast.

The Shoveller—Anas clypeata, is held in high esteem for the table.

The Dusky Duck—Boschas obscura, more commonly known as the Black Duck, is one of our common Ducks, but its flesh is much inferior to the Mallard, Canvass Back and others.

The Blue-winged Teal—Boschas discors, are highly esteemed as an article of food; these birds are easily taken in hollow traps with the common device, a figure four.

The Green-winged Teal—Boschas carolinensis, is a common and well-known species, whose flesh is excellent.

The Mallard—Boschas major, ranks next to the Canvass-back and Red-head for the excellency of its flesh and food.

The Pintail Duck—Dafila acuta, or as it is sometimes called the Sprig-tail, this bird is highly esteemed by epicures. The Gadwall—Chaulioduas stripera, closes our river Ducks. We now come to the Fuligulinæ or Sea Ducks, comprising five genera, as follows: Somateria or Eider Ducks; Oidemia or Scoters; Fuligula or Pochards, Clangula or Golden Eyes and Haralda or Long Tails.

The Eider Duck—Somateria mollissima, is noted for the softness, elasticity and warmth of their down, in that respect excelling all other Ducks; their flesh however is inferior.

The King Duck—Samateria spectabilis, is now quite rare.

The Scoter Duck—Oidemia nigra; little esteemed.

The Velvet Duck—Oidemia fusca, of similar habits to the Scoter, and on account of associating with it often mistaken for it by some sportsmen.

The Black or Surf Duck—Oidemia perspicillata; the flesh of this species is coarse and strong.

The Scaup Duck or Blue-bill—Fuligula marilla, and the Pied Duck—Fuligula labradora, are both considered poor as articles of food.

The Red-headed Duck—Fuligula ferina, is second only to the Canvass-back in its excellency as food.

The Ruddy Duck—Fuligula rubida, and Tufted Duck—Fuligula rufitorques, are both rare on the Island.

The Buffel-headed Duck—Clangula albeola, better known as the Butter-box or Butter-bill, though often fat and plump, is not held in as high esteem as many other species.

The Golden eye Duck—Clangula vulgaris, is inferior for the table.

The Harlequin Duck—Clangula histrionica, commonly known as the Lord, is in plumage the most striking and remarkable of all; the grotesqueness and oddity of its markings suggested its name. Its flesh is considered excellent. It is one of our rarest species.

The Haralda glacialis or Long-Tailed Duck, better known as the Old Wife and South Southerly, is common, but little esteemed for the table.

The last of the Anatidæ are the Merganinæ—Mergansers, all four species of which belong to the Fauna of Long Island. The time was when the Hooded Merganser—Mergus cucullatus, with his beautiful black and white crest, forming when erected the segment of a circle, and its congener, the red-breasted Merganser—Mergus serrator, with its long pendant crest, were not unfrequently found along our shores, together with the Goosander—Mergus merganser.

The Smew or White Nun—Mergus albellus, is more frequently found.

I cannot trespass on your time by individualizing the Tern, Gulls and other water birds that possess less attraction to the sportsman, as but few are in any way adapted to the table, their flesh usually being coarse and fishy.

Having briefly reviewed our Game Birds, in conclusion I would say, that it is imperative something should be done, the strong arm of the law should be evoked to protect our birds; the use of batteries, traps and decoys should be strictly prohibited; the most stringent laws should be enacted with that intent in view; these should be rigidly enforced without fear or favor, and free from all partisan or political influence to shield the offenders; pass good strong laws, execute them faithfully, and the time is not far distant when our woods will again, as of yore, resound to the melody of the feathered tribe, and when the true sportsman, under the sanction of wise and just regulations, as to the proper period whereiu he may follow his favorite sport, may be enabled to be fully compensated for his endeavors. NICOLAS PIKE.

"WHAT ARE YOU GOING TO DO ABOUT IT?"

[Delivered before the New York State Association of Sportsmen at their Twenty-third Annual Convention, Coney Island, N. Y., June 29, 1881.]

THE following incident will serve to illustrate and introduce the subject matter of this paper.

A sportsman whom I will designate by the letter X, is the owner of a large tract of land which he uses as a preserve for Game. To this end he has stocked it with a quantity of quail, rabbits, etc. For the protection of the first he has constructed plac's of shelter, where in severe weather they seek refuge and are fed liberally with grain. A man of means, he has spared no expense to attain successful results. He employs men to watch and protect his game, and in the season is rewarded with ample sport for himself and his friends. It is unnecessary to add that he is by no means a popular personage in the neighborhood. His trials and tribulations are many; but he is firm in his purpose to thoroughly test the possibility of enforcing on his own land, laws which he has formed to be entirely inoperative in the country at large. His property is posted with notices, forbidding trespasses, and while he is aware that his losses by poaching are enormout he is encouraged to continue the experiment.

His experience is a varied one, and he is constantly confronted with troublesome characters, who look with scorn upon his efforts to do as he wishes with his own.

A couple of years since, on a certain day in September he was startled by the rapid discharge of guns, at no great distance from his residence.

He sallied out, and, hurrying in the direction of the firing, he soon came up with an individual who assisted by two superbly broken pointers was flushing and killing the half-grown quail.

He discovered the gunner to be a stout, thick-set person, with a heavy black moustache. His garments were after the latest sporting fashion, and he carried a gun of the most expensive and modern build.

"What do you mean," says X—, "by killing birds out of season, and on my land?"

"All right boss," says the fellow, "there's nothin' mean about me."

"How many birds have you killed?" says X—.

The gunner, no wise disconcerted, thrust his hands into his pockets, and one after another drew out twenty partly grown quail.

"You have killed just one hundred dollars worth," says X—.

"All right, boss," says the gunner, whereupon he produced a Russian leather wallet, and, abstracting five twenty dollar bills, offered them to X—.

"I have no right to take your money," says the talker, "you must settle this with the Court."

"Now see here, boss," says the fellow, "I'm a plumber by trade, I am, and when other gentlemen kin be out a shootin', I've got to be at work a fixin' of their plumbin';" and says he, "I like a day's shootin' as well as the next man, and I expect to pay for it."

At the mention of the word plumbing, X—'s hair fairly stood on end. The owner of much city property, his life had been made utterly wretched by his encounters with the members of that profitable branch of trade. The confession of the gunner quite demoralized him, so he pondered for a moment and then said to the fellow, "Come with me."

In company they returned to X—'s residence. He led the plumber into his dining room, and produced some brandy, of which his prisoner swallowed a bumper.

"Now my friend," says X—, pointing out of the window, "do you see that road? Well, it leads directly to the railroad station. You start as quickly as you can, and don't you stop until you reach it. Do as I tell you, and I will not proceed against you. I have met men of your trade before."

"All right, boss," says the plumber, "you've treated me like a gentleman, and if I kin do anything for you in my line, here's my card. It bore the following legend:"

Y—— Z—— & CO.
PLUMBING IN ALL ITS BRANCHES.
Owners of the Patent Reversible and Anti-scorbutic Trap.
CHARGES MODERATE.

With us, where we have few men of leisure, those who are fond of sport must indulge their fancy when it shall not interfere with their business pursuits.

We see this exemplified in the case of the sporting plumber. The open season is to him one when the exigencies of trade demand that he shall prey upon his fellow men. As expense is no object compared to the pleasures of a day's shooting, he does it at the risk of coming in conflict with the law. The chances are so vastly in his favor, the possibility of such an encounter does not disturb his serenity. The combination of sport and business is not a happy one, and our necessity of combining the two goes very far toward increasing the difficulties of an exact enforcement of the game laws. Moreover, men whose moments of recreation are few, and whose shooting days must be limited in number, are the cause of the demorilization of the professional gunners whom they employ. To secure the greatest number of birds in the shortest space of time, they urge these men to acts which they know to be utterly destructive and ruinous

In other countries there is an *esprit du corps* among sportsmen, entirely wanting with us, and which it is possible can never be established.

Not long since a reporter of one of the morning papers, visited the little hamlet near which I reside, to inquire into

the causes of the rapid disappearance of wild fowl from the bay in our front. To assist him in his investigations I collected at my house the professional gunners of the neighborhood. These men, though daily violators of the game laws, had no hesitation in acknowledging the fact, and in giving their reasons for so doing.

All were agreed that if the laws for the protection of game could be enforced it would result in vast benefit to themselves; but so long as one violated the same with impunity, the others should not refrain from so doing. Moreover, it was understood that one could not be induced to bear witness against the other. All asserted that their necessities forced them to yield to the solicitations of the sportsmen who employed them, in the use of devices and unfair advantages which were ruinous and fatal. Moreover, they were frank to confess that among those who urged them to violations of the game laws in the matter of wild fowl, were many who confessed themselves to be members of sportsmen's associations. Indeed a man must be exceptionally conscientious who can resist the allurements of dusking ducks and wild geese, and abstain from shooting at fowl from a boat while under-weigh.

The reporter, at the conclusion of his interview with these gunners, came to the conclusion that to enforce the game laws it would be necessary to suspend the writ of *habeas corpus* and put the country under martial law, and even under these circumstances the gunners acknowledged that if they wanted a mess of birds at any season they would have them in defiance of a provost guard.

The expression of such sentiments will show how difficult is the task to enforce laws, which, however desirable, appear to be held in contempt and derided by those who would be the greater gainers by their rigid enforcement.

In other countries the magistrates or justices of the peace are nearly all sportsmen or in sympathy with them, consequently the game laws are rigidly enforced and effectively sustained. Our minor judicial officers being elective, their sympathies are in harmony with the prevailing popular sentiments of their particular districts; with them it is merely a question of securing the greatest number of votes.

What shall be thought of a justice of the peace who encourages lads to snare quail of which he is a purchaser for the market. He is certainly not the man to punish violators of the game laws. Yet just such functionaries hold sway in many localities. Other incumbents of the office cannot distinguish one bird from another. I have in my possession a legal paper prepared by one of these officials, who speaks of a gun as "she," that weapon having in his eyes no other attribute than as an expression of his opinion of the qualities of the gentler sex.

As to game constables, they are but another spoke in the political wheel. So far as the purpose for which they are created is concerned, they are utterly worthless. These officers have a large family connection, many of whom are professional gunners and habitual violators of the game laws.

They certainly do not propose to complicate their domestic affairs for the sake of a form of animal life which in their opinion has nothing in common with their own sensitive and superior natures.

It is my fortune to be so situated as to have peculiar facilities for observing the results of the non-enforcement of the laws enacted for the protection of wild fowl. From the windows of my residence I may, with a glass, sweep an extended line of sedge. By this means, and from a constant practical experience as a sportsman, I am enabled to watch the rapid decline of the shooting privileges in the bay in my front. This body of water, situated on the east end of Long Island, was once the haunt of seeming'y inexhaustible supplies of wild fowl. For many years I have noted the decrease of the number of birds returning in each recurring season. To day it is not worth the necessary exertion to secure a few birds. Now and again from being constantly on the ground a comparatively good day's sport may be secured; but the visitor from the city whose time is limited has but small chance of enjoying the same.

Had an intelligent system been inaugurated to preserve and protect the fowl on this sheet of water, for generations to come it might have afforded a source of enjoyment and pleasure. Instead of this the most destructive devices have been used. The geese and ducks are fire lighted and dusked, and no sooner do a few birds settle on the water than a boat pursues them. It is a popular fallacy that eel-pot stakes and fishing boats keep the birds from off their feeding grounds. This is a mistake, for they soon learn to disregard all which does not inflict injury upon them. Their abandonment in this locality must be entirely attributed to the night attacks made upon them. Ordinary shooting over decoys from meadow points would have had no appreciable effect in diminishing their numbers. In addition, the killing of migrating wild fowl in the spring of the year is a potent factor in their coming annihilation. Could they be allowed to remain undisturbed during that season of the year, they would return to us in the autumn in vastly augmented numbers, and with less fear of the decoy.

The question may be asked—Why not make an effort to enforce the game laws on these waters? It cannot be done except by the establishment of patrol boats manned by men strangers to the locality, well paid and earnest in their efforts. If such a system could be devised and put under the care of efficient persons it is possible that the wanton and fatal destruction of wild fowl might be checked and they in time return to us with their former profusion. Unless something of this nature be done, and that quickly, the once-famous waters of Long Island will be entirely deserted by their feathered inhabitants.

To protect the upland birds a system of patrol by non-political officers would rescue to the sportsmen of New York one of the finest shooting grounds of the world. There is land enough and to spare—no end of shelter and food. All that is required is an intelligent system of protection for the birds. Such a system is not in existence to-day, nor will it be until a radical change in our method of enforcing the game laws is inaugurated.

The question for sportsmen to consider is, "What are you going to do about it?

GASTON FAY.

SOUTH ABINGTON, Mass., has a first class sportsman's club of forty working members, and more coming. We have just joined the Massachusetts State Glass Ball Association, and are going to work and do what we can to protect the game birds in our vicinity, as they need looking after badly.—C. F. C.

MOSQUITOES.—I am a veteran squirrel hunter, but as yet I have never been able to conquer the myriads of mosquitoes that infest the woods, and hunt you while you hunt the squirrel. Will some one be kind enough to give a good receipt in the FOREST AND STREAM that will cause the pests to keep their distance?—W. C.

MR. CROOK TO MR. BERGH.

The following letter has been published:

NEW YORK, June 16, 1881.

Henry Bergh, Esq.:

MY DEAR SIR—My attention has been called to certain squibs in some of the daily papers to the effect that, as the President of the Society for the Prevention of Cruelty to Animals, you had asserted your intention to break up the tournament of the New York State Association for the Protection of Fish and Game, to be held at Coney Island, commencing next Tuesday, and that I, a President of the last named organization, had returned the compliment by threatening to cause your arrest. I desire explicitly to deny that any such action has ever been contemplated upon my part. Had we the advantage of personal acquaintance with each other, such an unfortunate rumor could not have found its way into print. The association which I represent is largely composed of the most influential citizens of this State, embracing many who have honorably held seats in the State and National Legislatures and in the executive chair, and also including the representative business men of the several cities, towns and hamlets in this State, and also those who have been foremost in concerted efforts not only to protect but to propagate and cultivate fish and game. That such gentlemen should be classed with the cock-fighter and dog-fighter is neither just nor creditable to the person making such charge.

Nothing will afford me or the association which I represent greater pleasure than to assist your society in preventing anything which shall bear the resemblance of cruelty. The suggestion accredited to you to the effect that birds were to be drugged or mutilated could only originate in ignorance of the character, customs and purposes of the State organization. I assure you that due courtesy will be shown you and all others who may attend the tournament, and that nothing shall occur in any wise warranting any unfavorable criticism of our proceedings, and that the members of the association will prove your most reliable assistants in the humane work in which you are engaged. Respectfully, etc.,

ABEL CROOK.

WESTERN PENNSYLVANIA.

PITTSBURG, Pa., June 14.

THE FOREST AND STREAM comes to us this week fresh with news from field, kennel, river and ocean. It seems as though your paper improves with every issue. The growth and interest in sporting matters in this city furnishes a good illustration of the value and influence of a good sportsman's paper. Only a few years ago, a group of half a dozen enthusiastic sportsmen met and organized the first sportmen's association in Western Pennsylvania, selecting Robert Dalzell, Esq., as President. I refer to the "Sportsmen's Association of Western Pennsylvania." At the time of its organization, the directors rented a small back room on Fourth avenue, second floor, and placed on file the FOREST AND STREAM. The meetings at first were not well attended except for the purpose of reading your paper. For several years it seemed as though the success of the enterprise was doubtful; but the interest awakened by news from all parts of the country so increased the interest that the number of members was doubled and trebled and quadrupled, until larger rooms were necessary, and the association removed to No. 39 Fifth avenue. Here the association still doubled and quadrupled in membership until still larger rooms were necessary, and the association secured a long lease on the building they now occupy, No. 75 Fifth avenue, where they have fitted up apartments at a cost of over $11,000, and the membership now includes nearly 300 of the best names in this city.

A few years after the organization of this association, the Allegheny Sportsmen's Association was organized, and it now has a membership of over one hundred. The interest awakened by these two associations occasioned the organization of smaller associations in nearly all the counties throughout the western part of this State, and finally to the organization of the Pennsylvania "State Association," an association composed of representatives from all the regularly organized associations in the States. Through the influence of the State Association, such legislation has been secured as protects all game and song birds, as well as game and game fishes, and this protection has become so complete that it is now decidedly healthy for any one in the State to kill game or take fish out of season.

The high character of the gentlemen enrolled as members in this association have entirely changed the term "sporting man" into "sportsman," and has made shooting a recreation and pastime for professional men and over-worked business men. With this change came a demand for finer weapons than were previously used, and this demand became so great that, in May, 1878, the firm of J. Palmer O'Neil & Co. was organized, and became at once importers of fine guns and fine goods in every variety. This firm is now agent in the United States for the Westley Richards' hammerless guns.

The spring contest of the Allegheny Association was duly reported in your columns. The contest of the Western Pennsylvania Association was postponed on account of scarcity of birds. The contest will, however, take place on Tuesday, June 21, at Bridgeville, about eleven miles from this city.

REPORTER.

INFORMATION WANTED.—I desire to learn of some point in the Adirondacks, within say thirty miles of rail connections, St. Regis region preferred, where good hotel or private family accommodations can be obtained for invalid ladies, not sick ones, at prices from $7 to $10 per week each. Three in party, and length of stay from three months to a year. Address F. E. H., Oswego, N. Y.

DEFERRED.—We are obliged to defer a number of communications until next week. We beg the indulgence of correspondents whose communications should have appeared with this issue.

Sheepshead, *Archosargus probatocephalus.*
Kingfisher or Barb, *Menticirrus nebulosus.*

Fishermen never lose the love for the employment. And it is notably true that the men who fish for a living love their work quite as much as those who fish for pleasure love their sport. Find an old fisherman if you can, in any sea-shore town, who does not enjoy his fishing. There are days, without doubt, when he does not care to go out, when he would rather that need did not drive him to the sea; but keep him at home a few days, or set him at other labor, and you shall see that he longs for the toss of the swell on the reef and the sudden joy of a strong pull on his line. Drift up along side of him in your boat when he is quietly at his work, without knowing that you are near. You can do it easily. He is pondering solemnly on a question of deep importance to him, and he has not stirred eye or hand or head for ten minutes. But see that start and sharp jerk at his elbow, and now hear him talk, not to you—to the fish. He exults as he brings him in, but he mingles his exultation with something of pity as he baits his hook for another. Could you gather the words that he has in many years flung on the sea winds, you would have a history of his life and adventures, mingled with very much of his inmost thinking, for he tells much to the sea and to the fish that he would never whisper in human ears. Thus the habit of going a-fishing always modifies the character.—W. C. PRIME.

GAME FISHES IN WEST VIRGINIA.

THE moment the Afrite in Arabian fable had revealed to the fisherman the lake of white, red, blue and yellow fishes, the secret was locked up in his selfish bosom until he had enriched himself. But times have changed, and men have grown more generous since then. Now, when a fisherman discovers a good place to fish and his cup of joy is brimful and bubbling over, a mysterious something woos him entirely away from self and compels him to share the knowledge with lovers of the sport all over the country.

A good geni reminds me that a word in season is like "apples of gold in pictures of silver," and then intimates that the fishing grounds of Greenbriar County, West Virginia, deserve more than a passing notice in the columns of FOREST AND STREAM. I shall only speak of the southeastern or mountain district of our State, and leave the fishing grounds of other sections to the guardianship of other writers. Greenbriar County can boast of one of the most popular summer resorts in America, with plenty of game fish almost at its doors, and will be hailed as a well-spring of happiness by those who come to West Virginia for recreation.

Away out here, in the very heart of the blue Alleghenies, the angler finds an abundance of black bass and mountain trout, and our waters afford as much amusement as any lake or river that ripples beneath the influence of these columns. Those of my readers, if I have any who love

> To cast the line and draw the prey
> From the clear ripples where they play,

may spend the season at the Greenbriar White Sulphur Springs and devote as much time as they choose to this most delightful of all the pastimes. One peep into this elysium of the angler and the tourist is fascinated forever, and a bird's-eye view of the United States will explain why this is so. The peaks of the Allegheny and Rocky Mountain ranges resemble the tents of two opposing armies pitched on either side of a mighty plain, and West Virginia lies in the very midst of the eastern encampment. Of course we have the valleys, birds and fountains, rivers, hills and mountains, a feast of beauty and song, and a limitless display of infinite wisdom to satisfy the cravings of the mind and soul of any man.

Twenty-five miles west of the Springs the "Clear Creeks" sparkle and dance in the valleys of the Sewells like wavy threads of burnished silver, and the local fame of these two little streams is justly deserved. Their crystal depths are chuck full of the finest silver-finned mountain trout ever lured to the surface with dainty fly and then "snatched right out of the whirling billow." This fish can be taken almost any bright day in the winter time, with either the angle-worm or artificial bait.

About six years ago Major J. W. Harris, of our State Fish Commission, made a successful "plant" of black bass at different points in Greenbriar River, and the increase has been astonishingly rapid ever since. Not one out of a thousand has been captured with the ordinary hook and line. Hardly a dozen persons out here have taken even the initiatory in the science of surface-fishing, and the art of throwing a fly down the throat of a wily bass the first clip and the fish thirty feet away at the bottom of the river is a little more of mystery than the masses can unravel and properly reel in.

The Greenbriar is only six miles from the Springs and, as the angler wades or floats around where the "delicate lily hangs its trembling flake of snow above the water, dreamily," his view is hemmed in by rugged hills and lofty mountains, forming in Nature's gallery a picture of the tenderest beauty and wildest sublimity. No wonder the heart thumps hard and fast against the ribs! The river is found to have a rocky bottom and plenty of shoals, with a width of from twenty-five to 300 yards and a depth of from two inches to thirty feet. A more natural habitat for black bass does not exist in America and any point along the river, from its source in Pocahontas County to its mouth in Summers County, is a good place to fish. At present we enumerate the fish by scores of thousands, but in a little while millions will feel

right at home in the limpid waters of this little mountain stream.

I should like to give the reader a faint conception of one of our trips, for many of my happiest hours are spent in fishing for bass. The facts shall be given as a warp, but the woof of fancy must be interwoven by the reader.

A party of us take an early start for "Caldwell's Dam," five miles from Lewisburg, and enjoy all the pleasures incident to a day's recreation on the water. Riding up the bank to the dam we often startle a "whopper" as he noses around the edge for a breakfast of crawfish or toads. A rush and a frothy furrow tell of "sickness at home," as he plows for deep water like a miniature tug-boat under a full head of steam. Sometimes we stop on the way and whip the still water under the overhanging bushes and trees. The cast is made, "flip!" echoes from the centre of a circle of wavelets, and we slink away from the tempting pool, minus a fly. The "rise" was too heavy for the single leader. At the dam our bridles are willingly placed in the hands of a friendly oak that bends down and seems to plead for the privilege of holding the animals beneath its welcome shade. The day is well chosen. Not a ripple breaks the surface of the eddy, "the falling leaf forgets to float" and the bubbles creep by as lazily as the boy in the corn-field that was overtaken and strangled to death by the tendrils of the pumpkin vines Occasionally the reflection of a bird or a fleecy cloud is seen in the water as they flit across the summer sky. Years ago "Ichabod" was written upon the utility of the dam, and today its ruins form a semi-circular causeway or stepping-stones across the stream. Up the river from the boat-landing, glittering like a snow-bank in the sunlight, a splendid riffle whirls and dallies and dances at the foot of the mountain, just in front is a long, smooth stretch of deep water and below is a beautiful cascade as far as the eye can reach! What angler could keep the thrills of joy from chasing each other up his back and creeping through his hair as he realizes that scores of living jewels are eagerly awaiting a place in his crown of piscatorial glory?

Having decided to troll while pulling for the riffle, the boat is untied and, with a spoon-hook or trolling minnow curling beneath the surface many yards behind, we float slowly out upon the glassy waters. As I do not happen to fall within the orbit of Shakespeare's man who has no music in his soul, and drinking deeply at the fount of Nature, I catch the inspiration of the birds and bees and hum to the dip of the oars—

> O what music, as we listen
> To the riffle's distant roar;
> How the broken waters glisten
> As they dash against the shore!
>
> Mossy boulders rising yonder
> With a beard of snowy foam,
> Where the maddened waters thunder
> O'er the river monarch's home.
>
> Where the silver eddy sleeping,
> Just beside the roaring flood,
> Mark you jeweled beauty leaping
> From the tide in sportive mood—

"Hold on!" The oars drop, and the light silk line slips off the rod like greased lightning. The ball has been opened by striking a five-pound bass, and the fun has commenced in earnest. He is well hooked, and takes to the bottom, but presently jumps three feet into the air and shakes himself all over. Round and round, up and down, and in and out he runs, and finally wearies of the sport and surrenders at discretion. My, O! but he does look pretty out there, presenting a broadside, and the bright spoon glistening in his mouth. A few more lunges and he is reeled close up Not having a landing-net I catch the line near his nose, lift him out of the water and gently pillow his head in the boat at my feet. Yes, he does seem a little bit astonished. A fish that has been sleeping for eons of ages in the heart of a geologic leaf could exhibit more signs of animation than our finny friend displays for half a minute or more. The language of his silence seems to be, "Well, here we are! but I little dreamed that snapping up that thing would place me in such a pickle as this!" As a matter of course, a flood of comment is lavished upon the poor little fellow by my companions. Before reaching our destination, however, several more of the "beauties" cease to wriggle about in their palaces of running water, and are placed beside the first trophy in the canoe.

The riffle is gained at last, and I prepare to whip it from head to foot. Those acquainted with fly-fishing know by happy experience how the waters of a good riffle boil, seethe and waltz around over the rocky bottom, and how, too, that right in the middle of each of the whirls a beautiful little foam-flower gathers. The pulse quickens and the arm tingles as the red hackles buzz by the ear, and one of them drops exactly in the centre of the foam-sport. Days of Aladdin! The flower disappears in a twinkling, for the magic touch of the fly has metamorphosed it into a lusty six-pounder, and he "makes way for liberty" with all the patriotism of his nature. And so the sport goes on, until we weary of it and start for home. The catch is a trifle heavier than "the burden of a dream," and is equal to a band of music in drawing the people of Lewisburg to the doors and windows. And how their mouths do water! Yet we don't wonder at that, for those who have enjoyed the dish can certify that a black bass properly served up is indeed "a dream of delight."

But here the pen must be laid aside. A fisherman never knows when to stop talking on his favorite hobby, but I shall place the final period at the end of the next sentence. Reader, whatever else may be forgotten, remember the fishing-tackle when starting for the mountains of West Virginia this summer. M. W. Z.

Lewisburg, June 6, 1881.

TROUT IN THE RANGELEYS.—Phillips, Me.—The trout fishing at the Rangeley lakes exceeds any previous year. Horse loads of boxes of trout, packed in ice, come out daily *en route* for Portland, Boston, New York and other places. Pierson Davis, 24 Canal street, Boston, has just returned and left for Boston, this 5th day of June, with a nice box of trout. His party numbered in all thirteen gentlemen from Boston and vicinity, except Wm. H. Cole, Esq., who came from Baltimore, Md. The most of the party were at the lakes less than one week, though Mr. Davis was there from May 18 till June 4. The party took in all nearly 1,000 trout, two of which weighed, when caught, 6 lbs each, two 5 lbs each, and out of one lot of eighty, ten weighed 40 lbs, or 4 lbs each on the average. The whole catch of the party was estimated to weigh upward of 600 lbs. salmon and brook trout. Axel Dearborn, president of the Broadway National Bank, Boston, went home this morning with upward of 100 lbs of trout. The Major was a party by himself, and only spent one week at the lakes, but caught a goodly number of large trout. The above are only a small portion of what have been taken this spring. Capt. William Lewis and two sons from New Bedford, Mass., last week caught one hundred trout from the lake weighing 100 lbs, the largest of which tipped the scale at over 6¾ lbs. They were there only thirty-six hours. Mr. A. J. Hewey, at Beach Hill on the stage road to the lakes, caught a year old bear last week. They are so plenty that Mr. Hewey is obliged to fold his sheep every night.—S. F.

WANTED—SOME ANGLE WORMS.

WE are permitted to publish the following letter to the Fish Commissioner of Iowa. We suggest the importation of angle worms, or, better yet, of teachers to teach the boys to use artificial flies, and that to snare a trout is murder in the first degree:

MANCHESTER, Iowa, March 21, 1881.

HON. B. F. SHAW—My Dear Sir: I have been viewing the Spring Branch trout. Before the thaw commenced the water was as clear as crystal, and the boys were snaring them. Isn't it astonishing that trout can be snared. One boy snared one of five lying on their spawning bed, above the bridge at the milk factory. It was the smallest one and weighed three pounds and four ounces It could not turn in a wash boiler. About four of the 1879 trout have been snared. There are no worms. Consequently we who cannot snare don't get any. A boy living on the stream sent me one of the '79 fish snared by him, weighing one and one-half pounds and thirteen inches long.

I am satisfied that the "close season" must be extended. All of the fish caught were full of spawn. They said the '77 fish contained a cupfull of ripe eggs. These trout don't spawn in November nor until late in December. The law makes November, December and January the "close season." As they spawn up to April—most of them in the month of March—it must be changed to November, December, January, February and March. This will save them. It is too bad to have them killed on their spawning beds.

Trout of '77 and '79 are all on the riffles, and from the "blue hole" to the upper spring. I believe there are 2,000 of the '79 and from 600 to 800 of the '77 trout. Of course I did not see all these trout, but I saw the wake of thousands when they were leaving their beds and going for cover. The boy that I have employed to watch them says that on a clear morning he would see from twenty to thirty on one riffle of the trout of '80. They hatched about April, 1880. This hatching will be about the first of May, which will make the stream full of fish. The large ones have taken the suckers and minnows. The water-cress is a great protection to them and the stream is full of moss. If I get any of the trout of '77 I will preserve one for you. Have you tried Prof. Wickersheimer's preserving fluid? It leaves the fish with all its colors.

I am perfectly satisfied that 10,000 of the fish of March last that were put in a spring stream at the headwaters of the river are growing. The stream is just as fine as Spring Branch. I will try and ascertain by the first day of May, and if we find they are there we will endeavor to put in ten thousand more. The spawning trout at Spring Branch from all appearances will not be disturbed for a month, as the water will be muddy. Truly yours, S. G. VANANDA.

THE FLY-CASTING TOURNAMENT.

THE fly-casting at the New York State Sportsmen's Convention will be called as this paper goes into the mail. At a meeting held at Hotel Brighton, Coney Island, on the 20th inst., at which Mr. Fred Mather, the Director of the Fly-Casting Tournament, Mr. James Geddes, the referee, and Mr. Lucius Moses, one of the judges, were present. The following points were decided upon: The rule allowing distance for short rods will be adhered to. The bass casting will be done with a one-ounce weight instead of bait, all to cast with the same weight. The judges will consider style of delivery of the flies on the water, and accuracy, as well as distance, and for this purpose the following scale of 100 points has been adopted.

Distance across the wind	30
Distance with the wind	30
Style of delivery of flies	25
Accuracy	15

In single-handed fly-casting class C will be called first in order to give amateurs winning in this class a chance to enter in the other classes.

The extra prize of a salmon rod, given for extreme distance with a single-handed rod, will be cast for last of all. Those who have cast in the other classes can enter for this contest free of charge. Other members wishing to cast for it will pay the usual entrance fee. The rule for this contest will be that any rod of twelve feet or under may be used, but there shall be no allowance for distance given for short rods.

STONE LUGGERS.

Syracuse, N. Y.

DURING a recent visit to the Thousand Islands of the St. Lawrence, I observed what I had never seen before, and something unfamiliar to most anglers. On the south shore of beautiful Round Island two mounds were discovered by a friend of mine situated say ten feet from the water line and in about three feet depth of water. They were built of pebbles in the form of a pyramid. One must have comprised a bushel or more of small stones, the other was not so large. By patient watching the fact was discovered that these mounds were made by chubs, which could be seen carrying the pebbles in their mouths from near the water-line to the hillocks. They worked incessantly and perseveringly, seemingly unconscious of the presence of spectators. If driven away by dropping a stone upon them they would quickly return and resume operations, always in nearly the same place, going over the same line to the same place to find the small stone.

I have heard it said that bass build such mounds, but for what purpose there seems to be a diversity of opinion. I have never seen anything of the kind before, nor have I found an angler who ever heard of chub becoming mound builders; so the discovery was naturally very interesting to me, and has excited the curiosity of others. It is for this reason that I write you, feeling confident that if you will add to the letter some remarks of your own, a great many of your readers will thank you for them. Why and for what purpose was so much labor expended by the fish, and what fish are prone to such occupation? D. H. B.

The name "chub" is so extensively applied in America that it is not at all descriptive. We restrict it entirely to the "fall fish," *Semotilis corporalis* and *S. bullaris*, while in Virginia the name is even applied to the black bass. As the English chub is a cyprinoid fish, and we have fifty species which are more or less like it, it gives great latitude to the use of the name Some of these fishes carry stones in their mouths probably to cover their eggs. One, the *Exoglossum maxillingua*, of Rafinesque, is given the common name of "stone toter" by Jordan, but it is impossible to say to which genus your fish belongs. We wish we had a specimen.

TROUTING AT TIM POND, EUSTIS, MAINE.—Mr. Jared Goodrich, of Plainville, Conn., with his friend Seymore, two weeks since, started on "round trip tickets" for the above named now popular resort. They went via Boston, Portland, Lewiston, Farmington and Kingfield. Mead's hotel was burned May 10th, also the stables, with Dan Clark and Son's new stage coach. A large new hotel has been opened, of which Mr. G speaks very highly. Dan Clark & Son, with usual enterprise, have on still another new coach with excellent horses, sure to make time. At Kennedy Smith's cabins they found a party from Lewiston, one from Boston and another from Walcotville, Conn The cabins and boats were all in fine order, trout were in great abundance—in the creel—and a new cook placed them with various viands on the table in a style to tempt more fastidious appetites than those sharpened by exhilarating sport and pure bracing air. Mr. Goodrich reports there has not been a large amount of rain there this season, and that the mountain streams are not full, not enough water in the Carrebasset River to "run the logs" with ease. The nights were cool, and white frost three mornings silvered the shores of the forest-draped lakelet. Some of the guests took trips down Tim Pond Stream to feast on the beauties of its foaming cascades and lure the nimble trout from their dark pool homes. Another company went to Beaver Pond, and from there on into greater depths of the dark and vast wilderness to lakes ages ago inhabited by the speckled charmers that so entice us sportsmen, and here they have dwelt unknown, save by a few lumbermen visiting these secluded regions in winter in pursuit of their vocation. And now Smith prepares the way for the chosen ones to cast their silken lines upon these virgin waters. I envy them their great privilege But more of this anon. Mr. G. and friend turned their faces homeward the 9th inst., arriving in Plainville the 11th, looking ten years younger than when they started, having had the best trouting trip yet in their lives, though somewhat venerable in years. They were allowed on their tickets to return via Flagstaff, Lexington, North New Portland and North Anson, when they came to the Somerset R. R. They speak of the scenery by both routes as grand beyond description, from Kingfield to Eustis, and from Smith's farmhouse to North New Portland, at which place they found a good hotel. They speak of hearing partridges drumming all about the cabins, and think they wintered unusually well. Mr. Editor, may you and I be there to see. In my last, when speaking of flies, I should have named the "Moosehead" as made from a description I gave to Wm. Mills & Sons. It is one of the best for Tim Pond and the Dead River region.—J. W. T.

PROPER CREDIT—Syracuse, N. Y.—I am in favor of fair play. I am in favor of giving credit to the party to whom it properly and rightly belongs. I have just read the letter of "Walton" in this week's FOREST AND STREAM (June 2), and he therein makes a great mistake or a very glaring misstatement. He is correct in saying that the fishing in Onondaga Lake and Seneca River is better now than usual. I know that there are more glass-eyed pike, yellow pike and black bass now in the lake than for any year during the last fifteen years. But he gives the credit of all this to the Onondaga County Sportsman's Club. It does not belong to them. They have done very little if anything toward keeping the nets and seines out of the lake and river. I do not know that they have ever hired a man to patrol and watch the lake or river, contributed toward the expense, or spent a dollar for that purpose.

The credit all belongs to the Onondaga County Fishing Club, which every spring and fall for the last four years has had four or five men in its employ for the purpose of protecting the fish in the lake and river from poaching by seines or other nets. These men have been paid by the Fishing Club. All of the dues received from about two hundred members have been devoted to that purpose. During the last four years they have captured and destroyed a great many nets of various kinds, have successfully prosecuted nearly one hundred poachers, and have struck terror among the law breakers. And they propose to go right on with the good work, but do not want their thunder stolen now by a pigeon-shooting club.

I have read and now possess a nearly complete file of FOREST AND STREAM, and know that you favor the right.—"I GO A FISHING."

TROUT IN THE ADIRONDACKS—Moira, Franklin Co., N.Y., June 8.—Parties who have returned from the 16-mile level say they never saw the trout fishing better than it has been on the level during the past two weeks. They state that all who came there had no trouble in catching all they wanted. They caught many large trout, several weighing a pound and a pound and one-half. Two of them caught 26 good sized ones at the landing at the foot the of level one evening in less than an hour's time. The trout fishing this spring is uncommonly good in all the northwest parts of the Adirondacks. They saw many deer along the level, often two and three together, feeding along the banks of the stream in the daytime. One man, who was in a boat alone fishing in River Pond, a small pond formed by an outlet from the river, saw a large buck near the centre feeding on lily pads. Although he had no gun, and nothing but a paddle and fishing rod, the man gave chase The water in the pond is very shallow, with a very muddy bottom, so every jump the deer made he would sink into the mud nearly all over, and could not get along very fast, so that he came very near overtaking him. But when both were near the shore, and the man gaining fast, the water suddenly became so shallow that he could not propel his boat any further, and the buck, by hard scrabbling, managed to work his way out of the mud to the shore. When he struck hard bottom he soon was out of sight. And the man had a hard time backing out of the mud with his boat. At that same time the man went to the outlet of the pond and caught two trout that weighed by the scales 3 lb. 2 oz., and many smaller from ¼ to ½ lb. in weight. This happened last week.—A. C.

SHAD IN THE DELAWARE.—The shad-fishing at Gloucester, N. J., a few miles below Philadelphia, on the Delaware

River, ceased for the season on Friday last. The catch this year has been remarkably large and a very profitable one. About 45,000 fish have been caught, 15,000 more than in 1880. Fishing began three days later and ended one day later than last year. The greatest number of shad taken in a day (24 hours) was on May 2, when 4,000 fish were caught. During the last ten days of the season shad became so scarce that it barely paid expenses to haul the seine. All the fish caught at the Gloucester fishery were sold to the Delaware and Potomac Fish Preserving Company, of Philadelphia, at $15 per hundred, which on the average was about market price. We are speaking now of seine fishing. Many more shad were caught by gilling nets in Howell's Cove for a lay out, the drift being up or down the river from a half to three quarters of a mile. Bass-fishing has begun with us. But the Schuylkill has been so muddy since the season opened, owing to heavy rains, that but few, if any, fish have been taken.—HOMO.

FISHING AT OSWEGO—Oswego, N. Y., June 10.—Trout rise freely to the fly in our outlying streams, and within the past month many fine creels have been brought in by parties from points within twenty miles of town, captured both with bait and fly. One speckled beauty taken from Mad River, May 18, tipped the beam at four pounds two ounces. Beat that. We can offer the tourist fisherman fine brooks and the skillful angler from four to seven pound catches of genuine brook trout at points within three hours' ride of our city, where good board and care can be obtained for $1.50 per day. For home sport bass are now coming rapidly to the front, and within the limit of an afternoon's walk the river and lake shoals offer fine fishing, both with spoon and fly. Our climate is "the finest in the world" at this season of the year, and our citizens are always pleased to greet the cosmopolitan in his search for "pastures new." Two weeks since, with a friend, I spent three days along the trout streams of our county, returning with twenty pounds of dressed fish, and during the past week I have filled a twelve-pound basket twice with black and Oswego bass during an afternoon.—H.

☞ *See notice elsewhere of New York game law.*

NEW JERSEY SHAD TAKE THE FRY.—Knowing that any information relative to the taking of shad on hook and line will prove of interest to your many readers, I will state that on May 25th last, I caught with a light eleven-ounce rod on yellow fly, a male shad weighing two and a half pounds, while fishing for perch in the Raritan River. Also during the month of June (about the 3d) of last year, I caught a shad in the same river, with same tackle but red fly, weighing four and a half pounds. I have also seen taken from the same river a shad on live minnow bait and worm. Also have seen two other shad hooked on fly. These fish, when hooked, are very gamey and are harder to kill than a black bass of less weight. We lovers of the disciples of ancient Izaak Walton are patiently awaiting July 1st, when the open season in this State is up for BLACK BASS.

WHERE TO FISH—To J. L. C., Brooklyn.—You can have fair fishing near Red Bank from June 15, maybe later, this season. Pintard's Point, Lawrence's Cove, north of McClees Creek, are the best places for weakfish. The best bass grounds in the vicinity of Oceanic are the Slough Way, South Channel, Upper Rocky Point, head of the flats, and south side of North Channel. I reside within one-half mile of these places, and will be pleased to post you when you come.—G. H. W.

THE LIGHTEST FLY-ROD.—A short time ago we chronicled the fact that the lightest fly-rod on record was a split-bamboo rod of four and three-quarter ounces. Last week Mr. George W. Van Siclen, of the New York Bar, brought into our office his favorite rod of ash and lancewood, made to his order three years ago by Wm. Mitchell. Mr. Van Siclen has used it constantly, and has taken several hundreds of trout upon it, and yet it weighed upon our scales four and a quarter ounces. It is still in good order, and looks capable of several years' service.

FISH AND SALERATUS.—People living on Thomas Creek in the town of Perinton, N. Y., claim that the refuse from the saleratus works at Fairport kill not only the fish, but ducks and geese as well. Farmers say that their cattle have been injured, and they are making loud complaints.

To restore nerve and brain waste, nothing equals Hop Bitters. Believe this.

Fish Culture.

REPORT OF THE MICHIGAN COMMISSION.

THE fourth report of the State Commissioners and Superintendent on the State Fisheries of Michigan for 1879-80 has been received, It does not appear as well as former reports of this State, and its proof reading has been neglected. Table A shows the planting of whitefish hatched in 1878-9, deposited in inland lakes to be 4,790,000; in Lake Erie, 349,000; in Lake Michigan, 1,050,000; in Lake Huron, 595,000; in St. Clair River, 655,000, and in Detroit River, 7,115,000; making a grand total of 14,545,000. Of quinnat salmon 212,846 were planted in 1879. Of lake trout, *Salmo namaycush*, there were 379,000 planted in the same year, while the brook trout numbered 12,000. the land-locked salmon 4,867, and the eels 317,000. The Commissioners believe that the brook trout can live over a more extended territory in the State than has been supposed, and will try to increase this fish in future, together with the rainbow trout of California.

In 1880 there were 50,400 brook trout distributed, and 26,500 lake trout, together with a few black bass. Many eels of former plantings have been taken and show a good growth.

Of the grayling they say: "Drawing a line from the mouth of the Muskegon River on the west, across the peninsula to Tawas Bay on the east, and all the streams north of it are the natural habitat of the grayling." We are disposed to question this statement as we doubt the existence of grayling in all the streams, especially those running north in Presque Isle and Cheboygan counties. They further say: "In the Jordan and Boyne rivers they are nearly if not extinct. With man's rapacity on land and the brook trout's voracity in the water they cannot increase so as to maintain their existence." We are glad to see that it has been the policy of the Michigan Fish Commission to protect and preserve this beautiful fish for which anglers go so far. Dr. J. C. Parker, of the Commission, has hatched a few, and we wish he had been able to get more eggs. It has often been a matter of surprise that the Michigan Fish Commission seemed to be groping in the dark a few years ago regarding the spawning habits of the grayling, when Mr. D. H. Fitzhugh, Jr., has investigated the subject and actually determined their date and place of spawning, and also obtained the eggs which were hatched years ago. He saw Mr. Mather take the first grayling eggs ever taken by hand in America, and afterward divide them with Mr. Frank N. Clark, who hatched them. The Board planted a few adult grayling as far south as the Dowagiac Creek at Pokagon, and they have since been seen; also in Mill Creek, a branch of the Paw Paw, in Berrian County. These facts, together with the knowledge that they live in the ponds at Pokagon, prove that other waters of the State besides those where the grayling is found are suitable to them, if not infested with enemies which destroy the helpless fry.

An appendix contains a "United States Fishery Act" for the protection and preservation of the food fishes of the coasts and lakes, and general fish laws of Michigan, with the amendments, and also the game laws. The list of fish commissioners is an old one and not correct. The Board should watch FOREST AND STREAM closer, and it would then have seen a revised list last September.

FISH CULTURE IN CONNECTICUT.

HARTFORD, Conn.

PERHAPS it may be interesting to you to know what we have been doing this spring. We have distributed 274,000 young trout, in lots of 5,000 each, to stock the depleted streams in different parts of the State. We deliver them free to applicants at the hatching house in Poquonock. If parties wish them delivered in any part of the State, they pay for the time and the traveling expenses of the messenger. This work has been very popular, and we have not, even with this large number, been able to supply the demand. Prof. Baird presented us with 25,000 Penobscot salmon eggs, which we hatched out with a loss of only 4,369, and the young fry were, at Prof. Baird's suggestion, all put into the Farmington River, a branch of the Connecticut, at the same place in the town of Colebrook. We have also distributed about 480,000 young land-locked salmon in the various lakes and rivers of the State. The Connecticut River shad have been remarkably large and fine this year, and have been so abundant that the price at Saybrook has varied from $12 to $18 per hundred, small shad not being reckoned. The jelly fish again appeared this year in such numbers that the owners of the pounds in Long Island Sound, west of the mouth of the Connecticut River, were obliged to take up their netting to prevent the whole structure being carried away. This occurred just when the run of shad was most abundant, and caused great losses to the pound owners. Messrs. Rankin and Chalker, who are carrying on the shad hatching operations on the Connecticut River, have been very successful recently at Windsor taking a large number of ripe shad, and turning the young fish when hatched into the river. This morning a million young shad arrived from Havre de Grace, pursuant to an agreement made between Prof. Baird and U. S. Senator Joseph R Hawley. They were put into the Connecticut River, a few miles above Hartford. The last Legislature largely increased the duties of the fish commissioners by constituting them "Commissioners of Shell Fisheries," placing under their charge all that part of Long Island Sound which was awarded to Connecticut by the recent statute fixing the boundaries between New York and Connecticut. It is estimated to contain about 600 square miles. The commissioners are required to fix a coast line, known as the "eye sight line," from point to point along the shore, and the territory lying between that line and the New York line is to be under State supervision; all north of that line, as heretofore, to be under the supervision of the towns. The commissioners are also required to cause to be made a map of all this region, showing all natural oyster, clam and mussel beds, and all designations of oyster grounds made to private individuals by the towns previous to the statute taking effect. They are also required to propose an equitable system of taxation for the oyster grounds granted to individuals, and lying within the new area. They are empowered to grant to applicants, under certain forms and restrictions, any part of this new area, for the purpose of oyster cultivation, on the payment to the State Treasurer of one dollar per acre. These are the prominent features of the statute, which is very long. The commissioners have established an office in New Haven. The blank forms of application, which, by law, required the approval of the Chief Justice of the State, were ready on June 1st, and on the following day I was notified by the clerk that applications for 7,500 acres had already been made.

WM. M. HUDSON,
Commissioner of Fisheries.

THE FATHER OF FISHCULTURE IN AMERICA.

I HAVE read with increasing interest the "Epochs in the History of Fish Culture," and I am glad that these useful facts are to be made secure for all time in the reports of the United States Fish Commission.

The requisite bibliography to be consulted would almost appal most compilers who are concerned in presenting a connected history of the discoveries and practices in connection with the science. Regarding the initial work in our country it is true that Dr. Theodatus Garlick did hatch, after artificial fecundation, the first fish ova in the United States, notwithstanding his book was published in 1857, as I shall clearly substantiate further along in this communication. One year after the Government Hatching House of Huningen, Alsace, was successfully engaged in the artificial production of fishes, Dr Garlick and Prof. H. A. Ackley determined to make the experiment of artificial fish breeding. Accordingly Dr. Garlick in August, 1853, made three trips to the Sault Ste Marie and brought to Cleveland, Ohio, one hundred and fifty trout, *Salmo fontinalis*, and, during his absence on the first expedition, Prof. Ackley constructed a pond on his farm two miles from Cleveland from a number of springs into which these trout were placed, and they seemed to be as much at home as they were in the blue waters of Lake Superior.

Meanwhile others were procured from Port Stanley, Canada, West, and lodged in the same pond. The trout were healthy, and the transfer wrought no perceptible change in their habits or lives. About November 20 the trout began to manifest symptoms of spawning, as was evident from their being discovered in pairs, although their instinct for reproduction was some six weeks later than the usual season of trout spawning, owing no doubt to the vicissitudes incident to transportation and change of water. By the use of a landing net a pair was captured, and placed in a bucket of water preliminary to the artificial expulsion of the ova. An earthen vessel partially filled with water was obtained, and the work began, the doctor taking the female in his left hand and gently expelling the eggs with the right hand into the earthen vessel. In like manner the spawn of the male was extracted, and the contents of the vessel was gently stirred, and almost instantly the eggs were changed from a golden orange color to a pale, transparent yellow. The vessel containing the eggs was placed by the doctor in a running stream, and was used for a primitive hatching box. On the 9th of January, 1854, one of the eggs was placed under one of Dr. Goadby's microscopes, for the doctor was then giving lectures in Cleveland, and the Cleveland Medical College then being in session the professors and students had an excellent opportunity to study the embryonic changes which took place during incubation. On the 22d of January the young fish began to emerge from their close quarters to enter upon a new existence. While the incubation process was going on Dr. Garlick was watching the changes of the embryos, and made six cuts representing embryo life from segregation until emergence from the eggs. I have been thus explicit in order that the honor of this first successful experiment might fall where it belongs, to my Esculapian brother. Now for the facts, which have been overlooked probably by Prof. Goode. In February, 1854, Dr. Garlick read a "paper" before the Academy of Sciences, of Cleveland, giving the main points which are contained in my statement of the first experiment made in the United States in the artificial production of fishes. This experiment was the first and crucial experiment, and justly forms the basis of fish culture in our country. The paper alluded to is used in Dr. Garlick's work on fish culture as an introduction, and hence its liability to be overlooked, and was published also by the *Ohio Farmer* about the time of the successful experiment, or three years before the publication of the book. NAHUM E. BALLOU.

Sandwich, Ill., June 15.

SHAW'S FISHWAY.

CHARLES CITY, Iowa, February 2, 1881.

FISH COM. SHAW, Anamosa, Iowa:

Dear Sir—Thinking that it might be of some interest to you to know what success the fishway which you planned in 1876 has had, we would say: In that year we built a new dam and a mill, plitting a fishway in the abutment next the mill, according to your plans and specifications. So far as my observation has gone, it has been a perfect success. Previous to the building of this new dam there was a brush dam put in in 1856, with no fishway, and the fish would always collect in large quantities in the spring of the year at the foot of the dam and under the mill, where they were caught by the hundreds. Since the new dam—which is ten feet high—has been put in, with the fishway, the fishing has been better above the dam than below, and there have been no such collections of fish around and about the mill as before.

It was thought at first that the fishway was of no account—that the fish would need a guide-board to pilot them up through the dark pools to the upper waters, but I believe that it is now generally conceded to be a success. At all events, I am not sorry that I had it put in, as it has given perfect satisfaction, and it is always a pleasure for me to do anything to please the people generally. I superintended the work, and I don't think that it cost more than $30. Of course it would cost much more to tear out and put one in an old mill-dam, but I would not bear the fault-finding and grumbling for all one costs; besides, I feel that it is the duty of every man to protect and cultivate the interests of anything and everything that will bring happiness, health, wealth or pleasure to the community at large, and I think the culture of fish will come under this head. Hoping that the untiring interest you have taken in the enterprise will prove a lasting benefit not only to yourself, but to generations which are to follow after us, I remain very respectfully yours, MILO GILBERT.

Pres't Charles City Water Power Co.

CHARLES CITY, Iowa, March 21, 1881.

MR. B. F. SHAW, Anamosa, Iowa:

Dear Sir—Your letter just received and will answer it immediately. First—The supply of fish above the dam has very much increased since the fishway has been in operation here. More fish were caught above the dam last season than ever before, and larger fish also. I am more than ever convinced that fishways, if properly constructed, are very valuable in maintaining as well as increasing the supply of fish. The greatest drawback in keeping up the supply of fish is the spearing of them which at most times attends the barbarous practice that I think it ought to be stopped, and would hold up both hands for a law that would effectually put a stop to it. More—I would see that it was enforced. Fish do not congregate below the dam as they did before the fishway was put in. I have watched the fishing interests very closely for thirteen years, and I do not guess at any of these things, but I know of them.

Second—The law relating to fishing near a fishway or dam I think a good law, and will see that no fish are caught near the fishway or dam here. I am very positive that as soon as fishways are put in at Nashua, Waverly, Waterloo and other places, we will see a large increase of fish in the Cedar River. I shall watch the matter with a great deal of interest. Would be glad to hear from you again. Yours truly, W. F. MILES.

A SALMON IN THE OSWEGO RIVER—Oswego, N. Y., June 13.—I desire to record in your columns the first catch of salmon, *Salmo salar*, made in this county for thirty years. On Saturday, the 11th inst., while fishing with a fly just below the lower dam on the Oswego River, and within the limits of this city, Mr. Nesbitt took a genuine salmon of the weight of two and one-half pounds. A second catch of a larger fish he failed to land. Evidently the finny travelers were seeking to pass the dam, journeying up stream, but were prevented by the apron and the lowness of the water. Why do not the fish commissioners build the fishways ordered by the Legislature of 1880? Fifty years ago this river, the Oswego, swarmed with this finest fish that swims. Mr. Nesbitt's experience proves the desire of the fish to return to their ancient spawning beds. Let the commissioners aid them at once or the sportsmen of this county will feel that a great lack exists somewhere. We seek to protect game and fish according to the strictest letter of the law, let the officers of the law aid us as in duty bound to do. Build at once the needed fishways and Americans need no longer pay tribute to Canada for the privilege of fishing in her salmon streams, for we shall be able to catch our salmon at home. —T. E. H.

RAINBOW TROUT.—A friend informs us that Mr. James Geddes, of Syracuse, N. Y., has recently planted 15,000 young rainbow trout, *Salmo iridea*, in streams in Onondaga County. Our informant does not say where they came from, but we presume from the ponds of the New York Fish Commission at Caledonia. We hope to hear of the best results from this, and that Mr. Geddes may live long and catch many of the progeny of the beautiful fish he has planted.

Fair skin, rosy cheeks, buoyant spirits and the sweetest breath in Hop Bitters.

The Kennel.

FIXTURES.

THE NEW YORK DOG ORDINANCE.

AN ORDINANCE TO PREVENT THE DANGER OF HYDROPHOBIA TO ANY OF THE INHABITANTS OF THE CITY OF NEW YORK

The Mayor, Alderman and Commonalty of the City of New York do ordain as follows:

Section 1. Hereafter it shall not be lawful to permit any dog to go abroad loose or at large in any of the public streets, lanes, alleys, highways, parks or places within the corporate limits of the City of New York, under a penalty of three dollars for each offense, to be recovered against the owner, possessor or person

who knowingly harbored such dog within three days previous to the time of such dog being so found going abroad loose or at large; and the Commissioners of Police are hereby authorized and directed to cause complaint to be made to the Corporation Attorney against the owner or possessor of every dog permitted to go loose or at large within the corporate limits, as aforesaid, for the recovery of the penalties prescribed in this ordinance; such penalties and all license fees, when collected, to be accounted for semi-monthly, and paid to the Comptroller of said city, and upon the requisition of the Mayor, to be applied toward the payment of enforcing the provisions of this ordinance. Nothing in this ordinance shall prevent any dog from going into any such street, lane, alley, highway, park or public place, provided such dog shall be held by such owner or other person securely by a cord or chain, to be not more than four feet long, fastened to a collar around the neck of the animal.

Sec. 2. Every owner, possessor or person, who harbors any dog, shall take out a permit for each dog, at the Permit Bureau, paying the sum of two dollars ($2) for the same. All permits, and renewals of the same, shall be dated from the first day of May in each and every year, and shall be from one year from date, and all renewals shall be one dollar ($1). Said permit shall have the name of the owner and the number of the permit or license on it. Any dog so licensed must have a collar around his neck, with a metal tag attached, having the number of the license on it. And any dog so licensed must, when in the street, be held by such owner, or other person, secured by a cord, rope or chain, not more than four feet in length; but the owner, at his option, may use, instead of the above, a muzzle, constructed so as to prevent the dog from biting. Any dog that is not so secured, although he is licensed, shall be captured the same as if no license was granted. No dog having a collar and tag, with the number of his license on it around his neck, that may be on a wagon or other vehicle belonging to its owner, shall be captured. Any person appointed by his Honor the Mayor to capture dogs who shall permit any person to take one or more dogs from him for nothing, or for pay, shall be arrested, and taken before a police justice, and upon the facts being proven, the judge shall impose a fine of not less than $10, or more than $50, for each offense. Any person may make a complaint of persons having dogs unlicensed at the police stations, and the officer in command shall entertain the same; and all policemen on patrol duty must report all violations of this ordinance the same as any other violation of a Corporation ordinance. All such reports shall be transmitted to the Corporation Attorney, the same as for other violations of city ordinances, and in addition to the $3 fine, shall be added all costs of suits for the recovery of the same as for any other violation of the city ordinances. The provisions of this section, except those relating to leading and muzzling dogs, shall not apply to dogs owned by non-residents, in remaining temporarily or in passing through this city, or to dogs brought into this city and entered for exhibition at any dog show or annual exhibition of dogs.

Sec. 3. The Mayor of the City of New York is hereby authorized and empowered to take such measures as he may deem most efficient to carry into effect the provisions of section 1 of this ordinance. All dogs found loose or at large, as aforesaid, shall be seized, captured and delivered by such persons as the Mayor shall designate, at a place to be provided and indicated by him, where such animals, if not within forty-eight hours thereafter claimed and redeemed by the owner or some other person, shall be killed and destroyed in such manner and by such persons as the Mayor shall designate.

Sec. 4. Any owner or other person who may claim such dog shall, before being placed in possession thereof, pay therefor the sum of three dollars. The provisions of this ordinance shall apply only to dogs owned or claimed by residents of this city; and any person who shall knowingly harbor any such dog, and claim payment for the capture thereof, which shall not be owned or captured within the corporate limits of this city, shall thereby incur a penalty of ten dollars.

Sec. 5. No person shall hinder or molest any person or persons so appointed by the Mayor while engaged in seizing or capturing and delivering any such dog as aforesaid, or any other person engaged in the performance of any duty enjoined by the provisions of this ordinance under a penalty of not less than twenty-five nor more than one hundred dollars for every offense, to be sued for and recovered in the manner now provided by law or ordinance for the recovery of penalties for violations of the ordinances of the Common Council, on the complaint of the person so hindered or molested; the penalty, when recovered, to be accounted for, paid, and appropriated as provided in section one of this ordinance. The Commissioners of Police are hereby authorized and required to cause the persons so engaged in the performance of any of the duties prescribed by this ordinance, to be protected from hindrance or molestation.

Sec. 6. Chapter XLIV. of the Revised Ordinances of 1866, and all other ordinances or parts of ordinances inconsistent or conflicting with the provisions of this ordinance, are hereby repealed.

Sec. 7. This ordinance shall take effect immediately.

THE PHILADELPHIA DOG POUND.

THE dog pound of Philadelphia is under the charge of the "Women's Branch" of the Pennsylvania Society for the Prevention of Cruelty to Animals. The following report of the working of the system under the ladies' direction is contained in the report of Mrs. C. E. White, presented at the International Congress at Berlin last year and reprinted in "Our Dumb Animals," of Boston:

"Eleven years ago, soon after the formation of the 'Women's Branch,' the Executive Committee of that society, finding that the taking up and killing of the dogs running unmuzzled in the streets, which was required by the city laws and was in the hands of city officials, was attended with circumstances of the most revolting cruelty, and becoming firmly convinced that it would never be humanely done so long as it was performed by men who worked for money alone, and who took no interest whatever in the animals which came under their charge, applied to the City Councils of Philadelphia, desiring that this matter of the taking up of the dogs might be put into their hands, and promising if their request was granted to perform the work as faithfully and conscientiously as possible. After a long delay their petition was granted, and the city transferred to them the sum of three thousand dollars, which was appropriated annually for this work, and at the same time gave them a piece of land in the outskirts of the city on which to erect a building suitable for their purpose. An inexpensive house was then built, containing a sufficient number of rooms to accommodate the family of the Superintendent of the 'City Pound,' or 'Dog Shelter,' as it was named, and the two apartments which are necessary for asphyxiating purposes. Two large yards were also prepared, one for the male and the other for the female dogs, bordered by high fences, and in which a large number of kennels were built, so that each dog might have one to himself if he wished. Grapevines were also planted and made to run over arbors or trellises to afford us shade during the extreme heat of summer. Troughs were put up in different parts of the yards to furnish the dogs with water, and long tables or stands under shelter, on which their food could be placed. The manner of catching and keeping and killing the dogs was entirely changed after it came into the hands of the 'Women's Branch.' In place of the barbarous lasso formerly in use, which choked a dog as soon as he was caught, and in which condition he was frequently dragged some distance, nets were substituted, which do not generally cause the animal any pain.

"The wagon in which the dogs were conveyed to the Pound was provided with springs, and divided into two compartments, so as to separate the large from the small dogs, the latter being sometimes much injured by the attacks of their larger comrades. The plan was adopted of keeping every dog a week whenever it was practicable in order to afford the owner, if he had any, full opportunity to redeem him. During that time the dogs were kindly treated, and fed twice a day, the food being ordinarily some cheap kind of meat boiled together with Indian meal in the proportion of half to half. At the end of the week if not redeemed they were killed by means of carbonic acid gas. The method adopted at that time has been since pursued in most respects, except that the carbonic acid gas has been changed to carbonous oxide, which scientific men have decided to be an easier form of death. The money received for the redemption of the dogs is all returned to the city, and amounts to more than a thousand dollars a year. The exact process of killing by means of carbonous oxide gas, and a description of the asphyxiating room as published in connection with the annual report of the 'Women's Branch,' and will be sent to any one making an application for it. It is better to familiarize the dogs with the asphyxiating room by inducing them to enter it frequently, and placing food there for them so that they may not suffer from the apprehension which is caused to so intelligent an animal by being confined in a strange place. In the cases where they are sick at the time they are taken up, or have pups, milk is given to them, in place of the usual food, as much as possible. It would not be correct to give the impression that all the dogs not redeemed by their owners are killed. At the time that this matter came into the hands of the 'Women's Branch,' either a direct or implied permission was given to the President of preserving a few of the dogs that were calculated to be useful, either on account of their great intelligence, or from the possession of valuable properties, such as being good watch or hunting dogs. All such animals are kept alive, and are generally sold when it can be ascertained that they are likely to have good homes, but in all such cases, two dollars, which is the amount of the redemption fee, is paid to the city. It is worthy of note also that in cases where the owners of dogs are poor, and are very much attached to their favorites and anxious to redeem them, but have not the money, the 'Women's Branch' invariably aids them by paying a portion or all of the redemption fee out of its own treasury. Occasionally, when the circumstances seem to render it justifiable, such as where a dog aids his master to gain a living for his family, or where he is the guide of a blind man, he is returned without a redemption fee. The Superintendent of the Pound or Dog Shelter invariably accompanies the men who take up the dogs, to see that they are guilty of no unnecessary cruelty in the performance of their work.

"The average number of dogs taken to the Pound in a year is about three thousand. Of these, two thousand three hundred are killed, and their bodies sold after death to be used for various purposes of trade. About six hundred are redeemed, thus enabling the Superintendent to return to the city twelve hundred dollars of redemption money.

"The support of each dog averages a cent and a quarter a day, exclusive of the milk, which, as before stated, is sometimes given. There are five men employed in connection with the Pound, viz., the Superintendent, Assistant and three dog catchers. Occasionally it is necessary to have a man for two or three days to assist in extra work.

"The salary of the Superintendent is $650 a year, in addition to which he has his house rent free, and enough land for a vegetable garden; that of the Assistant, $540; that of the three dog catchers, $721.50. The total expenses of the Pound are about $2,900, this includes the support of the horse which is kept for drawing the dog-wagon. In addition to the Superintendent, four police officers accompany the dog catchers, this being rendered sometimes necessary by the turbulent character of the people whose animals are taken up and the resistance that they make.

"The Pound is under the direction of a Committee of the 'Women's Branch.' The members of this Committee visit it, and have the entire control and management of the institution, consulting with the superintendent as to the advisability of any changes or reforms that he or they may consider desirable. The Chairman of this Committee pays the employees, and another member of the Committee acts as treasurer, keeping all the accounts.

"In the hope that other societies may follow the example of the 'Women's Branch,' of Philadelphia, and by this means be able to ameliorate some of the sufferings of one of the noblest of animals, this statement is drawn up and respectfully submitted to all kindred organizations, by

CAROLINE E. WHITE,
"President of Women's Branch."

THE BOSTON DOG LAW.

CHAPTER 278. An Act to authorize the establishment and mentainance of a Dog Shelter by the Society for the Prevention of Cruelty to Animals in the city of Boston.

Be it enacted, etc., as follows:

Section 1. The Board of Aldermen of the city of Boston may authorize the Society for the Prevention of Cruelty to Animals to establish and maintain in said city a shelter for the detention of unlicensed or stray dogs which may be seized under the provisions of this Act, and may make any necessary agreement with said society for the reception, sheltering, keeping and feeding, or humane killing or otherwise disposing of such dogs: provided, however, that no such shelter shall be established or maintained when an adjoining owner objects thereto.

Sec. 2. The mayor of said city shall annually, within ten days from the first day of July, issue a warrant to one or more police officers, or any officer of said Society for the Prevention of Cruelty to Animals directing them to proceed forthwith to seize and deliver at such shelter all such dogs found running at large within said city of Boston, not licensed and collared according to law, and to enter a complaint against the keepers or owners thereof. Such officers other than those under regular pay from said city, shall receive one dollar from the treasurer of said city for each dog so taken and delivered as aforesaid. And all bills for such service shall be approved as provided in section seven of chapter one hundred and thirty of the Acts of the year one thousand eight hundred and sixty-seven.

Sec. 3. Every dog so taken and received by such shelter, as hereinbefore provided, shall be there kept and provided with suitable food, and the owner thereof may redeem the same at any time within five days, by proving title to said dog, by showing that the same has been duly licensed according to law, and by paying a fee fixed by the aldermen of said city. At the expiration of five days said society may cause said dog to be humanely killed, or, upon payment of the licensed fee required by law, it may sell or otherwise dispose of the same.

Sec. 4. For keeping and sheltering any dog, under the provisions of this Act, said society shall not be liable to pay any license fee, nor shall it be liable for keeping any dog at such shelter which is unlicensed.

Sec. 4. The aldermen of said city shall have the power to prescribe the price at which any dog taken and kept in such shelter may be redeemed by the owner thereof, and all moneys received by said society for the redemption and sale of any dogs kept at such shelter shall be paid to the treasurer of said city. [*Approved May* 13, 1881.]

HOW TO NURSE SICK DOGS.

II.—BY A. J. SEWELL, M. R. C. V. S.

HAVING pointed out how essential good nursing is to dogs when affected with disease, and laid down a few rules for their general management, I now propose to give a few hints on nursing animals affected with particular diseases. As distemper requires great care for its successful treatment, I will take it first.

DISTEMPER.

The rules for the general management of sick dogs must here be observed, and then attention may be directed to diet. The first week the diet should be entirely of a fluid nature, as weak mutton broth or beef-tea; and, if these are refused, milk may be offered. After the first week, when the dog is very weak, bread or biscuit may be added to the broth or other liquid food, which may now be given stronger. At this period of the disease, the dog often refuses all nourishment. On those occasions it should be drenched with it—that is, given it out of a bottle as in medicine. The beef-tea, if the dog is very weak, should be thickened with arrowroot, and a small quantity of port wine added. A fresh egg, well beaten up with a little brandy, may be given occasionally for a change. The food should be offered in small quantities every two hours. About the end of the third week, if the dog is progressing favorably, and the fever diminished, the diet may be increased. In addition to the beef-tea and broth, small quantities of meat, such as mutton or beef (the former preferred) may be allowed. It is more serviceable when rather under-cooked. Should this cooked food be refused, raw meat is readily snatched up by some animals. Sheep's paunches, well cleansed and boiled, are frequently relished by a dog at this period and may be given with safety as they are easily digested. Large quantities of any kind of food should not be offered at a time, but rather small quantities every three or four hours. The quantities may be gradually increased as the patient improves and gains strength.

Distemper is often accompanied with a bad form of diarrhœa, which, if not stopped, quickly proves fatal. A judicious diet greatly assists in stopping the purging. If beef-tea is given, it should be thickened with gelatine; or if milk, it ought to be first boiled, but not given until cold. The meat of boiled rabbit is a capital thing for dogs suffering from diarrhœa during this complaint; and biscuits, made of arrowroot, of which dogs are very fond, will be found exceedingly useful. I do not think it out of place to again remind dog-owners that in this disease great attention should be paid to ventilation and other sanitary arrangements of the hospital.

JAUNDICE.

A dog affected with jaundice, or "the yellows" as it is sometimes called, generally refuses food. For the first few days he is better without any, except a little weak beef tea, or milk and water, to which is added a small quantity of lime-water. These fluids at first should not be forced, but placed within easy reach of the patient, so that he may drink or refuse it at pleasure. If the case is a protracted one, the dog becomes very weak. It is then necessary, if he will not take it voluntarily, to drench him with the beef-tea, which should now be made stronger. Plenty of fresh cold water, for drinking, should be supplied, as he is generally feverish, and consequently thirsty. A dog which has had an attack of this disease should be brought back to his usual diet gradually, or a return of the symptoms will ensue.

MANGE AND OTHER SKIN DISEASES.

The most common skin diseases affecting dogs are those which result from over-feeding, improper diet and want of exercise. It is generally ill-cared for dogs that become affected with the virulent or parasitic mange; but of course any dog, however well cared for, may be the subject of this disease by associating with one so affected. Very often skin disease—if it be red mange, humor, or blotch—may be cured, if not chronic, by two or three doses of saline purgative medicine, such as epsom salts. Another important factor is proper diet, as oatmeal or rice, well boiled and mixed with the gravy of a boiled sheep's head, or milk, just to give it a relish, with plenty of vegetables added, as cabbage, greens, spinach, and, when they can be obtained, young nettles. Dogs which have been fed on flesh will at first refuse it, but owners, if they want to effect a cure, should persevere, and starve the animal to it; for if the meat is continued during the complaint medicinal treatment is useless, or, rather, the case is prolonged.

A dog with skin disease—except those affected with a contagious kind, and then only when other dogs are about—to prevent the affected animal transmitting it to healthy ones should not be chained up or confined in any way, but allowed liberty and plenty of exercise.

Many dogs are habitually constipated, and by constantly receiving doses of purgative medicine the complaint is aggravated. Instead of continually dosing the dog, add some oatmeal and vegetables with this or other diet, and the above condition of the bowels will soon be altered. Another good remedy for this troublesome complaint is liver, which should be given rather under-cooked (boiled); a couple of meals of liver per week will soon restore the bowels to their normal state.

Again, other dogs' bowels are always in a relaxed condition. This state generally results from food irritating the intestines. I have frequently observed that dogs which eat the biscuits dry suffer most from this complaint, but when the biscuits have been soaked, this condition has entirely changed. Another good remedy is water in which rice has been boiled; also boiled milk.

I might mention here that after several experimental trials, I find that puppies fed on Swiss condensed milk instead of cows' thrive very much better, and are not so much infested with worms.

SLIPS.—There are said to be 20,000 hounds in England, the cost of whose maintenance is estimated to be $2,500,000 per annum.....The many fox hunters in Montgomery, Delaware and Chester counties, Penn., predict great sport for next fall. Between Mr. Wain's new pack of nineteen imported hounds and the packs of the Rose Tree, West Chester and Paoli clubs, poor Reynard will have anything but a pleasant existence.....Mr. J. Otis Fellows called one of his cocker whelps Cape Horn, because he says "she is hard to get around,".....The shipping of Robins Island from the grasp of the Eastern Field Trials Club has occasioned no little anxiety to the management. Gardner's Island, situated about twenty miles to the eastward, is now talked of, but it is extremely unlikely that Mr. Gardner will, at this late day, consent to the open sesame to his grand preserve, which for years has been so jealously guarded.

THE EASTERN FIELD TRIALS CLUB.—At a special meeting of this organization, held on Thursday, June 16, this city, the following members were present to vote on the adoption of a new constitution and by-laws: Messrs. Donner (President), Livingston, Coster, Cornell, Webb, Spooner, Danforth, Hamilton, Pentz, Herzberg and Von Lengerke. After a discussion of each section of the majority's report of the committee empowered to draw up the rules, the revision was adopted, which will not go into effect until the annual meeting of next year.

WANTED—The pedigree of English setter bitch Vic owned by Mr. M. L. Norton, Greenland, L. I.; Campbell's imported English setter bitch Flora, and Fausman and Smith's English setter Dash. Address D. D. this office.

KENNEL NOTES.

*** Breeders and owners of dogs are invited to send memoranda of names claimed, bred, whelps, sales, etc., for insertion in this column. We make no charge for the publication of such notes; but request in each case the notice be made up in accordance with our form, that the name of both owner and dog be written legibly, or printed, and that the strain to which the animal belongs be distinctly stated.*

NAMES CLAIMED.

Baron, Berg, Bishop, Brunig, Bravo, Blanco, Bonn and Bruna—Miss A. H. Whitney, Lancaster, Mass., claims the above names for the litter of seven St. Bernard dog puppies and one bitch puppy, whelped June 12, by Mr. L. Z. Collins' imported Rousseau out of owner's Brunhild.

Josephus—Mr. Jno. A. Heether, Huntsville, Mo., claims the name of Josephus for black, white and tan setter dog puppy by Rake (Dan-Ruby) out of Venus (Brussels-Sally.)

Billy H.—Mr. Jno. A. Newberry, Huntsville, Mo., claims the name of Billy H. for red Irish setter dog puppy by Frank (imported Shamrock-Cora) out of Nelly (Ben-May), purchased of Mr. Wm. Huedman, Chillicothe, Mo.

Vice Gunamond—Mr. F. N. Geradin (Captain of Police), Detroit, Mich., claims the name of Grace Gunmond for white, liver and ticked pointer bitch puppy, whelped Dec. 16, 1880, by King Bow out of Josie, presented to the Captain by the Detroit Kennel Club.

Glenny—Mr. J. B. Cooke, Corland, N. Y., claims the name of Glenny for liver and white ticked pointer bitch puppy whelped March 7, 1881, by King Bow out of Grace, bred by the Detroit Kennel Club.

Vice—Mr. J. J. Jordan, Winchester, Va., claims the name of Nice for lemon and white setter dog puppy, with dark points, whelped April 16, 1881, by Gladstone out of Lella (Leicester-Kirby) bred by Capt. I. W. Foster.

Duke—Mr. W. H. Coursen, Newton, N. J., claims the name of Duke for black, white and tan beagle dog, one year old, by Ringold out of Ringlet.

Dutchess—Mr. W. H. Coursen, Newton, N. J., claims the name of Dutchess for black and white beagle bitch, thirteen months old, by Imported Rambler out of Bessie.

Tom II.—Mr. H. B. Vondersmith, Lancaster, Pa., claims the name of Tom II. for Gordon setter dog, whelped April, 1880, by owner's Tom out of Bess.

Jim—Mr. H. B. Vondersmith, Lancaster, Pa., claims the name of Jim for Gordon setter dog, whelped April, 1880, by owner's Tom out of Bess.

Jennie—Mr. H. B. Vondersmith, Lancaster, Pa., claims the name of Jennie for Gordon setter bitch, whelped April, 1880, by owner's Tom out of Bess.

Mab—Mr. H. B. Vondersmith, Lancaster, Pa., claims the name of Mab for Gordon setter bitch, whelped April, 1880, by owner's Tom out of Bess.

Nell—Mr. H. B. Vondersmith, Lancaster, Pa., claims the name of Bell for Gordon setter bitch, whelped April, 1880, by owner's Tom out of Bess.

Micky Free—Mr. A. J. F. Ingraham, Belfast, Maine, claims the name of Micky Free for red Irish setter dog puppy by Cale out of Nell.

Rupert—Mr. Chas. T. Brownell, New Bedford, Mass., claims the name of Rupert for his Gordon setter puppy whelped December 2, 1880, by Dash out of Maud S.

Cape Horn—Mr. J. Otis Fellows, Hornellsville, N. Y., claims the name of Cape Horn for all liver cocker bitch by Benedict out of Pansy.

Fuchsia—Mr. J. Otis Fellows, Hornellsville, N. Y., claims the name of Fuchsia for liver and white cocker bitch by Brag out of Curlew.

May Elgin—Mr. H. B. Vondersmith, Lancaster, Pa., claims the name of May Elgin for white, with lemon ears, Llewellin setter bitch puppy, whelped Oct. 7, 1880, by Zanzibar (Gladstone-Mersey) out of Lady Elgin (Carlowitz-Queen Bess).

June Elgin—Mr. H. B. Vondersmith, Lancaster, Pa., claims the name of June Elgin for white and lemon setter bitch whelped Oct. 7, 1880, by Zanzibar out of Lady Elgin.

Princess Elgin—Mr. H. B. Vondersmith, Lancaster, Pa., claims the name of Princess Elgin for white and black ticked setter bitch whelped Oct. 7, 1880, by Zanzibar out of Lady Elgin.

Tot Elgin—Mr. H. B. Vondersmith, Lancaster, Pa., claims the name of Tot Elgin for white, black and tan setter bitch, whelped Oct. 7, 1880, by Zanzibar out of Lady Elgin.

Harry Elgin—Mr. H. B. Vondersmith, Lancaster, Pa., claims the name of Harry Elgin for black, white and tan setter dog, whelped Oct. 7, 1880, by Zanzibar out of Lady Elgin.

Maud S.—Mr. George L. V. Tyler, West Newton, Mass., claims the name of Maud S. for black pointer bitch, one year old March 31, by Mr. E. C. Alden's Pete, Jr., out of Mr. W. H. Slocom's imported bitch Kate.

Andy—Mr. James D. Bailey, Allen Springs, Cal., claims the name of Andy for black and tan setter puppy whelped March 7, by Sam (Tinel-Pet) out of Fanny C. (Sure-Lulie).

Blue Dick—N. D. Hathaway, Middleboro, Mass., claims the name of Blue Dick for black, white and tan ticked setter puppy dog, whelped December 5, 1880, by Blue Dan (Dash III.-Opal) out of Flake (Druid-Swazey).

Guy—Mr. R. Norris Williams, Dritton, Luzerne county, Pa., claims the name of Guy for orange and white setter dog whelped March 24, 1879, by Valentine's Glen (Shipman's Joe-imported bitch) out of Floss (Bismarck-Imported Fannie).

Zadie—Mr. Charles A. Draper, Sing Sing, N. Y., claims the name of Zadie for his red Irish setter bitch puppy, whelped March 6, 1881, by Wenzel's Chief out of Pierce's Gussie.

Josh Billings—Mr. L. M. Currier, Sycamore, Ill., claims the name of Josh Billings for black and white setter dog puppy whelped March 4, 1881, by Druid out of Princess Draco (Rob Roy-Livy).

Ben—Mr. Colin Cameron, Brickerville, Pa., claims the name of Ben for beagle dog puppy by Elmore's Victor out of Pownall's Fanny Fifth.

Grace—Mr. Colin Cameron, Brickerville, Pa., claims the name of Grace for beagle bitch puppy by Elmore's Victor out of Pownall's Fanny Fifth.

Agnes—Mr. Colin Cameron, Brickerville, Pa., claims the name of Agnes for beagle bitch puppy by Elmore's Victor out of Pownall's Fanny Fifth.

Miss Miggs—Mr. Colin Cameron, Brickerville, Pa., claims the name of Miss Miggs for beagle bitch puppy by Elmore's Victor out of Pownall's Fanny Fifth.

Becky Sharp—Mr. Colin Cameron, Brickerville, Pa., claims the name of Becky Sharp for beagle bitch puppy by Elmore's Victor out of Pownall's Fanny Fifth.

NAMES CHANGED.

Snowball to Bonfanti—Mr. J. H. Winslow, Baltimore, Md., changes the name of his cocker bitch, purchased of Mr. Burr Hollis, from Snowball to Bonfanti.

Erie to Evie Kirk—Mr. J. H. Winslow, Baltimore, Md., changes the name of his cocker spaniel dog, purchased of Mr. J. F. Kirk, Toronto, Ont., from Erie Erie Kirk.

BRED.

Lady Byron-Afton H—Mr. J. M. Haynes' English setter bitch Lady Byron (Carlowitz-Dodge's Rose) to Afton H. (Davidson's Afton-Wykoff's Belle II.).

Bess-Sam—Mr. H. L. Lufkin's (Long Island City, N. Y.,) two-year-old bull terrier bitch Bess (Class-Rose) to Mr. G. E. Adams' bull terrier dog Sam (Grip-Flora), May 1-2.

Gip-Rush—Mr. H. Hedeman's pointer bitch Grip to Mr. Edmund Orgill's champion Rush, June 12.

Rose Sensation—Mr. H. C. Livingston's (New York city) pointer bitch Rose (Snapshot-Gypsie), 2d N. Y., 1880, to Sensation, June 9-11.

Beauty-Victor—Mr. Geo. Pownall's (Christiana, Pa.) beagle bitch Beauty, 2d at Philadelphia, 1879; bess (Dan-Bess), 1st at Boston, 1878, to Victor (imported Rattler-imported Bluebell) May 4, 1881.

Venus-Victor—Mr. Geo. Pownall's (Christiana, Pa.) beagle bitch Venus (Venus-Dan) to Victor (imported Rattler-imported Bluebell), May 21, 1881.

Sam-Rush—Mr. J. P. Swain's (Bronxville, N. Y.) pointer bitch Nan (Sensation-Juno) to Mr. Edmund Orgill's champion Rush, June 6.

Dutchess-Duke—Mr. W. H. Coursen's (Newton, N. J.) beagle bitch Dutchess to same owner's Duke.

Moll-Thunder—The Mohawk Kennel's (Chatham, Ont.) setter bitch Moll (Leicester-Rose) to Mr. A. H. Moore's Thunder (Pride of the Border-Fairy II.) June 7.

WHELPS.

Zoe—Mr. W. P. Lawrence's (Boston, Mass.) English setter bitch Zoe (Cowring's Ben-Clytie) whelped June 14, fifteen puppies, nine dogs and six bitches, by Mr. G. B. Inches' Dick (Dinks-Flirt).

Daisy—Dr. Al. Waits' (Boston, Mass.) King Charles spaniel Daisy whelped June 13, four dogs, two bitches, by owner's Rollo.

Gretchen—Mr. Albert Winter's (Cairo, Ga.) setter bitch Gretchen (Macleod of Dare-Brenda) whelped June 9, eight puppies, by Keutuck (Lolty-Kirby). One has since died.

Beauty—Mr. Greenough's (Boston, Mass.) black and tan Beauty, out of Dr. Mason's Dora by Copeland's Shot, whelped May 31, seven puppies, by Fay's Coin.

Bive Belle—Mr. E. W. Jester's (St. Georges, Del.) setter bitch Blue Belle (Lister-Waddington's Daisy) whelped June 13, 1881, seven puppies, three dogs and four bitches, by Mr. J. C. Higgin's Dashing Monarch. Color, six like sire, black and white, and one bitch like dam, white with little blue.

Bridget Plunkett—Mr. E. J. Robbin's (Wethersfield, Conn.) Irish setter bitch Bridget Plunkett whelped June 10, thirteen puppies, by same owner's Dick Hatterack. Bridget has had 79 puppies in six litters.

SALES.

Victress—Mr. H. B. Vondersmith, Lancaster, Pa., has sold to Mr. C. Z. Miley, same place, the dropper bitch Victress.

Brackett—Mr. H. B. Vondersmith, Lancaster, Pa., has sold to Mr. S. A. Kaye, St. Louis, Mo., the setter Brackett (Gladstone-Clip).

Banshee—Mr. H. B. Vondersmith, Lancaster, Pa., has sold to Mr. R. R. Asbury, Greenville, S. C., imported red Irish setter Banshee.

Second match:

Messinger	5444445445—43	Root	4444544545—43
Frazer	4525445544—43	Sawyer	4545445551—43

Ties: Messinger, 4; Frazer, 4; Sawyer, 3; Root, 4.

WHEELING, W. Va., June 14.—Last Saturday we shot a friendly match with the Yale College Club. Following is the score:

Otto Jaeger	5445454455345545—68		
R S Stewart	4544445545545445—66		
William Cox	4544445545445545—65		
B H Babcock	4554544454544545—65		
John Moore	3454544544544544—63		
James Regan	4443536304564434—55—362		

Yale College Club.

C S McChesney	5445545454545445—66		
F H Tichenor	5444455555544355—66		
J E Stetson	4454544454545445—65		
H Harding	4455444554554445—64		
S H Hubbard	4455445454534544—63		
J S Durand	3325453344345354—52—327		

ALBANY, June 17.—A high wind prevailed all day, which interfered sadly with the holding and calculations of the men. The 200-yard life membership was called at two o'clock.

James I Miles, S M	*2	4544555445—43	
H Root, S M	*2	5534454443—41	
G H Charles, Bal S		5444444444—29	
A H Steed, Bal S		5524454442—29	
S Baldwin, Bal S		3445444428	
A Stalwart, Bal S		4444334427	
Roscoe Robertson, Bal S		3434434426	
A Thorne, S M	*2	3443043525	

* Allowance to military files.

Following came the seventh competition in the Winchester match, at 500 yards:

	200 yds.	500 yds.	
Wm E Fitch, S M	5553320	5445553—32—48	
James I Miles, S M	5534420	5245542—30—40	
A Stalwart, S M	3544420	2345541—28—38	
G H Charles, S M	3344438	4345535—19—37	
H Root, S M	4543330	4443535—18—37	
Roscoe Robertson, S M	3243235	4535350—20—35	
A Thorne, S M	3553319	2534454—26—35	
H Solid, S M	4403501	3403555—15—26	

WORCESTER, Mass., June 15.—At the Woodlawn Range yesterday quite a company of the gun club gathered. The light and weather were bad. Between the showers the following record was made:

	Shot at.	Broken.		Shot at.	Broken.
A B F Kinney	50	23	J E Garland	48	11
A S Newcomb	50	33	G B Holden	50	30
J S Mascroft	60	29	Geo McAllear	55	25
F H Fuller	50	28	E I Smith	40	25
C A Parker	65	28	A L Gilman	40	20
J Messenger	45	17	A P Cutting	25	6
Rev M Lamson	40	4			

Tuesday, June 28, they are to meet again and try their luck or skill at breaking balls.

GARDNER, Mass., June 16.—The last record made by the rifle club at the Hackmatack range was as follows, distance 200 yards, off-hand, ring and Creedmoor targets combined:

	R.	C.	H.	C.	Totals.
A. Matthews	79	45	90	47	179—92
G. F. Ellsworth	86	45	89	47	175—92
L. N. Dodge	85	43	85	44	168—87
G. H. Frail	78	44	79	45	157—89
Chester Hinds	79	43	79	44	154—87
G. G. Goodale	75	43	77	45	152—88
F. H. Knowlton	73	44	66	45	139—89
H. G. Knowlton	71	43	67	44	138—87

Selph	5	4	5	5	3—22	5	5	6	4	5—24—46—160

The totals of the battalion teams were: Louisiana Field Artillery, 422; Washington Artillery, 383; Continental Guards, 381.

BOSTON, June 15.—Long-range shooting was in order to-day at Walnut Hill. Capt Jackson seemed sure of a fine score, but a strong northwest wind at the last range, together with a bad light, served to demoralize most of the shooters, and out of eight men but five completed their scores. The records stood:

W H Jackson.

800 yards	5	5	5	5	5	5	5	5	5	5—75

WABASHAW, Minn., June 11.—The two days' shooting tournament given by the Wabashaw Sportsmen's Club was a decided success.

The team shoot at glass balls for champion badge (presented by Lake City Sportsmen's Club), open to any organized club in Wabashaw and adjoining counties, Minnesota and Pierce, Pepin and Buffalo counties, Wisconsin. Each club to enter six members. There was also a Class Shoot—Purse $100. Fifteen balls from Mole trap—18 yards rise.

On the second day, a Class Shoot—Purse $70. Ten glass balls from Mole trap—18 yards rise; entrance free.

On the team shoot, entries were made by Lake City, Plainville, Alma and Wabashaw, six each. Won by Lake City, scoring 85, Plainview 58, Wabashaw 56, Alma 44. The badge is of solid gold, in shape a large shield, mounted by an eagle with out-spread wings; the whole suspended by two gold chains from a heavy cross bar, and with inscription:

"Lake City Team. Won at Wabashaw, Minn., June 8th, 1881, by Lake City Team."

The badge is open for challenge by clubs from counties above named.

In the first-class shoot D. H. Towle, of Red Wing, made 15 straight; M. E. Tabor, of Plainview, on a tie of 14 between four took second position. H. S. Elkins got third over fourteen competitors on the tie of 13, while six of the shootists made a "divy" of the fourth viz., Stout, Skinner, Fisk, Corey, Artz and McCroden.

Of the second class shoots, 39 entries, prizes were taken by M. E. Tabor, Plainview, first, divided by McMillan, McCroden, Dorr, Skinner, Craft and Seymour. Third won by Wm. Mills, Plainview. Fourth by M. Hitchcock, of Weaver.

On the third shoot Skinner took first money.

Sweepstakes innumerous, purses were then shot for, and glass raised like hail for the two days. Teams were present from Plainview, Lake City and Alma, while delegations were sent from St. Paul, Red Wing, Winona, Kellogg and adjoining towns.

LYNN., Mass., June 17.—The annual tournament of the Massachusetts State Glass Ball Association opened at Oak Island, near Lynn, yesterday, and all the clubs of the State were well represented. The first event was the association, for individual association badges, which occupied several hours. The match was open only to members of the association. 15-ball shoot. The shooting was as follows: W Hatch, 13; W S Perry, 14; R F Schaefer, 14; Harry Dutton, 14; John C Russell, 14; E W Webster, 13; W H Watson, 12; W H Cowdin, 12; Dr Prescott, 9; C B Holden, 12; E T Smith, 12; L G White, 12; M D Gilman, 12; C B Derochmont, 13; E Hardmak, 9; George Monk, 11; J E Whidden, 12; T J Fish, 13; Eugene Barry, 12; T J Beaudry, 13; F C Nobles, 14; A H Jones, 12; J Huffman, 12; J H Dills, 9; Jas Watson, 14; E Rowell, 11; J Spofford, 15; W T Brackett, 12; J H Frost, 12; Horace W George, 14; D Kirkwood, 12; J P Kendall, 13; F L Carlin, 11; J H Wright, 9, and J. Spofford, of Amesbury, took the badge. In the shoot-off of the tie of 14, Whidden took fourth, W S Perry, Prescott, and Horace W. George, of Lynn, divided second and third prizes, and John H. Frost, of Lynn, took fourth.

The next event was a subscription match open to members of the association, 10 balls, three traps. The score was as follows: M D Bluck, 8; E W Smith, 9; W B Witherell, 7; E W Webster, 7; W Hatch, 8; H F Shaefer, 8; C B Derochmont, 9; C B Holden, 9; J S Sawyer, 8; L G White, 8; W H Cole, 6; E Buffington, 7; T J Beaudry, 8; E W Rowell, 8; J B Valentine, 7; H F Sheldon, 6; F L Carlin, 7; J E Whidden, 7; T J Fish, 8; J C Haskell, 8; Eugene Barry, 9; D Moore, 7; W J Braley, 3; W D Gooch, 8; F T Noble, 5; A H Jones, 8; J Huffman, 9; H H Francis, 7; B Lynde, 3; J Spofford, 7; J A Howell, 6; Joseph Randall, 7; F A Johnson, 8; H Dutton, 9; A Keating, 6; L J A Conroy, 7; F T Smith, 10; Otis L Baldwin, 9; George Monk, 9; H W George, 9; John W Frost, 5. C M Clark took first money, and C H Derochment, C B Holden, George Monk and H W George divided second money, W D Gilman and T J Beaudry divided third prize, E W Webster and E W Buffington fourth, while J A Howell took fifth.

The third event was a subscription match, open to members, 10 balls from the Card trap. The score was as follows: L P White, 10; S Hall, 9; W H Cole, 10; W F Brackett, 10; D Moore, 7; A Keating, 9; J H Dill, 8; J H Wright, 8; J E Williams, 4; C L Baldwin, 9; D J Drake, 8; E Noyes, 7; E C Hollis, 8. White, Cole and Brackett divided first money, Hall, Allen and Baldwin second, Dill, Wright, Drake and Hollis third, Noyes and Mooney fourth, and Williams the last prize.

During the day the annual meeting was held, when the following officers were elected: President, Maj. L. G. White, of Worcester; Secretary, Frank T Noble, of Malden; Vice-Presidents, A N Parry, of the Pow wow club, of Amesbury; W B Nagel, of Fort Hill Society of Stoughton; George Monk, of Ver ferrymount Club of Quincy; Lt. H. L. Wright, of Natick; E W Buffington, of Fall River; Capt. J S Sawyer, of the Middlesex Club; the South Abington, Ayer and Hopkinton Clubs were not represented at the meeting; W B Hoes, of Westboro, W H Leighton, Jr., of Middleboro, and D Knowles, of Worcester; A H Jones, of Malden; J C Smith, of the Raymond Club, Boston; F H Lander, Lynn Sportsman's Club; O L Baldwin, Lynn Central Club; Treasurer, A Keating, of Quincy; Board of Directors, E W Webster, of Lynn; C H Wales, of Amesbury; H H Francis, of Stoughton; J Kirkwood, of Boston; H S Fay, of Marlboro. The reports presented showed the association to be in a flourishing condition. The place for the next annual tournament was not decided upon, but it will probably be held at Worcester. Much interest was expressed with the location this year, it being wholly unfit in many particulars.

The second and last day of the tournament saw a large attendance, more balls being represented than on the previous day. The first contest was a veteran match, open only to members of the association, five balls from Holden and five from Card trap. Score: John Merrill, 7; F H Lander, 7; W B Witherell, 6; George H Fox, 2; F Curtis, 6; O L Baldwin, 4; G W Wilson, 6; G B Blanchard, 5; L H Houghton, 7; L H Hudson, 6. F H Lander and L A Houghton divided first money; F Curtis and G W Wilson second, G B Blanchard third, and Otis L Baldwin fourth. A grand sweepstake match occurred, $1 entry, 10 balls, and the score was as follows: H Dutch, 8; J Spofford, 10; W B Witherell, 6; A Houghton, 9; W Hatch, 7; F H Lander, 8; O L Prescott, 7; W J Braley, 7; C M Starr, 8; L H Hudson, 7; A Rowell, 9; E W Law, 8; E T Smith, 10; F Johnson, 9; T J Beaudry, 9; G Monk, 8; J R Williams, 4; C H Derochemont, 7; R Hardwick, 1; C B Holden, 10; W Mitchell, 7; E Barry, 7; G H Hens, 5; F C Phelps, 6; E Noyes, 7; F S Hall, 8; L J Carson, 6; W B Perry, 7; F T Noble, 6; A H Jones, 7; Otis L Baldwin, 6; A Keating, 5; H Ray, 10; H W George, 9; G J Rugg, 10; G B Blanchard, 10; J E Sawyer, 5; J C Haskell, 8; E Rowell, 10; E W Buffington, 9; W H Sheldon, 10; E W Webster, 9; R F Schaefer, 10; H Mortimer, 8; L G White, 8; G H Fox, 8; F L Paine, 9; B R Lewis, 6; E L Caskin, 8; M D Gilman, 10; H H Francis, 8; W H Cole, 9; D Kirkwood, 7; J Merrill, 9; O L Tait, 8; G W Wilson, 7; Frank Curtis, 9. E T Smith, W S Perry and W H Sheldon divided first prize, T J Beaudry and F L Paine second, Freedom H Lander took third, C L Prescott fourth, while J S Sawyer and B R Lewis divided nth.

The next event was for the association team gold badge, held by the Lynn Central Club, made up of one team from each club of the association, of five men; 15 balls per man, seven from the Card trap and eight from the Holden. This was the principal shoot of the tournament, and the score was as follows: Lynn Central Club—E W Webster, 15; H W George, 11; Judson H Frost, 9; F R Johnson, 13; J C Haskell, 14; total, 62. Merrymount Club—George Monk, 14; E Hardwick, 9; C L Prescott, 11; A Keating, 13; Frank Curtis, 10; total, 57. Raymond Club—H Ray, 8; O Dearborn, 6; W B Witherell, 11; G B Blanchard, 10; B Schaufler, 13; total, 48. Lynn Sportsman's Club—Alfred Paine, 9; J F Randall, 10; F H Lander, 15; E L Caskin, 13; H Mortimer, 8; total, 55. Pow-wow Club, of Amesbury—C H Derochemont, 13; R Rowell, Jr., 14; J Spofford, 14; J A Rowell, 11; W Hatch, 13; total, 64. Worcester Club—W S Perry, 14; Alba Houghton, 13; G J Rugg, 11; J T Smith, 13; C B Holden, 12; total, 81. Malden Club—H Dutton, 11; L J Carson, 14; A H Jones, 13; J Huffman, 12; F T Noble, 10; total, 60. Fall River Club—W H Sheldon, 14; E Buffington, 13; W J Braley, 15; T S Hall, 13; S Allen, 11 total, 66. Middlesex Club—J S Sawyer, 11; E W Law, 9; E C Gore, 11; W F Webster, 12; J R Williams, 8; total, 51. The Lynn Central Club again took the badge and first money, Fall River second, Pow-wow Club third and Worcester fourth.

THE LOUVETIER.

A recent dispatch from Paris announced that a voluminous report had just been printed by the Chamber of Deputies emanating from the committee for examining a law for suppressing the ancient institution of the Louveterie, or professional body of wolf-destroyers, dating back to the Merovingian dynasty. The committee, in place of the time-honored system, suggests a code of rules for the effective destruction of noxious animals in general. This will be a sad blow to the very large and respectible class of country gentlemen who dearly prize titles and uniforms. Before 1789 the Louveterie, or wolf-destroying service, was placed under the charge of the Grand Veneur or Grand Louvetier, the dignity being one which was highly prized and much sought by the nobles. Napoleon I re-established it and it was maintained under the Restoration. Louis Philippe once again abolished it, but it was revived by Napoleon III, to disappear with the Second Empire. After 1789 bounties were offered for the destruction of wolves, and the Government appointed agents to superintend battues; at present the work is conducted under a series of rules established in 1814. The minister of Finance appoints the "Lieutenants de Louveterie," there being always a keen competition for such places among rich sportsmen and gentlemen desirious of wearing a picturesque uniform. There must be a forest in the department to furnish an excuse for the appointment and the louveterie must keep up the necessary establishment. The would-be louvetier has been known, like the honest farmer in the Western States where a bounty is paid for wolf-scalps, to import a wolf or to rear a litter in secret, which, when duly grown, are let out to be hunted. This latter course, however, is not unattended with certain perils.

THERE is a deadlock over that 'possum cooking question.

PUBLISHERS' DEPARTMENT.

THE BRUNSWICK SOUPS have had a fair and impartial trial from samples sent to this office, and can be well recommended to sportsmen and yachtsmen where a palatable impromptu dish is desired.

THE KINNEY BRANDS of cigarettes are justly held in high esteem by all who smoke. The firm manufacturing them have attained an enviable reputation for the standard quality of their goods.

WHAT is home without a baby? and what baby's life is complete without one of the Dare baby carriages? When he grows older the fore is for a velocipede. If you don't know where to get one for him see advertisement of Dare elsewhere.

THE HUNTER'S CAMP AT NIGHT.

"Did you ever notice what a difference a fire makes? I have slept in the woods summer after summer for a number of years, but I can never build a camp-fire at night without watching the change which it works upon the surrounding forest. Before the fire is lighted you feel only—a nothing—in the sombre vastness; but touch a match to the collected dry leaves and twigs, and what a change! A world of your own is immediately created, aglow with the warm, red light, and limited by the surrounding gloom."—FOREST AND STREAM of June 2.

IN the thick darkness of the midnight woods
I sit alone, within my hemlock camp,
Silent and thoughtful. All about me rise
The dark, columnar giants of the wild,
Funereal hemlock and majestic pine,
The gnarled oak tree and the quivering birch.

Ah, how profound the hush! When evening threw
Its glimmering shades across these forest aisles,
The mingled voices of the living world
Died out, and birds and creatures of the wild were stilled.
The woodpecker its drum-like tappings ceased,
The partridge sought her nest; the pied blue jay
Ceas'd its harsh clamor, and the pigeon wild
Folded its azure pinions and was still.
As shades fell deep in tangled copse and glade
The cawing crow flocks settled from their flight;
The high-flying hawks descended from the air,
And silence all around me wove its spell.

The tall, black trunks of the great forest kings
That hedg'd me round seem'd all instinct with life;
Secur'd to my feverish fancy like the forms
Of those barbaric warriors who once trod
These lonely wilds, majestic, stern and grave;
Those feather'd forest chieftains, grim and fierce,
Painted for war and terrible with arms.
With quiver, shield and club and lofty spear.
Then thro' the thick'ning glooms would seem to shine
The eye-balls of wild creatures, wolf and bear,
And grand, imperial stag with branching horns;
But when I snatch'd my rifle they would seem
To shrink and disappear and melt from sight.

Then sudden from the dry, dead leaves around
I raisd a camp-fire that did light the woods,
And caus'd how vast a change! The sombre shades
Vanish'd away, and the rough boles of trees,
Thro' all their drooping foliage, shone and smil'd
In the blithe, cheerful radiance of my fire
So all the phantom spectres fled away.

As in my hemlock camp I sank to rest
I felt secure in such companionship
Of those red flames that seem'd to guard my couch,
And all the shapes that fancy conjur'd forth
Vanish'd like dreams—and rest and sleep were sweet.

ISAAC MCLELLAN.

Yachting and Canoeing.

FIXTURES.

June 28.—Southern Y. C. challenge cup.
June 30.—Inter-State regatta, New Orleans.
July 1.—Gananoque open regatta, second and third class yachts.
July 1.—San Francisco Y. C. Cruise to Monterey.
July 1.—Royal Canadian Y. C. Governor General's Cup.
July 2.—Match race, New Orleans.
July 2.—Quincy Y. C. First championship regatta.
July 2.—Nellie-O'Connor match, San Francisco.
July 2 to 5.—Quaker City Y. C. Corinthian cruise.
July 4.—Buffalo Y. C. Annual regatta.
July 4.—Cleveland Canoe Club regatta.
July 4.—Boston city regatta.
July 4.—Larchmont Y. C. Annual regatta.
July 4.—Cleveland, Y. A. Annual regatta.
July 4.—Lynn harbor. Open regatta.
July 4.—Quaker City Y. C. Corinthian regatta, Penn's Grove.
July 4.—Salem Bay Y. C. Special regatta.

CRUISE OF THE S. F. Y. C. TO NAPA.

Editor Forest and Stream:

The yachts of the fleet assembled at Front Street wharf, San Francisco, Friday, May 27, for a four days' cruise. The signal to get under way was given at 7 A. M. from Commodore Harrison's yawl Frolic. The boats all made a fair start up, arriving at Vallejo that night at 8 P. M. Saturday morning they started for Napa, the fleet arriving in the afternoon, Annie making the quickest time, arriving at 2:50 P. M., the Thetis arriving four minutes later, and the others in the following order: Clara (sloop), Emerald (yawl), Lively (sloop), Lolita (yawl), Startled Fawn (yawl), Chispa (schooner), Nellie (schooner), the Frolic (yawl) last. In the evening an informal ball was given at the Palace Hotel. Sunday was spent at Napa Springs, and a drive by Gen. Miller's residence, the yachts remaining quietly at anchor. Monday the fleet got under way for home, coming to off Vallejo during the morning. The advance messengers were seen in the distance bearing down San Pablo bay in the afternoon, and soon the regular fleet and accompanying yachts hove in sight rounding the eastern point of Angel Island. Chispa was the first to arrive off San Francisco, dropping her hook quite a while before the others came in sight, Annie next in second, with Nellie third and Emerald fourth. Some of the boats hugged the Contra Costa shore, therefore not arriving until very late in the evening.

The cruise was enjoyed by all hands, and judging by the numerous guests, who disembarked well pleased, yachting is becoming very popular with our citizens, ladies included. Some of the latter can "work ship" quite as well as their liege lords, and may safely be trusted with the helm in all sorts of weather. A. W. C.

THE "FLAG OFFICERS' SLOOP."

WE publish this week the first authoritative news and details concerning the large sloop building to meet the Canadian challenger, should her speed come up to expectations. As already known, Mr. Henry Piers is building for the Flag Officers of the New York Y. C. at the yard of Mr. David Kirby, Rye, Westchester Co., N. Y. It is not necessary here to mention the good, solid basis upon which the reputation of Mr. Kirby rests as a builder of fast and successful yachts. He is already well known to our readers as the author of some very lucid and excellent articles on the subject of modeling written for this journal. If not quite able to agree with all the tenets of Mr. Kirby's faith, we must concede that he can point with much force to the fine sloops of his production and substantiate his theories with an unanswerable "handsome is as handsome does." Many may take exception to his best known ship, the Arrow, on the score of looks or steering off the wind, but few will question her speed or weatherliness, the two principal points to be dined at for match sailing over a smooth water course. Without in the least detracting from the well earned reputation of other builders who have turned out such smart racers as Hildegarde, Comet, Mischief, Fearless, Minerva or Elephant, it may safely be said that the Flag Officers have made a wise choice in placing with Mr. Kirby the contract for fashioning a yacht intended to be second to none in the country. It is proverbially difficult to predict with exactness the future performance of any vessel, but the presumption is that successful men attend this venture, considering what has been done in the past by the same builder. Here we say that none realize the responsibility of the undertaking more thoroughly than Mr. Kirby himself, and that builder is especially modest in his expectations and predictions of what he can do. Nearly little gutter-publication distributing a few hundred copies a week, unseen and unknown, undertook to libel Mr. Kirby recently by attributing to him language never used. Let its bummerism, properly characterized by Mr. Kirby as the veriest trash, be consigned to the public through some of its exchanges, we wish here to deny the truth of the libel at the outset. Mr. Kirby understands the machinations of blackmailers as well as we do, and with us does not deem an imbecile hy-shot worth replying to, simply as an answer. In addition to this infamous match, however, it is proper that both sides should be put squarely on record in history through the medium of this journal. To this end we have attempted to counteract the prejudice shown in some quarters against the Canadian challenger, now proposing to the American side of the matter. A contract was given to Mr. Kirby for a sloop of a certain size, he simply engaging to do his best with a view to producing a fast vessel. There has been no "bragging" nor any warranted or implied, as an answer. In addition to the

security after sundown as will prevent the judges from distinguishing the boats as they go round the stakes), otherwise they will be declared off and be run again next day, or at such time as the judges may determine.

8. All regattas of this club shall be triangular, distance fifteen (15) miles. Judges shall not start yachts in a regatta unless there is at least a steady five-knot breeze blowing. In case a race is postponed for want of wind, or other cause, it shall be deferred from time to time, as the judges may determine.

9. Boats of the first class shall allow one another 5½ seconds a foot measurement for every mile sailed in a straight line, the distance to be computed by the judges. Boats of the second class shall allow one another in like manner 6 seconds per foot. Boats of the third class 6½ seconds per foot. Boats of the fourth class 7 seconds per foot. Boats of the fifth class 7½ seconds per foot. Boats desiring to enter a class other than that to which they belong shall only receive time allowance on the minimum measurement of the class they enter.

10. Boats shall be measured as follows: Take the extreme length from outside of stem to outside of stern-post, at the water-line. This mode of measurement applies to regular models only.

11. No catamaran or double hull boat shall be allowed to enter against any round bottom boat belonging to this club in any regatta given by or under the auspices of this club.

12. In all Corinthian races boats must be sailed by members of the club, with amateur crews.

13. No side out-riggers shall be used by any yacht sailing under the rules of this club.

14. There shall be an annual regatta for the club challenge cup, to be sailed by Corinthians, to take place on the last Tuesday in June between all yachts belonging to this club.

15. The winner of the cup shall hold it until within two weeks of the next annual match, when he shall deliver it to the Secretary of the club.

16. The holder of the cup shall have the privilege of substituting any boat other than the one that won the cup originally, provided said boat be *bona fide* his own property.

17. Any member winning the cup for three successive years shall retain absolute possession of it.

18. In the challenge cup race time allowance will be 1½ minutes per foot.

19. On the fourth Tuesday of May in each year and the Thursday succeeding there shall be given races, to be sailed under the rules and regulations of this club, for such purses or prizes as the club may provide, open to professionals, as follows:

Fourth Tuesday in May, 1st, 3d and 5th classes. Thursday succeeding, 2d and 4th classes.

On the Tuesday and Thursday succeeding the dates hereinabove mentioned the same classes shall be sailed by Corinthians, for such prizes as the club may provide.

20. There shall be a sweepstake race on the second Tuesday in August, for a purse of $250 to the first boat and $100 to the second, each yacht entering to pay an entrance fee of $25, the race to be open to professionals. Time allowance 1½ minutes per foot for the race.

21. There shall be race a year in inter-state regatta given under the auspices of this club and sailed under her rules, open to yachts of the first, second and third classes, a prize such as the club may fix to be given to each class; time allowance 5½ seconds per foot per mile for 1st class, 6 for 2d class, 6½ for 3d class, to be sailed by professionals.

22. Boats entering for any race are to be placed by the judges and when so placed they shall anchor and pay out not less than 3 feet of cable, until the signal for starting is given.

23. To start boats in a race three guns shall be fired as signals:

The first gun as the signal to form in line.

The second gun, 20 minutes after the first, as the signal to prepare for starting.

The third gun, 10 minutes after the second, as the signal for boats to get under way.

Any boat entered in a regatta and not in position, with anchor down and jibs down, on the firing of the third gun shall be ruled out of the race.

24. On the signal for starting being given each boat shall get under way with all possible dispatch, taking care to avoid collision with one another. The boats when placed in position, prior to starting, shall be at least thirty feet apart. Each boat in starting must take her anchor on board.

25. In running for the stake-boats it shall be optional with any boat on which side she rounds the stake-boat, provided she rounds it. By rounding it is to be understood she must pass on the outside of the stake-boat, but may do so direct or by going inside and then outside.

26. Each yacht must go fairly round the course and must not touch any boat or vessel or stake-boat in so doing, but will not be disqualified if wrongfully compelled to do so by another yacht. If a yacht, in consequence of her neglect of any of these rules, shall foul another yacht or compel another yacht to foul she shall forfeit all claim to the prize and pay all damages.

27. Should two boats, sailing on the wind, approach each other, the windward boat, in attempting to pass the leeward boat, shall do so without coming in contact with her. Should she come in contact with the leeward boat she shall be ruled out of the race and pay all damages resulting from such contact. The leeward boat shall keep her course and not luff up, under the same penalties.

28. In beating to windward, two boats nearing each other on opposite tacks, to avoid collision, the boat that has her larboard tack on board shall bear away and pass under the stern of the boat having her starboard tack on board.

29. A yacht overtaking another yacht shall keep out of the way of the last-mentioned yacht, but when rounding any buoy or stake-boat used to mark off the course, if two yachts are not clear of each other at the time the leading yacht is close to and actually rounding the mark, the outside yacht must give the other room to pass clear of it, whether it be the lee of weather yacht which is in danger of fouling the mark.

No yacht shall be considered clear of another yacht unless so much ahead as to give a free choice to the other on which side she will pass. An overtaking yacht shall not, however, be justified in attempting to establish an overlap and thus force a passage between the leading yacht and the mark after the latter yacht has altered her helm for the purpose of rounding.

30. When passing a pier, shoal, vessel or other obstructions to searoom, should yachts not be clear of each other the outside yacht or yachts must give room to the inside yacht in sailing such obstructions, whether she be the leeward or weather yacht, provided always that an overlap has been established before an obstruction is actually reached.

31. A yacht may luff as she pleases to prevent another yacht passing to windward, but must never bear away out of her course to hinder the other passing to leeward, the lee side to be considered that on which the leading yacht of the two carries her main boom. The overtaking vessel, if to leeward, must not luff until she has drawn clear ahead of the yacht she has overtaken.

32. If two yachts are standing towards a shore or shoal, or towards any buoy, boat or vessel, and the yacht to leeward is likely to run aground or afoul such buoy, boat or vessel (a stake-boat or buoy excepted) she is not able to keep clear in tacking in collision with the yacht to windward the latter shall at once tack upon being hailed to do so by the sailing master of the leeward yacht, who shall be bound to see that his own vessel tacks at the same time.

33. Boats running free must invariably give way to those on the wind on either tack.

34. Oars or paddles of any kind are prohibited from being used to propel a yacht during a race and sculling with the rudder will not be allowed—all races must be sailed. Each boat may use such poles as are necessary for booming out the sails, but must not be used for any other purpose.

35. Yachts can carry what ballast they choose and dispose of it at will, except live ballast, which must be brought back.

36. Any yacht must come to an anchor during a race without forfeiture of the prize.

37. Each yacht, on taking her position in line of a regatta, shall have the club signal flying at her peak; after sailing she may lower it.

38. Should the owner or sailing master of any yacht consider that he has a fair ground of complaint against another for foul sailing, or any violation of these rules, he must enter his protest in writing as soon as he can, with all due diligence, and the same with the judges. A protest made in writing shall not be withdrawn. The judges shall also, without a protest, disqualify any yacht should it come to their knowledge that she has committed a breach of these rules.

39. Any yacht violating any of these rules shall be ruled out and forfeit all claim to the prizes.

ROYAL NOVA SCOTIA YACHT SQUADRON.

THE squadron is in a very flourishing condition and has settled upon an extensive list of fixtures for the year. The opening cruise was sailed June 11. Race for regular Squadron prizes was sailed June 18. The open matches for Members' Prize are set down for July 9; those for the Mayor's Prize for July 30; for the Lieutenant-Governor's Challenge Cup, August 13; for the Flag Officers' Prize off Chester, August 18, and the final class races for Squadron Prizes, Sept. 10. The custom of this club of printing their fixtures in form of a circular for distribution is a commendable one and might be followed by home clubs to advantage. Measurement is based upon actual tonnage as it ought to be and otherwise the sailing rules of the Y. R. A. have been adopted. The officers of the Squadron are: Commodore, His Excellency the Marquis of Lorne, K. T., G. C. M. G., etc., Governor-General of Canada; Vice-Commodore, C. C. Carter, R. E.; Rear-Commodore, F. S. West, Esq.; Honorary Secretary, A. C. Edwards, Esq.; Honorary Treasurer, W. Dudley, Esq.; Measurers, J. E. Butler, Esq., and G. H. Luke, Esq., of Halifax, Ed. Dowling, M. P. P., Collector of Customs at Lunenburg, and F. W. Hindman, Esq., at Charlottetown, P. E. I. Sailing Committee, Messrs L. Briand, J. Fraser, J. W. Stairs, W. S. Salter and Capt. Wall, R. A. The club has a larger proportion of yacht owners to members than any other in America, making it one of great activity, hard sailing and spirited racing, and an example in many respects to clubs nearer home. There are on the list for 1881, 17 regular and 18 honorary members, with a fleet of 44 yachts, including several cutters and yawls. The Squadron runs and not "regattas," the latter word being properly tabooed from all its publications.

NEW BEDFORD YACHT CLUB.

The fleet of this club now comprises the following:

SCHOONERS.

NAME.	OWNER.	PORT.	Sailing length.

NEW YORK YACHT CLUB.

THURSDAY, JUNE 16.

THE rather scant entries for the annual match of the club is a very convincing answer to those in the habit of judging the popularity of the sport or the prosperity of a club by the amount of racing done. We have always held that there was no connection between the two, and this year offers a good occasion to have ourselves right. The New York Y. C. was never so strong in membership or in yachts, being second only to the Eastern Y. C. in the former, while the fleet is the largest of any in America, yet "regatta" day saw only a miscellaneous lot of sails and crafts, ready to crowd the line when one class filling with the prospect of a good day's racing. Judged by the rules the N. Y. Y. C. might be deemed in the last stages of dissolution, a conclusion exactly opposite to the actual state of affairs. None view this disinclination to race the whole fleet as in years gone by with more satisfaction than we. To simply enjoy yacht ownership and a love of sailing for sailing's sake has been gradually developing among the mass of yacht owners. The new hand's only conception of the sport is to be the happy possessor of some sort of tool or machine called a yacht by courtesy with which to indulge his gambling propensities, a good deal as nine men out of ten do upon the turf. Beyond this he knows nothing of the pleasures and uses of such craft, and cares still less. Slowly, however, experience becomes his teacher, and a new world is unfolded at his feet. He learns to appreciate the life afloat and finds his sympathies steadily drawn toward the wakes and ways of the sailor. He gives up racing and becomes an active cruiser, taking in an occasional match just to give his boat a record, and hence his sailing colors are seen as often as of yore. We think the taste for cruising, which has of late become so manifest in the large clubs, a most healthy sign, and therefore feel little disposed to cavil at the want of numbers present at the usual annual race. Out of a fleet of four thousand decked yachts in England, only three hundred are racers by habit. The real all-cruising go, and a similar ratio between the two lots is certain to prevail with us on this side of the Atlantic, for all signs point that way.

A friend, fired with enthusiasm in a good cause, told us not long ago: "I tell you, this is going to be the biggest racing season in." Nor could he be convinced to the contrary. So far nothing has sustained his remark, for racing has only been up to the average. Hardly that, except in the East where a wonderful impetus has been given to the passion of the hour. There has been nothing especially deserving to be chronicled in New York up to date, barring the appearance of the sloop Hildegard, ex-Atlantic. We have thus to rely even upon an old boat to create a ripple in the dreary rack of annals of these matters. Fortunately Hildegarde created such a big ripple that should the good lady repeat her performance with the next thing of a tidal wave. That this sloop was a dark horse has long been admitted, but that in a fair working breeze she could hold both Mischief and Gracie down the wind, and soundly beat them on a run in such unmistakable style must be adjudged a boon, nothing less wonderful—if she can do so again! There was a good whole sail wind, variable in strength, it is true, but enough to give Gracie and her iron rival the advantage of their size, and we can only account for Hildegarde's scoring in so brilliant a manner by combining on if all circumstances in her favor and her being handled as smartly as ever sloop was. They were sailors, and they had been drilled like dragoons aboard the Rear Commodore's flyer. They knew their stations, and pulled together like men who understood each other. It was just a whole sail wind for her, and the sea was perfectly smooth. She made a good start, carried the strength of the wind out with her, and finished in a flattening breeze, increasing her lead over Gracie in the last few miles. Still the fact remains that she held her ground with a fresh breeze out, and after rounding the mark soaked out to windward of all the rest in a way which called forth exclamations of surprise aboard the judges' steamer. It was neither luck nor fluke, and if the above explanation will not serve, then it was downright sailing and seamanship that did it, and Hildegarde immediately took rank as the fastest of her tonnage in and America, and a winner every time in fair square work, until overpowered in heavy weather by the rest of her class. But we have an inkling that she will be as good as any in a chop or roll; she has the easiest looking side of anything in the fleet. Under the cognomen of Niantic she left the ways of Alonzo Smith, at Islip, L. I., early in 1876, having been modeled by the builder and finished complete to the order of Mr. R. H. Huntley, of Brooklyn. She was built 4 ft. longer than the model called for, by splicing that much in amidships—no doubt one cause of the yacht's great speed, for, unlike most, she has "two ends to her," and an easy, shapely side tapering away into one of the few handsome counters of elliptic shape to be seen. No longer ago than a month or two ago, he has knack of his own, and his models are original to the extent of being cut on different principles altogether from those followed by others. His is not a bow and entrance lined away to nothing, the loss made good by a full chubby stern to supply the bearings, but she cuts a fairly easy bow and a corresponding run, has very flowing topsides a long floor, the latter turned up gently to melt away with a dying bilge in the sweetest of bows above and below ever a beamy ship was blessed with. His run is remarkably clear, the quarters full of power without being clumsy and hard, and he does not go to excess in compliance with some wild hobby or mythical "practical" theory, but a seeking for an average best in all respects. That is the key to his model and to the surprising success one of his sloops has now placed on record in his favor. It should be added that his yawl, the sail maker, always helps him out, for he does most of the stitching for help craft, and Hildegarde's sails were specimens of the art of making close winded drivers that had no little to do with her vanquishing the good company she was in last Thursday. The Hildegarde is a centreboard sloop, 69.5 ft. on deck, 61.6 ft. waterline, 19.2 ft. beam, 6 ft. deep and drawing 5½ ft. water aft.

Concerning the other large sloops a liberal allowance should be made in comparison with Hildegarde, for while the two big dogs were fighting each other the little fellow got away with the bone. It cannot be overlooked, though, that after Mischief and Gracie had separated, Hildegarde made play with both, though in a slackening wind, on the way home. Fanny carried away topmast early in the day, and Grayling was left well astern on the run out. It was a matter of surprise to us that with a long stump left in the caps there was not seamanship enough aboard that sloop to rig a jury affair of some sort. What she lost, however, was more than made up subsequently by her tacks for her competitors, by with no company, and finding it, too, for she weathered the Hook close in the wake of the leaders, but in the falling wind again felt the loss of light canvas. As Fanny is a dangerous customer in just the weather of this day, her toppling and striking out for herself was to be regretted. She is a great, dry, wet-weather reaching machine, and little else. Her play is for ah water and a stiffish breeze, for then she is exceedingly close winded. When it comes to a jump of a sea, however, we had rather be excused either from taking passage in such a shingle bottom or from backing her in close places. Having got the hang of the bits in an easy, moderate swell, she would be the last one of the lot we should pick as a winner in tough water, and the first one likely to cut and run for a lee to repair damages. Mischief sailed a gallant match with her big sister Gracie, and although it was a crushing, whole sail breeze, once more scored from her rival, and that after making a superfluous hitch into the beach. Six times have these two met, and six times has Mischief carried off the honors, though for want of time allowance in scrub race for the Bennett Cup last year the silverware went into Gracie's locker. Vision won the race as whole windward work continued, and soon broke tacks with the rest. Wizard did not sail well at all, though whether owing to some inherent defect in model or only a question of trim and handling we are not prepared to say. In the former, a thing we think not likely in view of the great beam has probably been surpassed, and something will have been learned from her excessive proportions 41 ft. 10 in. water-line and 17 ft. 2 in. beam, the outgrowth of the silly custom of measuring by Bagdad rule. Enchantress and Vixen made the usually close work of their class, the day's racing ending in favor of the latter, due more to smart handling than anything else, as both these sloops make a very closely matched team, with our preference for Regina in good working breeze. Among the schooners the Commodore made an escape of some of the centreboards, beating all but Estelle down to the Spit, and there, with much consideration for the smaller classes, running into the Horseshoe rather than weather on them and take their wind, as she might easily have done. She had her sole competitor, the Fleetwing, well in hand all day, for the latter, though a comfortable mid sound sort of ship, has not the form of a racer, being a deep sided and flat floored craft below water. It needs a young gale to send her through to advantage, and a sea to show her at her best. The Southern Cross was the first to return from stake boats. She is undersized as well as the latest example of the folly of the theory of so-called practical men that a fast boat must be shoal, flat floored, beamy, and of light displacement. The Cross is all this, and a slower schooner could hardly be found. We have been told that she only needs only seven tons of ballast when twenty would have been none too much in a well proportioned hull of her size. But for the falling of the wind toward the end of the day the race would have been a perfect one. Under such circumstances the result was pretty well got at, before the wind petered out, and the rear guard had to catch light airs to bring them across the finish. The course was from the judges' boat, W. Fletcher, off Stapleton, to and around buoy No. 10, on Southwest Spit, keeping the same on port hand, thence to and around Sandy Hook Lightship, keeping the same on starboard hand, and return the same course, keeping the Southwest Spit on the starboard hand in returning. Yachts must keep to the eastward of buoys No. 9, 11 and 13 on the west bank, to the southward of buoy No. 8, on Southwest Spit, and outside of buoy No. 6½ on the north going and coming and returning, and will pass between the committee's boat, Wm. Fletcher, and buoy No. 15 on the West bank at the finish of the race. Nine prizes were offered, but the class for second class keel schooners and that for sloops of first class filling, only seven were sailed for. These were one each for first class keel schooners, first class centreboard schooners, second class centreboard schooners, first class centreboard sloops, second class centreboard sloops, and the Bennett and Challenge Cups—one for schooners and one for sloops. The Challenge cups are sailed for according to the sailing regulations of the club, with time allowance, the winners to hold the same for thirty days after the race without liability of challenge, after which they are held subject to challenge, in accordance with the deed of gift. Last year the schooner Clio and sloop Mischief won the cups, and recently they were surrendered to the club to be raced for again, the cups becoming properly only after being won three times. The starters were as follows:

The Regatta Committee consisted of Messrs. Gilbert L. Haight, Chester Griswold and John H. Bird, on board the steamer Fletcher. The guests of the club were accommodated on board the Columbia, chartered for that purpose. The start was after the usual slovenly fashion by an unusual number of sail and slide canvas, but even with this latitude some skippers were entirely unequal to the work of sending their charges away without being handicapped, although there was a grand working breeze from due West. Fanny came down to the line with a rush, suddenly changed her mind, apparently not quite sure of the signals and hove into the wind awaiting some one to set the example and show the way. This Clytie did in fine style, going away under balloon canvas, closely followed by Hildegarde, Dauntless and Gracie, and leading smart in hull, sails and crew, the latter in genuine Chinesey jumpers, warm, perhaps, but infinitely more thoroughbred than the "boating shirts" usually affected. To lubbers the Rear-Commodore was easily distinguished by the red worsted caps of his crew. Estelle, with a bone in her teeth, the lady of the Madcap hoping to dare and do more of same, then the Commodore's schooner Dauntless, the trimmest of the fleet, and in to be put under a class case—these, with the Vision, got across within the period allowed, all the rest were handicapped, their time being counted from 11:30. For comparison, their actual starts are given below, showing that the last of the lot required sixteen minutes from gun-fire to find out what was going on:

	H.	M.	S.		H.	M.	S.
Clytie	11	15	50	Vixen	11	22	23
Hildegarde	11	16	15	Crusader	11	22	48
Estelle	11	16	16	Wizard	11	23	30
Madcap	11	17	40	Tidal Wave	11	24	15
Vision	11	18	07	Regina	11	24	35
Dauntless	11	18	02	Fleetwing	11	24	56
Mischief	11	21	44	Fanny	11	25	09
Gracie	11	21	44	Southern Cross	11	26	30

Balloon jibs were boomed out through the Narrows, Fanny hauling out to spinnaker boom. That the last of the fleet lost much of the wind

going out, paying double for their sleepy start. Those hugging Wadsworth got puffs carrying them into the lead, M schief and Gracie trying a luffing match and working high up of the rest. Hilaregarde in the meantime going about her business, showing the way down to the first marks, and Wizard, under working sail only, bringing up the rear. Off the Hospital Islands, Hildegarde and Clytie had put the rest astern with Vision fairly close aboard, and sending club topsail aloft. The fleet soon had all they wanted, and gunwale-to were filling down along the West Bank and home. Clytie fairly smothering the Rear-Commodore as she went by to windward. Gracie got out on Mischief's weather, and pinned the Iron sloop clear down to the spindle. This mark was rounded as under:

	H.	M.	S.		H.	M.	S.
Clytie	12	33	00	Tidal Wave	12	33	00
Hildegarde	12	26	10	Vixen	12	36	50
Estelle	12	27	00	Fleetwing	12	37	52
Dauntless	12	27	28	Fanny	12	40	20
Crusader	12	40	42	Regina	12	42	45
Gracie	12	31	00	Madcap	12	43	00
Mischief	12	32	05	Wizard	12	45	00
Vision	12	33	27	Southern Cross	Not timed		

Clytie "split open," the rest slowly jibed and trimmed over, Crusader being worked as smartly as ever, after making the neatest round. Tidal was disappointing us; she used to be a smoother with all sheets eased, but to-day had the sulks. Fanny showed up without her topmast, and was being dropped square away for the outer mark. The fleet bunched at the Hook, the rear-guard bringing the wind up with them. When abreast the Scotland lightship the Hildegarde had again gone through the rest, but only to give way again to Clytie, who led around the lightship. Hildegarde had sheets snugged in to the utmost, and had begun her work to windward before the rest had reached the mark. She was evidently being sailed for all she was worth, and lay higher than anything which followed her. The times taken at the Sandy Hook lightship were:

	H.	M.	S.		H.	M.	S.
Clytie	1	33	33	Vixen	1	46	39
Hildegarde	1	40	50	Dauntless	1	47	35
Estelle	1	41	50	Regina	1	51	24
Gracie	1	42	37	Fleetwing	1	55	00
Tidal Wave	1	43	38	Fanny	1	55	15
Mischief	1	44	47	Wizard	1	57	20
Crusader	1	45	35	Madcap	2	02	40
Vision	1	46	05	Southern Cross	2	05	00

Mischief and Vision made good turns, but Regina was sailed very wide. Jiblopsails gave way to small sails, the fleet standing in to the beach and picking up a more nor herly wind and the young flood. Hildegarde was the first to round, followed by the rest of the sloops of centres. Another hitch brought them so far in that they could lay along the beach for the Hook, Mischief making still another short board inshore, whereby she must have lost much. It was a procession up the beach, the big ones slowly gaining on the leader. In the meantime, Dauntless, Vision and Fanny had broken tacks with the rest, and had laid a course to the northward and westward shortly after rounding the lightship, very much to their advantage as it turned out, for Fanny was able to make up all she had lost, and with a better start might have scored in spite of the loss of her upper spars. The rest of the fleet overstood to the southward, Tidal making a short board, coming up in imitation of the Mischief. It was astonishing to see the latter sloop hang to Gracie in the stiff wind then blowing, clearly proving that in anything not too strong for jiblopsails she must be counted the faster of the two, in spite of Gracie's tonnage and length being so much in her favor. Near the Hook Hildegarde got another pull on her sheets, but size was telling, and Gracie had hauled up close to the leader, the black buoy 3½ being passed by Hildegarde at 3.17.30, Gracie 3.19.53, Mischief 3.24.12 and Fanny 3.30.00. All went about and ran down into the Horseshoe, Gracie, when far enough to weather the spit, going around, while Hildegarde overstood, the latter, however, still leading. Here the times were timed 3.40.00 and 3.47.20. It looked as though Gracie would at last show the way home, but the wind was continually lightening, and the smaller sloop again increased her lead, finishing with plenty to spare, Mischief also making her time of the big race, putting another race to her credit. The rest of the fleet came in straggling, the result of the racing being appended:

FIRST CLASS KEEL SCHOONERS.

Club prizes therefore go to Dauntless, Tidal Wave, Estelle, Hildegarde and Vixen, and the Leonard Challenge Cups are now held by Tidal Wave among the schooners, and Hildegarde among the sloops.

SEAWANHAKA YACHT CLUB, JUNE 18.

THE eleventh annual Corinthian races were sailed, June 18, under the most favorable circumstances, and brought out a good lot of starters under the rules published in our last issue. That crews of amateurs could always be found for large schooners like Clytie or Crusader was something we had doubted, and questioned the wisdom of encouraging such heavy tonnage in a purely Corinthian race. In England it is seldom that yachts over 20 tons are sailed under such rules, and if efforts were concentrated in having as large a number of small yachts as possible we think the benefits of amateur racing would be more widely distributed. This year showed the difficulty of collecting such a large body of gentleman sailors as was required to man schooners, and Clytie was forced, by special permission, to draw upon the professional element to make up her complement. The wind was blowing strong from W.N.W. all day, being too much for even the Mischief, and just all that Gracie could take without the necessity of begging; hence she scored her third victory in seven races over her iron rival in spite of losing her topmast a few minutes after crossing the line. As it proved she was better without it, for she held Mischief and in the puffs would run up close on the latter's quarter. On the beat home Mr. Flint's big sloop overpowered the Mischief, passed her, and continually increased her lead to the finish, winning a fine race after being sailed as well and possibly a trifle better than when in the hands of professionals. As for Mischief, she made a hard fight, but had to give in to tonnage for which practical even know no allowance to be a fair equivalent in a blow. She suffered also through having a light crew unable to get in sheets as fast as the others, and her owner did not care to "ram her through," but thought a little prudence best even though it might cost the race, hence she was eased through the flaws that would not bother a larger boat. The only wonder under the circumstances was that Gracie should not have won by three times the amount, and that a sloop 61 feet on water line should have made such a close thing of it with another 20 feet longer. As Gracie is unquestionably a fast yacht, the most logical conclusion of the day's work is that Mischief should be given credit for being by long odds the fastest of her size, and at least a good match for Gracie in hard weather but for their difference in tonnage. We are led to this observation because the New York *World*, in a report of the racing, entirely ignores the size of the two sloops, and in an off-hand manner claims Gracie as having proven herself the superior boat. Overlooking the value of tonnage in strong winds is an error common to the daily press, but we might expect a little more thorough comprehension of the points at issue by the *World*, and trust that in the future it will profit by having its attention called to a failing it exhibits too often Of the schooners, Clytie likewise overpowered her small competitors, both of which sailed a most plucky race, Agnes, as usual, being handled with consummate skill. Regina, with her double head rig, turned the tables on Vixen, and would do so oftener were she sailed as well in professional hands as she is with a crew of Corinthians. Fanita, in this class, was barred at the last moment, exceptions being lodged to some of her crew. We have always taken this sloop to be the best of her inches if not of her tonnage, and would like to see her come to the scratch and substantiate what we have written in opposition to the *World*, *Spirit of the Times* and others who have been rash enough to set her down as a failure, knowing nothing at all about her, and who are now trimming to a new shift of wind. Wonder what has caused this sudden change evolved from the inner consciousness of our contemporaries? Are they learning to take their cue from these columns? Schemer was run into by a clumsy coaster when she had the race well in hand, but was lucky escaping being run down altogether. It would be a good thing to sue the owners of that coaster for damages. Some of them need a good lesson in the fulfilment of the Road, and must be taught that yachts have the right of way as well as any other craft that floats. It is the only safeguard against collision. Among the fourth class Gael and Petrel made a good race, both being skippered by veterans at the business. Gael was particularly quick with her canvas. Both badly beat the centreboards, Cute and Vivien, the latter a Kirby model at that, so that keels and outside ballast won a fair, square battle from the light drafts. Coquetto was badly outclassed, being only 20 ft. water line, and had no chance in such weather At the outer mark she carried away her throat ballards and lost much time for repairs, but she bravely sailed the course against such odds. Courses and conditions will be found in last week's paper. The crews mustered as under:

SCHOONERS.

Agnes—Captain and owner, L. A. Fish. Corinthian crew—F. E. Swan, G. W. Chauncey, T. L. Arnold, E. M. Osborne, E. S. Rupert, N. D. Lawton, D. Wright, W. Peet, Jr., H. E. Cole, Lyndon Arnold, J. L. Marcellus and J. Lyman. Agnes is 59.66 feet over all and 55.25 ft. on water line. Allowance, 16m. 23s., minus.

Madcap—Captain and owner, F. D. Shaw, N.Y.Y.C.; mate, T. D. W. Thompson. Corinthian crew—E. S. Rapallo, A. Macy, L. Van Kirkman, H. C. Pritchitt, B. K. True, K. Monroe, J. T. Terry, Jr., R. H. Ellis and Charles Haw. Madcap is 47 ft, 7 in., over all. Allowance, 31m. 36s., minus.

Clytie—Captain and owner, Anson P. Stokes; mate, A. Rich. Crew reported to be regular yacht's crew, and therefore, professionals. Clytie is 85 feet over all and 78.25 feet on water line. Allowance, 3m. 5s., minus.

FIRST CLASS SLOOPS.

Gracie—Owners, Joseph P. Earle and Charles R. Flint; mate, J. Frederic Tams. Corinthian crew—W. Emlen Roosevelt, Alfred Roosevelt, William M. Wright, F. Wallace Soule, A. B. Boardman, Sidney Chubb, Harry Earle, Henry Siemsen, Dr. Piffard, David Crocker and Edmund Yard, Jr. Gracie is 85 feet over all and 78.25 ft. on water line. Allowance, 5m. 8s., minus.

Mischief—Captain and owner, J. R. Busk. Corinthian crew—A. C. Smith, J. R. Maxwell, W. H. H. Beebe, W. D. Steele, O. D. Lovell, G. Moffat, J. L. Happock, W. May, F. May, C. B. Warner, G. Morris and C. P. Kunhardt. Mischief is 67.47 ft. over all and 61 ft. on water line. Allowance, 11m. 1s., minus.

SECOND CLASS SLOOPS.

Regina—Captain and owner, Commodore, W. A. W. Stewart; mate, Vice Commodore, C. S. Lee. Corinthian crew—Rear Commodore, M. R. Schuyler, W. H. Mitchell, T. A. Havemeyer, W. B. Simonds, J. G. Woodbury, D. Lord, Jr., W. Foulke, Jr., David Paton and J. W. Beekman. Regina is 50.64 feet over all and 47.25 feet on water line. Allowance, 22m. 4s., minus.

Vixen—Captain and owner, F. C. Lawrence, Jr.; mate, G. Kortwright. Corinthian crew—G. L. Rives, C. G. Peters, G. Clark, A. Stevens, — Breese, R. Monroe, C. Webb, H. Livingston, T. Lawrance and J. P. Kingsford. Vixen is 55.1 ft. over all and 44.1 ft. on water line. Allowance, 22m. 7s., minus.

THIRD CLASS SLOOPS.

Schemer—Captain and owner, W. S. Alley; mate, A. B. Alley. Corinthian crew—C. P. Jenkins, A. Monroe, R. C. Cornell, T. Bache, J. Aymar, H. D. Cooper and H. A. Sanderson. Schemer is 39.95 ft. over all and 37.17 ft. on water line. Allowance, 30m. 25s., minus.

Wave—Captain and owner, J. C. Barron. Corinthian crew—Albert Williams, Jr., F. W. Backer, C. King, H. R. Parkin, A. Seton, L. F. D'Oremieux, J. R. Wood, Jr., H. L. Sprague and M. Parker. Wave is 41.3 ft. over all and 33.7 ft. on water line. Allowance, 28m. 36s., minus.

FOURTH CLASS SLOOPS.

Coquette (cutter)—Captain and owner, H. W. Eaton. Corinthian crew—Oliver Adams and W. G. Diedrichson. The Coquette is 23 ft. over all and 20 ft. on water line. Allowance, 55m. 25s., minus.

Cute—Captain and owner, J. Clinch Smith; mate, J. R. Suydam, Jr. Corinthian crew—J. S. Lawrence, W. H. Russell, J. M. Mitchell and F. Stansberry. Cute is 30 ft. over all and 26.3 ft. on water line. Allowance, 43m. 38s., minus.

Gael—Captain and owner, B. B. Hopkins; mate, J. F. Lovejoy. Corinthian crew—H. J. Drake, P. K. Drake, P. K. Hills, J. P. Topping, C. Simpson and A. N. Thurles. Gael is 33 ft. over all and 28 ft. on water line. Allowance, 43m. 4s., minus.

Petrel (cutter)—Captain and owner, J. Hyslop. Corinthian crew—Benjamin Turzo, H. S. Pratt, T. E. Brown, Jr., and R. L. Firason. Petrel is 32.14 ft. over all and 28.12 ft. on water line Allowance, 48m. 34s., minus.

The races were in charge of the committee, Messrs. Jas. H. Elliott, C. Wyllys Betts, Louis P. Bayard, Robert Center and G. Foster, who with the guests of the club were on board the steamer Americus. The arrangements were perfect, though some difficulty was experienced in taking the yachts' times at all points owing to three different courses being sailed. The wind was strong and puffy from W.N.W., and the tide half flood. Clytie, Gracie and Coquette were handicapped owing to late start. All hands crossed with jib topsails, Gracie and Gael sending up ballooners:

	H.	M.	S.		H.	M.	S.
Madcap	11	27	16	Mischief	11	32	06
Agnes	11	29	14	Regina	11	34	04
Gael	11	29	30	Vixen	11	34	56
Schemer	11	30	46	The Cute	11	35	49
Wave	11	31	10	Clytie	11	35	16
Gracie	11	31	26	Coquette	11	37	27
Petrel	11	31	30				

It was a reach down to the Spit, the big ones gradually going to the fore. Barely clear of the Narrows, a sharp puff took the topmast off Gracie, leaving an ugly wreck aloft and the balloon jib topsail over the bows. This was rapidly secured by the Corinthians, and with the increasing wind she was better off without the top hamper. Meanwhile Mischief had passed to windward and kept the lead out to the lightship, being aided by her spinaker which was got out for a short while but lowered with other light sails in ample time to make the round, her topmast being housed for the beat home. The times at the spit were taken as under:

	H.	M.	S.		H.	M.	S.
Mischief	12	23	45	Vixen	12	34	57
Gracie	12	24	28	Schemer	12	36	10
Clytie	12	25	19	Wave	12	38	16
Agnes	12	26	06	Gael	12	45	52
Madcap	12	33	10	Petrel	12	46	08
Regina	12	34	51				

Sloops sent out spinakers to starboard, and the schooners "split" for the run to the ship. Gael had her spinaker hoisted in stops, and broke out the sail as she eased around the buoy, and was off for the Hook. The cutter Petrel stuck to plain sail only, her crew not having worked together at setting spinaker, and the run to the turning buoy 5½ being only short, it was not deemed advisable to risk any gear. These two hauled around buoy 5½, and trimmed flat homeward bound, Gael at 1.13 and Petrel at 1.15, with Cute following at 1.19, as near as could be ascertained. The Scotland lightship was rounded by the third class sloops, Schemer at 1.26.30 and Wave at 1.28.52. In beating back to the Hook, Schemer, having the right of way, being on the starboard tack, she was met by the coaster R. J. Hazzard, of Port Jefferson. The schooner, finding it impossible to weather the yacht, was put off too late, and ran her jib boom into Schemer's mainsail, tearing across and catching the leech, swinging the yacht alongside abreast the fore chains, at one time threatening to drive her under. The leech rope gave way in the nick of time, and the schooner passed ahead clear. Of course the race was over in the class, and Wave finished at her ease. The larger classes rounded the lightship:

	H.	M.	S.		H.	M.	S.
Mischief	1	37	38	Agnes	1	44	15
Clytie	1	39	11	Regina	1	48	46
Gracie	1	39	56	Vixen	1	52	00

Gracie made a close turn, Mischief being obliged to spill several times to harden down. The big sloop slowly gained, and shortly after tacking for the Hook, weathered and forereached on Mr. Busk's ship. The lead was gradually spun out, the smaller sloop having all she wanted to get through the knock-down flaws driving across the lower bay, and increasing in violence up to the end of the match. Under the circumstances she could not expect to hold Gracie, and so was obliged to let the first race out of seven go in favor of the larger boat. Times taken at finish were as under:

SCHOONERS.

Yacht	Start. H.	M.	S.	Finish. H.	M.	S.	Actual Time. H.	M.	S.	Corrected Time. H.	M.	S.
Clytie	11	33	00	4	30	04	4	55	02	4	51	51
Agnes	11	29	14	4	49	22	5	20	08	5	08	45
Madcap	11	27	16	Not timed.								

SLOOPS—FIRST CLASS.

Gracie	11	31	26	4	12	36	4	41	10	4	36	02
Mischief	11	32	05	4	26	07	4	54	01	4	43	00

SLOOPS—SECOND CLASS.

Regina	11	34	04	5	03	52	5	29	48	5	07	44
Vixen	11	34	30	5	07	10	5	32	40	5	10	33

SLOOPS—THIRD CLASS.

Wave	11	31	10	4	20	41	4	49	31	4	20	55
Schemer	11	30	46	Disabled.								

SLOOPS—FOURTH CLASS.

Gael	11	29	24	2	54	00	3	24	36	2	41	32
Cute	11	35	00	Not timed.								
Vivien	11	34	30	Not timed.								
Petrel	11	31	30	2	33	38	3	27	08	2	38	34
Coquette	11	35	00	4	26	26	5	01	26	4	06	01

Prizes therefore go to Clytie, Gracie, Regina, Wave. In fourth class Gael lodged a protest, the time of finish being very inaccurate, owing to absence of the judges' steamer, and the race may have to be resailed.

EAST RIVER YACHT CLUB.

THE second annual regatta of this club was sailed June 20. Course from club-house, Greenpoint, around the gangway buoy off Sand's Point, and home to Hunt's Dock. There was a large list of starters, including no less than nine cabin yachts, besides six open jib and mainsails and three cats. The increase in cabin craft is a most encouraging sign. Among the sandbag shifters, Judge Elliott, of shell-boat fame, had entered the new Mistake, a clinker-built boat of great lightness in hull, and the acme of a racing machine. The wind was fresh from the southwest and the tide was flooding. The fleet had booms off through the gate and a beat home. The Keegan turned the buoy first about a minute ahead of the new Mistake, but the whole fleet was beaten out of sight by Mr. Hughes in his new catamaran, Primo. A long leg and short one brought them to the Stepping-Stones on the way home where the Mistake weathered on the Keegan only to give way to her again off Throgg's Point, the Keegan finishing 38 seconds the better, but loosing to the clinker by 12 sec. on time allowance. The race was concluded as under:

FIRST CLASS—CABIN.

	Ft	In		Elapsed time. H.	M.	S.	Correct'd time. H.	M.	S.
Chester A. Arthur	35	6	Chester W. Southworth	3	32	22	3	52	22
Favorite	34	6	Matthew Charde	3	58	05	3	51	05
J. Tregarthen	33	0	Alex. Thompson	3	58	16	3	51	16

SECOND CLASS—CABIN.

Eisie May	31	5	John G. Northrupp	3	35	24	3	53	24
Peerless	30	0	Louis Kafer	3	55	51	3	53	01
Louise	28	0	Charles Brandt	4	26	04	4	19	14
Jane	28	0	John Law		—			—	

THIRD CLASS—CABIN.

Julia	25	9	J. F. Sullivan	4	35	59	4	35	59
Etelka	23	0	Victor L. Gerster		—			—	

FIRST CLASS—OPEN BOATS.

Mary Keegan	27	6	John Keegan	3	36	14	3	36	14
Mistake	27	1	Charles B. Elliott	3	36	52	3	36	02

SECOND CLASS—OPEN BOATS.

Louisa W	22	6	Charles Voltz	4	40	25	4	40	25
H. H. Holmes	22	0	John Kreymeir	3	45	01	3	44	01

THIRD CLASS—OPEN BOATS.

Carrie Taylor	19	11½	J. G. Northrup	4	01	50	4	01	50
Joe Algeau	17	0	M. Nicklaus	4	16	06	4	10	11

FOURTH CLASS—CAT-RIGGED BOATS

Bella Gould	19	10	W. Peterson		—			—	
Ping Ugly	16	6	P. O'Day	4	53	52	4	46	32
Lone Star	18	4	O. Joback	4	51	30	4	48	50

Prizes go to Favorita, Tregarthen, Peerless, Julia, Mistake, Holmes, Taylor, Ping, Ugly. The Holmes also takes the club pennant, having made the best corrected time. The regatta Committee included Messrs. J. D. Smallfield, J. Early, Theo. Tileston, J. C. Rennison, Theo. Tucker and W. Briggs.

THE AMERICA CUP.—The following has been sent in answer to inquiries from the Bay of Quinte Yacht Club:

NEW YORK YACHT CLUB,
NEW YORK, June 15, 1881.

Richard S. Bell, Esq., Secretary Bay of Quinte Yacht Club, Belleville, Ontario:

Dear Sir—The secretary of the club has referred to us a communication from you dated 30th ultimo, in which you ask whether this club will nominate one yacht to defend the America's Cup, in the proposed contest with the Atlanta, or whether a representative will be named on the morning of each day, and in reply therefore we have to say that the same yacht will be sailed against the Atlanta in all three races. We are, dear sir, respectfully yours,

WM. KREBS,
J. F. TAMS,
ROBT. CENTER,
Committee on America's Cup

RACING IN THE EAST.—Owing to the crowded condition of our columns full reports of Eastern racing are unavoidably left over till next week.

FANITA.—We learn that decided exception is taken to the ruling of the Sailing Committee of the Seawanhaka Y. C. barring the Fanita from starting in the recent Corinthian races, as it is claimed that the crew of the Fanita were in no wise professionals, and that the decision was announced at the last moment, too late for the owner to identify his men before the committee.

YACHTING NEWS.

NEW YORK CANOE CLUB.—The annual regatta of the N. Y. C. C. will be held at 3 o'clock on Saturday afternoon, June 25, at the club-house, New Brighton, S. I. Open to members only. Boats leave Battery every half hour for Staten Island. There will be three races—a paddling race, a sailing race with time allowance, and an upset race. An entrance fee of $1 admits a canoe to all three races. Five dollar prizes are offered for the paddling and upset races and a $10 prize for the sailing race. Entries may be made up to the hour of starting. The Dot, holder of the N. Y. C. C. Cup, having received two challenges,

will sail the third race for the cup and compete for the sailing prize above offered at the same time. As usual, an entrance fee of $1 will be charged to each canoe competing for this cup. This race is open to *all* canoeists. Entrance fees payable to C. Bowyer Vaux, 27 West Twenty-third street, Secretary of the Club. By order of the Regatta Committee: C. Bowyer Vaux, C. K. Munroe, W. P. Stephens, C. P. Oudin and L. F. Dorendeux.

FOR FRANCE.—Mr. Clapham has his yard so full of work tha the has been obliged to refuse orders, including two from abroad. He has now in hand a Nonpareil racing boat for a gentleman in Boulogne, France. She is 19½ ft. long, 5 ft. beam. Decked fore and aft and supplied with four hatches. The deck is laid of ⅜ in. strips fancy woods; coamings, trimmings, planksheer, rail, etc., in black walnut. Copper fastening and riveted work throughout. He also is building another, 25 ft. long, for cruising in Maryland waters. She is to be yawl rigged—a very sensible idea. A third boat is in hand 48 ft. long, 12 ft. beam, with accommodations for six and to be schooner rigged. The energy and success of Mr. Clapham in building up a flourishing business in one or two short years against much opposition and making his name known all over civilization will be acknowledged, even by those who do not as yet look with favor upon the style of boat he has brought out as a specialty.

YACHTING IN BUFFALO.—*Editor Forest and Stream:* The famous sloop Cygnet, now holding the Gardner Cup won at Cleveland last year, has just accepted challenge to sail again for same this July 4 under the conditions the cup is held. She leaves here last of June and is likely to meet the pick of the lake fleet at Cleveland. Our Common Council has led the way and set you an example on the Atlantic seaboard in appropriating $200 for the club races July 4 at this port. How is that for a Common Council? We are proud of our City Fathers now. Turk, Arrow, Alarm, Curlew, Kittie, Mermaid, Petrel, Fleetwing and Clara may be looked for at the line and we will give our country cousins and townspeople such a sight that will start a fresh boom in the noble sport. PENNANT.

ROYAL CANADIAN YACHT CLUB.—A steam yacht has been put on the route between the club house on an island and the shore. The cost of the privileges to members is $10 yearly subscription, $5 for passage by the steamer and $5 for annual rents. The house is a handsome structure, facing Toronto, and was designed by Messrs. Frank Darling and Curry. It contains a dining room 20x30 ft. and a reception room 20x20 ft. on the ground floor, and on the second story a billiard room, smoking room and committee room. The building is surrounded by a balcony, and has a tower on the southeast corner. Baths, lockers, dressing rooms, besides a lawn tennis and croquet ground is being laid out, and trees planted.

YACHTING IN FRANCE.—According to a return which has been prepared by a committee of French yachtsmen, it appears that there are now 103 steam yachts, 1,073 sailing schooners, and 8,192 pleasure boats, with a total burden of 24,108 tons and an approximate value of $2,750,000 on the registers. The number of persons employed in them, exclusive of the owners, is 3,891, while the number of members belonging to the different sailing clubs is 11,476. These clubs give nearly $120,000 a year in prizes, and spend about $700,000 in other ways.

NEW BEDFORD YACHT CLUB.—The club book for 1881 has been issued and is an excellent index of the present strength of this enterprising organization. The fleet musters 15 schooners, 22 sloops, 5 cutters and 5 cats. Most of these are of moderate tonnage, ranging from 25 to 65 ft., forming an excellent school for amateurs. The list includes 309 regular and 3 honorary members. So fast has the fleet of cutters grown that especial provisions have been made in the sailing rules for their classification.

BIG CUTTER.—Boston will after all not lead off with the first large cutter, as work is to be commenced at once on a ship 60 ft. waterline and 70 ft. over all for Com. W. A. W. Stewart, S. Y. C. The lines are by Harvey and Prior, London and Wivenhoe. She will be built by Piepgras, of Greenpoint, and if successful will be the forerunner of a class of the same sort, for we know of several gentlemen awaiting results before going and doing likewise. The good cause is gaining strength.

YAWLS IN SAN FRANCISCO.—The yawl Emerald astonished everybody on the Napa trip. She was known to be fast as a sloop, but was supposed to be slow as a yawl. She got to Napa close to the Annie, and within a few yards of the Clara, beating all the others. On the sail home from Mare Island she sailed up to the front with the Chispa and Nellie, beating all the sloops and schooners. The old Emerald is a marvel yet.

SAGITTA.—This handsome sloop is for sale; inquiry of Mr. Alonzo Smith, yacht builder, at Islip, will elicit details. We imagine the Sagitta will sell "like hot cakes" now that Hildegard's brilliant victory has brought out Mr. Smith's name so prominently as a builder. We should like to see Sagitta fall into the hands of a racing owner. She is the best looking of the many good ships launched at Islip.

COLUMBIA YACHT CLUB.—Annual regatta has been postponed until September, to arrange better for classification, measurement, etc. First "union" regatta will be sailed July 12 as announced in our Fixtures. Mr. C. A. Winter has been elected Vice-Commodore in place of G. S. Rusk, resigned. A marine railway for yachts under 50 ft. is to be built upon the club grounds.

SOUTHERN YACHT CLUB.—Has issued a neat club book for the current year, containing their constitution, by-laws, and the new sailing rules, also the burgees of yachts. Next issue will, we hope, also contain a list of yachts, with dimensions, builders, etc., thereby making the publication more valuable as a book of reference. A chart of local racing courses would also be a useful supplement.

SEAWANHAKA YACHT CLUB.—The club book for this year shows a gratifying exhibit and a marked increase in yachts and members. There are now in the fleet 14 schooners, 6 steamers, 26 cabin sloops, 9 cutters and 19 "open boats," a total of 74 yachts and 177 members. With the new club house thrown open this spring, large additions may soon be expected.

NEW YORK YACHT CLUB.—The club book for 1881 is a very neat publication, containing the names and burgees of no less than 45 schooners, 30 sloops, 4 cutters and 27 steamers; total, 106 vessels, all over 15 tons. The membership has increased very fast, there being 431 names on the list, of which 33 are those of honorary members and 84 those of life members.

MARIQUITA.—This keel sloop has been bought from Boston by Mr. F. W. Gunther, who will fly the Atlantic Y. C. burgee. She is 37.8 ft. on deck, 31.4 ft. on water line, 13 ft. beam, 4.2 ft. deep, and draws 5½ ft.; was built in 1866 by Jackson & Mathews, of Greenport, but since then thoroughly overhauled.

KNICKERBOCKER CANOE CLUB.—Will take steamer July 2 to Esopus Island, 85 miles up the Hudson, there launch and cruise home by canoe. All canoeists are invited. A meeting to arrange details is called for June 26, 3 P. M., at the club-house, foot of Eighty-sixth street, North River.

MURIEL AND REGINA.—We hear that the 12-ton cutter Muriel has been bought by Mr. E. D. Morgan, Jr., and the Regina by Mr. Chas. Stillman, pending the construction of a new cutter of some eighty tons.

SYLVIE.—This schooner, well known as one of Steers handsome models, has been sold by Mr. Thos. Nye, Jr., of New Bedford, to Mr. C. N. Whitten, of Boston. If the Sylvie were again sloop rigged she would make capital racing with the biggest sloops in spite of her age.

DEFERRED.—A vast amount of material and correspondence must be delayed until the racing season slacks up. Also reviews and notices of books, pamphlets, etc. The "boom" has taxed our space beyond its stretching capacity.

PROMISE.—This fast steam yacht has been sold by Allen Thorndyke Rice to Davis Johnson, of New York, through Manning's agency.

CLEVELAND CANOE CLUB.—Will sail a race July 4 and be present at the Lake George meet in August.

We know that there is nothing on earth equal to Hop Bitters as a family medicine.

Answers to Correspondents.

☞NO NOTICE TAKEN OF ANONYMOUS COMMUNICATIONS.

W. J. N., Tiffin, O.—For metallic cartridges see our advertising columns.

CONSTANT READER.—When you send your name your queries will be answered.

J. S. G., High Bridge.—No special license is required to shoot game on Long Island.

J. H., Peru, Ill.—When you sign your name to your communication it will be answered, not before.

J. B. R., Philadelphia.—See articles on gun-shy dogs published in FOREST AND STREAM, February 5, 1880, and April 8, 1880.

C. F. C., South Abington.—We have not yet examined the powder, and so cannot say whether or not it has the dangerous properties of the Dittmar.

M. N., Hoboken.—You will find much of the information about California in Mr. Van Dyke's "Rifle, Rod and Gun in California." We can send it to you. Price $1.50.

E. G., New Orleans.—The cut of the fish called "mud jumper," which you send, is an African fish known as *Periophthalmus koelreuteri*, which seldom grows over six inches in length. Little or nothing is known of its breeding habits.

J. E. G., Kansas City, Mo.—Our club wishes to get for the club room a work on game birds, a standard, and something nice, strongly bound and with good illustrations. Can you recommend one to us? Ans. There is no such work as you ask for. A copy of Audubon's Birds of America comes nearest to it, but would be very expensive.

F. H. W., Elmira, N. Y.—What is the proper dog to train for retrieving ducks? Water or cocker spaniel? I wish a dog that I can train for retreiving from the river and lakes near this place. Where can I get a water spaniel for above purpose? Ans. The dog you want is an Irish water spaniel. There are several breeders of this valuable strain in this country. Watch our kennel advertising columns, and "Kennel Notes" column for the information you want.

J. M., Boston.—The undersigned is one of a party of four that annually visit the trout streams and lakes in Maine and New Hampshire. It has been suggested to us that Labrador would afford us richer opportunity for our sport. Can you put us on the way of posting ourselves about the country; the route and probable expense, etc., etc., and where to go for August and September fishing? Ans. Not much is known of Labrador. Prof. Henry Youle Hind, of Windsor, N. S., has written a book on Labrador, but we have not seen it. Write to Mr. W. F. Whitcher, Commissioner of Fisheries, Ottawa, P. Q. From Quebec you can probably take steamer of the Quebec and Gulf Ports Line to some point about Tadoussac, and from there will have to go in a *shallenge* or fishing smack. We will be glad to hear the results of your trip, and would advise you to go before September as the season sets in early there.

COB, Easton, Md.—A sweepstakes match was shot. H. and T. killed all their birds. R. came next, and G. B. S. and others next. H. and T. claimed first and second money and R. third. A dispute then arose by B. claiming that H. and T. were only entitled to first, R. to second and G. B. S. and others to third; but B. was overruled, and H. and T. shot off for first money, T. winning. H. then took second money and R. third, B. still protesting. Was B right or wrong? Ans. In "class" shooting the highest score takes first, or ties on highest score shoot off for first; second highest score takes second, or ties on second highest shoot off for second; third takes third, etc. If you were shooting "class" shooting, then H. and T. should divide or shoot off for first, R should take second, and the others shoot off tie for third. If you were shooting for the highest individual score to win the division was correct. This point should have been agreed upon before shooting the match.

NOTICE!

A Grand Chance!

FOR ONE DOLLAR.

A fine English breech-loading gun with nearly the best record in the world.

Gwynne Price having been presented with one of W. W. Greener's celebrated guns, made expressly for trap shooting, has determined to dispose of, by raffle, his well-known "Price" English gun, used in most of the great matches of last year.

The gun was made to order, regardless of cost, by one of the very best workmen in England; only used one season and in fine condition. Weight about 9 lbs., 10 bore, finest Damascus, 30 inch barrels, right cylinder, second choked, rebounding locks, best extension rib, etc.; full particulars will be found in Gwynne Price's new book, "The Gun and How to Use It, etc.," pages 57, 58, 59, 66, 67, 68, 73. Mailed free for 25 cents, stamps.

Should the number of snares disposed of exceed 250, and reach 350, a fine extra special Remington breech-loader, 10 lbs., got a few weeks since through Lamberson, Chicago, at a cost of $125, will be given as second prize, and if 450 tickets are sold Price's very handsome liver and white pointer Jack, four years old, will be added for third prize. Jack is very fine on chickens, quails and snipes; very staunch, and backs exquisitely, and was shown at St. Louis bench show, 1879, valued at $50.

Will take place July 1. Share certificate will be sent on receipt of one dollar, currency or stamps, to GWYNNE PRICE, Vice-president Sportsmen's Club, St. Louis, Mo. June23,1t

THE GREAT SINGLE BREECH-LOADER.

FOREHAND & WADSWORTH'S NEW BREECH-LOADER has so completely distanced all the others that it stands alone. There is no second. It is the only single gun worth having. As described in the above cut it is now complete, with rebounding lock, pistol grip, lever fore-end, nickel-plated frame, and is beautifully finished throughout. The barrels are either steel or twist. When steel they are bored out of a solid bar of steel, differing in this respect from all others, which are merely old musket barrels refinished. When twist they are the best imported barrels and of very fine grain. They are bored either cylinder for use in the field, or choked for very close shooting. When choked the targets will not suffer in comparison with Greener's, Jones', or even Colt's. Hitherto we have been far behind our orders, but having greatly increased the production we can fill orders immediately. The cost of these guns is a mere trifle. We are sole agents at New York for Colt's Club Guns, and also for Enos James & Co., Birmingham.

We offer a small JOB lot of the celebrated Webley Guns of all sorts at about half price.

Wm. MILLS —AND— **SON,** 7 Warren St., N. Y.

Sportsmen's Goods.

5 Consecutive Shots, 50 feet, off-hand.

WILD HARRY, the Indian scout, says that with a Stevens' Rifle or Pistol, at 50 feet, off-hand, he can knock the spots out of a playing card in this way all day long. He is obliged to use these arms to do the great feats performed daily in Barnum's Circus and elsewhere. Ringing a bell *every time* through a *quarter-inch bulls eye*; cutting the ashes from a cigar held in another person's mouth; piercing a dime held between another's fingers, and numerous other difficult and wonderful shots. The only objection to these arms is that they shoot so well, are so handy to take apart and carry about in a trunk or bag, that everybody wants them, and the makers have had to enlarge the factory, and work nights to supply the demand, and even in the dull season cannot get much stock ahead. Send for illustrated price list to

HUNTER'S PET RIFLES: .22, .32, .38 or .44 cal., 18 in., $18; 21 in., $19; 24 in., $21.

POCKET RIFLES: .22 or .32 cal., 10 in., $12.25; 12 in., $13.25; 15 in., $15; 18 in., $16.50.

GALLERY PISTOLS: Light, $20; heavy, $22.

NEW YORK, May 19, 1880.

I avail of this occasion to inform you that the little pocket rifle that I bought from you six months ago is a *perfect* gem. On my last trip I had occasion to use it in the woods, and out of 100 shots I killed 87 birds, *the largest size* being a wild pigeon at a distance ranging from 10 to 300 feet. For accuracy and perfection I consider *Stevens rifle unrivalled*. Hoping this statement will give you pleasure, I remain, dear sir,

Yours, very respectfully, J. A. P. BONALDE.

Hotels and Routes for Sportsmen

Black Bass and Maskalonge

THE CELEBRATED FISHING GROUNDS OF THE

THOUSAND ISLANDS.

St. Lawrence Hotel and the Rathbun House,

CAPE VINCENT, N. Y.

[Terminus of R. W. & O. R. R.]

Both under one management. The Rathbun House has been enlarged to double its former capacity, and both houses refitted and refurnished throughout. They are located in the immediate vicinity of the very

BEST FISHING GROUNDS OF THE ST. LAWRENCE RIVER.

Competent oarsmen with first-class boats at reasonable prices can always be obtained. Malaria, mosquitoes and hay fever are unknown at this point. The terms for board at either of the hotels are from $7 to $14 per week, according to location of room.

See FOREST AND STREAM of July 1, 1880, "Bass and Maskalonge Fishing," for description of the attractions, and send for circular containing full particulars.

H. L. FOX, CAPE VINCENT, N. Y.

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R. R.

THE ONLY ROUTE TO THE

Trout, Grayling & Black Bass Fisheries,

AND THE

FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the

Grand Traverse Region.

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections.

The hotel accommodations are excellent, and will be largely increased in time for the season of 1881 by new buildings and additions.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. Time Cards, Folders and further information, address

A. B. LEET, Gen'l Pass'r Agent,
Grand Rapids, Mich.

Fishing Season at Rangeley Lakes Again Open.

SARANAC LAKE HOUSE,
(Formerly "Martins,")
ADIRONDACKS.

I beg leave to inform the traveling public and old patrons of this well known and popular resort that I have purchased it and will open it to visitors on or about May 15. The house is being thoroughly renovated with new furniture throughout, and every comfort and convenience to make it equal or superior to any other Hotel in the country. An A1 table; best of attendance; superior and experienced guides. Neither expense nor pains will be spared to give my guests satisfaction.

Address MILO B. MILLER,
Saranac Lake, Franklin Co., N. Y.

$66 a week in your own town. Terms and $5 outfit free. Address H. HALLETT & CO., Portland, Maine.

Hotels and Routes for Sportsmen.

TO SPORTSMEN:

The Pennsylvania R. R. Co.,

Respectfully invite attention to the

SUPERIOR FACILITIES

afforded by their lines for reaching most of the TROUTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

THE LINES OF

Pennsylvania Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principle cities to KANE, RENOVO, BEDFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for

Trout Fishing, Wing Shooting, and Still Hunting.

Also, to

TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST, renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

L. P. FARMER, Gen'l Pass. Agent.
FRANK THOMSON, Gen'l Manager. febl7-y

Chesapeake & Ohio R'y.

THE ROUTE of the SPORTSMAN and ANGLER TO THE BEST HUNTING AND FISHING GROUNDS OF VIRGINIA AND WEST VIRGINIA,

Comprising those of Central and Piedmont Virginia Blue Ridge Mountains, Valley of Virginia, Alleghany Mountains, Greenbrier and New Rivers, Kanawha Valley, and including in their varieties of game and fish, deer, bear, wild turkeys, wild duck, grouse, quail, snipe, woodcock, mountain trout, bass, pike, pickerel, etc.

Guns, fishing tackle and one dog for each sportsman carried free.

The Route of the Tourist,

through the most beautiful and picturesque scenery of the Virginia Mountains to the White Sulphur Springs and other famous summer resorts.

The C. & O. R'y is reached by rail at Huntingdon, W. Va., from the West, Northwest and Southwest; at Charlottesville, Va., from the North and East, and at Richmond, Va., from the South.

The completion of the Peninsular Extension in the summer of 1881 affords

THE ONLY ALL RAIL ROUTE TO THE "YORKTOWN CENTENNIAL"

and establishes a continuous rail line, via Richmond, Va., and Newport News, Va., between the mouth of Chesapeake Bay and the Pacific Ocean.

CONWAY R. HOWARD,
G. P. & T. A., Richmond, Va.

Old Dominion Line.

THE STEAMERS of this Line reach some of the finest waterfowl and upland shooting sections in the country. Connecting direct for Chincoteague, Cobb's Island, and points on the Peninsula, City Point, James River, Currituck, Florida and the mountainous country of Virginia, Tennessee, etc. Norfolk steamers sail Tuesday, Thursday, and Saturday. Lewes, Del., Monday and Thursday at 3 P. M. Full information given at office, 197 Greenwich Street, New York.

Bromfield House, Boston.

EUROPEAN PLAN.

MESSENGER, Proprietor.

ADIRONDACKS.

Sportsmen and Tourists going to the woods via Plattsburgh after July 1 can find me at the Fouquet House, that city, and on the train for Ausable Forks Tuesday, Thursday and Saturday mornings to arrange for conveyances and seats in coach for the lakes. My coaches being new and of Abbott & Downing's latest approved pattern, I am not only able to offer more comforts and conveniences than other lines, but having guided over the entire Adirondack region so long I can furnish my patrons with such reliable information as may assist them in carrying out their plans for hunting or fishing. CHAS. J. GREENOUGH, Stage Prop. and U. S. M. Agt., Saranac Lake, Franklin County, New York.

SUMMER RESORT.

ON SHINNECOCK BAY, LONG ISLAND

Having added largely to my house I am prepared to take two or three families for the summer. Surf and still water bathing, also good snipe shooting. Good boats and guides ready at all times. Plenty of sea food cooked in best manner.

Hornbeam Rods
A SPECIALTY.

W. HUNTINGTON,
WILTON, CONN.

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly-fishing. Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take up other rod, and be fairly sure of returning with it in serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON as above.

THREAD-WOUND, LONG-RANGE
SHOT CARTRIDGE CASES

For muzzle and breech-loading, cylindrical and choke-bore shot-guns. Made to open just short of 50, 70 and 90 yards, giving close pattern and great penetration. 10 and 12 gauge. Send for circular.

GUNPOWDER!
Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breech loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 8, No. 7 being the coarsest. Packed in 6¼ lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg. "Sea-Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg. coarse, FFFg. fine.

Dupont's Sporting, Mining, Sheeting and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound *only.*

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration.* For field, forest or water shooting it ranks any other brand and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG and "Sea Shooting" FG in kegs of 25, 12½ and 6¼ lbs, and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist.* The FFFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FG is the standard *Rifle* Powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

88 WALL STREET, NEW YORK.

TO CORRESPONDENTS.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen.

Communications upon the subjects to which its pages are devoted are invited from every part of the country.

Anonymous communications will not be regarded. No correspondent's name will be published except with his consent.

The Editors cannot be held responsible for the views of correspondents.

All communications of whatever nature should be directed to the Forest and Stream Publishing Company.

Subscriptions.

Subscriptions may begin at any time. The subscription price is $4 per year ; $2 for six months. Remittances should be sent by registered letter, money order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States and Canadas ; and is on sale in Europe by The American Exchange, 449 Strand, W. C., London, Eng. ; and by Em. Terquem, 15 Boulevard, St. Martin, Paris, France.

Address: **Forest and Stream Publishing Co.,** Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.

Thursday, June 30.

THAT 'POSSUM will be served in every style July 7, 1881.

THE FLY CASTING TOURNAMENT.

FLY-CASTERS say that the late tournament was the largest and most successful of any ever held. Why it is that this beautiful art has no votaries outside the New York State Association for the Protection of Fish and Game we do not know, but if a tournament was ever under other patronage, either in this country or any other, we never heard of it. It is to be hoped that other associations may introduce it, and also that the New York Society will carry out the new features introduced at this last one. One of the most important of these was the perfect record of the wind kept by Mr. A. B. Crane, of the United States Signal Corps.

The day was cloudy and the wind so light that the judges did not consider it necessary for the contestants to cast both with and against it. The tournament was honored by the presence of many ladies, and the following gentlemen were noticed among the spectators, many of whom remained all day : Hon. R. B. Roosevelt, Mr. Chas. H. Raymond, Mr. H. C. Washburne, Mr. H. L. Leonard, Mr. Wm. Mitchell and a host of others. The pond was 84 feet long by 63 feet wide, and in making long casts the contestants were placed back from ten to twenty feet in the salmon and sixty feet in the bass casting from the edge of the pond. Platforms six feet square were laid on the ground for them to stand upon, so that all should stand in the same place, and a line with numbered buoys at every five feet was stretched across the water. This line had been soaked the night before in order that it should not shrink after measurement, and the floats were correctly placed before casting. All was in order, and the only thing which conspired against it was the wind, which was too weak to bring out a contestant's points in casting with and against it.

Mr. Harry Pritchard was the "dark horse," a man whose friends claimed much for him, but who had no public record. It was feared that Mr. Pritchard would enter the amateur class and walk through to the champion's. He disdained to do this, and although the amateur prizes were as good, if not better, than in the Champion classes, and he could not be barred from it, he showed no disposition to enter there. His first entry was in the salmon casting, where he showed that he was an adept; and when we consider the fact that he not only never cast in such a contest, nor ever saw one, and hardly knew what was expected of him, he did well. He was drawn to cast first, and cast as in ordinary fishing, and afterward said that he never saw as much muscle put upon a rod as Mr. Wood did, and that he would have hesitated to put such a strain upon a rod. Of the casting of the Wood brothers little is to be said. Reuben, the elder, is the heavier man of the two, but the wiry build of Ira caused several to think that he might give his brother a close contest if—he wanted to. Mr. Pritchard was very nervous and ill at ease. He cast in his trial casts in a manner new to all present, and termed an "underhand" cast by some and a "water cast" by others. In this the line was not retrieved, but by drawing it in a few feet and then sending it out again without leaving the water, it rolled over and over with a snake-like motion, and the fly was sent further and further. According to the rules this style could not be allowed, as the regulations expressly say that a cast shall not be valid unless the line be retrieved, and in retrieving he lost many flies. Mr. Reuben Wood won much applause by his skill and grace, and did not lose a fly.

The bass casting was in "Cuttyhunk style," with a one-ounce sinker. The casters of heavy baits at Cutty hunk and Pasque Island were not represented. The score given in another column gives the result. This style of casting is new to the Association, as it is only practiced in salt water. It is quite an art and should be continued. The heavy-weight men say that if they had been represented there would have been some extraordinary long distances scored. Mr. Endicott, who took the third prize, was commended for his accurate casting.

When the amateurs in Class C were called to the score no one seemed able to predict the winner. The casting as a whole was good, and those who expected to find half or more of the new men to be duffers were disappointed. Mr. Hier, the winner of the first prize, was challenged several times for lost flies. He had little advantage by being coached by Reuben Wood, for "Uncle Rube" seemed impartial in this matter and gave many of the amateurs advice. Mr. Hier's cast of 67 ft. 6 in. was beyond that of any of the others with their allowance added. Once he cast 73 ft., but having no fly the cast was lost. The next in length was Holberton and Plumb who cast 64, the former with a longer rod, and yet, when style and accuracy were taken into account, one of these men fell to the fifth and the other to the seventh place. Mr. Endicott was, in our opinion, the neatest caster in this class, and on his style and accuracy took second prize over three men who cast greater distances. Mr. Hier had worked hard to prepare himself for this contest by continual practice, as shown by the condition of his hands, which were skinned and calloused by the rod, and his labor was well rewarded.

In the next contest, Class B, where only 1st-prize winners in previous contests were barred, Mr. Pritchard entered and took the first. He was still nervous and continually forgot to retrieve his line and had to be cautioned. Mr. Arrowsmith, who took second, had a record. He took second prize at Le Roy in 1867 in a free-for-all, when there were only two entries and no score report was given. He has not cast in public since, but he evidently knows how to do it. Mr. Endicott again showed his graceful style and led Mr. Holberton, who beat him on distance but was behind in delicacy.

The Champion class was looked for anxiously as Mr. Pritchard would again meet the veterans. He was still nervous, and it was also noticed that Ira Wood was getting shaky. The latter gentleman had eaten nothing since early morning and it was now six P. M. He had assisted every one who had a tangled line, coached the amateurs indiscriminately to encourage them all, lifted the platforms and made himself useful at every opportunity. This and his continual smoking caused him to shake. Reuben Wood took the first, Mr Pritchard second, Ira Wood third and Mr. Dennison fourth. Mr. Pritchard's casting, for delicacy, was admired by many. He cast fully sixty feet and his flies fell before the line touched the water. The others, in all the classes, when casting for delicacy cast a side cast, so that the line fell lightly but before the flies. We incline toward Mr. Pritchard's style in delicate casting, and hope that future judges will decide on this question. Mr. Pritchard's style was a new one and the judges followed precedent. He wanted to instruct them, but of course it is not admissible for a contestant to instruct judges in any point. They could not at this late stage take a new view of any points.

In the sweepstakes Reuben Wood led off and actually cast seventy-five feet with a ten-foot rod. This brought an exclamation from the veteran, Mr. Roosevelt, who pronounced it the most wonderful casting he had ever seen. He took the first and only prize. Mr. Pritchard cast as far once, with a longer rod, but did not or could not retrieve his line. Ira Wood essayed to cast, but a trial convinced him that he "had gone to pieces." Thus ended the largest and most successful fly-casting tournament ever held in any land. The arrangements and the judging gave general satisfaction, and the judges agreed so well on comparing their notes that the referee was not called on to decide a single point. The latter gentleman was prompt to investigate a challenge of loss of fly or other cause, and won approval by his promptitude.

THE NIHILIST MARKSMEN.

WE depart from our rule of not noticing anonymous communications to give space in this number for a remarkable letter, setting forth what seems to be a use of our American rifle ranges certainly not intended when they were projected. The plan seems to be to do some king-killing at long range ; and, with the weapons which may be procured in this market, an experienced shot would find but little difficulty in picking off an individual at a distance of fully 500 yards. At present, on the ranges, it is no novelty to have marksmen at the mid-range lodge a dozen consecutive bullets within the carton circle of 11 inches diameter. This, too, with light rifles, and with the comparatively heavy 3 lbs pull. Lighter trigger pull, heavier rifle, and a rest to shoot from would all increase the chances of hitting nearer the mark.

Bombs thrown by hand and the use of a pistol from the midst of a crowd are very crude and unreliable plans, while by selecting a site commanding a view of a point where the victim is to pass it would be comparatively easy for the conspirators to carry out their murderous plan with sure deliberation, while the distance from which the shot would come would enable the assassins to readily escape.

Five hundred yards mean a distance of over six of our ordinary street blocks, and if one of these sharpshooters, which our mysterious correspondent hints are practicing on our American ranges, could secure a position overlooking a point where the Czar or other victim was to hold a review, then the "taking off" would be comparatively easy with the telescopic sights and other aids to fine shooting. There is no better school of marksmanship in the world than an all-comers match on one of our ranges. All sorts of notions in shooting are there tried, and either accepted or condemned as the results warrant. No suspicion is aroused by practice of any sort, and by scattering their force of marksmen, as seems to be the case with these conspirators, a vast amount of information on windage, elevations, the sorts and effects of various charges and the operations of the several makes of arms may be gathered.

What is to be done to checkmate their devilish designs we cannot say. It may be that it is after all merely a mare's nest story started by our correspondent without proper authentication or upon partially heard remarks. That our correspondent preserves a strict personal seclusion is not surprising, since the fate of an eaves-dropping informer is not apt to be a very pleasant one. We can only aid in thwarting the designs of these rascals, premising that they have the plan

laid down, by giving such facts as have fallen in our way full publicity, leaving it to others to take the preventive or precautionary step.

THE FATHER OF AMERICAN FISH-CULTURE.

CONCERNING the claims of Dr. Garlick and Prof. Ackley *vs.* the Rev. Dr. Bachman, upon which so much has been said in our columns, we can now say that we have received a copy of "Proceedings of the Cleveland Academy of Natural Science, 1845 to 1859; Published by a Gentleman of Cleveland. 1874." In this (pages 86 to 91) we find a paper "On the Artificial Reproduction of Fishes, by Dr. Theodatus Garlick, M. D." Read before the Academy Feb. 14, 1854. In this paper he relates the determination of Prof. Ackley and himself to make the experiment of breeding fishes after reading the work of Remy and Gehin, in France, and of their selection of the brook trout for their first experiment. On the 21st of November, 1853, he captured a pair from those in the pond where they had been placed and took the eggs by hand and artificially impregnated and hatched them. Further on (pages 118 to 123) we find as follows: "At a meeting held at Cleveland, O., Nov. 28, 1856, Dr. Garlick in the chair, the Doctor exhibited eggs of brook trout under the microscope. At a meeting held Dec. 5, 1856, he showed views of the anatomical structure of *Salmo fontinalis* from fish spawned Nov. 4 Again, Dec. 12, 1856, he resumed the examination of the young of the trout and specimens only twelve hours old were placed under the microscope and the circulation of the blood shown, together with the peculiar cellular structure of the yolk sac, etc.

This bulletin fully establishes Dr. Garlick's claim to have hatched trout in 1853, and it has been sent to Prof. Goode. Personally we never doubted the Doctor's assertion that he did artificially impregnate and hatch trout in this year, but we were glad to get the published proceedings of the Academy which contains the record and fully substantiates all his statements in this matter.

THE STATE TOURNAMENT is still in progress, as we go to press. The meeting has been one of the largest of the kind ever held in this country. As it is not yet concluded we reserve our comments upon it until next week. The tournament has attracted much attention from the daily press of this city, and the tone of criticism upon the meeting has been of a character which we venture to say was not anticipated by the attending clubs. The details of each day's work, including the whole of the State Shoot proper, are given elsewhere. The scores of the other matches will follow in our next edition.

THROUGH the courtesy of the editors of the *Christian Union* we are permitted to reproduce from the columns of that journal the plans of the camp cottages which have been built this year at Lake George Park. These cottages are comfortable and inexpensive, and in many ways much more adapted for out-of-town summer life than are the more primitive tent or the more pretentious hotel. We should like to see this plan tried elsewhere, as Dr. Eggleston suggests. There are numerous fine sites for such a summer cottage "camp" or village near this city. Is it not practicable to form such a select joint stock company among those whose employment keeps them in New York during the summer, but who would gladly repair daily to a summer settlement somewhere near the city on the Hudson? Now that the *Christian Union* has taken the initiative, we hope it may carry out some such project.

BY the addition of four extra pages this week we are enabled to give the full scores of the Coney Island tournament without encroaching at all upon the other departments.

The Sportsman Tourist.

A MODEL CAMP.

LOVELIEST of the lakes that break the expanse of that forest known to Adirondack sportsmen as the South Woods, is Massawepie. At least so think the two fishermen, who, on this morning of early August, are floating lazily upon its surface. The sky is clear, the sun bright, and the lake-trout are lurking in the coolest depths below, far from the temptation of worm or fly. The sportsmen are reclining in the boat and looking at the wild scenery around them. They follow the varying outline of the lake, here sweeping far inland in a beautiful bay, there making out in a bold promontory, with here a sandy beach and there a rocky point. They see the densely-wooded ridges rising abruptly from the shore. They see the hills beyond, Blue Mountain towering high above the rest, and the dim outline of more distant peaks in the background of the picture. And as they look they see something which leads them to take their paddles and send the canoe swiftly toward the shore. It is not a deer nor bear —no denizen of the forest has hastened their departure; but if you have ever lived in the backwoods many weeks you, too, have reeled up your line when you have seen about noon the smoke of the camp fire curling above the trees. The canoe is directed toward a spot where the underbrush is cleared away and there is a path leading from the landing up to a high bank which overlooks the lake. Seen from a distance, there is only a little opening where a few of the tall spruces and hemlocks have been cut away; but a near view discloses a white tent among the tree-trunks, a sheltered table of bark already spread, or rather loaded, for dinner, shirts drying, blankets airing, wet boots smoking, camp kits strewn in all directions, logs logs piled near the fire—in fact, a model camp. Not one of those aristocratic camps that the sportsman sometimes finds near the Saranacs or St. Regis, glorying in a log hut, adorned with innumerable split bamboo rods and whole batteries of guns, where the chief occupation is target-shooting and the ground is strewn with cartridges; not that, indeed, but a real genuine camp *rusticus*, boasting of nothing but plenty of venison and trout. That old relic of a guide with a full white beard and sunburnt face is "Wren."

That other person with a leathery complexion who is doing nothing in particular was a white man once, and might be still if the long accumulated mass of dirt and tar oil was removed from his face. But there are mosquitoes in the woods. Yes, such is the fact, and the Professor—I forgot to tell you that the dirty man is the Professor—the Professor, I say, when he made the discovery declared that he wouldn't be bothered by such pesky little unworthy-to-be-noticed insects, and he has kept his word, for the mosquitoe doesn't exist in the whole Adirondack region that has got a bill long enough to reach through the coat of tar-oil on the Professor's face; and that's saying a good deal, for the insects grow pretty large there. But a few words more about the Professor. He is the originator, pusher and and go-aheader of the party which I am now introducing. His chief occupation while in the woods is putting on tar-oil. When he isn't doing that, he stuffs—stuffs in all senses of the word. In fact, he is a success as a stuffer. He stuffs at meal times, but if he never stuffed anything but himself I should not mention it. His hobby, however, is stuffing birds and animals, and not only these, but fishes too; yes, and snakes, frogs, worms, any living thing that is visible to the naked eye. If Wren kills a bull-frog for bait he wants to stuff that. There is a rumor, and Wren says it is so, that last summer when the Professor lived at the house of a farmer down in a clearing at the Raquette, he indulged himself in stuffing everything he could shoot. He had filled the house with cranes, hedgehogs, etc., when one day a new baby was added to the farmer's large family, and little five-year-old Bobbie, after watching the baby brother for some time, looked up in his mother's face and said, "Muzzer, don't let Professor stuff baby."

But to return to our campers. Wren hears the voice of the hungry fishermen as they hasten up the path, and carries the pan of smoking venison from the fire to the table. The Professor proceeds to whet an immense dirk which he carries in his belt. In a few moments the four are smiling around the little bark table, savory with venison, trout, and griddle cakes. A morning's exercise in bracing mountain air gives one a relish for the plainest food, but with what an appetite the sportsman sits down to his repast of game, he only knows who has himself thrown the fly and hunted the deer in the remote fastnesses of the wilderness. Wren is naturally very talkative, but seldom says a word during the more important occupation of eating. The meal over, however, his face broadens, his eyes twinkle, and he suddenly bursts into a spasm of laughter.

"That's only to help digestion a little," he said, when questioned as to the cause of the merriment; "but when I looked at yer Ligourney I kinder thought ye'd like to sleep in the tent to-night."

At this all explode except the boy addressed, who essays a smile, but with poor success, for his face is so diversified by mosquitoes bites that it resembles an elevated map of the Alps. While the others are recovering themselves I will introduce him. He is the tall, fine fellow of eighteen, in corduroy pants and white flannel shirt, whose neat appearance would tell a backwoodsman at first sight that this was his first trip into the woods. The young guide at his side is Hank. But perhaps by this time you are asking the cause of the fun. I will tell you, or rather let the Professor; for it is one of his standard stories. Excuse him if he seems to talk a little like a guide. I don't mean as guides talk in books, but as they really talk; a good deal like other people, but with a few backwoods phrases now and then. Many of them are men of some education—Adirondack guides I am speaking of—and they never deliver long discourses in broken English at critical moments. It is the height of the Professor's ambition when in the woods to look and act a guide, and whenever their party meets another Ligourney always asks the strangers to pretend to take him for one, whereat he is greatly delighted. With this introduction to his story I will let him begin.

You see that boy Lig. had determined before coming into the woods to have a hut, the rest of the party might sleep in a tent, but he wouldn't. He would live the life of a true hunter, roaming the woods by day, and resting at night upon fragrant boughs of balsam and hemlock with no shelter but the bark of forest trees above him. In vain Wren and I urged the comfort of a tent, and related our experiences. We were met with a copy of Murray and the settler. 'Murray didn't sleep in a tent.' Look here, he says, 'Throwing some huge logs on the fire, and wrapping our blankets around us we—' 'Never mind young one, you shall have a hut if you won't quote any more Murray, and so Wren and I cut a spud and peeled several noble spruces, while out of the broad sheets of bark Hank constructed one of those picturesque three-cornered little hunting shanties open to the south. The ground within was covered with boughs, and in front we built our camp-fire.

Night came—our first night in the woods. The shades fell upon the hills around us and over the blue waters of the lake. The camp fire, dimly burning, alone broke the gloom. It was a hot, sultry July night. Tired with our day's work we lay down early, the guides in the tent, Ligourney and I in that never-to-be-forgotten shanty. Fainter and fainter burned the camp fire. Darkness deepened around us. Rest came. Rest for the creatures of the wilderness. Rest for the two guides slumbering heavily in the tent. But "tired nature's sweet restorer" never visited that shanty. The fire went out, the night grew damp, and the mosquitoes came. He came collectively. He charged like the Old Guard at Waterloo and the result was even more bloody. I owe my life to the tar-oil. I pulled my blanket tightly over my head, leaving only the tip of my nose exposed. I was then quite comfortable. But poor Lig.; he plunged and kicked convulsively, and ever and anon between his struggles there came a despairing moan, so mournful but yet so comical, that I finally shook with laughter. "Oh, shut up! It may be fun for you, but I'll be hanged if it is for me."

I was silent out of pity and he didn't speak again. Morning came at last and with it reinforcements for the enemy. But as soon as it was light we crawled out from the heaps of slain mosquitos and kindled a fire. I felt a strange sensation in my nose as if it were enlarged somewhat. I put my hand to my face. Horror! Long before I expected to touch my nose I came in contact with a mass of swollen flesh. Yes; it must be so. Here was the end of my nose—way out here. I called Lig.'s attention to it and the unfeeling fellow went into hysterics. The more considerate Wren tied up the injured member in a rag; but, my friends, to this day my nose has never regained its original beauty! However, the hut became our storehouse, and ours was still a model camp, for the tent stood upon the high point above the lake-side and the cool breezes blew mosquito, black fly and midge far from the couches of our rest.

AN ELK HUNT BY MOONLIGHT.

WHILE hunting among the Rockies in the vicinity of Chief Mountain, several summers ago, I came upon a little g'ade one day which held in its centre a miniature pond. Around its shores the elk had trod the grass with their sharp hoofs until very little verdure remained. Two well-worn trails led off up the mountain, and all the signs indicated that this was an every-day—or night—watering-place for these animals. At the time I found it the sun was nearly set and I had to hurry in order to reach camp before dark. So taking a hasty survey of the place, with many a wistful glance at the track of some monster elk, I hastily descended the canyon and reached camp none too soon, as the gathering darkness was accompanied by a violent thunder storm, which "turned loose" just as I entered the lodge.

It commenced with a low muttering of thunder and occasional vivid flashes of lightning, which illuminated far-away precipices and lofty peaks with startling distinctness. The very seams of a distant ledge and the fibrous roots of a stunted pine were revealed by an unusually bright flash. Shortly the thunder became louder and nearer and seemed to batter and crash up against the rocky cliffs in successive charges, as if Nature had brought out all her artillery to rend the very mountains. Then came the hail—great pearl-like balls of ice—which rattled down upon the lodge and through the smoke-hole with chilling effect, several times subduing the few embers which fitfully flickered in the fire-place.

Perhaps nothing so lowers a man's estimate of his power and importance as a thunder-storm. Then, as crash after crash sounds over his head and the lightning seems to play about his very feet, he realizes his littleness—his utter insignificance. Among such mighty contending elements he realizes that he is of no more consequence that a leaf blown about by the fitful winds.

The storm quickly passed over and finally died away in the distance. With a long-drawn breath of relief and a murmured "Thank God," I started to build up the fire. As I did so Pe-nuk-wi-um and his family emerged from under sundry heaps of bedding and robes, which were piled promiscuously in different parts of the lodge. They looked so ridiculous as they crawled forth that I couldn't help but smile and finally burst out in a loud ha, ha, ha!

"Do not laugh, my friend," said the chief, solemnly, "do not laugh. The thunder and lightning are great chiefs. Do not laugh—they might come back and kill us."

If a war party of Sioux had suddenly come upon us I do not think Pe-nuk-wi-um and his family could have been more frightened. They sat huddled about the fire and in trembling tones recounted the disasters they had known to be caused by the dread elements.

To change the subject, I told the chief about the lakelet I had discovered.

"Ah, I know the place well," he said. "When a young man I killed many elk there. The elk come there only in the night to drink, and when the night was day (moonlight) we used to go there to kill them. We would hide in the bushes by the trails. We would hide so good that even the birds could not see us. We sat among the bushes and the leaves hid us from all animals. Far off we could hear the elk coming down the trail. They would often stop to bite off a mouthful of green leaves; then they would come a little closer and stop to look. 'Ah, smart elk!' I used to say to myself, 'I see you, but you can't see me. Come closer, I want to see if your heart is good.' Then they would come nearer and the chief elk would stop right in front of me. Then my arm was strong. I drew the arrow back, took a careful aim and shot right where the moon shone bright on his side. Buzz! the arrow went right into his heart and he lay down. Then I shot fast. All my arrows lay on the ground before me and I kept shooting till the band ran away."

"It is moonlight now, Pe-nuk-wi-um," said I; "let's go up there to-morrow night?"

"Ah, I am not a young man any more," he replied. "The winters sit on my head and make a heavy load to carry My legs are not strong any more."

"But it isn't far," I said.

"Well," he answered, "I will go with you, but we will have to travel slowly; there are many rocks to go over, and I cannot jump them like the sheep."

The next afternoon, after two or three hours of slow walking and climbing, we arrived at the lit le lakelet. I noticed with satisfaction that quite a number of elk had visited the place during the night. In several places where I had walked about in the mud the day before I found that they had obliterated nearly all traces of my footprints. It was yet an hour or more till dark, and to pass away the time we sat down on a fallen log to smoke and chat. From our elevated position we had a splendid view of the country to the East. About eighty miles distant the three lonely butts of the sweet grass hills stood surrounded by a sea of prairie, and still further eastward the blue outlines of the Bear's Paw mountains loomed up against the sky. Southeast, far beyond the Missouri, I recognized several of the Moccasin and Snowy mountains, over which I had clambered in pursuit of mountain sheep.

As the sun gradually sunk in the West, we ate our lunch of boiled meat, bread and dried bull-berries. The bull-berry (called by the Blackfeet, *Mis-sin-it-sim*) forms one of their principal articles of diet, and is gathered in huge quantities by the squaws, who cut off the bushes and beat them over blankets with sticks. In color and taste this berry resembles our red currant, and is, perhaps, a trifle more tart in flavor.

"Appe-cun-ny," said Pe-nuk-wi-um, suddenly, "did you ever hear about the Old Man and the bull-berries?"

"No!"

"Then I will tell you the story. Once the Old Man was walking by the river, when he thought he saw some nice large berries in the water, and taking off his clothes jumped in after them. When he got in the water, however, he could not find the berries, and climbing out on the bank was about to put on his clothes, when looking down in the water he again saw the berries, and once more jumped in after them. This operation he repeated a number of times, until he finally became enraged, and tearing up his robe bound some

stones to his feet with the strips, determined to jump far enough and deep enough to get the berries. But he was too strong, and jumped way out where the water was black and deep. Down, down he went, and nearly drowned. He finally succeeded though in breaking the strips which held the stones to his legs, and, tired and half strangled, climbed out on the bank to rest. As he lay there he happened to look up overhead and saw great bunches of berries growing on the bushes, and immediately perceived how he had been fooled by the reflection of them in the water. Picking up a club he threw it at them, saying, 'There, I will make thorns grow on you, and after this any one who wants to gather you will have to knock you off with clubs.'"

And now the sun had set, and we repaired to the places we had picked out to watch the trails, Pe-nuk-wi-um taking the left one and I the right.

My hiding-place was not more than fifty feet from the trail, and commanded a long reach of the path where the sun shone brightly through the stunted pines. As the slight wind was blowing down the mountain in the direction from which the elk would come, I dared to light my pipe, and sat for a long time thinking of bygone exploits of mountain and prairie. Hoo, hoo hoo, hoo hoo! cried an owl way up on the mountain side, and from the dark recesses below its mate answered back in a repetition of hoots. What hunter but loves to hear the hoot of the owl! What pleasant memories has he of bygone sport, of peaceful camping in the woods, of silent paddling among the lily pads where the mist winds fantastically upward, but whst are associated with the melancholy notes of this queerest of queer birds.

In my wanderings among the mountains and prairies I miss one old friend of Eastern days—the loon! How many nights have I lain awake in the depths of some Eastern forest and listened to its wierd, long-drawn cry arise from the lake, and, echoing from hill to hill, finally die away in the distance. But, hark! No more dreaming. I heard something surely! Yes, I hear it again, the tread of some heavy animal coming down Pe-nuk-wi-um's trail. A bright flash from the chief's gun, a report, followed by a moment's silence. Then from the animal the most unearthly, hideous yell ever heard. I recognized it. Pe-nuk-wi-um had wounded a grizzly! Perhaps there were more with it! Perhaps—but I waited no longer. I heard something coming through the bushes toward me, and turning, fled with all speed down the mountain. As I crossed the glade I saw the chief emerge from his hiding-place, in spite of his weight and years running like a deer. He was soon beside me, and together we kept on down the mountain. Over rocks and logs, jumping deep holes, we kept on and on, never stopping till we reached the prairie. Exhausted and faint, we sank down upon the grass and tried to regain our breath.

"What was it?" I asked. "A bear," gasped the chief. "Did you kill it?" "I don't know," he replied. "I saw its eyes in the bushes and thought it was an elk. I fired, it yelled, and I ran away as quick as I could." No more hunting that night. So we quietly wended our way back to camp and to bed, but it was long before we fell asleep. Never in my life had I received such a scare. That terrifying yell still echoed in my ears and my heart beat faster every time I thought of it.

Well, of course by breakfast time the whole camp had heard of our exploit, and many were the questions asked and tales recounted about the bear. Accompanied by six or eight young men, I went back to the lakelet. Arriving there, we deployed and slowly reconnoitred the ground. Step by step we advanced to the thicket where Pe-nuk-wi-um had seen the bear. Not a sound was heard. "I guess it's dead," said one. "I don't believe he killed it," said another. "Look," said another, and running a little distance held up a dead lynx to view. "Hi-hi-hi" they all shouted. "Look at Pe-nuk-wi-um's and Ap-pe-cun-ny's bear. See the big bear which yelled. See the big bear which chased them down the mountain." There was no doubt about it. To Pe-nuk-wi-um's distorted vision the lynx had seemed an elk and a bear, and my ears had willingly deceived me as to the cry. Carefully strapped to a pole, the animal was triumphantly borne into camp and received with shouts of derision by the people.

Poor Pe-nuk-wi-um! He never heard the end of the elk hunt. Many a time since have I heard the Indians, speaking of the lynx, call it "Pe-nuk-wi-um's elk." AP-PE-CUN-NY.

Fort Benton, M. T., April 25, 1881.

TWO WEEKS WITH THE BASS AND PICKEREL.

AT INTERMEDIATE LAKE, ANTRIM CO., MICHIGAN.

BY KINGFISHER.

DEAR D.—We went a fishin' up to Northern Michigan in July last, as agreed upon in May, with many regrets that you could not join us as expected; and I will say to you—and you can apply it to yourself as a scourge—that you missed two weeks of as glorious sport as ever fell to the lot of "ye honest angler." We concluded not to fill your place with an unknown quantity, so the party contained only two of the old "Kingfishers," W. (the scribe) and the writer. An editor friend from Hamilton, Ohio, Mr. B., a half-fledged "anguliar," and a mighty good fellow, made up the party—not large, but two of us at least, chock full of love for the gentle art. We shipped the camp outfit ten days ahead, to Mancelona, a station forty miles south of Petoskey, on the G. R. and I. R. R., at which point we were to take wagon for Intermediate Lake, our objective point. By correspondence, everything was arranged and ready for us; wagon chartered, camp-boy hired, and two boats engaged of Postmaster Cutler, of Lake Shore P. O. (at lower end of lake), who was to meet us with the boats at Bellaire, the new county seat of Antrim County. I left Cincinnati at 7:15 Thursday morning, July 15th, and arrived at Mancelona next morning at 6:04, the other two having left the night before, in order to see the upper end of the road by daylight, and have things ready for an early start on my arrival. We left the station shortly after 7 A. M., the scribe and editor in the hack, while the camp-boy and I went with the baggage on, or rather with, another wagon. That hack is a delusion and a snare for the unwary. It was simply an old lumber wagon, without a cover, with two spring seats hung on to the bed, and was drawn by a pair of ponies a size and a half larger than jack rabbits. It is a *mail* hack, and if the mail pouch happens to contain two letters more than usual the passengers have to walk and help to push up the sand hills. It makes two trips a week to Bellaire and up the country as far as Central Lake P. O. at the head of Intermediate Lake. It leaves Mancelona on Tuesday and Friday.

The road to Bellaire, as a wagon road, is frightfully jolty, full of roots, and highly unsatisfactory as a highway generally, but we found the walking to be fair to middlin' and several little cold streams on the way furnished us much comfort on that hot July day. After being on the R. R. a day and night, I was well nigh fagged out and needed rest; so I rode on the wagon all the way down except about twelve miles. Bellaire is twelve and a half miles from Mancelona; no great effort to figure up the distance walked, and walking on an average July day is not strictly a pastime for a person whose waist-band measures in the near vicinity of fifty inches, "of which the writer is one." The new county seat is located on Intermediate River about midway between Grass below, and Intermediate lakes above. The river is a rather shallow, winding, narrow stream, in places scarcely five yards wide, is perhaps four miles long, and connects the two lakes. The site of the town—a huge square blocked out of the heavy woods—was still covered with the fallen trees, lying as felled by the choppers, while a fire that had recently swept through them made it as cheerless and desolate-looking a place as could well be imagined. Six months before it was a first class howling wilderness, but at the time we crept wearily up its one imaginary street at the lower end of the clearing, it contained fifteen unpainted wooden houses and a saw-mill, that insatiate, screaming fiend whose appetite will only be appeased—and at no distant day—when it has devoured the last vestige of the noble forests of Northern Michigan and dried up its streams so there will not be water enough in them to swim a water beetle. We found the people clever and neighborly, and full of hope and plans for the future. It is really a pretty location for a small town, and we believe Bellaire has a future ahead of it. We arrived about noon and found the hack had preceded us only a few minutes. Of course Cutler was not their to meet us as promised, and we spent nearly an hour looking around the place; looked at the river, a mere thread through the woods, bought some lumber at the mill to make a fish box, camp table, etc., made a good many ill-natured remarks about Cutler, and finally, when our patience was worn out waiting for him, concluded to go up the river as far as the lake at least, hunt a camp for the night, and lay for that Postmaster's scalp in the morning. We were told "Green's landing" was only about eighty rods up the river, from which point our P. M. walked twice a week to swap mails, and for this we started, the wagon following with the traps. Luckily we met the subject of our remarks a short distance out of town with two of his sons, one of them carrying a well-flattened mail pouch. The introduction was brief: "I suppose this is Mr. Cutler?" "Yes!" "Well, here's your fishing party. Shake. Where are your boats?" "Up the river at the landing, about eighty rods." (We found eighty rods to be the only appreciable distance in this neck o' woods.) Then we went for that landing again.

At the head of wagon navigation a trail led down to the water and that landing, which was a spot at the water's edge devoid enough of overhanging "bresh," as the camp boy expressed it, to allow a skiff to get to the bank.

At this point is the head of the rapids, eighty rods long, more or less.

The river, through the rapids, is shallow, in places barely deep enough to float a light skiff, and runs like a mill race, which feature no doubt had something to do with the P. M. preferring to walk from the landing down and back.

Three narrow, flat-bottomed boats were to transport us and our luggage up the river and lake somewhere to a camp. We loaded part of the things into them, and the Cutler boys and the writer, to whom powers were given as to locating, started, leaving the rest to smoke and wait till we came back for another load.

Trouble for the writer began right at the landing. The little narrow river ran with a good, strong current, as I found before reaching the lake, and it is an exceedingly devious stream. Its turnings and windings are numerous and "sarpentine," and its currents deceptive. My boat was loaded too much by the head, unavoidable on account of the size of the boxes containing our effects and the narrowness of the craft aft of the rowlocks. It steered wild, and objected decidedly to keep the middle or any part of the stream, and about every ten yards it would take a notion to shove its nose into the bank on either side, or wander off under some overhanging bush or tree with the evident intention of brushing the operator at the oars off into the water. Rowing a boat up that river, loaded as mine was, is calculated to develop muscle and latent profanity, and it requires a fair amount of the former to overcome the current, and a judicious use of the latter, in at least five different dialects, to keep the boat in the stream. By a vigorous use of both I at last turned a quiet kink in the river and beheld the lake only a few yards ahead. I felt like resting, but that contrary boat did not want to go ashore. A dozen vicious yanks on the starboard oar buried her bows in an oozy bar, and I straightened up, mopped the sweat out of my eyes and made a few remarks about Cutler, his boat, Intermediate river and the country at large. As I gazed out on the beautiful sheet of water before me I thought of old man Columbus and his feelings on first sighting land on his memorable voyage, and reaching away back into the dim past I had a figurative and fraternal shake with the lamented mariner.

From the head of the rapids up the banks of the stream are a tangle of swamps. Spruce and cedars overhang and sweep the water in many places, and old dead trunks, bristling with countless jagged limbs and bayonet-like spikes, giving to some of them the appearance of enormous "devil's darning needles," reach out over and into and under the water from every conceivable direction. Most of these have, however, been cut away and removed to make a channel through which to run saw-logs to the lower lakes, and it is an easy matter to make a trip through the river in a small boat down stream. In sight, to the right of us, and in a line up and down the lake, were three islands, the second one of which, about a mile distant, the Cutler boys favored as a camping place, and we accordingly struck out for it against a strong head wind and a short, chopping sea. The pull to the island proved more satisfactory, at least to my boat, than that up the river, as it had more room in which to spread itself and indulge its frolicsome and erratic disposition. It was a good sea boat, however, and behaved very properly after relieving it of its bow load. Passing the first island, we dropped in behind the middle one (which we afterward named Middle Bass) out of the wind and pulled around to the east side, where we found a comfortable landing. This island is probably six or seven hundred feet long and less than half as wide, is flat and low, not more than two feet above the surface of the lake at any point, ground rather spongy, well covered with a plentiful growth of trees, grass and underbrush, and contains two and one-eighth acres.

Last spring, during the prevalence of the long, heavy rains, it was two feet under water. It lies nearly in the middle of the lake, which is here about a mile wide, and is owned by Mr. Frank Lewis, of the Lewis House, at the head of Torch Lake. As there was no spring nor firewood on it, we pulled across the lake to Cutler's Landing in search of a better camp. Here we found nothing in sight but an almost impassable swamp and a half cordroyed streak through it to the hard land a quarter of a mile back, so we returned to the island and concluded it was a very fine place for a camp, which it proved to be on a better acquaintance.

Unloading the boats, we went back after the rest of the party to find the boys out of patience at our long stay, and worrying lest some mishap had befallen us.

I loaded my boat this time on an even keel, the editor in the stern and some other freight in the bow, and the trip was made with less outlay of muscle and fewer general remarks than was required by the first one.

The other two boats would only carry the remaining baggage, which moved the scribe, our Johnny and Mr. Cutler to make a circuit around the swamp and come out to the water nearly opposite the island, where they waited till we unloaded and brought them over. The sun was dipping into the tree tops in the west before we were ready to make camp, but where there were so many willing hands it did not take long to unpack, put up two tents and start a fire and the supper. Our neighbors took their departure for home, leaving us to fight mosquitoes and arrange the camp for the night's much needed rest. With gum blankets, an extra tent, the kitchen fly, buffalo robe, quilts and blankets, we made a comfortable bed, over which we adjusted a mosquito bar made and provided for this especial trip, and then we rested and smoked and laid out the morrow's work. The "skeeters" were numerous and annoying at first, but after we got better acquainted we did not mind them so much. They seemed to take a special liking to the editor. His neck and hands were usually covered with lumps the size of soup beans. On the water, while fishing, they did not trouble us.

Next morning early we started Johnny across to Cutler's for milk, butter, eggs, bread, potatoes, etc., which were all ready for us as per agreement. We had brought with us pilot bread, bacon, sugar, tea and coffee, canned meats, pickles, beans, etc., and all our larder lacked was fresh fish, but the camp must be put in order first. The boy was kept busy most of the day getting over from the mainland a supply of dry cedar for firewood, and a lot of clean rye straw from Cutler's with which we made a luxurious bed in each tent. With the lumber we made a table, fixed up the kitchen, stretched a fly over it, and by the middle of the afternoon the camp was pronounced in running order.

Then we went a-fishin'—down the lake in the "pocket" near the outlet. We found we could get no minnows with a seine as there was not a spot along the shores or down the river clear enough of bull-rushes, lily pads or bushes to draw out at. We caught a few dozen small sunfish with hook and line which proved to be fair bait, but we went back to camp disappointed with four or five small bass and a couple of pickerel. Enough, however, to change smells in the frying pans.

Next morning we tried the sunfish again; cut off the dorsal fin as we used them, and had fair sport, but the results were far from what we had been led to expect. I took one large mouthed bass during the forenoon, of four and one-quarter pounds, which was a fair symptom of better things in store for us had we only good bait.

When I struck the old fellow and he left the water three feet to show his size a streak of electricity ran up the line, and down the rod into the remotest parts of the "old franie," and bait, backache and recollections of Intermediate River all vanished on the instant, and I was a boy again.

Back on the island for lunch, some one said "frogs." Why had we not thought of them before? We got the Cutler boys to catch us fifty for a starter, and from that time on we had rare sport.

Speckled frogs and green were plenty and of assorted sizes, and, large or small, they were a toothsome morsel for both bass and pickerel.

Our Johnny was not much of a cook, but he could surround a frog with neatness and dispatch, and next to his voracity and staying qualities at the table, catching frogs proved ed to be his best "holt," so the question of bait was happily settled.

During the night it commenced to rain—was raining when we got up—and it came down steadily all day except during an interval of an hour or more in the afternoon. This kept the scribe and editor in camp most of the day. They, however, ventured out when it stopped rain ng, and went down to the pocket where they took a few very fine bass and pickerel, and fished back to camp in time to escape the rain when it commenced to come down again. But the spirit moved me most powerfully that particular morning to go a-fishin', and as I have always believed that a little rain should not hold a lover of the sport back when the yearning was strong within him to go I slipped into a rubber coat, put a dozen frogs into a minnow bucket, took the smaller boat, and, crossing over to the east shore, fished quietly up the lake a couple of miles to study the water, and learn, if possible, the feeding grounds of the fish.

The shores of the lake, and more notably the lower portion of it, are fringed with a belt of bull-rushes growing from the bottom, and extending out into the water from a few feet to fifty yards, and here and there a patch of water-lilies spread their broad, green leaves, dotted with white and yellow flowers over the water, covering it for yards like a smooth mat.

Some of these rushes grow to great size. One I pulled up measured sixteen feet and four inches in length, the lower end being as large as the butt of a trout rod. In many places along the outside of this belt, pickerel weed and two or three kinds of aquatic plants and grasses reach up from the bottom at depths of from six to eighteen feet, some of them coming to the surface, and in this water forest ye honest angler will sometimes allow a bass of much strategy to entangle himself, which is liable to chafe his line and his temper, and open the vials of his wrath. And look you under this circumstance that you forget not your cunning by waxing much wroth, and by an over-zealous "yank" rend your tackle asunder to the great hilarity of your finny friend at the business end of the line, whose name is *M. pallidus* or *M. salmoides* as the case may be.

Along this belt of rushes and lily-pads, from the very edge to fifty and seventy-five feet out into the lake, is found the best of the fishing.

We did not strike a half dozen fish a hundred feet away from the rushes, but later in the season they hunt the deeper water, and Frank Lewis says that in October hundreds of bass may be found packed in the deep pools of the little rivers connecting the lakes. Here, under the shadow of the broad leaf of the lily, old "longface," always hungry, poises

himself on his pectorals and lies in wait for his prey, and woe to the unwary sunfish or heedless shiner that ventures half a yard away from the protecting bull-rushes.

Here, along the margin of the reeds, disporteth the black bass—let me write his name in large letters—the bold biter, the game fighter and the one altogether lovely. More cunning and curiosity and sass in his eye, more impudence and fearlessness and strategy, more game and staying qualities in his make up, and more pure and vigorous fight has he in him to the square inch than has the whole pike family, except, perhaps, the noble mascalonge.

Strike a six-pounder with a light rod, work him away from the rushes where you can fight him on fair terms, in thirty or forty feet of clear water, and after you have dropped him over the side of your boat, securely attached to the end of your stringer, you will have added at least a half a year to your lease of life.

Besides bass and pickerel, mascalonge are occasionally taken in this lake and a few others of the chain, but they are not plenty, and it is a feather in the lucky fisherman's cap who succeeds in capturing one.

We were told of one weighing 40 lbs that was speared last spring at the mouth of the little stream connecting Cedar and Intermediate lakes, which made us the more eager to handle one, but we were disappointed, as all our lures failed to induce one to strike. I fished along through the steadily-falling rain nearly a mile from camp and had taken but two bass, the pair weighing perhaps 6 lbs., when I got into a fight with a pickerel that induced me to believe my early education in that line of sport had been neglected, and largely increased my respect for them as a game fish. I was sitting with the butt of the rod resting on the seat under my leg, watching a pair of loons out in the lake, when he struck the frog, and the jerk was so sudden and powerful that rod, reel and all came near going overboard.

He must have fastened himself the first dash he made at the bait, for I did not strike at all, but just stopped the reel with the thumb, and when I got to my feet and the line tightened up he was a hundred feet away, and going, strong as a horse.

For a minute it was uncertain whether he would go his way or come mine, but with the rod well up, the strain soon brought him around, head to the boat. He came slowly in, surging from side to side with a strength that was astonishing. When he got sight of the boat he shot off out into the lake with a velocity that made the reel whistle, but with a pressure on the spool that nearly blistered my thumb, I stopped him, and as he turned he leaped into the air like a bass and spitefully shook himself. I worked him back near the boat again, and he lay quietly for a moment or two close to the top of the water, which was so clear I could see every movement of his fins, and I fancied I could tell what he was thinking about by the expression of his eye. His long countenance wore such a resigned look that I thought he had given up the fight, and I reached for the gaff, but he was only playing possum, for he suddenly dashed under the boat with a rush it was impossible to check, and it was only by a prompt dip of the rod and leading the line quickly around the stern of the boat that it was prevented from fouling, in which event he would have smashed my tackle and flirted his tail at me in derision.

When he finished his rush—aided by the excellent temper of the rod—he sculled gently off down the lake, pretending not to remember anything about what had just taken place; but all the time I knew he was studying over a new scheme to get rid of the steel in his jaw.

Fresh trouble was brewing and it behooved me to study closely all the points in his tactics. I held an easy line on him for half a minute and then gave a smart pull to wake him up, when, turning with a quick swirl, he threw his broad tail out of the water and started straight for the boat. A frantic whirling of the reel-handle kept the line out of his way, but left no time to settle with a stray deer fly that had come in under my hat rim out of the rain and camped on the side of my nose. When within three or four yards of the boat he came to the surface with a rush that sent him four feet out of the water, and after a vain effort to shake out the hook his vicious-looking jaws came together with an audible snap-snap, evidently intended to part the line, but the wire-wrapped silk smelt was made especially for such customers, and he fell back in the water, bursting, no doubt, with wrath and disgust. The failure of this scheme seemed to take the starch out of his dorsal, for I noticed as he plunged under the boat (a favorite bit of strategy with a pickerel) that he had a worried, demoralized look on his long face that said plainly, "What are I now?" But the fight was not all out of him yet. Another rush and he came around under a strong pull, and this time started in a circle around the boat, drawn nearer at every turn of the reel. He had apparently made up his mind that the heft of his trouble lay in that quarter and, gathering all his failing strength for a final effort, turned and came straight at me, and when ten feet away left the water and struck one of the oars hanging over the side as he fell back. This last failure to circumvent the enemy, coupled with the rap he got from the oar, bewildered him, and he lost heart in the struggle. Another feeble and aimless rush, and I reeled him alongside, and, with rod in left hand, thumb on reel, ready to let go at the first stroke of his tail, held his head partly out of water, jerked the gaff in his jaw and lifted him into the boat. He thrashed furiously around for a minute, and finally lay gasping and utterly spent, yet with a sullen gleam in his eye that admonished me to be on my guard when extracting the hook from his mouth.

As I wished to take him to camp alive to show the boys, I did not knock him on the head with the club provided for the purpose, but inserting it betwen his jaws held him down with one knee, released the hook and strung him on a piece of strong cord at the same time. The long, brave fight was over, fought with dogged courage and fine generalship on the part of old longface, and serious doubts as to the final result on mine; but as victory had perched on my banner I was exceedingly comforted, and sat down to relieve the tension on my nerves and put on another frog.

Many similar battles afterward, with both smaller and larger fish than this one, inclined us to the opinion that the fighting qualities of the pickerel are greatly underrated, at least we were surprised by the vigor and gameness shown by them in this lake. Most of them, while on the hook, would leave the water—unusual with pickerel—from one to four times, after the manner of a bass, more noticably when brought near the boat, and their strength is prodigious, requiring the most reliable tackle to bring them to gaff. A very few made no fight whatever; just set their caudal fin "hard-a-port," and suffered themselves to be reeled in like a bent stick. All such cravens were at once knocked on the head for their lack of spirit.

Crossing over to the west shore to a long point reaching out into the lake, which shut off the view of the upper water from our camp, I skirted along the rushes for half a mile, without taking a fish, then crossed back and dropped into a quiet little bay, dotted here and there with patches of lily pads, which looked so inviting for a cast that I stopped the boat about sixty feet away and dropped a frog within three feet of a broad lily leaf glistening in the rain. Instantly there was a swirl in the water, and after a sharp, fierce fight, I lifted about a 4½ lb. large-mouthed bass over the side of the boat. Fishing leisurely back to opposite "long point," I took five more of the same kind of bass, but no pickerel. Here is about the narrowest part of the lake, it being something less than half-a-mile in width.

Nearly straight across from the point comes in from the back hills a little stream of most delicious, clear, cold water, cold almost as ice, and so clear that it looked white contrasted with its green setting of mosses and ferns, and spruces and cedars. A few rods of clean, sandy beach afford a good landing place, and it is one of the few spots at which a landing can be made on account of the overhanging trees and bushes that lap the water around nearly the entire shore line

Pulling the boat up on the land near the mouth, I drank from the stream till I had to shake out a reef in my pants, and always after, when passing, I made a point to stop and drink of its crystal waters.

A noticeable feature of the little streams flowing into these lakes is the entire absence of any fish life in them, which may be accounted for, perhaps, by their low temperature and the shifting nature of the sandy bottoms. Some of the larger ones, however, abound in trout, and Cedar River, which flows into Intermediate River from the east, just above Bellaire, excellent trout and fair grayling fishing may be had by the angler who has the pluck in him to toil and "sweat full sore" through the almost impenetrable tangle of brush and swamp to get to the good places. Under the leaning trunk of a tree hard by the little stream, and out of the drip of the rain drops through the boughs overhead, I kicked the cramps out of my legs and ate my lunch in solitary but satisfied silence.

Taking a parting drink of the sweet, cold water—I could scarcely get enough of it—I reluctantly headed the boat for camp, and leisurely floating and fishing along, arrived at the island about 6 P. M., taking on the way down five more longfaces and a small-mouthed bass.

The weights of the bass run from 2½ to near 5 lbs. The big pickerel weighed 8½ lbs., the others all the way down to 3 lbs., altogether a fine day's sport despite the rain.

The pure loveliness of the string of bass put the boys in such excellent humor that a movement in force up the lake was at once determined on for the morrow, and, supper over and pipes lighted, the camp yarns were cut short for an early turn in and turn out in the morning. The vociferous snore of the camp boy and the baffled hum of a horde of gore-seeking mosquitoes on the outside of the bar ceased their rasp on our nerves as we dropped off to sleep, listening to the sweeter music of the steady patter of the rain on our canvas roof.

TO BE CONTINUED.

NORTHERN NEW HAMPSHIRE.

ONCE more northward! Up the valley of the Merrimac and through the capital city of New Hampshire, where the crowd and the display of military uniforms and the music of brass bands proclaim election day, and tell us that a distinguished citizen of the State is about to take the Gubernatorial chair once occupied by his father; rattling through the bustling towns of Laconia and Lake Village, and sweeping around the beautiful shores of Lake Winnepesaukee, the cars of the Boston, Concord and Montreal Railroad at length deposit us at the Pemigewasset House at Plymouth for dinner.

This satisfactorily disposed of, we take on board our traveling companion who shall be known as "Rob," and a can of land-locked salmon fry, which he has brought from the State Hatchery, and start again for Connecticut Lake.

Up the beautiful valley of Baker's River winding through the mountains of Rumney, Quincy, Wentworth and Warren, round the base of Moosilauke and Owl's Head we cross the Warren summit, and drop down into the Connecticut Valley at Woodville, and back over into Vermont at Well's River to exchange passengers with the Passumpsic Road, and then move on again up the Ammonoosuc through Lisbon and Littleton to Wing Road Station, where the White Mountain branch diverges, and crossing another summit come to Whitefield, the great lumber town where the Jefferson Road turns off, and where we catch a glimpse of Mount Washington through the gaps in the lower range, and keep on down John's River till we reach the Connecticut again at Lancaster.

Thence to Groveton Junction, where we change to the Grand Trunk Railway, and arrive at North Stratford in time for supper. A pair of nice horses and a light wagon meet us here, and deposit us at the Parsons House, Colebrook at 10 P. M. The young fish are placed under the stream from the aqueduct in landlord Bailey's barn, and we turn in to start again the next morning up the Connecticut Valley to the lake, which we reach at noon after a delightful drive.

The young salmon are safely deposited near the mouth of a small brook emptying into the lake, once our dinners eaten, and a double-seated "buckboard" with a pair of powerful black horses provided by Landlord Smith, of the Lake House, to take us into Second Lake.

White shirts are changed for blue flannel, shooting-jacket pockets filled with fly hooks, lines, reels and other paraphernalia, valises left behind us, and with rods, baskets and rubber boots we are deposited at the camp of the Conn. River, Sumpter County, at the outlet of Second Lake at 4 P. M. A tramp of three-quarters of a mile further brings us to Capt. Tom Chester's hosp table camp, where we find the worthy captain with his assistant Harding, and your old correspondent, Edward Norton, ready to welcome us as the first arrivals of the season. "Uncle Tom" has been enlarging his camp, and has added a new kitchen and laid a floor overhead to get more sleeping accommodations, and Norton is showing his manifold talents by making chairs for the camp while awaiting a party of authors and artists who are daily expected to take sketches for an illustrated article for a popular magazine.

"Rob" is hungry for trout and is soon at the landing raft, where his success induces the writer to join them, and with a piece of minnow for bait we basket enough nice brook trout before dusk for breakfast the next morning.

Saturday morning is cold and rough, with the wind from the east and no fish rising to the fly, but Norton pilots us to the leeward side of the point between North and East inlets where, with live minnows, we are soon busy and return to camp at 11 A. M. with three lake trout weighing six and one-half pounds, and a good assortment of brook trout from one pound down to one-fourth of a pound.

In the evening we try the inlets with a fly, but without success.

Sunday is raw and stormy, but clears about 4 P. M., and we get about a dozen trout for supper from the landing raft. Monday it is still blowing hard, and ice has formed on Uncle Tom's pond below the spring, but we try the Point again after breakfast, using live minnows as before, and unfortunately using up our stock of bait, but have a few minutes' exciting work.

"Rob" seated in the stern of the boat strikes a trout inshore, and in a second more the writer strikes one "outboard" from the centre seat, and by the time they are fairly hooked Norton has one in the bow! And now comes the fun! My fish is fighting to get inshore, and Rob's is on his way for deep water, and the split bamboo and the slender lancewood are both well doubled under the strain and the effort to keep the lines apart, but a quick movement and a rise from my seat, as my fish makes a rush toward the stern, enables me to swing my rod over Rob's head while he shortens his grasp and we are clear, my line cutting water for the rocks, and his shooting out for the lake.

A few minutes' steady fighting, and Norton behind me, after bringing in his victim, a half-pound brook trout, grasps the landing net, and scoops up mine as I draw him to the side of the boat, as handsome a *Salmo fontinalis* of one and one-quarter pounds as ever was seen, and then passing the net to me, I am in time to secure Rob's prize, which turns out to be a "laker" of two pounds. Another "laker" of three pounds falls to Rob's lot in the morning, and two more brook trout of one pound each to mine, and we return to dinner and put up our rods, having taken from Friday night till Monday morning eleven and a half pounds of lake trout and over twenty pounds of brook trout from Conn. Lake.

The afternoon sees us on our way out to First Lake, where we spend the night, and return to Colebrook on Tuesday morning, and reach Diamond Pond before night. Here the Messrs. Rolfe have fitted up a nice summer hotel with every accommodation for fishermen, and we pass a pleasant day, though without much success in fishing. The "cold snap" has sent the fish to deep water apparently, and though we whip the lake for hours with all the flies in the catalogue the result is small, those taken fallen to the coachman or scarlet ibis.

We are a week late, a party from Holyoke, Mass., having been very successful the previous week, and probably the next comers, after warm weather comes again, may be equally so. The object of the trip is however attained. We secure ample evidence of the success of the "plants" of land-locked salmon in Conn. Lake in '79 and Diamond Pond in '80, these fish having been often seen in both waters.

Returning from Diamond, half a day is spent at Sim's Stream, and a good basket of small brook trout taken, not to mention the numbers of fingerlings restored to the stream.

June 10th finds us on our way through Dixville Notch, to try a pond in Wentworth's location, marked on the maps as Wentworth Pond, but known to the natives as "Greenough." We are met at Aker's Pond, in Errol, by Amasa Ward, the guide, and taken in his boat across Aker's Pond, and there by a two-mile carry reach his camp on Greenough. Here we fare sumptuously on trout till the 13th, though we catch but few more than we can eat, but the catching of those is not to be forgotten. Two gentlemen from Boston, Messrs. C. and G., with Rob and myself, make a merry party, and a trout of one and one-half pounds falls to the lot of each, Mr. C., Rob and the writer, and enough smaller ones to keep the camp in rations while "Ama-sa's" trout chowder on Sunday was a dish not to be forgotten. Greenough Lake is a scene of beauty buried deep among the dark spruce-covered mountains, with clear water and a rocky bottom, it is a veritable trout paradise, but the fishing, like all lake fishing, is uncertain.

Great quantities of trout are sometimes taken here, and the writer can testify to their gameness on the hook, and their toothsomeness on the table. All these backwoods trout disdain the delicate flies of civilization, and a big, gaudy bass fly, a silver doctor or a scarlet ibis are most killing.

My best trout of seventeen inches I killed with a scarlet ibis. We took two or three dozen pretty trout from Clear Stream while waiting at Aker's for Ward, but the glory of this stream is departed.

Monday, the 13th, took us back through the Notch to Colebrook. Tuesday Rob and the writer took six dozen more small chaps from Sim's Stream, and Wednesday brought us back to brick houses and "biled shirts" again. My split bamboo rod gave perfect satisfaction, and though some of my companions thought it rather heavy—60 ounces—I did not find it wearisome, and think I can kill a heavy fish with it quicker than with a lighter rod.

Should any of my fellow sportsmen who read FOREST AND STREAM feel inclined for a trip to Northern New Hampshire let me commend them to the Percy House, North Stratford, kept by C. E. Smith, the Parsons House, Colebrook, by E. F. Bailey, the Lake House, Conn. Lake, by Mr. Smith, a brother of the one at North Stratford, to "Uncle Tom's" camp at Second Lake, and the Messrs. Rolfe at Diamond ponds, and finally to Amasa Ward at Errol, and the earlier they go the better.

How we took "Uncle Tom" by surprise before his summer supplies had arrived, and how we lived on trout steady for three days, we will only hint at, for we met the long delayed supplies going in as we came out, and the pork and potatoes, coffee and flour held out amply—what did we want more? Nothing but the anticipation of repeating the visit in 1882.

VON W——.

TO WARD OFF MOSQUITOES—Gouverneur, N. Y.—In answer to "W. C.'s" inquiry for something to drive off mosquitoes, I can recommend the following: ⅓ oil of pennyroyal and ⅔ olive or sweet oil mixed. A two-ounce vial full will last one person for a two-weeks' trip in the woods. Rub it well on the hands and face. Be careful not to get it in the eyes. It is not disagreeable and will wash off easily. Have used it for several years with good result.—E. F. B.

MINNESOTA SHOOTING.—We can put one or two gentlemen into communication with a Minnesota farmer who is a frequent contributor to this journal, and who lives in an excellent country for ducks, geese and prairie chickens. Communications should be inclosed to us and addressed to "Minnesota."

Take Hop Bitters three times a day and you will have no Doctor bills to pay.

ESCAMBIA RIVER, WEST FLORIDA.

SO much has been written of East Florida, its scenery, its climate, its sporting facilities of all kinds and its manifold attractions, that it seems almost treason to assert that West Florida is far its superior in all things. Yet such is the honest opinion of this writer, after a tolerably fair exploration of East Florida, and a full and entire knowledge of the western half of the state.

Twenty years ago, the writer, then in the flush of early manhood, accompanied by a dear friend, of the medical profession, first saw the Escambia River. A sable gentleman whom we had picked up in Montgomery, Ala., and who had, or professed to have, all the virtues and none of the vices of his race, was our man Friday for the trip.

Not even Dumas himself, most fertile of French liars, could have held the nocturnal luminary to this accomplished *raconteur* of imaginary adventure. Born free in the West Indies, he spoke a language compounded of all the languages under the sun, at least all that I know. He would commence a sentence in pure French, interlard it with Spanish, and end with sailor English.

He had been a soldier under the grey-eyed man of destiny, Walker, and had charged among the immortal six hundred on that immortal day. Had he known history I doubt not that he would have fought and drank with Suwarrow, dined with Napoleon after Austerlitz, and supped with Wellington after Waterloo. My companion, Dr. W——, named him "Black Hawk," on the spot, less from his resemblance to that bird of prey than an undefined feeling in his mind that by some species of metempsychosis the spirit of that renowned warrior now dwelt in the body of the ex-West Indian.

He united the most undeviating honesty with a surprising capacity for all spirituous fluids, but, when most drunk, he never forgot his place, or presumed upon the familiarity of gentlemen. To sum up all, he knew how to broil fish, to make *Café a la Francaise*, and to make a most exquisite omelette. I never saw a liar that was honest, but I do believe that he was an exception to the rule. Why should there not be exceptions? Every liar is a thief. Granted. Reverse the proposition and we have, "Every thief is a liar." Yet have I seen men in the garb of gentlemen, lie deliberately. And tell one of them that he lies, and he bristles up and talks of his wounded honor! Ah! my masters! *Vive la bambogue! Vive le mechant!* The Escambia River rises in Alabama, and after pretending that it intends to empty itself into the Chattahoochee, makes a bold rush for the Gulf of Mexico, into which it empties after much winding and tribulations.

In the lower part of its course, every little creek which empties into it makes a lake, sometimes ten or fifteen miles long, and often a half-mile wide. These lakes are the chosen home of trout (*M. salmoides*), bream, red perch, wawmouth, sun perch and croppies.

They are bold biters and, being generally uneducated fish, the merest tyro can take them.

Well, behold us then, on a bright summer morning in August, as we stand upon the porch of a low, rambling loghouse, to be our home for the next six weeks. The inmates of this house are an old man, a very patriarch in looks, who, however, can beat us both with a rifle; his wife, two stalwart sons and the two pretty, blushing usual girls to be found anywhere in West Florida. A long row of houses, very similar to the one in which we stand, stretches off toward the river. This is the negro quarter. There is a standing feud, I am sorry to say, between those who live nearest the river and those who live most remote. Dark insinuations pass between dark, old patriarchs anent "dem set lines."

It is openly charged that there are vile darkeys, so lost to all sense of shame that they visit at the midnight gloaming the lines that are set for the toothsome blue cat by the dwellers on the hill. *Per contra*, there is a legend that a hill negro, visiting a line set by a bank negro, for the purpose of reprisal, ran his thumb into the mouth of a monster cat before he took him off the hook, and the fish liking the taste thereof, bit so hard and held so fast that he was fain to cry for help. And the bank negroes took a base advantage of him, and did stripe him from his head unto his heels; all of which we learn at the proper time from one of the family.

Ghostly talk is whispered around, both among the bank and the hill dwellers, concerning a cat of huge size which is popularly supposed to be a witch. However that may be, they tell with bated breath how Uncle Daniel, having bated his hook one night with a small bird, saw the line swaying to and fro in a most furious manner. Hauling it in, he saw the old fiend *in propria persona*, in the shape of an old cat, the veteran old cat of the Escambia, "Twenty-five foot long, sah!" "Wid sasser eyes!" "Wid double de wideness 'tween de eyes ob any oder cat on de yeath! An' he say, 'Daol, I come arter you!' An' I flew, I did! Flew! I done more'n dat, I flewed!"

As we sit around the breakfast table we hear this negro folk-lore and many other curious things. As we walk down to the river we notice that the morning has suddenly become gray and my determination to fish for bream is changed to a desire to throw the festive fly for trout and jack. The doctor sticks to the bald bream, for he loves the bold rush and the hard fight of the gayly-striped bream; while I, slave of the reel, yet think that no angling is worthy the name unless the fish is killed at least thirty yards from the angler.

Leaving the doctor to his own devices, I put my rod together and, with the "Black Hawk as my boatman, I turn into an arm of the river, and with a nondescript fly, the like of which would alarm any Northern angler, I commence casting. I may here remark that the most killing fly is one made from the feathers of the red bird, with the shank of the hook wrapped with white flannel and the head made of black cloth. I never saw a white fly with red wings and a black head, and fully three inches long, but trout and jack have, or they would not rise at it so freely, and all the time looking with scorn and ill-concealed contempt upon artistically made flies.

Round and round we go, and not a single rise to reward our labor. Do you see yon green bush that partly hangs in the water, and under which lie many perch of many kinds? The fly is deftly thrown beyond the bush, and drawn, with skimming hops toward the angler. Ha! A monarch Jack! He flashes from under the bush, like a tiger of the waters, and with a headlong leap, not swirl, he gorges the huge fly, and is again under the bush before you can say the traditional "Jack Robinson." Everything is perfectly still, for the monster does not yet know that he is mine. A slight twitch soon tells the tale, and with a mighty rush he leaves his lair, and for a straight fifty yards never stops.

You check him in his headlong career, and with wide open mouth, showing all his formidable array of teeth, he jumps his full length of thirty inches high in the air. Now he shoves along in regular lines, beautifully geometric, and now he spins himself in small circles, savage and full of fire, and game to the last. The Black Hawk stands with wide open mouth, forgetful of his paddle, while he tries to pull him into the boat, which, after much objurgation and loud threats, he succeeds in doing. There he lies, savage still, for he has bitten the Black Hawk to the bone, who, to have revenge, incontinently hits him over the head with his paddle, and so ends that Jack's capers.

About a hundred yards from this battle ground, spreading far and wide, is a patch of "bonnets," now spreading their broad leaves to their fullest extent, and looking with their dark green invitingly cool and attractive. The fly falls lightly as a flake of snow near a large bonnet, and with a lazy swirl out comes the master of that domicile, and, taking the fly as if he had been waiting for it all day, he feels the sudden stab of the steel, and with race-horse speed he dashes for the centre of the patch of bonnets. Now you need a boatman! And this one proves himself equal to the occasion. For almost as swift as the fish himself he is in the open space, and while the angler holds the trout taut he drives him!

Step by step the sullen foe is driven out into the open water, and then you have a fair hand-to-hand fight with a ten-pound trout. With half the trouble that the monstrous Jack has given us he yields to fate, and lies in the bottom of the boat, while the "Black Hawk" eyes him with a lurking suspicion in his mind that he, too, can bite!

On we go, and by the time that we return to the good Doctor I have caught enough fish for all the family, both white and black.

Such is the record of one day's fishing the lakes of West Florida. Some after this one were perhaps better, others worse; but on the whole the angling was all that any one could ask.

I have not left myself room to tell many moving mishaps that befell the "Black Hawk," unluckiest of niggers. Nor shall I dwell upon the toothsome wild turkeys that fell to my gun, and the two deer that were killed, one with No. 4 shot.

If any of your readers should wish to visit that region they can find a warm welcome and a paradise of small game.

Go to Montgomery, Ala., and take the Pensacola R. R., and get off at the first station in Escambia County. They are welcome to use my name as an introduction. I am known to everybody, or I was "befoh de wah." The climate is the same as East Alabama. No flies and no mosquitoes. No ice and no snow. ST. CLAIR.

THE SARANAC LAKE REGION.

THE FABLE OF THE FROGS.

THE season has fairly opened at the Saranac lakes and vicinity, and sportsmen flock to the forest like doves to their windows. Our woods yet abound with game, and our lakes and streams are alive with fish. This is the season they are waiting to be caught, and enthusiastic anglers wish naturally to find the best way to reach the Adirondacks.

Many, after one trip to the wilderness, especially if they have good sport and a pleasant time, write articles for the papers and periodicals, describing the route they have taken as *the* Adirondacks, not taking into consideration the large extent of the Adirondacks. There are many ways of entering this region, but the experience of thirty years in all parts of the Adirondack wilderness should give me some knowledge of its ways and byways, and to my mind the Lower Saranac combines more advantages than any other place as a starting point for sportsmen or tourists. And this is getting to be better understood, as many parties are proving this season by coming this way and being met here by their guides from St. Regis, Long Lake, Blue Mountain Lake and Saranac Lakes.

This place is easiest of access to both sportsman and guide.

Each hotel-keeper thinks he keeps *the* hotel of the wilderness. They make me think of the East and West Ponds, each inhabited by frogs and separated from the other by a hill. One fine morning one frog from each pond started on a voyage of discovery, each to see how his neighbor's pond compared with his own. When they reached the summit they fell into conversation, and each accepted an invitation to look into their neighbor's pond. So each one rose on his hind legs and with his foot on the other's shoulder looked for the pond. But as we know a frog's eyes are on the top of his head, each one looked into his own pond when he thought he was looking into his neighbor's. So they were both satisfied and retraced their way. When they reached home they were met by their friends and asked how their neighbor's pond compared with their own. They both gave the same answer: "I would not give an acre of this water for their whole pond."

Thus the landlords of the Adirondacks feel each of his own locality.

In leaving Lake Champlain at Westport, Port Kent or Plattsburg you reach M. B. Miller's at Lower Saranac Lake from one to two hours sooner than you can any of the other Saranac lakes. The thorough renovation of Mr. Miller's, the Saranac Lake House, is about complete from cellar to garret. Guests who have visited this house and been satisfied will now be delighted with the improvements.

I write this for the benefit and information of uninitiated tourists, not for any pecuniary consideration. Mr. Miller is not the man to give a summer's board bill for a literary puff.

Parties are misled in many ways. Some *en route* for Saranac lakes have been carried to St Regis by stage-drivers, who are supposed to use their influence for the man who pays them best. But Charlie Greene, the new proprietor of the stage route between this place and Ausable Forks, can be depended on to carry travelers to their chosen destination without fear or favor. He has the best set of stage horses that have ever been on the route, and having bought out Mr. Harper, of Keeseville, is prepared to carry passengers with speed and comfort, and flatters himself he will give satisfaction to the public. SARANAC LAKE GUIDE.

It has come to be quite the fashion for railroads to prepare handsomely printed and profusely illustrated handbooks setting forth the attractions of the country through which they pass. We have from time to time noted such books as they came to our desk. Elsewhere will be found reference to some new ones.

Natural History.

THE UBIQUITOUS SKUNK.

HIS BITE.

SPEAKING of woodchucks reminds a Western correspondent of some of his observations of skunks. The connection we fail to see, but here is what he says:

Have been very much interested in reading notes from correspondents, and read some very curious stories; do not think they could all "produce papers" for some of the tales. "Rio," in the last number (June 2), thinks a woodchuck up a tree a singular sight. I never saw one in such a position in York State, but ten years ago in Kansas I shot several, perhaps six or eight in all, out of various sized trees. I had the good fortune to see one do the climbing. I think he was used to it. He evidently understood his business. Two years ago I was out after rabbits one morning after a heavy fall of snow, and found a skunk lying dead at the end of a hollow log, and the tracks of a fox that had killed him. There could be no mistake as it had snowed until 2 o'clock A. M., and there was no other tracks about, and not a flake of snow on the skunk; besides, I could see where the fox had slid on his side in the snow, just as a dog will do after a similar experience. Is that a common occurrence? Once in Kansas I shot a skunk at least ten feet from the ground among some basswood sprouts that grew up from an old stump, but I think he was the only climbing skunk in that country so I guess that ended the race of climbers.

F. U. R.

Orrleville, O., June 23—Editor Forest and Stream: I inclose with this note a slip which I have had printed in several papers, and desire that you will give it to the public through the columns of the FOREST AND STREAM. I desire to possess all the facts I can obtain upon the subject of skunk bites, with a view of refuting or sustaining a theory which has recently been brought into prominence in the profession, hoping you will oblige me by giving it space. Having recently had my attention called to a disease designated rabies mephitica, or hydrophobia, from the bite of the common skunk (*mephitis mephitica*), I have decided, through the kindness of this paper, to put to the farmers, trappers and other interested parties four questions, in the hope that some information of value may be brought out which will throw light upon a subject surrounded at the present time with a paucity of fact. Before giving the questions it may be best to state, in a general but concise way, the end to which these interrogatories are made. A few years ago forty-one cases were reported in detail of persons bitten by skunks, forty of whom died within ten days or a year with symptoms resembling closely hydrophobia from the bite of the rabid dog. The bites were nearly all inflicted at night, upon the hand, nose or ear, while the persons were sleeping upon the ground in camp. Several cases were also reported of dogs being bitten, the bite proving fatal in each instance. The gentleman who collated the above-mentioned cases asserts as his belief, and endeavors to prove the same, that the bite of the skunk always produces a peculiar form of rabies, which is invariably fatal if left to run its course; that the disease is produced by the inoculation of a special hydrophobic virus generated by the skunk, and, finally, that the first cause of the dread malady (hydrophobia) originates with the skunk and the allied genera. If any one to whose notice this article comes can answer in the affirmative any of the following questions, that person will do me a favor by writing the facts on a postal card and sending it to my address:

1. Have you ever known a person to be bitten by a skunk, and if so, what was the result of the bite?
2. Have you ever known a dog to be bitten by a skunk, and if so, what was the result of the bite?
3. Do skunks ordinarily show a disposition to bite?
4. Have you ever seen a skunk that had lost the power of secreting or expelling the odious fluid which constitutes its battery?

HOWARD JONES, M. D.

Our files contain much discussion of this question. An epitome will be given for Dr. Jones next week.

TREE-CLIMBING WOODCHUCKS.

ASHFIELD, Mass.

AS "Rio" doubts the existence of more than one climbing woodchuck, I would state that twenty odd years ago, being troubled with constant raids on my crops, I bought a good "chuck," dog. He killed and scared away the most of them the first year; and three of his victims he treed. The first two were in low leaning trees, but the third one was about two-thirds grown, and "Spot" got between him and his hole and made a rush for him. "Chuckee" scrabbled the best he knew; but "Spot" soon placed a fearfully short distance between his nose and the varmint's caudal appendage, when "chuck," evidently fearing a curtailment, made a dash at a small ash tree and clawed his way up, never ceasing to climb until he had placed a good twenty feet between himself and "Spot," when he crawled awkwardly into a small crotch. As he appeared painfully ill at ease in his elevated position, I drew my revolver and kindly assisted him to a quiet position on mother earth. The despoilment of a nice bean field near by had rendered me somewhat in earnest on the "chuck" question.

By the way, your turtle story reminds me of a little yarn spun for the beguilement of a party of hunters (including the writer) by an old mossback out in Southern Indiana. The boys had been telling a few fish, turtle and snake stories, to which he listened very attentively. When they had all finished, old "mossy" gave a hitch or two and unlimbered. "Wall, boys, I never have doubted any sort o' huntin' story sence my leetle 'turkle' scrape down on the bottoms." The boys all looked inquiringly and he proceeded. "I was a pokin' round down thar one day last year, when I come across the durndest old-lookin' 'turkle' I ever seen. Why, the moss was an inch thick on his back, and the old cuss couldn't hardly wiggle his tail. I cut a stick to measure the depth of the moss on his back and accidentally scraped off a hunk on it, when I seen some letters. So I scraped it all off and thar in big letters was writ 'B. C.' followed by the figgers '567.' Wall, I stud up kinder faint-like, and tuk my hand off on him to sorter rub my old head, when he fetched a flop to git away and slid down the bank a bit and turned clean over, when, I'll be 'dogoned,' if thar wa'nt printed in the biggest kind o' capitals on his belly, just amind his forelegs, 'Adam,' and down a little furder, nigh his right hind leg (in the same

style that they put the name of the town on dog collars), was printed in smaller type, 'Paradise!'"

RUFFED GROUSE.

TWO CAPTIVE RAILS.

NEW BRUNSWICK, N. J., June 9.

Editor Forest and Stream:

While shooting on the meadows near this city last September I slightly wing-tipped a rail bird (*Porzana carolina*), which I put in my pocket alive. Soon afterward my dog pointed, but although I walked all over the place where I thought the bird ought to be, I failed utterly to flush him. Determined not to give it up so, and searching very carefully through a pool of mud and water just in front of the dog's nose, I accidentally discovered the bill of a bird just above the surface. I reached down and secured him perfectly uninjured. On arriving at home I put both birds in a large cage, scarcely hoping they would long survive.

For nearly a week they were very wild, and refused all sustenance. After that time they commenced to feed, gradually became tamer, and are now in perfect health and apparently quite reconciled to their fate. Their sole diet is bread softened with milk, of which they partake freely, entirely undismayed by the presence of spectators. They are, of course, almost continually bathing, and constantly on the move, and I now consider them the most interesting of all my feathered pets, although I have a large number. They are also very useful to me in my profession, as I paint all my birds from life, if possible. I have had them, as you see, nearly a year, and they seem to-day in as good condition as when first caught. I think they are male and female. Have they ever been known to breed in captivity?

G. R. HARDENBERGH.

We should be glad to be kept informed of the condition of these novel pets. We have never known of the rails breeding in captivity. Have any of our readers any knowledge on this subject?

THE SEVENTEEN-YEAR LOCUST.

IN the June number of the *American Naturalist*, Prof. V. Riley predicts quite an extended appearance of the Periodical Cicada, better known as the Seventeen-Year Locust. The habits of both species of this insect—*Cicada septendecim* and *C. tredecim*—have been carefully studied, and are now pretty well known. The insects may be expected to appear in the localities designated below about the present time. We quote from Prof. Riley's First Report on the Insects of Missouri, his remarks on the two broods looked for this summer:

BROOD XVII.—*Septendecim*—1864, 1881.

In 1881, and at intervals of seventeen years thereafter, they will, in all probability, appear in Marquette and Green Lake counties, in Wisconsin, and may also appear in the western part of North Carolina, and about Wheeling, Virginia; in Northeast Ohio, and a few in Lancaster county, Pa., and Westchester county, New York.

There is abundant evidence that they appeared in the counties named in Wisconsin in 1864, and fair evidence that they appeared that year in Summit county, Northeast Ohio, while straggling specimens were found in the same year by Mr. S. S. Rathvon in Lancaster county, Pa., and by Mr. James Angus in Westchester county, N. Y. Dr. Fitch also records their appearance in 1847, or seventeen years previously, in the western part of North Carolina, and Dr. Smith, in Wheeling, Virginia, in 1830, 1847 and 1864. The distance between the localities given is very great, and it is doubtful whether all these records belong to one and the same brood.

BROOD XVIII.—*Tredecim*—1868, 1881.

In the year 1881, and at intervals of thirteen years thereafter, they will, in all probability, appear in Southern Illinois, throughout Missouri, with the exception of the north-western corner, in Louisiana, Arkansas, Indian Territory, Kentucky, Tennessee, Mississippi, Alabama, Georgia, and North and South Carolinas.

Though, as already stated, I published the first account ever given of the existence of a thirteen-year brood, yet, besides the others mentioned in this chronology, this particular brood has been traced since, as having occurred in the years 1816 1829, 1842, 1855 and 1868; and Mr. L. W. Lyon, at the July (1868) meeting of the Alton (Ills.) Horticultural Society, even mentioned its appearance in 1803.

In Missouri it occurs more or less throughout the whole State, with the exception of the north-west corner that is bounded on the east by Grand River, and on the south by the Missouri River. The south-east part of the State, where Dr. Smith has recorded it since 1829, is most thickly occupied. I enumerate these counties in which there is undoubted evidence of their appearance during the present year (1868), viz., Audrain, Bollinger, Benton, Clarke, Charlton, Callaway, Cooper, Cole, Franklin, Gasconade, Iron, Jefferson, Knox, Lewis, Marion, Macon, Morgan, Moniteau, Pike, Phelps, Pulaski, Polk, Pettis, Schuyler, St. Charles, St. Louis, St. Francois, St. Clair, Warren and Washington.

It not improbably overlaps some of the territory occupied by the *septendecim* Brood XIV. [abrood which appeared last in 1879], but I do not think it extends into Kansas.

In Illinois it occurs more or less throughout the whole southern half of the State, but more especially occupies the counties from the south part of Adams county along the Mississippi to the Ohio, up the Ohio and Wabash Rivers to Edgar county, and then across the centre of the State, leaving some of the central counties in South Illinois unoccupied. To be more explicit, I enumerate all the counties in which it undoubtedly occurred during the present year (1868): Adams (south part, back of Quincy), Bond, Clinton (north-west corner, adjacent to Madison), Champaign, Coles, Crawford, Cumberland, Clay, Clark, Edwards, Edgar (especially in the eastern part), Franklin, Gallatin, Hardin, Hamilton, Johnson, Jasper, Jersey, Jefferson, Lawrence, McLean (east end), Macon, Madison, Marion, Massac, Monroe, Pike, Perry, Piatt, Pope, Richland, Randolph, Sangamon, Saline, St. Clair, Union (north-east corner), Washington, Wayne, Wabash, Williamson and White. There were none the present year, either at Decatur, in Macon county, or at Pana, in Christian county; nor were there any at Bloomington or Normal, in McLean; nor in Dewitt county, which lies south of McLean; nor in Spring Creek, Iroquois county, which is north-east of Champaign.

In Kentucky, according to Dr. Smith, it occurred in the northwest corner of the State, about Paducah and adjacent counties south, in 1829, '42 and '55, and it occurred there in 1868.

In Arkansas, it occupied all the northern counties in 1842, '55 and '68.

In Alabama, it occupied Russell and adjacent counties on the east side of Black Warrior River, in 1842, '55 and '68

In Tennessee, it occupied Davidson, Montgomery, Bedford, Williamson, Rutherford and adjacent counties, in 1842, '55 and '68

In North Carolina, it appeared in Mecklenburg County, in 1829, '42, '55 and '68.

In South Carolina, the Chester district and all the adjoining country to the Georgia line, west, and to the North Carolina line, north, was occupied with it in 1816, '29 '42, '55 and '68.

In Georgia, it has occurred in Cherokee county since the year 1816.

In Louisiana, it appeared in Morehouse, Caddo, Clairborne, Washington and adjacent parishes, in 1855 and '68.

It also doubtless occurrs in Mississippi and Indian Territory, though I am unable to specify any localities.

A GUIDE TO ICHTHYOLOGY.*

[The following review was originally published in the *Critic*. It is reprinted here with revisions by the author.]

A VOLUME fitted "to meet the requirements of those who are desirous of studying the elements of Ichthyology; to serve as a book of reference to zoologists generally; and, finally, to supply those who, like travellers, have frequent opportunities of observing fishes," has long been a great desideratum. Dr. Guenther, of the British Museum, has "intended" to supply this want by an "Introduction to the Study of Fishes." The intention and attempt were praiseworthy; the result is a failure. From every point of view the outcome of the author's labor is defective. The foundation of systematic biology is a knowledge and appreciation of species, and the aggregates of species in successive degrees of comprehensiveness. Species, of course, cannot be expected to be treated of in an "Introduction," and genera are the lowest aggregates considered in the present. If those subordinate aggregates are combined in such a manner as to conflict with the essential characteristics of the including groups, we may rest assured that a vicious principle and method underlie the entire superstructure. That there are such discordancies between the constituents and the diagnoses of the groups—and those of every degree—will soon become apparent to every one familiar with the subject who examines this volume. The necessary limitation of space will confine us to the exhibition of a few examples. These illustrations will be taken from fishes which are perfectly well known, whose character Dr. Guenther had abundant means of ascertaining, and which are among the common and familiar of American types.

Premising that the typical physoclyst Teleost fishes are distributed, according to the nature of the anterior dorsal, anal and ventral rays, and the separation or coalescence of the lower pharyngeal bones, among Acanthopterygii, Acanthopterygii Pharyngognathi and Anacanthini, it will be shown that the characters assigned to those orders are not shared by species of the family and even genus in which severally they are placed or to which they naturally belong.

These genera may be referred to as instances of confusion of species which differ in characters elsewhere regarded as of family or even ordinal value.

Dr. Guenther assigns high value to the relative development of the spinous and soft portions of the dorsal fin. Thus, the first division, including a number of families, of Acanthopterygii (*A. Percoformes*) is said to have the "spinous dorsal well developed . . . rather *longer* than, or as long as the soft" (p. 375). Yet this unnatural distribution of the Centrarchids (Black Basses, Sun Bahes, etc.) among the three "genera" *Centrarchus*, *Bryttus*, and *Enneacanthus* is adopted from his catalogue of 1859, and, notwithstanding the labors of Agassiz and others, is as strange a medley of forms as the American ichthyologist would be likely to imagine. Under *Centrarchus* are confounded the representatives of three distinct groups or subfamilies. Two of the species referred to that "genus"—"*C. hexacanthus*" and "*C. nilidus*"—have the spinous dorsal little developed, much *shorter* than the soft (Other species are again described under the generic names *Grysles* and *Ilurus*, and placed in a different subfamily.)

Dr. Guenther attaches great importance to the existence of 24 (14 and 10) vertebræ in contradistinction to the development of a greater number. On such differences a number of families are constituted by him. In the genus *Sebastes* (Rock Cod, etc.), however, as last admitted by him, are species which differ as widely or more widely in this respect than some of his families. His generic diagnosis is indeed a complex of blunders. The genus *Sebastes* is said to have "one dorsal with 12 or 13 spines," and "vertebræ more than *twenty-four*" (p. 413). "About twenty species are known," it is added. Of these, however, only two ("*S. norvegicus*, *S. viviparus*") "have more than twenty-four vertebræ," and those two have normally *fifteen* dorsal spines, while the others having "twelve or thirteen spines" have *not* "more than twenty-four" vertebræ. The combination signalized by Guenther does not exist.

Dr. Guenther recognizes an "order" (*Acanthopterygii Pharyngognathi*) *solely* because its representatives have "the lower pharyngeals coalesced" (p. 529). Nevertheless, in the *genus Sciæna*, referred to the "order" of typical Acanthopterygii (p. 429) he has confounded two forms ("*Sc. oscula*" and *Sc. Richardsonii*," the "Sheepshead" of the lakes), which have "the lower pharyngeals coalesced" earlier and more completely than some of his Acanthopterygii Pharyngognathi.—It may be remarked, *en passant*, that other so-called typical "Acanthopterygii" which are truly "pharyngognathous" are *Pogonias* (p. 427), *Gerres* (p. 38?), and *Myriodon* (p. 383).

We may now ask, in the name of both science and common sense (1) *why* characters which are regarded by the same author as of *ordinal*, or at least family, value *are not of generic* value in the cases referred to, or, it may be (2) *Why* characters which are not regarded as of *generic*—or at least of not more than generic value—are used *to differentiate orders*. As a matter of fact, in each case important modifications of structure are associated with the ones noted; and not only are the characters of moment and readily recognizable, but the physiognomy is distinct, and differentiates the respective types from those with which they are confounded. But it must be added that on the other hand the characters in question can not be used to diagnose major groups.

One other example of another kind of error must suffice. Dr. Guenther distinguishes the "orders" Acanthopterygii and Anacanthini solely on account of the development of spines in the vertical and ventral fins of the former, and their absence in the latter. There is no such difference between the constituents of the groups in question as is claimed; and closely allied forms, belonging to the same family, are separated among two orders and respectively associated with types with which they have little affinity. The cel-pout of the markets (*Zoarces*) is referred to the Acanthopterygii and the family Blennioidæ, although the author himself admits that it has "no other fin-spines" than a few near the caudal, without apparently appreciating the falsification of the system the facts: the nearly-related *Lycodes* is interjected among the Anacanthini. As a matter of fact there are no major structural differences between the two and where one goes the other must follow.

Dr. Guenther's want of familiarity with the former usage of ichthyologists has sometimes led him into amusing mistakes.

For instance, Cuvier (Hist. Nat. des Poissons, t. i., p. 55) proposed to place the subgeneric name within parentheses after the generic, "par exemple: *Perca (labrax) lupus*, *Perca (labrax) lineatus*, etc." Temminck and Schlegel, acting on this suggestion, but omitting the parentheses, called the *Perca (labrax) Japonicus*, *Perca-labrax Japonicus*, without the slightest intention of distinguishing it from *Labrax*, but evidently recognizing in it a species of the sub-genus *Labrax* and genus *Perca*. Bleeker subsequently differentiated it as a peculiar generic type—*Lateolabrax*. Nevertheless our learned author has sagely given the name *Percalabrax* to the genus, as if Temminck and Schlegel had actually founded and characterized it! He did this in 1859, but has not yet learned that he committed the blunder so evident to one familiar with ichthyological literature.

As it has been shown that in every "order" of typical physoclyst fishes there are genera which exhibit characters in diametrical contrast with those proposed as diagnostic of the orders, it necessarily follows, not only that such characters are of little moment for major classification, but that the use of the volume as an aid to "zoologists" or "travellers" for identification must be comparatively small. Its usefulness is still further reduced and the difficulties of identification enhanced by the entire absence of analytical synopses and the paucity of illustrations of family types.

As we have confined our examination to genera and the consequences flowing from their treatment, it is proper to add that the defects of the author's mode of treatment of scientific subjects ramify into every branch of inquiry to a greater or less extent. That which is most free from error and which is really quite rich in details that have hitherto only appeared in scientific periodicals of limited circulation, or not been elsewhere published, is the portion (chapter 21) devoted to "The Fishes of the Deep Sea." This is well worthy the attention of all interested in Ichthyology. The other chapters must be consulted with extreme caution and reserve.

THEO. GILL.

*An Introduction to the Study of Fishes. By Albert C. L. G. Guenther. Edinburg: Adam & Charles Black, 1880.

A SMART SPARROW—Wauseon, O.—A number of English sparrows nest in the galvanized iron front in the bank building in this town. To-day one got its foot caught in a A-shaped slat in the iron, and set up a loud cry. Another bird flew up, caught it by the head and tried to pull it out, failing in this it flew inside, braced on the iron and attempted to pull it in, catching the bird with its bill by the head. This was also a failure, and the bird again flew outside, caught the captive by the head with its bill as before, and flying upwards, raised the bird out of the trap and set it at liberty. I call this very close to reason—if not there.—H.

Sea and River Fishing.

FISH IN SEASON IN JUNE.

FRESH WATER.

Brook Trout, *Salvelinus fontinalis.*
Rainbow Trout, *Salmo iridea.*
Dolly Varden Trout, *Salvelinus malma.*
Grayling, *Thymallus tricolor* and *T. montanus.*
Black Bass, *Micropterus salmoides* and *M. pallidus.*
Maskalonge, *Esox nobilior.*
Pickerel, *Esox reticulatus.*
Pike or Pickerel, *Esox lucius.*
Pike-perch (wall-eyed pike)
Stizostethium americanum, *S. griseum*, etc.
Yellow Perch, *Perca flavitilis.*
Striped Bass, *Roccus lineatus.*
White Bass, *Roccus chrysops.*
Rock Bass, *Ambloplites.* (Two species).
War-mouth, *Chænobryttus gulosus.*
Crappie, *Pomoxys nigromaculatus.*
Bachelor, *Pomoxys annularis.*
Chub, *Semotilus corporalis.*
Shad, *Alosa sapidissima.*

SALT WATER.

Sea Bass, *Centropristis atrarius.*
Striped Bass or Rockfish, *Roccus lineatus.*
White Perch, *Morone americana.*
Bluefish or Taylor, *Pomatomus saltatrix.*
Scup or Porgie, *Stenotomus argyrops.*
Pollock, *Pollachius carbonarius.*
Tautog or Blackfish, *Tautoga onitis.*
Weakfish or Squetague, *Cynoscyon regalis.*
La Fayette or Spot, *Liostomus obliquus.*
Channel Bass, Spot or Redfish, *Sciænops ocellatus.*
Sheepshead, *Archosargus probatocephalus.*
Kingfisher or Barb, *Menticirrus nebulosus.*

THE FLY-CASTING TOURNAMENT.

THE following is the official record of the fly-casting tournament last week at Coney Island:

The judges were Mr. Lucius Moses, of Marcellus; Mr. Eugene G. Blackford, of Brooklyn, and Mr. Charles F. Murphy, of Newark, N. J. Mr. James Geddes, of Syracuse, acted as referee. After consultation, it was decided to enforce the rules to the letter and give the allowance of five feet on distance to each foot of rod short of the longest one used, none in the single-handed contests to exceed eleven and a half nor be less than nine and a half feet in length, and in the salmon contest not to exceed twenty feet, and in the bass not to exceed nine nor be less than seven feet. For other rules see FOREST AND STREAM of June 16.

THE SALMON CASTING.

Thursday, June 23, at 10 A. M.—1st Prize—One split-bamboo salmon rod, eighteen feet in length, in three pieces, with two tips, in grooved case and sack, especially constructed for this contest and donated by B. F. Nichols & Co., 36 Beach street, Boston. Value, $50.

2d Prize—One fly-rod, reel and line, donated by Peck & Snyder, 124 Nassau street, New York. Value, $25.

3d Prize—Five dollars gold ($5)

4th Prize—One year's subscription to FOREST AND STREAM, by Fred Mather, $4.

The following gentlemen entered and cast in the order of their names:

Harry Pritchard, Washington Gun Club, Brooklyn.
Reuben Wood, Onondaga Fishing Club, Syracuse.
Ira Wood, Onondaga Fishing Club, Syracuse.
Frank P. Dennison, Onondaga Sportsman's Association, Syracuse.

There was a very light air stirring from the south, across the cast, but not enough to make it advisable to cast with or against it while Mr. Pritchard cast, but by the time Ira Wood was called to the score it veered to the eastward and strengthened a very little. He asked permission to cast from that end of the pond, because the buoy line was near the south side, where the judges sat, and he being a left-handed caster found difficulty in laying his line near the buoys from the west end. This was granted, and the score was made and prizes awarded in the following order:

	Length of Rod. ft. in.	Length of Le'd'r. ft. in.	Longest Cast. ft.	Allowance. ft. in.	Cast as counted. ft.
R. Wood.....	17 6	10 0	110	—	110
J. Wood.....	17 6	10 0	101	—	101
H. Pritchard....	15 3	10 5	91	9 2	100 2-12
F. B. Dennison..	17 6	10 0	94	—	94

The points scored were:

	Distance.	Style.	Accuracy.	Total.
1st Prize—R. Wood.....	60	25	15	100
2d Prize—J. Wood.....	51	18	8	77
3d Prize—H. Pritchard.....	50	15	7	72
4th Prize—F. B. Dennison ...	44	10	5	59

BASS CASTING.

This contest was held in "Cuttyhunk style," *i.e.*, with a rod from seven to nine feet in length, and a weight reeled up near the tip of the rod and cast. The contestants all cast

with the same weight, which was one ounce. The following were the prizes:

1st Prize—One split bamboo striped bass rod with steel pivot, rubber and German silver reel, filled with twenty-one thread linen line; rod silver-mounted and in fine case. Donated by J. F. Marsters, 55 Court street, Brooklyn. Value, $75.

2d Prize—Automatic reel, with hard rubber discs, gold mounted and appropriately inscribed and decorated. Donated by Loomis & Plumb, Syracuse. Value, $50.

3d Prize—Five dollars gold ($5).

4th Prize—One year's subscription to FOREST AND STREAM, by Fred Mather, $4.

The entries were:

Frank Endicott, Richmond Co. Game and Fish Protective Association. Rod, 7 ft. 2 in.

John Williamson, Coney Island Rod and Gun Club. Rod, 8 ft. 11 in.

W. L. B. Stears, Coney Island Rod and Gun Club. Rod 8 ft. 11 in.

After some discussion it was decided to allow distance for length of rod in this class as in the others. The score was:

	Actual cast. Ft. in.	Allowance. Ft. in.	C'stas'm't'd Ft. in.
1st Prize—John Williamson	178 6	—	178 6
2d Prize—Capt. Stears	156 6	—	156 6
3d Prize—Frank Endicott	136 0	8 ½	144 ½

Mr. Endicott was awarded the fourth prize for the accuracy with which he cast, in addition to the third given him for distance.

TROUT OR BLACK BASS FLY CASTING.

Of the three classes in this division it was decided to call class C, first in order to give the amateurs a chance to enter in the other contests from which winners of certain prizes were barred. Promptly at 3 P. M. entries were called for

CLASS C—AMATEUR.

Open to all who never won a prize at any contest at this or a previous convention of this association.

1st Prize—One Leonard split bamboo "Catskill" fly rod, gold mounted, with Mills & Sons' best rubber click reel, filled with their "standard" enameled water proof fly line. Donated by William Mills & Son, 7 Warren street, New York. Value, $60.

2d Prize—One trunk rod, with reel and line complete; rod silver-mounted and in fine case. Donated by J. Marsters, 55 Court street, Brooklyn. Value, $25.

3d Prize—One "Henshall" black bass rod, with extra second joint and three tips. Donated by S. W. Goodridge, Grafton, Vt. Value, $15.

4th Prize—One elegantly-bound copy of Dore's "Ancient Mariner." Donated by Harper Brothers, Franklin Square, New York. Value, $10.

5th Prize—One expensively-bound copy of "Pastoral Days" (W. H Gibson). Donated by Harper Brothers. Value, 10.

6th Prize—One oil painting—"Quail Seeking Refuge from Stress of Weather." Donated by Henry W. Abbott, 11 Commonwealth avenue, Boston, Mass. Value, —.

7th Prize—One hundred cigars. Donated by F. W. Mertens & Son, 175 South street, New York. Value, $10.

8th Prize—Five dollars gold ($5).

9th Prize—One year's subscription to FOREST AND STREAM. Donated by the Forest and Stream Publishing Co., through Fred Mather. Value, $4.

The following were the entries and order of casting:

W. Holberton, N. Y. City Association for Protection of Fish and Game. Rod, 11 ft. 7 in.

C. A. Bryan, Fountain Gun Club, Brooklyn. Rod, 11 ft, 2½ in.

M. E. Elmendorf, Coney Island Rod and Gun Club. Rod. 11 ft. 3½ in

J. S. Plumb, Onondaga Fishing Club, Syracuse. Rod, 11 ft. 3½ in.

Frank Endicott, Richmond County Association for Protection of Fish and Game. Rod, 10 ft. 11 in.

G. S. Hier, Onandaga Fishing Club, Syracuse. Rod, 10 ft. 10 in.

J. A. Nichols, Onondaga Fish Club. Rod, 10 ft. 6 in.

The score was:

	Cast. ft. in.	Allowance. ft. in.	Total. ft. in.	Wind. Miles per hr.	Wind. Pressure per sq. ft.
W. Holberton	64	—	64	1½	.015
C. A Bryan	45	1 5½	46 5½	2	.02
M. E. Elmendorf	57	1 1½	58 1½	4½	.08
J. S. Plumb	64	1 1½	65 1½	2½	.025
F. Endicott	58	3 11	61 11	2½	.025
G. S. Hier	67 6	3 4	70 10	1½	.015
J. A. Nichols	54	5	59	3½	.045

The judges took no note of the wind. The following is their scale of points.

	Distance.	Style.	Accuracy.	Total.
1st Prize—G. S. Hier	60	25	15	100
2d Prize—F. Endicott	53	25	15	93
3d Prize—C. A. Bryan	39	25	15	79
4th Prize—M. E Elmendorf	50	12	15	77
5th Prize—W. Holberton	55	6	15	76
6th Prize—J. A. Nichols	50	9	15	74
7th Prize—J. S. Plumb	55	12	6	73

CLASS B.

Open to all members except those who have won a first prize at this or a previous convention in a casting contest open to all.

1st Prize—Two rods (trout and bass), all lancewood and gold mountings; each rod consisting of one butt, two second joints, different weights, and three tips, with extra bamboo tip case. All in handsome black walnut case, lined with velvet and bound with bands of silver. Specially made for this occasion and donated by Fred D. Divine, 76 State street, Utica. Value, $75.

2d Prize—One split bamboo fly rod with click-reel, and one Holberton's full length fly book with improved Hyde clips and Russia leather cover. Donated by Conroy, Bissett & Malleson, 65 Fulton street, New York. Value, $40.

3d Prize—One pair Mackintosh wading pants and one Hallock hunting coat. Donated by Goodyear's Manufacturing Company, 488, 490 and 492 Broadway, New York. Value, $40.

4th Prize—Five dollars gold ($5).

5th Prize—One year's subscription to FOREST AND STREAM. Donated by the Forest and Stream Publishing Company through Fred Mather, $4.

The entries were:

F. Arrowsmith, Monroe County Club, Rochester. Rod, 11 ft. 6 in.

H. Pritchard, Washington Gun Club, Brooklyn. Rod, 11 ft. 3 in

F. Endicott, Richmond County Protective Association. Rod. 10 ft. 11 in.

W. Holberton, N. Y. City Protective Association. Rod, 11 ft. 6 in.

F. B. Dennison, Onondaga Sportsman's Club. Rod, 10 ft. 10 in.

The score stood:

	Cast. ft. in.	Allowance. ft. in.	Total. ft. in.	Wind. Miles per hr.	Wind. Pressure per sq. ft.
T. Arrowsmith	73	—	73	3½	.045
H. Prichard	76	1.3	77.3	6½	.18
T. Endicott	62	2.11	64.11	3½	.045
W. Holberton	70	—	70	5½	.13
F. B. Dennison	67.6	3.4	70.10	2½	.04

The casting was with the wind, which was so light that the judges did not order them to cast against it. The points made were:

	Distance.	Style.	Accuracy	Total.
1st Prize—H. Pritchard	60	25	15	100
2d Prize—T. Arrowsmith	55	25	15	95
3d Prize—T. Endicott	52	25	15	92
4th Prize—W. Holberton	53	20	15	88
5th Prize—F. B. Dennison	54	15	15	84

CLASS A—CHAMPION.

Open to all members of the Association. 1st Prize—Fishing tackle, to be selected by the winner, of the value of $50. Donated by Charles F. Imbrie, of Abbey and Imbrie, 48 Maiden Lane, New York, $50.

Second Prize—One green-heart fly rod with click, reel and water-proof line. Donated by J. B. Crook & Co., 50 Fulton street, New York. Value $35.

3d Prize—One split bamboo fly rod, german silver mounted, cane wound butt, two tips with bamboo tip case, rubber click reel and fly line. Donated by W. M. Cornwall, 18 Warren street, New York. Value, $25.

4th Prize—Five dollars gold, $5.

5th Prize—One years' subscription to FOREST AND STREAM. Donated by the FOREST AND STREAM Publishing Company, through Fred Mather, $4.

The entries were:

I. Wood, Syracuse. Rod, 10 ft. 1 in.

R. Wood, Syracuse. Rod, 10 ft. 1 in.

H Pritchard, Brooklyn. Rod, 11 ft. 3 in.

T Arrowsmith, Rochester. Rod, 11 ft 6 in.

The score was:

	Cast. ft.	Allowance. ft. in.	Total. ft.	Wind. Miles per hr.	Wind. Pressure per sq. ft.
Ira Wood	67	6 3	73.3	1½	.015
R. Wood	75	6.3	81.3	9-10	.01
H. Pritchard	74	1.3	75.3	1½	.016
T. Arrowsmith	72	—	72	1½	.015

As before, the wind was so light that the cast was made with it, the judges not thinking it worth while to cast against it, hence the 30 points allowed for and against the wind were consolidated and the points scored were:

	Distance.	Style.	Accuracy	Total.
1st Prize, R. Wood	60	25	15	100
2d Prize, H. Pritchard	55	25	15	95
3d Prize, J. Arrowsmith	54	10	15	79
4th Prize, I. Wood	54	10	6	70

SWEEPSTAKES.

Free to all who have cast in any of the foregoing contests without payment of fee. One prize, a Leonard gold-mounted split bamboo salmon rod, 16 feet long, weighing 27 ounces. Donated by W. H. Hopson, of New Haven, Conn.; value, $75.

Messrs. H. Pritchard, Reuben and Ira Wood and Frank Endicott entered for this contest. Mr. Endicott withdrew, and after making a few casts Ira Wood gave it up. The contest then remained between Reuben Wood and Harry Pritchard. The wind had died to almost a dead calm, the anemometer registering only from two-fifths of a mile to one mile and two-tenths per hour. The rules were: Any practicable single-handed trout rod under twelve feet in length and no allowance for distance, style and accuracy not to count, but the prize to go to the longest cast. Reuben Wood won in 75 feet to Mr. Pritchard's 74. The latter gentleman got out 75 feet, but did not retrieve his line and hence the cast was not allowed.

We, the undersigned, acknowledge the above to be the official score.

(Signed) LUCIUS MOSES, EUGENE G. BLACKFORD, } Judges.
CHARLES F. MURPHY,
JAMES GEDDES, Referee.
FRED. MATHER, Director of Fly-casting.

Of the rods used, it may be well to say that Mr. Pritchard used a green-heart rod of his own make, as did Mr. Bryan. The others used split-bamboo, mainly from Nichols, Boston. Mr. Nichols was on hand with a stock and offered caste as a choice—an offer that some who came without rods available themselves of. The local press reports must have erred in some respect to have called out the following letter:

NEW YORK, June 25, 1881.

Editor Forest and Stream:

Through some misunderstanding the press has not reported the fact that my salmon rod (with which I took first prize at the tournament) was one of "Abbey & Imbrie's Best." It is the best rod I ever handled, and I think that my friend Imbrie should have the credit due him. R. WOOD.

THE FLY-CASTING—New York, June 27.—As a witness of the late fly-casting tournament I wish to find fault. Not with its judges nor its manager, but with the New York Association. Mr. Mather promised to lift it out of the rut from a mere side-show to one of the principal features, and he succeeded as far as lay in his power. But look at the prizes! Nothing worth over $75. Then look at the pigeon-shooters getting prizes worth thousands! Compare the two arts and see which is the more of an art. Which is the more scientific, the neater and more gentlemanly? Now let the new managers at Niagara Falls improve on this, and we will see an interest awakened that little prizes of fishing-rods can never awake.—FLY-CASTER.

OQUOSSOC ANGLING ASSOCIATION.—The officers elected at the annual meeting, June 1, 1881, were: A. D. Lockwood, President, Providence, R. I.; James A. Williamson, Secretary and Treasurer, 119 Liberty street, New York City. Weston Lewis, Vice-President, 55 Sumner street, Boston. Trustees: A. D. Lockwood, George P. Rowell, Francis H. Leggett, Adon Smith, Frank H. Lovell, James A. Williamson, Charles W. Hersey, Weston Lewis, William P. Frye. I. N. Packard, Superintendent, P. O., Indian Rock, Maine. By the laws of Maine, the fishing season for land-locked salmon and trout commences May 1, and closes September 30; excepting that the South Bog Stream, the Rangeley Stream, from Howard's Dam at the outlet to the Kennebago Stream, the Cupsuptic Stream, above the lower falls, and the Benis Stream, are closed after June 30, and the Kennebago Stream is closed September 1.

THE CARP AS AN ANGLER'S FISH.

AS nothing is known of carp angling in America, we take pleasure in quoting a chapter on this subject from "The Practical Fisherman," a book just published in England by Mr. J. Harrington Keene, a well-known angler, naturalist and fishculturist. He says:

It being an exceedingly wary fish, the capture of a large carp may be fitly ranked among the *notabilia* of fishing. Nevertheless, carp are sometimes curiously voracious when of small and medium size. Thus, in the heat of a dead still summer day, I have succeeded in taking nine dozen of these fish, varying from ½ lb. to 2 lb. Such takes are, however, I confess, exceptional, and it is curious to note that they only occur in the case of small or comparatively small carp, which, presumably, have not lived long enough to mature the wisdom of which they constitutionally possess the germs.

I have known in my experience some curious vagaries in the taking, etc., of baits by large carp, and still stranger behavior when hooked. Of the former I may mention a sudden fit of voracity which prompted a six-pounder to take no less than three potatoes and hooks belonging to three different anglers, myself included. We, of course, held the customary disputation as to whom the fish belonged, but I claimed it on the strength of my bait and hook being the deepest down in the gullet. I have read of a similar instance somewhere, and can quite believe it to be true. I have on several occasions taken small carp with the minnow when fishing for perch. When a large carp is hooked it has some very curious ideas as to behavior. On several occasions I have had the line severed by the sharp spine in the back fin, and once I landed a fish properly hooked, but who in his unsuccessful endeavors to get the gut across the aforesaid spine, had wound the line round and round its body so inextricably as to allow of its being landed tail first. Fortunately, the tackle was stronger than usual.

The tackle I use is of the finest description. The gut is usually a part of a fine fly-cast, in length about 4ft. or 5ft. The float—for it is ordinarily better to use a float—is a light quill. On the lower part of the gut, at about a foot or so from the hook, I attach a couple of large split shots. The float is so adjusted that while one of the shots lies *on* the bottom, the other just deflects it from its horizontal position on the surface. The bait is a well-scoured cockspur or red worm, and is impaled on a medium-sized hook. Of course the bait lies on the bottom. The rod should now be sustained in position by means of the spike or a notched stick, and the angler, if possible, should retire beyond it and watch. As soon as he sees the float assume an upright position the rod should be taken cautiously, and as soon as the fish has taken it away, say a few inches in a decided manner, it is time to strike with firmness and decision. The first rushes of the fish must be controlled with equal firmness and discretion, lest a "smash up" result. I have never know this kind of tackle to fail if used judiciously. The line and rod should be fine and light.

The baits, as might have been supposed by the variety of food in which *Cyprinus carpio* indulges, are many, and require discrimination in their general ordering, as, indeed, they do for all fishes. More especially, however, is it necessary to cleanse the worms from all impurity, and to scour the gentles, if the latter be used. The first-named baits are much the best, in my opinion, for general carp fishing; and although it is certain that failure of sport must sometimes occur, yet I can safely say that when fishing in carp ponds I have never failed to get a fair day's sport by judicious baiting and careful fishing.

In order to give the reader some idea of the nature of carp angling, I may be allowed to briefly narrate my own experience in the capture of a 9 lb. fish. It is well known among anglers that some enormous carp are to be found in Virginia Water, Windsor great park, and I have seen them on calm, bright summer mornings basking at the surface with just the back fin above water, rather resembling logs of wood than fish. I had for a long time coveted one of these beauties, and for hours over a pipe had pondered the ways and means, till, to quote Hood, my "heart was sick and the brain benumbed." I had gut tackle, fine twist lines, suitable rods galore, but a problem still eluded solution, and that problem was how to get the bait to them. It must be borne in mind that their basking water was usually quite two hundred yards either way from land. Of course the punt was at my service, but the difficulty was approaching within fishing distance. Immediately one got nearer than about thirty yards they were *non est*. After much consideration, however, I decided to try once again with different tactics. Behold me, therefore, reader, on the morrow, just as the "eyelids of the morning" were opening, equipped with a Wells four-joint trout rod, a fine twist line, a spring reel and fine three-yard gut cast, to which was attached a single No. 6 hook, wending my way toward the lake. This reached, I was soon within fifty yards of the leviathans, slowly patrolling the water beneath the bright sunbeams, and, after carefully dropping the weight into thirty feet of water, I sat down quietly to arrange the tackle. A breeze was softly rippling the water, and my idea was to float the light tackle to the wily fish, and trust to my skill in hooking and playing one at that great distance. My bait was a fresh green pea, which I now extracted from its pod and impaled on the hook so as to almost completely hide the shank, but leaving the point just through. Taking a large chestnut leaf that happened to lie in the punt, I stipped the gut through its centre, so that it would form a sort of kite or sail for my bait. Raising, then, the rod aloft, and rapidly letting the line run from the reel. I had the satisfaction of watching the gradual approach of my bait to the as yet unsuspicious carp. Slowly onward it went through the air for twenty yards, and then softly dropped on the water, to be borne on a stream precisely to where the huge fishes lay. At last the shoal was reached, and, retained by my line, the bait and leaf remained stationary—some few seconds fraught with terrible suspense. And on a sudden down went the leaf, the line tightened, and a terrific rush told that a *Cyprinus carpio* had found his match. Now came the Greek-to-Greek combat. Right and left in turn, now down to the bottom, anon quite at the surface, was the fight prolonged; but, as far as Master Carp was concerned, it was in vain. After an hour's good sport—such sport as I never but once before experienced—he was landed, scaling 9½ lbs. He was probably one of the smallest of those whose black

fins I had seen. I have simply given this episode as illustrative of the difficulties one has to overcome sometimes in carp fishing. Of course, when carp are near to spawning, and shortly after, when they are close together and jostling each other with affectionate demonstration, it is a matter of little difficulty to catch them, but given the exigencies of the example I cite, and the carp indeed proves himself a "wit."

It has been the usual custom of writers on angling to connect the carp and tench under one category: Why, I know not. The same mistake is made in regard to roach and dace, but of this I shall have to speak in another chapter. There are certainly some points of similarity physiologically between carp and tench, such as power of endurance of heat and cold, but to the angler proper they are as different in habits as chalk is from cheese, to use a homely metaphor. Carp ever bite best during the early hours of morning, and tench are generally best "on" toward evening. Carp can be taken best during the early summer months. I have known good tench biting freely on a dull January day with the wind due east. I have, however, never caught carp under such circumstances.

In giving general directions to such anglers as are not experienced in carp fishing, let me impress one or two indisputable truths on them for their guidance. Fish with the lightest tackle compatible with strength; never use a large, long-shanked hook; cover the shank of the hook when baiting; let the bait rest on the bottom; let the fish have the bait while you count five; give plenty of time to kill the fish; your hook will never tear out of the gristly mouth; put no shots near the hook; and finally, when a fish is hooked, keep perfectly cool and deliberate.

The most useful bait for general fishing is the lob worm or the red worm; next to these I like a bluebottle fly. Of this bait Mr. Bakey says: "No matter how small your hook, it must be put across the body just under the wings." For large carp, as I have indicated, the green pea, cherry, green corn or new potatoes may be used with success. It is necessary to use a small triangle hook for the latter bait, putting it on by means of a baiting needle, thus hiding the hook completely and giving your fish time to pouch, or at least to pass it beyond the teeth in the throat before referred to.

It is highly necessary sometimes to ground bait the spot you intend to fish. The following preparation has been recommended, but I imagine that most experienced anglers will readily perceive that it errs from extreme elaboration: Take a quantity of well cooked veal, a handful of oatmeal, and a little honey; bruise them in a mortar, mix them to a thin paste or batter with new milk and a few grains of assafœtida. Crush down in a mortar a quantity of worms, gentles, slugs and some lumps of the most tallowy cheese you can find, thicken the veal batter with this compound, and then roll it up into little balls; these balls must be thrown into a compost of tallow greaves and grains steeped in bullock's blood, and the entire mess sunk in the place some hours before fishing. This is Blakey's prescription. There are no less than twelve ingredients, besides trouble of procuring and compounding, and after all has been faithfully done one may go out, as I did on one occasion, after mixing up this unspeakable mess—and tell it not in Gath—catch nothing.

The best and simplest ground bait I know of is pearl barley or even boiled rice, using boiled pearl barley or a red worm for the hook bait. I have usually found that immediately after a thunderstorm is a good time to fish; and let it not be forgotten that the early bird ever gets the pick of the worms, or, as in this case, fishes.

In conclusion of these remarks on carp I may be allowed to jot down a few recorded weights of these fish. I have myself seen them of 18 lb., but according to Donovan they attain a prodigious weight in Germany. He says: "One was taken at Dertz which weighed 38 lb. In Prussia they frequently weigh 40 lb., and in the Volga they are 5 ft. long. One caught near Frankfort-on-the-Oder was 9 ft. long and 5 ft. in circumference, weighing 70 lb. Lake Zug, in Switzerland, produes carp of 90 lb.; and in the Dniester some had been taken of which knife handles are made with the scales. Carp do not arrive at this prodigious size until they are of a very advanced age." I should think not.

THE AUTOMATIC REEL ON GREENWOOD LAKE.

NEWARK, N. J.

I HAD all my traps packed for a trip into the North Woods, when my companion announced to me his inability to go. He had a case in court which he must attend, as he could not get it postponed. Not liking to go alone, I decided to spend a week at Greenwood Lake, and make the Adirondack trip later in the season. I drove up with my old friend and angling companion, Grant J. Wheeler, of Montclair. It was a lovely drive, though we took a somewhat roundabout course. Stopping at De Graw's at the Lake Side House, we had time to select our rooms, get ourselves settled and still to have a few hours' fishing before supper. Mr. Wheeler had taken no tackle, but was to use mine, as I had two rods with me. The rod I was using was of split bamboo, weight just six ounces. The butt was nineteen years old, the middle joint and tip new, Charley Murphy made it, and no more need be said. I had just received the new automatic reel, which I had tried on trout but not on bass. I think the reel is a grand success. I was delighted with its action. It was impossible for a fish to get slack line. I could reel in the heaviest bass with one hand without touching rod or reel with the other. I think the reel adds new zest to the sport when using so light a rod, and certainly takes off one-half the strain from the rod. With the automatic reel the ordinary light trout rod is strong enough for any bass. I had a strong prejudice against it; did not like its appearance, and was sure I should not like it, because in a measure it revolutionizes the mode of angling. But after a week's trial on heavy fish I think that it is just splendid.

A number of gentlemen anglers saw the reel at work, and all expressed approval. I am not interested in any manner for this reel, except that I hail all the improvements in angling implements with pleasure. All the great improvements are the work of the last forty years. The split bamboo rod, the many excellent trolling spoons, the patent enamelled waterproof silk line, the Mackintosh wading suits and many others so familiar to the fisherman, and so necessary to his comfort, are of recent invention.

It being unlawful to take black bass in New Jersey before July 1, we were compelled to do our bass fishing above the State line. But we could troll for pickerel as much as we pleased. The week proved very stormy; two days I could not fish, as it blowed hard enough to blow a boat out of water. When we could stay on the water we found no trouble in taking plenty of fish. We were fortunate in securing the services of James M. Cofair, who was very attentive to our wants, and knows the fishing-ground thoroughly. Jimmy has a raft and shanty, with sleeping accommodations for four persons. Parties wishing his services must engage them some time ahead, as he is in much demand. I only took a few bass with flies, but a gang of hooks with large, live minnow was too much for them to resist. I took fifty-two in one day to my rod alone, and all good fish, the largest three and a half pounds, the smallest a pound and a half.

I know of no really good fishing so handy to New York and easy of access as Greenwood Lake. The bass run as large as the Adirondack or Canada bass. Any experienced fisherman should get at least thirty bass a day. When the law for bass in Jersey expires the catch will doubtless be much larger.

There are many hotels on the lake, some stylish and expensive, others plain and cheap. The Lake Side House is beautifully located, and convenient to the fishing grounds, just at the State line, and opposite to the last station of the train.

There is a movement on foot to commemorate Frank Forester by creating the Warwick Woodlands into a park. This will be a good move, and make the lake very popular. Should this be carried out, a host of Western sportsmen would make a pilgrimage to the park to see the spot made famous by Herbert's writings. T. S. M

SALMON IN CANADA.

WE invite communications on the subject of the run of salmon in Canadian rivers. They will be valuable as showing the dates of arrival of the runs this year as compared to last, when they were not only scarce but late. The following letters, which we print by permission of Prof. Baird, are important and it will be noticed that the second one qualifies the first in regard to the numbers of the fish:

MATAPEDIA, June 19, 1881.—"The run of fish has been the largest ever known, and began about the 10th of June; slacked off and has started again. All the fish in Mowatt's freezer up to the 16th, average twenty-six and a half pounds, and a lot of 150 or thereabouts put in yesterday average twenty-seven pounds. We have taken twenty-five here, and they run larger than usual and are fresh and perfect, not like those last year. On the Great Camtapedia three rods killed fifty-two, all as fine as ever came into that river."—H.

STEAMER OFF GASPE BAY, Chaleurs, June 22.—Mr. Mowatt must have misunderstood me, for I find, though the run of fish is very large in size, it is small in numbers all along this bay, and the netmen tell me it is going to be a bad season and probably the most of the fish will run late, as they did last year, late in August after their nets are up. I am sorry I misunderstood Mowatt. H.

RESTIGOUCHE SALMON.—Just as we go to press we are shown a fine salmon, taken by Mr. Gilbert E. Jones of the Restigouche Salmon Club. It is three feet eight and a quarter inches in length and weighs 38 lbs. Mr. Jones reports the season as opening good, but the extra amount of logs running in the river interferes with fishing. We will give his score next week.

TIM POND TROUT FISHING.

LAST season as I unjointed my faithful bamboo at Middle Dam I said to the "Deacon," "There are too many people here; what with a steamboat profaining the once peaceful waters of the lake, guide-books and excursion tickets, they are getting too thick for comfort, and I quite agree with Steve Morse that this fishing 'needs a rest.' Next year we must, like Daniel Boone, 'move on,' and I guess we had better try Tim Pond that you have been talking so much about."

So this year I corresponded with the "Deacon," a veteran, who has been casting his flies on Rangeley waters for thirty-five years, and found that he had made up a party for the headwaters of the Kennebec. But as I wanted to try Tim Pond, and being further moved and incited thereto by an article in FOREST AND STREAM, of May 19, I took unto myself three congenial spirits, and started at 7:30 A. M. from Boston, reaching Farmington the same evening at about five; took supper at the hotel there, and then by stage to Kingfield over a good road, arriving at the latter place at 9 P. M. We found the hotel of which your former correspondent wrote, burned to the ground, but another one had been improvised near by where we secured quarters (four in a room) for the night, and next morning at eight o'clock we were rolling along the banks of the beautiful Carybassett River for Eustis.

And right here I will stop to corroborate all that J. W. T. said as to the road, and the scenery which includes the Carybassett River—not Conybassett as your types made it in the article referred.

We arrived at Smith's Farm at 3 P. M., as hungry as sharks after our ride through the mountains. Found Mr. Smith waiting to receive us, and after a dinner of country style (at which broiled chicken did not figure as I had wagered that it would) we started for the pond over the roughest "carry," with one exception, that I ever saw. That one is the twenty-six miles from Booneville, N. Y., into the camp on First Lake. We found good tight cabins with the fragrant hemlock boughs for beds, and with some arrangement of our private mosquito nets slept the sleep of the just.

We stayed a week in camp, and fished every day but Sunday, and while I cannot go so far in my praise of the fishing as J. W. T., yet I will say that the fishing is good

The size is disappointing to one who has spent several seasons in the Adirondacks and the Rangeley region.

Our largest was one and one-half pounds, and we caught several weighing from three-quarters to one pound. But I must say that I never caught trout that gave so much sport or fought so hard, for their size, in my life. Several times when a three-quarters of a pound fish was hooked the other three rods would suspend work to see the sport. Twice I was splashed from head to foot by trout that took my flies near the boat. And we had as much sport as we wanted. There seems to be no limit to the number of the fish.

We noticed two distinct varieties in the pond. One was the regular Rangeley trout, broad, square tail, dark belly and bronzed sides, and the other with the tail more forked, milk-white belly and more silvery sides, more like the Adirondack trout. Of the two I think the latter showed the most game, though they are smaller in size.

With a cold northwester blowing the day we came out, we were glad to put on heavy topcoats, and thought within ourselves "How splendidly that chest of fish will keep this cold day." And it did.

Finally, if any of your readers want good fly fishing and plenty of it, and are not too extravagant in their ideas as to size of fish, they can surely find it at Tim Pond. They can find besides a good clean camp, good fare, and what, I think, is equally dear to the true sportsman, the most magnificent scenery of lake and mountain and the sense of communion with Nature in her wildest and freest moods. And if their experience is like mine, they will find the proprietor of the camp, Mr. Kennedy Smith, and his stalwart son, ready to do everything in their power to make their stay pleasant and successful. SPLIT BAMBOO.

CURING FISH.

MANY anglers when on long trips in the woods wish to preserve their catch, or when at the seaside and have a lot of fish which are worth taking home wish to cure them, but lacking experience often fail. We give the following from Mr. Edmund Ryan, Chief Inspector of Pickled Fish and Oil for the County of Halifax, N. S., to the *Chronicle*:

In the first place, when dressing mackerel, dress them as fresh as possible, and in some cases, when you have to take a large quantity out of your seines, put on a large crew. Then select a good splitter and see that the fish are split to the tail.

2d. You must have plenty of water in your wash-tubs, and always give your mackerel two waters, and, if time three; and in no case throw mackerel twice in the same water. Every time you dip the mackerel out of your wash-tubs empty the water out of the tubs and half fill them again with clean water. Be careful not to throw your mackerel in the tubs until water is put in them. After washing and soaking them until they become clean and white, dip them out on your store floor and then salt them. Don't let them lie in bulk after being washed.

3d. When salting don't be sparing of the salt. Sometimes the fish remain longer in casks than we think from the time of salting, and, if scarce of salt, the fish will sour in them. It is just as necessary for fishermen to dress their fish clean and good as it is for the butcher to have his meat properly corned.

4th. You must have your mackerel, if you expect a market for them, well split and clean. When you go to pack them for market be careful and buy good barrels. It is too much the custom to buy the cheapest barrels, not looking to the quality. I regret to say some of our supplying merchants, as well as the fishermen, follow that custom also, and when remonstrated with they have told the fishermen to fill the barrels and send them and they will make them tight. But I can say that there are barrels, with fish put in them, that can't be made tight, and while such barrels are sold and bought we will have bad fish, more especially fat herring and mackerel; when fat fish are put into leaky barrels they are sure to become rusty. I trust the deputies under my department will see that mackerel will in all cases be packed in mackerel barrels; poor herring and alewives in herring barrels; fat split herring in medium size barrels; all poor fish to be packed with coarse salt, and all fat fish with fine salt; and lastly, every layer of fish in the barrel must be salted with good, clean salt, and be careful to put on a sufficient quantity.

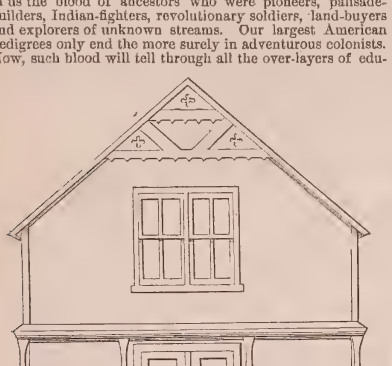
ARE THEY YOUNG BLUEFISH?—Corpus Christi, Texas, June 17.—Last week I visited Corpus Pass an outlet from Corpus Christi Bay to the Gulf of Mexico, and took part in hauling seine for pompano. We were not very successful with the fish sought for. The water being very clear they all jumped out over the top except one, but we caught large quantities of a fish I have known for many years under the name of "green mackerel," although I was satisfied it was a misnomer. One of the party who claims to know says they are the young of the bluefish, and I would not be surprised if he were correct, for although I have opened many hundred of these fish from time to time I never found any roe or eggs in one. They are a slim, forked-tail fish of from six to ten inches long, about three inches deep and from three-fourths to one inch thick, large mouth well filled with teeth, and bite anything within reach when caught. They eat shrimp and young mullet, and seem to go in large schools. They are dark green or blue on the top of the back shading to white underneath. They are covered with small scales, and die soon when taken from the water. They are found here only in spring and summer. I do not think they breed in this country as I have never seen one less than six inches long, which is their size when they first appear, nor over ten inches, which size they have attained by the latter part of the warm season. They make an excellent fish to fry for pan fish. They rarely come into the inner bays where the water is more or less sweetened and muddied by the fresh water from the rivers. I have known of these "green mackerel" since 1850, but have never been satisfied with the name. I never saw a bluefish unless these are the young of that species, and as I have heard that this question of where bluefish breed has been a vexed one I thought it possible that I had found out a clew for the wise ones to work on.—BEXAR.

BLACK BASS LAW IN MASSACHUSETTS—Wellfleet, Mass.—Four years ago one of our ponds—the Great pond in Wellfleet—was stocked with black bass. The fish were bought by one of the selectmen, he says in August, but others say in June, consequently it has led to argument on the subject. What is the duty of the selectmen of a town in connection with black bass? Can they give a permit to any inhabitant to fish, and if so, can they fix the price of such a permit, and is it optional with them whether they give a permit or not? Can you refer me to the law on that subject, if there is any? The commissioners recommended the fishing of the pond in four years, and I think the matter is left with the selectmen.—G. W. H.

You had better consult your fish commissioners. We have not the laws on the subject of ponds in your State which are leased or controlled by the selectmen.

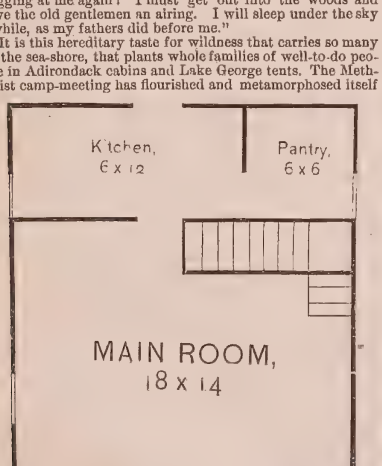
MR. T. W. BISSETT, of the well-known firm of Conroy, Bissett and Malleson, sailed last Saturday for England to complete arrangements for the sale of their hexagonal split bamboo trout and salmon rods, reels, lines, etc. This firm have met with great success on the other side, and their goods are much sought after by the leading anglers there and have given great satisfaction.

MINNESOTA—Pittsburg, Todd County, June 21.—Yesterday morning, in one hour and fifteen minutes, I caught fifteen large fish, principally bass and wall-eyed pike. As yet, owing, perhaps, to the frequent rains and consequent muddy water, bass do not rise well to the fly.—J. F. LOCKE.



HOP BITTERS is a preventive and cure for Augue; it is your own fault if you have it.

[From the Christian Union.]



CAMP COTTAGES.

BY EDWARD EGGLESTON.

CAMPING is an indigenous recreation in America. The Englishman teaches us how to row and how to play cricket, of which base-ball is but an American counterpart. The excellent gymnasium and the "garden," often formed of three sickly pine trees and a brass band, are enjoyments of the German fellow-citizen. But "camping out" is nowhere else a common recreation as it is here. There is so little ground on which to pitch a tent in the old continent, and the danger of what Mr. Henry James calls a "vulgar drizzle" is ordinarily so imminent, that camping out is not likely to become popular there. Many of us Americans have in us the blood of ancestors who were pioneers, palisade-builders, Indian-fighters, revolutionary soldiers, land-buyers and explorers of unknown streams. Our largest American pedigrees only end the more surely in adventurous colonists. Now, such blood will tell through all the over-layers of education and social refinement. Your forefathers dwelt in booths in the wilderness and you must keep the feast of tabernacles once a year. The law of heredity drives you to some trout brook, or lake-side, or sea-shore. An old Virginia captain who fought at Yorktown a hundred years ago was my father's father; my mother's father built the first block-house on the Indiana bank of the Ohio River at the beginning of this century and had three horses shot under him while leading a company of "Rangers" in defense of the frontier settlement. Now, every summer I grow restive in town and I say to myself, "There! my two grandfathers tugging at me again! I must get out into the woods and give the old gentlemen an airing. I will sleep under the sky awhile, as my fathers did before me."

It is this hereditary taste for wildness that carries so many to the sea-shore, that plants whole families of well-to-do people in Adirondack cabins and Lake George tents. The Methodist camp-meeting has flourished and metamorphosed itself into a place of summer rest and recreation as the too-fervid religious temperature of the old institution has cooled down. The "apotheosized camp meeting," as Gilbert Haven used to call Martha's Vineyard, has given us the camp cottage, a cool little shell with floors and windows, but innocent of plastering and expensiveness—a sort of cross between a wigwam and a house.

There is no reason why the camp cottage should be confined to religious watering places and Sunday-school assemblies. It is just as handy for the solitary family or the social group in the mountains or by the lake. Here at Lake George Park a piece of mountainous and wooded lake shore is laid off for just such inexpensive cottages, without any religious or scientific purposes except those of health and recreation. There is here no camp-meeting or natural history school. We just rest and row, sun ourselves and fish, forgetting the cares and excitements of life in landscape beauty and good company.

I have thought that I might promote the founding of other such places of simple and inexpensive summer rest by describing the cottage at last decided upon by the proprietor of Lake George Park, after some trials of other kinds. It is the most commodious for the cost that I have seen. The cottage, indeed, needs no description, since the accompanying elevation and plans, though from unprofessional hands, give a very good notion of it. It is twenty feet in length by eighteen in breadth, and affords six rooms and a pantry. It is a story and a half high, but as the upper half story is rather a high one, and as there is no ceiling between bed-room and shingles, there is no lack of air-space or ventilation. The piazza relieves the square look which a cottage of this dimension would otherwise have, and the wide glass front doors afford light, air and lake view to the main room. The house may be built with matched siding or with upright siding and battened cracks. The lumber is dressed on both sides and the studding is likewise dressed, since there is no plastering to these light shells. In place of dados and decorations the sojourner can amuse himself with trying the effect of wild flowers, real reeds and flags, bitter sweet, swamp alder, or fragrant spruce boughs.

The reader will want to know the cost of such a house. Those hitherto erected here have been of a different pattern, this being the improved plan for this year, and I cannot get the precise cost. Then, too, the cost of building may be lower here than where you will want to build. I can only judge by the price charged for such a house, which, with the lot, is sold at Lake George Park for four hundred dollars, of which three hundred is perhaps the cost of the cottage. But you can cut down the size and decrease the number of rooms, and thus build your house for less.

If there were more of such places of rest as this they would put the most beautiful scenery and quiet repose in reach of many families of moderate means. Such cottage villages ought to exist in the Adirondacks and along the shores of Long Island and in the delta of the Wisconsin. They would no doubt pay the proprietors a good interest if managed with economy. At Lake George Park, which is yet little but a patch of forest and picturesque lake shore in virgin wildness, the projector finds a fair profit in renting such a cottage as the one illustrated in our drawings for fifty dollars, including necessary furniture for summer-cottage life. And what can be done here can almost be done in the Highlands of the Hudson or on the banks of Lake Michigan, though the prices are higher as you approach a city.

Lake George has suffered much from its reputation as a high-priced place, but there are few places where one can sojourn more cheaply if one knows how. If you go to the "Fort William Henry," the "Fort George" or "Crosby-side" you get excellent hotel accommodation at prices not too high for first-class hotels, but too high for people in moderate circumstances. You may, however, go down to Bolton, or over in the East Lake George region, and get good living for six or seven dollars a week. Across the lake from where we live, on the fashionable West Side, where the country is less wild and the drives better, I see summer dwellings fit for princes. But right among them are some beautiful, but more modest places, such as that of Mr. Randolph, the poet-publisher. If one can afford it, and likes such things, the West Side has many attractions, no doubt. But the lake is just as lovely and the mountain side is more picturesque on our shore, while there is certainly more liberty as to living and dressing in our woods than in places where the expensive people drive their liveried carriages. And what is true of Lake George is true of all other beautiful lakes and mountains. If you do not want to live expensively you can build your camp cottage in some do-as-you-please part and live in liberty, or if you are so lucky as not to have to be in town ten months in twelve, you can build a more substantial house, so as to live in the country the greater part of the time and seek the city only for a winter sojourn. I should think such resorts as this might even be built on a joint-stock or co-operative plan. It is a pity that Lake George cannot also be reproduced.

CANADA'S CLAIMS.—BROCKVILLE, Ontario, June 7, 1881.—If a man wishes to enjoy a new country he has only to come to Canada. It is not necessary that in the summer months he should vanish off on the old trodden paths by rail to Colorado and a usual amount of dirt, heat, waiters and girls, all engaged in the delightful occupation and business of the "leech." Modern travel is reduced to the amount of money a man has. Ancient traveling had some spice of danger, some spice of romance; something that the present runners over routes have no idea of. Come into Canada, ye men of the forest and stream. Wild in nature, wild in our beautiful cascades, in our magnificent rivers, in our splendid forests. Yet the Government is so strong, that no man need carry a revolver, and that man is protected in his life and property. Take the "Mississigajou Lake" for instance, take the old "Masanoga," take the line of the Ottawa to Lake Jewiscanague. If ye, men of the forest and stream, want real life for the summer months, come into Canada.—H. C. J.

RAILROAD OFFICIALS are notified that an individual now traveling in the West, and representing himself to be an agent of the FOREST AND STREAM is not such; nor has he any credentials from us. The correspondent's certificate shown by this party is one of an old date, and none like it has been given to anybody within many months.

Yachting and Canoeing.

EASTERN YACHT CLUB REGATTA.

Editor Forest and Stream

The regatta was originally appointed for June 10, the day after the formal opening of the club house, and the fleet was ordered to rendezvous off the new quarters on the evening of June 8.

That day there was a dead calm, and the 9th opened with a hard N. E. blow, making the yachts late in arriving. About noon the weather lightened up a little, and the wind decreased so that during the afternoon many more arrived, until the fleet consisted of the following boats; Schooners—Caroline, Crest, Dawn, Dreadnaught, Fleur de Lis, Julia, Latona, Leatha, Magic, Meta, Phantom, Rebecca, Romance, Tempest and Kit; Sloops—Active, Ariadne, Addie V., Emma, Alice, Cynthia, Hera, Hesper, Idler, Imperia, Miranda, Recreation, Shadow, Siren and Viva; also the cutters Enterprise and Moya, and the yawl Edith. The club house, which is the best on the coast by all odds, was opened by the flag officers giving a handsome reception, ending with an illumination of the house and fleet and fireworks in the evening.

Friday morning opened with a N. E. gale, 56 miles an hour by the weather reports, accompanied by very heavy rain. A race was out of the question, and the announcement that it was postponed to Wednesday was soon received from the Regatta Committee. The fleet had an excellent chance to try their anchorage ground, under the most unfavorable circumstances, a N. E. wind being the only one in which the harbor is not perfect. The result was satisfactory, although one or two boats dragged a little until they gave more chain.

Wednesday opened clear, with a N. W. wind, which held on well during the day, blowing quite hard at times. The following yachts were entered for the race: Schooners, first class—Phantom, Vice Com. Hovey, 56 ft. water line, and Rebecca, Com. Toy, 70 ft. Second class—Latona, D. L. Peckman, 61 ft.; Meta, Franklin Dexter, 62 ft. and Sylph, A. C. Wheelwright, 48½ ft. There was also a single entry in the third class, the Curlew, H. W. Peabody, 40½ ft. The sloops and cutters turned out strong as follows: Enterprise, Rear Com. Peabody, 48.9 ft. water line; Active, Chas. P. Horton, 50.2 ft.; Anna, Augustus Hemenway, 39 1 ft.; Addie V. M. K. Abbott, 59 ft.; Hesper, W. H. Forbes, 45.6 ft.; Siren, L. H. Keith, — ft.; Imperia, T. L. Stockpole, 41.8 ft.; Recreation, J. B. Parker, 40.9 ft.; Viva, G. W. Benson, 45 ft.; Effie, B. W. Crowninshield, 34.6 ft. In the second class there were two entries: Shadow, John Bryant, 33.5 ft.; Hera, C. G. Weld, 34.11 ft.

Effie, evidently, was not aware that the new measurement placed her in first class, and therefore waited and sailed with the second class boats. She is but a trifle larger than Hera and Shadow, and would be better classed with them. Addie had the misfortune to carry away the topmast ring on her main shrouds while coming out of the harbor, and was forced, very reluctantly, to give up the race.

Sylph came up just as the signal sounded, and thinking she could not get up to the line in time, turned and ran out with the sloops. Among the large schooners there were no starters, as in this class there are no yachts here that can sail with Halcyon or Phantom, except, perhaps, the Magic. Halcyon is not yet in commission, and it was hoped that Magic could be induced to enter against Phantom, in which case Rebecca would have made a third starter in the class. Magic, however, would not enter, and two Commodores did not care to go through the farce of sailing Phantom round the course with Rebecca some way astern. The non-filling of this class is to be regretted, as Magic's friends claim they can beat either Phantom or Halcyon, while there are large numbers of yachtsmen in the club who feel sure either of the others can show her a clean pair of heels, and think Magic much overrated. Numerous yachts were on hand to see the race, including the schooners Caroline, Crest, Curlew, Dawn, Dreadnaught, Fleur de Lis, Foam, Hermes, Julia, Leatha, Magic, Phantom, Rebecca, Romance, Silence, Sylph, Tempest and Vit, as well as the sloops Ceriadne, Idler, Norvana, yawl Edith, and steamers Sappho and Addita of the E. Y. C.; also the schooners America, Alice and Adrienne, of the Boston Y. C., and the well known schooner Fearless, who appeared for the first time in her new coat of black, with gold band, looking handsomer than ever, and flying the N. B. Y. C. burgee.

The Gov. Andrew, with members and ladies on board, and the Pierson, with the Regatta Committee, were on hand. The starting signal was given promptly at 11:30 A. M. The course was to Egg Rock, going outside the Pig Rock stakes, then down to Half Way Rock and back to starting point, where the second class sloops finished, the larger boats rounding the stake boat and going down to Half Way Rock and back for the second time—15 and 19½ nautical miles respectively, and all in easy sight of the members who chose to see the race from the club pavilion on the Neck. Active crossed first, at 11:31:28, followed by Hesper at 11:31:42, both being rigged with double headsails, and both carrying jibtopsails and boom gaff topsails. The cutter Enterprise followed at 11:32:11, with an English topsail only; then Imperia, 11:32:55; Viva, 11:33:24; Anna, 11:33:45; Recreation, 11:34; all but Recreation, whose light sails were very small, carrying large jib and gaff topsails.

Latona and Meta jockeyed a little for position, and then got over the line at 11:38:34 and 11:38:45 respectively, looking very handsome under their clouds of canvas. More jockeying was in order with the little fellows, who finally crossed as follows: Hera, 11:46:35; Effie, 11:46:44; Shadow, 11:47:49. At this time it was seen that Latona had more sail than was good for her, heeling over so that her speed was greatly diminished, and one time a capsize seemed possible. However she came out all right, but Hesper had in the meantime taken the lead, with Enterprise sailing beautifully in second place. Soon after the start Effie lost her topmast, but cleared away the wreck and made a plucky race under two sails only. After rounding the stakes, a pull was taken on the sheets, and most of the jib topsails taken in. Viva, however, kept hers up for a time, and by the aid of this sail and what seemed to be poor handling, lost any chance she might have had; this was a pity, as the boat had speed and it was her day. Latina carried away her bowsprit shrouds while rounding the stakes, and Meta cut inside and took the lead in their lot.

On the run to the Rock, Recreation got by Anna, whose big topsail seemed a hindrance, but again lost the lead at the Rock. The two in the van made a splendid fight for the lead, but just before reaching the Rock the cutter went by her clawing to windward, the keel fairly beating the board, and at 12:15:30 came round, followed at 12:16 by Hesper, who was very quick with her jibtopsail. The Rear Commodore, however, had an immense one set and drawing in a minute, and both ran down before the wind for Half Way Rock, the cutter holding her own. Active rounded at 12:18; Imperia, 12:20:30; Viva, 12:21; Siren, 12:21:15; Anna, 12:23:30; Recreation, 12:23:45; Meta, 12:24; Latona bringing up the rear, the schooners having to tack before reaching the mark.

The small boats were seen, Shadow with a slight lead, the others having a hot fight of it. On the run down both Hesper and Active gained a little on Enterprise, whose jibtopsail did not draw as well as it should. Near the Rock she took it in, and Hesper went into first place, Active also gaining, though to have all the sail she could carry. Imperia got it hot and heavy off the Pigs, and had to luff repeatedly, allowing Meta to go ahead and Siren and Viva to gain on her.

The boats had a beat up to the stake boat, when it was seen that Siren meant business, having passed Viva and Imperia. They rounded as follows: Hesper, 1:30; Enterprise, 1:31; Active, 1:32; Meta, 1:33:30; Siren, 1:38:30; Latona, 1:41:30; Viva, 1:43; Imperia, 1:42:45; Anna, 1:45; Recreation, 1:46:30. On the run down Meta took second place; Hesper rounded at 1:46:30; Meta, 1:49; Enterprise, 1:50:30; Active, 1:51; Siren, 1:54:30; Latina, 1:56:30; Viva, 2:00; Anna, 2:01:30; Imperia, 2:02; Recreation, 2:04. At the same time the small boats came up to the line very prettily, Shadow crossing at 1:59:15; Hera, 2:00:30; Effie, 2:02:35. Hera looked as if she would be a tough customer later on, this being her first race; while Effie certainly had cause to be satisfied with so close a finish when in crippled condition, owing to loss of light sails. Siren meanwhile had been doing wonders, and Anna's new topmast bowed, was also doing well. The finish in this class was as follows: Hesper, 2:15:22; Meta, 2:15:40; Enterprise, 2:17:39; Active, 2:19:40; Siren, 2:20; Latona, 2:22:03; Viva, 2:27:27; Imperia, 2:29:16; Anna, 2:30:05; Recreation, 2:32:35. The summary for the day is as under:

Name.	Actual Time.	Corrected Time.
Meta	2:36:55	2:36:55
Latona	2:47:34	2:42:07
Siren	2:47:56	2:38:54
Hesper	2:48:40	2:41:04
Enterprise	2:45:28	1:41:48½
Anna	2:53:20	2:47:57½
Active	2:48:12	2:48:12
Imperia	2:56:21	2:51:12½
Viva	2:54:03	2:51:47½
Recreation	2:58:35	2:54:11½
Shadow	2:11:26	2:11:04½
Hero	2:15:45	2:15:45
Effie	2:15:51	—

Meta, Siren and Shadow take first and Hesper second prizes. During the race America and Dreadnaught had a brush in the bay, in which

the latter got the better of Gen. Butler's schooner. Whether the America has been improved by the alterations this spring is much a question. MARLINSPIKE.'

MARBLEHEAD REGATTA.

THE union regatta, open to all comers, was sailed June 17 and, as usual in the East, in very light airs. The contest, figuring up to no less than fifty-seven boats taking the signal from the judges on board the steamer Elsie. The wind was blowing fresh from the Southward and the few mishaps to spars and gear compared to former times go to prove that yacht racing has been learning and that shabby outfit is not so generally tolerated, yachts being no longer regarded as mere fair-weather toys, but meant to take the rough with the smooth, as they ought. The regatta is deservedly popular and drew a large crowd of visitors to Marblehead, and near, the guests being accommodated on board the steamer Wm. Sprague, chartered from Boston for the occasion. The management was in charge of the regatta committee—W. Bridges, G. C. Abbott, C. A. Choate, L. Atkins, B. F. Russell, G. W. Brown and F. H. Brown, who fixed a date and issued an explicit circular in ample time to secure a good attendance, and much credit must be given them for the success which attended their efforts. The judges of the sailing were: Dan'l Appleton, C. H. Hitchman, Simeon Dodge, John Bridge, C. A. Benjamin, G. C. Abbott, S. W. Brown, B. F. Russell and J. Atkins, and upon them devolved the duty of getting so large a fleet away without muddle and taking the times correctly. There was no bungling nor failure on their part and only a single foul reported, Shadow and Magic both claiming a decision in their favor running foul of Fly Fish and another. The prizes in second class sloops, therefore, remains in abeyance. The classification was as follows:

First Class—Sloops and schooners measuring 38 ft. and upward on water line. Two prizes to sloops and two to schooners. Second Class—Schooners less than 38 ft. on the water line. Two prizes will be rewarded. Also, all keel and centreboard sloops 26 ft. and less than 38 ft. on the water line. Two prizes for keels and two for centreboards. Third Class—Sloops and cat-rig boats 26 ft. and less than 26 ft. on the water line. Two prizes for keels and two for centreboards. Fourth Class—Boats less than 20 ft. and over 15 ft. on the water line. Two prizes for keels and two for centreboards. Special class—Boats under 15 ft. on the water line and dories. Two prizes for boats and two for dories. Open to boats of any class. Course for first class, distance 38 miles: From stake boat off Skinner's Head, leaving Point Neck Buoy on starboard, Half Tide Rock Buoy and Marblehead Rock on starboard, Half Way Rock Buoy on starboard, Egg Rock on starboard, returning leave Outer Breaker Buoy (No 4 Red Buoy) on port, Halibut Rock Buoy on port, Point Neck Buoy on port to starting point, passing between Judges' boat and flag boat. Course for second and third classes, distance 30 miles: As above, leaving Half Tide Rock Buoy on starboard, Halfway Rock on starboard, thence in southwest course three miles to a stake boat, leaving it on starboard, thence to Marblehead Rock, leaving it on port, to starting point, passing between the Judges' boat and flag boat. Course for fourth class, distance 6½ miles: From stake boat off Skinner's Head, leaving Brimble Rock Buoy (No. 5) on starboard, Black or Satan's Rock on starboard, Marblehead Rock on starboard, to starting point, passing between Judges' boat and flat boat. In rounding the Brimble Buoy care should be taken to avoid the Ledge, which extends from the buoy about 250 feet southeast. Course for special class, distance 3 miles: From stake boat off Skinner's Head, leaving Gray's Rock on port, Coney Island on port, stake boat off Fluent's Point on port, Gray Rock on starboard, back to starting point, passing between Judges' boat and flag boat.

Lurline parted hallards off the Brimbles. Falcon lost fore topmast and a couple sounded on the rocks off the brimbles, but beyond this there is no mishap to record. The following is the summary:

SECOND CLASS SCHOONERS.

Name and Owner.	Length. Ft.	In.	Corrected Time. H.	m.	s.
Crest, W P Parker, Salem	33	00	.	..	..
Bessie, C P Curtis, Swampscott	27	02	2	36	22
Annie, C A Beaty, Marblehead	29	00	.	..	..
Falcon, W L Frost, Boston	37	00	2	54	00
White Cloud, H H Smith, Boston	29	00	.	..	..
Cyda, Robert C Bligg, Marblehead	27	00	2	21	45
Betty, W W Keith, Jr, Dorchester	32	04	2	54	47

SECOND CLASS SLOOPS.

Magic, E G Neal, Lynn	30	06	2	18	57
Shadow, John Bryant, Marblehead	33	06	2	00	45
Nimbus, George F Howe, Cohasset	33	04	.	..	..
Lillie, Dillingham, Boston	36	06	2	11	22
Viking, S P Freeman, Boston	35	00	2	12	55
Geneva, J D Mack, Medford	29	00	2	19	24
Ellie, Crowningshield, Marblehead	36	06	2	07	55
Quinapur, H Wheeler, Boston	26	01	.	..	..
Keith, W H Davis, South Boston	26	06	2	44	23
Hera, C G Weld, Nahant	34	11	2	11	48

THIRD CLASS SLOOPS AND CATS.

Expert, E G Soutter, Lynn	22	09	2	21	35
Lydia, H Davenport, Manchester	21	09	.	..	..
Jennie, J R Shaw, Marblehead	24	03	.	..	..
